What follows emerges largely from my own experience of the alternative globalization movement, where issues of democracy have been very much at the center of debate. Anarchists in Europe or North America and indigenous organizations in the Global South have found themselves locked in remarkably similar arguments. Is “democracy” an inherently Western concept? Does it refer to a form of governance (a mode of communal self-organization), or a form of government (one particular way of organizing a state apparatus)? Does democracy necessarily imply majority rule? Is representative democracy really democracy at all? Is the word permanently tainted by its origins in Athens, a militaristic, slave-owning society founded on the systematic repression of women? Or does what we now call “democracy” have any real historical connection to Athenian democracy in the first place? Is it possible for those trying to develop decentralized forms of consensus-based direct democracy to reclaim the word? If so, how will we ever convince the majority of people in the world that “democracy” has nothing to do with electing representatives? If not, if we instead accept the standard definition and start calling direct democracy something else, how can we say we’re against democracy—a word with such universally positive associations?

These are arguments about words much more than they are arguments about practices. On questions of practice, in fact, there is a surprising degree of convergence; especially within the more radical elements of the movement. Whether one is talking with members of Zapatista communities in Chiapas, unemployed piqueteros in Argentina, Dutch squatters, or anti-eviction activists in South African townships, almost everyone agrees on the importance of horizontal, rather than vertical structures; the need for initiatives to rise up from relatively small, self-organized, autonomous groups rather than being conveyed downwards through chains of command; the rejection of permanent, named leadership structures; and the need to maintain some kind of mechanism—whether these be North American-style “facilitation,”
Zapatista-style women’s and youth caucuses, or any of an endless variety of other possibilities—to ensure that the voices of those who would normally find themselves marginalized or excluded from traditional participatory mechanisms are heard. Some of the bitter conflicts of the past, for example, between partisans of majority voting versus partisans of consensus process, have been largely resolved, or perhaps more accurately seem increasingly irrelevant, as more and more social movements use full consensus only within smaller groups and adopt various forms of “modified consensus” for larger coalitions. Something is emerging. The problem is what to call it. Many of the key principles of the movement (self-organization, voluntary association, mutual aid, the refusal of state power) derive from the anarchist tradition. Still, many who embrace these ideas are reluctant, or flat-out refuse, to call themselves “anarchists.” Similarly with democracy. My own approach has normally been to openly embrace both terms, to argue, in fact, that anarchism and democracy are—or should be—largely identical. However, as I say, there is no consensus on this issue, nor even a clear majority view.

It seems to me these are tactical, political questions more than anything else. The word “democracy” has meant any number of different things over the course of its history. When first coined, it referred to a system in which the citizens of a community made decisions by equal vote in a collective assembly. For most of its history, it referred to political disorder, rioting, lynching, and factional violence (in fact, the word had much the same associations as “anarchy” does today). Only quite recently has it become identified with a system in which the citizens of a state elect representatives to exercise state power in their name. Clearly there is no true essence to be discovered here. About the only thing these different referents have in common, perhaps, is that they involve some sense that political questions that are normally the concerns of a narrow elite are here thrown open to everyone, and that this is either a very good, or a very bad, thing. The term has always been

so morally loaded that to write a dispassionate, disinterested history of democracy would almost be a contradiction in terms. Most scholars who want to maintain an appearance of disinterest avoid the word. Those who do make generalizations about democracy inevitably have some sort of axe to grind.

I certainly do. That is why I feel it only fair to the reader to make my own axes evident from the start. It seems to me that there’s a reason why the word “democracy,” no matter how consistently it is abused by tyrants and demagogues, still maintains its stubborn popular appeal. For most people, democracy is still identified with some notion of ordinary people collectively managing their own affairs. It already had this connotation in the nineteenth century, and it was for this reason that nineteenth-century politicians, who had earlier shunned the term, reluctantly began to adopt the term and refer to themselves as “democrats”—and, gradually, to patch together a history by which they could represent themselves as heirs to a tradition that traced back to ancient Athens. However, I will also assume—for no particular reason, or no particular scholarly reason, since these are not scholarly questions but moral and political ones—that the history of “democracy” should be treated as more than just the history of the word “democracy.” If democracy is simply a matter of communities managing their own affairs through an open and relatively egalitarian process of public discussion, there is no reason why egalitarian forms of decision-making in rural communities in Africa or Brazil should not be at least as worthy of the name as the constitutional systems that govern most nation-states today—and, in many cases, probably a good deal more worthy.

In light of this, I will be making a series of related arguments and perhaps the best way to proceed would be to just set out them all out right away.

1. Almost everyone who writes on the subject assumes “democracy” is a “Western” concept that begins its history
in ancient Athens. They also assume that what eighteenth- and nineteenth-century politicians began reviving in Western Europe and North America was essentially the same thing. Democracy is thus seen as something whose natural habitat is Western Europe and its English- or French-speaking settler colonies. Not one of these assumptions is justified. “Western civilization” is a particularly incoherent concept, but, insofar as it refers to anything, it refers to an intellectual tradition. This intellectual tradition is, overall, just as hostile to anything we would recognize as democracy as those of India, China, or Mesoamerica.

2. Democratic practices—processes of egalitarian decision-making—however, occur pretty much anywhere, and are not peculiar to any one given “civilization,” culture, or tradition. They tend to crop up wherever human life goes on outside systematic structures of coercion.

3. The “Democratic ideal” tends to emerge when, under certain historical circumstances, intellectuals and politicians, usually in some sense navigating their way between states and popular movements and popular practices, interrogate their own traditions—invariably, in dialogue with other ones—citing cases of past or present democratic practice to argue that their tradition has a fundamental kernel of democracy. I call these moments of “Democratic refoundation.” From the perspective of the intellectual traditions, they are also moments of recuperation, in which ideals and institutions that are often the product of incredibly complicated forms of interaction between people of very different histories and traditions come to be represented as emerging from the logic of that intellectual tradition itself. Over the course of the nineteenth and twentieth centuries
especially, such moments did not just occur in Europe, but almost everywhere.

4. The fact that this ideal is always founded on (at least partly) invented traditions does not mean it is inauthentic or illegitimate or, at least, more inauthentic or illegitimate than any other. The contradiction, however, is that this ideal was always based on the impossible dream of marrying democratic procedures or practices with the coercive mechanisms of the state. The result are not “Democracies” in any meaningful sense of the world but Republics with a few, usually fairly limited, democratic elements.

5. What we are experiencing today is not a crisis of democracy but rather a crisis of the state. In recent years, there has been a massive revival of interest in democratic practices and procedures within global social movements, but this has proceeded almost entirely outside of statist frameworks. The future of democracy lies precisely in this area.

Let me take these in roughly the order I’ve presented them above. I’ll start with the curious idea that democracy is somehow a “Western concept.”

Part I: On the Incoherence Of the Notion of the “Western Tradition”

I’ll begin, then, with a relatively easy target: Samuel P. Huntington’s famous essay on the “Clash of Civilizations” Huntington is a professor of International Relations at Harvard, a classic Cold War intellectual, beloved of right-wing think tanks. In 1993, he published an essay arguing that, now that the Cold War was over, global conflicts would come to center on clashes between ancient cultural traditions. The argument was notable for promoting a cer-
tain notion of cultural humility. Drawing on the work of Arnold Toynbee, he urged Westerners to understand that theirs is just one civilization among many, that its values should in no way be assumed to be universal. Democracy in particular, he argued, is a distinctly Western idea and the West should abandon its efforts to impose it on the rest of the world:

At a superficial level, much of Western culture has indeed permeated the rest of the world. At a more basic level, however, Western concepts differ fundamentally from those prevalent in other civilizations. Western ideas of individualism, liberalism, constitutionalism, human rights, equality, liberty, the rule of law, democracy, free markets, the separation of church and state, often have little resonance in Islamic, Confucian, Japanese, Hindu, Buddhist, or Orthodox cultures. Western efforts to propagate such ideas produce instead a reaction against “human rights imperialism” and a reaffirmation of indigenous values, as can be seen in the support for religious fundamentalism by the younger generation in non-Western cultures. The very notion that there is a “universal civilization” is a Western idea, directly at odds with the particularism of most Asian societies and their emphasis on what distinguishes one people from another (1993; 120).

The list of Western concepts is fascinating from any number of angles. If taken literally, for instance, it would mean that “the West” only really took any kind of recognizable form in the nineteenth or even twentieth centuries, since in any previous one the overwhelming majority of “Westerners” would have rejected just about all these principles out of hand—if, indeed, they would have been able even to conceive of them. One can, if one likes, scratch around through the last two or three thousand years in different parts of

and “civilization.” In fact, if one reads the text carefully, one finds that the phrases “Western culture” and “Western civilization” are used pretty much interchangeably. Each civilization has its own culture. Cultures, in turn, appear to consist primarily of “ideas,” “concepts,” and “values.” In the Western case, these ideas appear to have once been tied to a particular sort of Christianity, but now have developed a basically geographic or national distribution, having set down roots in Western Europe and its English- and French-speaking settler colonies.\(^1\) The other civilizations listed are—with the exception of Japan—not defined in geographic terms. They are still religions: the Islamic, Confucian, Buddhist, Hindu, and Orthodox Christian civilizations. This is already a bit confusing. Why should the West have stopped being primarily defined in religious terms around 1520 (despite the fact that most Westerners continue to call themselves “Christians”), while the others all remain so (despite the fact that most Chinese, for example, would certainly not call themselves “Confucians”)? Presumably because, for Huntington to be consistent in this area, he would either have to exclude from the West certain groups he would prefer not to exclude (Catholics or Protestants, Jews, Deists, secular philosophers) or else provide some reason why the West can consist of a complex amalgam of faiths and philosophies while all the other civilizations cannot: despite the fact that one examines the history of geographical units like India, or China (as opposed to made-up entities like Hinduism or Confucianism), a complex amalgam of faiths and philosophies is precisely what one finds.

It gets worse. In a later clarification called “What Makes the West Western” (1996), Huntington actually does claim that “pluralism” is one of the West’s unique qualities:

\(^1\) But not those that speak Spanish or Portuguese. It is not clear if Huntington has passed judgment on the Boers.
Western society historically has been highly pluralistic. What is distinctive about the West, as Karl Deutsch noted, “is the rise and persistence of diverse autonomous groups not based on blood relationship or marriage.” Beginning in the sixth and seventh centuries these groups initially included monasteries, monastic orders, and guilds, but afterwards expanded in many areas of Europe to include a variety of other associations and societies (1996: 234).

He goes on to explain this diversity also included class pluralism (strong aristocracies), social pluralism (representative bodies), linguistic diversity, and so on. All this gradually set the stage, he says, for the unique complexity of Western civil society. Now, it would be easy to point out how ridiculous all this is. One could, for instance, remind the reader that China and India in fact had, for most of their histories, a great deal more religious pluralism than Western Europe; that most Asian societies were marked by a dizzying variety of monastic orders, guilds, colleges, secret societies, sodalities, professional and civic groups; that none ever came up with such distinctly Western ways of enforcing uniformity as the war of extermination against heretics, the Inquisition, or the witch hunt. But the amazing thing is that what Huntington is doing here is trying to turn the very incoherence of his category into its defining feature. First, he describes Asian civilizations in such a way that they cannot, by definition, be plural; then, if one were to complain that people he lumps together as “the West” don’t seem to have any common features at all—no common language, religion, philosophy, or mode of government—Huntington could simply reply that this pluralism is the West’s defining feature. It is the perfect circular argument.

2 It was utterly unremarkable, for example, for a Ming court official to be a Taoist in his youth, become a Confucian in his middle years, and a Buddhist on retirement. It is hard to find parallels in the West even today.
In most ways, Huntington’s argument is just typical, old-fashioned Orientalism: European civilization is represented as inherently dynamic, “the East,” at least tacitly, as stagnant, timeless, and monolithic. What I really want to draw attention to, however, is just how incoherent Huntington’s notions of “civilization” and “culture” really are. The word “civilization,” after all, can be used in two very different ways. It can be used to refer to a society in which people live in cities, in the way an archeologist might refer to the Indus Valley. Or it can mean refinement, accomplishment, cultural achievement. Culture has much the same double meaning. One can use the term in its anthropological sense, as referring to structures of feeling, symbolic codes that members of a given culture absorb in the course of growing up and which inform every aspect of their daily life: the way people talk, eat, marry, gesture, play music, and so on. To use Bourdieu’s terminology, one could call this culture as habitus. Alternately, one can use the word to refer to what is also called “high culture”: the best and most profound productions of some artistic, literary, or philosophical elite. Huntington’s insistence on defining the West only by its most remarkable, valuable concepts—like freedom and human rights—suggests that, in either case, it’s mainly the latter sense he has in mind. After all, if “culture” were to be defined in the anthropological sense, then clearly the most direct heirs to ancient Greeks would not be modern Englishmen and Frenchmen, but modern Greeks. Whereas, in Huntington’s system, modern Greeks parted company with the West over 1500 years ago, the moment they converted to the wrong form of Christianity.

In short, for the notion of “civilization,” in the sense used by Huntington, to really make sense, civilizations have to be conceived basically as traditions of people reading one another’s books. It is possible to say Napoleon or Disraeli are more heirs to Plato and Thucydides than a Greek shepherd of their day for one reason only: both men were more likely to have read Plato and Thucydides. Western culture is not just a collection of ideas; it is
The Impossible Marriage

In its essence, I think, the contradiction is not simply one of language. It reflects something deeper. For the last two hundred years, democrats have been trying to graft ideals of popular self-governance onto the coercive apparatus of the state. In the end, the project is simply unworkable. States cannot, by their nature, ever truly be democratized. They are, after all, basically ways of organizing violence. The American Federalists were being quite realistic when they argued that democracy is inconsistent with a society based on inequalities of wealth; since, in order to protect wealth, one needs an apparatus of coercion to keep down the very "mob" that democracy would empower. Athens was a unique case in this respect because it was, in effect, transitional: there were certainly inequalities of wealth, even, arguably, a ruling class, but there was virtually no formal apparatus of coercion. Hence there's no consensus among scholars whether it can really be considered a state at all.

It's precisely when one considers the problem of the modern state's monopoly of coercive force that the whole pretence of democracy dissolves into a welter of contradictions. For example: while modern elites have largely put aside the earlier discourse of the "mob" as a murderous "great beast," the same imagery still pops back, in almost exactly the form it had in the sixteenth century, the moment anyone proposes democratizing some aspect of the apparatus of coercion. In the US, for example, advocates of the "fully informed jury movement," who point out that the Constitution actually allows juries to decide on questions of law, not just of evidence, are regularly denounced in the media as wishing to go back to the days of lynchings and "mob rule." It's no coincidence that the United States, a country that still prides itself on its democratic spirit, has also led the world in mythologizing, even deifying, its police.

This position, at least, would be intellectually consistent. One might call it the Great Books theory of civilization. In a way, it's quite compelling. Being Western, one might say, has nothing to do with habitus. It is not about the deeply embodied understandings of the world one absorbs in childhood—that which makes certain people upper class Englishwomen, others Bavarian farm boys, or Italian kids from Brooklyn. The West is, rather, the literary-philosophical tradition into which all of them are initiated, mainly in adolescence—though, certainly, some elements of that tradition do, gradually, become part of everyone's common sense. The problem is that, if Huntington applied this model consistently,
it would destroy his argument. If civilizations are not deeply embodied, why, then, should an upper class Peruvian woman or Bangladeshi farm boy not be able to take the same curriculum and become just as Western as anyone else? But this is precisely what Huntington is trying to deny.

As a result, he is forced to continually slip back and forth between the two meanings of “civilization” and the two meanings of “culture.” Mostly, the West is defined by its loftiest ideals. But sometimes it’s defined by its ongoing institutional structure—for example, all those early Medieval guilds and monastic orders, which do not seem to be inspired by readings of Plato and Aristotle, but cropped up all of their own accord. Sometimes Western individualism is treated as an abstract principle, usually suppressed, an idea preserved in ancient texts, but occasionally poking out its head in documents like the Magna Carta. Sometimes it is treated as a deeply embedded folk understanding, which will never make intuitive sense to those raised in a different cultural tradition.

Now, as I say, I chose Huntington largely because he’s such an easy target. The argument in “The Clash of Civilizations” is unusually sloppy. Critics have duly savaged most of what he’s had to say about non-Western civilizations. The reader may, at this point, feel justified to wonder why I’m bothering to spend so much time on him. The reason is that, in part because they are so clumsy, Huntington’s argument brings out the incoherence in assumptions that are shared by almost everyone. None of his critics, to my knowledge, have challenged the idea that there is an entity that can be referred to as “the West,” that it can be treated simultaneously as a literary tradition originating in ancient Greece, and as the common sense culture of people who live in Western Europe and North America. Second, Mignolo, not entirely unlike Levy-Bruhl, ends up producing yet another confrontation between apples and oranges. He ends up contrasting Western theory and indigenous practice. In fact, Zapatismo is not simply an emanation of traditional Maya practices: its origins have to be sought in a prolonged confrontation between those practices and, among other things, the ideas of local Maya intellectuals (many, presumably, not entirely unfamiliar with the work of Kant), liberation theologians (who drew inspiration from prophetic texts written in ancient Palestine), and mestizo revolutionaries (who drew inspiration from the works of Chairman Mao, who lived in China). Democracy, in turn, did not emerge from anybody’s discourse. It is as if simply taking the Western literary tradition as one’s starting point—even for purposes of critique—means authors like Mignolo always somehow end up trapped within it.

In reality, the “word that political hegemony imposed” is in this case itself a fractured compromise. If it weren’t, we would not have a Greek word originally coined to describe a form of communal self-governance applied to representative republics to begin with. It’s exactly this contradiction the Zapatistas were seizing on. In fact, it seems impossible to get rid of. Liberal theorists (e.g., Sartori 1987: 279) do occasionally evince a desire to simply brush aside Athenian democracy entirely, to declare it irrelevant and be done with it, but for ideological purposes, such a move would be simply inadmissible. After all, without Athens, there would be no way to claim that “the Western tradition” had anything inherently democratic about it. We would be left tracing back our political ideals to the totalitarian musings of Plato, or if not, perhaps, to admit there’s really no such thing as “the West.” In effect, liberal theorists have boxed themselves into a corner. Obviously, the Zapatistas are hardly the first revolutionaries to have seized on this contradiction; but their doing so has found an unusually powerful resonance, this time—in part, because this is a moment of a profound crisis of the state.

---

3 Some of his statements are so outrageous (for example, the apparent claim that, unlike the West, traditions like Islam, Buddhism, and Confucianism do not claim universal truths, or that, unlike Islam, the Western tradition is based on an obsession with law) that one wonders how any serious scholar could possibly make them.
than epistemology, and so forth... The Zapatistas have no choice but to use the word that political hegemony imposed, though using that word does not mean bending to its mono-logic interpretation. Once democracy is singled out by the Zapatistas, it becomes a connector through which liberal concepts of democracy and indigenous concepts of reciprocity and community social organization for the common good must come to terms (Mignolo 2002: 180).

This is a nice idea. Mignolo calls it “border thinking.” He proposes it as a model for how to come up with a healthy, “critical cosmopolitanism,” as opposed to the Eurocentric variety represented by Kant or Zizek. The problem though, it seems to me, is that in doing so, Mignolo himself ends up falling into a more modest version of the very essentializing discourse he’s trying to escape.

First of all, to say “the Zapatistas have no choice but to use the word” democracy is simply untrue. Of course they have a choice. Other indigenous-based groups have made very different ones. The Aymara movement in Bolivia, to select one fairly random example, chose to reject the word “democracy” entirely, on the grounds that, in their people’s historical experience, the name has only been used for systems imposed on them through violence. They therefore see their own traditions of egalitarian decisionmaking as having nothing to do with democracy. The Zapatista decision to embrace the term, it seems to me, was more than anything else a decision to reject anything that smacked of a politics of identity, and to appeal for allies, in Mexico and elsewhere, among those interested in a broader conversation about forms of self-organization—in much the same way as they also sought to begin a conversation with those interested in reexamining the meaning of words like “revo-

Parenthetical Note: On the Slipperiness of the Western Eye

What I am suggesting is that the very notion of the West is founded on a constant blurring of the line between textual traditions and forms of everyday practice. To offer a particular vivid example: In the 1920s, a French philosopher named Lucien Lévy-Bruhl wrote a series of books proposing that many of the societies studied by anthropologists evinced a “pre-logical mentality” (1926, etc.). Where modern Westerners employ logico-experimental thought, he argued, primitives employ profoundly different principles. The whole argument need not be spelled out. Everything Lévy-Bruhl said about primitive logic was attacked almost immediately and his argument is now considered entirely discredited. What his critics did not, generally speaking, point out is that Lévy-Bruhl was comparing apples and oranges. Basically, what he did was assemble the most puzzling ritual statements or surprising reactions to unusual circumstances he could cull from the observations of European missionaries and colonial officials in

---

17 I am drawing here on a conversation with Nolasco Mamani, who, among other things, was the Aymara representative at the UN, in London during the European Social Forum 2004.
Africa, New Guinea, and similar places, and try to extrapolate the logic. He then compared this material, not with similar material collected in France or some other Western country, but rather, with a completely idealized conception of how Westerners ought to behave, based on philosophical and scientific texts (buttressed, no doubt, by observations about the way philosophers and other academicians act while discussing and arguing about such texts). The results are manifestly absurd—we all know that ordinary people do not in fact apply Aristotelian syllogisms and experimental methods to their daily affairs—but it is the special magic of this style of writing is that one is never forced to confront this.

Because, in fact, this style of writing is also extremely common. How does this magic work? Largely, by causing the reader to identify with a human being of unspecified qualities who’s trying to solve a puzzle. One sees it in the Western philosophical tradition, especially starting with the works of Aristotle that, especially compared with similar works in other philosophical traditions (which rarely start from such decontextualized thinkers), give us the impression the universe was created yesterday, suggesting no prior knowledge is necessary. Even more, there is the tendency to show a commonsense narrator confronted with some kind of exotic practices—this is what makes it possible, for example for a contemporary German to read Tacitus’ *Germania* and automatically identify with the perspective of the Italian narrator, rather than with his own ancestor,⁵ or an Italian atheist to read an Anglican missionary’s account of some ritual in Zimbabwe without ever having to think about that observer’s dedication to bizarre tea rituals or the doctrine of transubstantiation. Hence, the entire history of the West can be framed as a story of “inventions” and “discoveries.” Most of all, there is the fact that it is precisely

---

⁵ Or a French person to read Posidonius’ account of ancient Gaul and identify with the perspective of an ancient Greek (a person, who if he had actually met him, he would probably first think was some sort of Arab).
Certainly, modern rebels make their own views on the Classic Maya clear enough. As a Chol-speaking Zapatista remarked to a friend of mine recently, pointing to the ruins of Palenque, “we managed to get rid of those guys. I don’t suppose the Mexican government could be all that much of a challenge in comparison.”

Part V: The Crisis of the State

We’re finally back, then, where we began, with the rise of global movements calling for new forms of democracy. In a way, the main point of this piece has been to demonstrate that the Zapatistas are nothing unusual. They are speakers of a variety of Maya languages—Tzeltal, Tojolabal, Choi, Tzotzil, Mam—originally from communities traditionally allowed a certain degree of self-governance (largely so they could function as indigenous labor reserves for ranches and plantations located elsewhere), who had formed new largely multi-ethnic communities in newly opened lands in the Lacandon (Collier 1999; Ross 2000; Rus, Hernandez & Mattiace 2003). In other words, they inhabit a classic example of what I’ve been calling spaces of democratic improvisation, in which a jumbled amalgam of people, most with at least some initial experience of methods of communal self-governance, find themselves in new communities outside the immediate supervision of the state. Neither is there anything particularly new about the fact that they are at the fulcrum of a global play of influences: absorbing ideas from everywhere, and their own example having an enormous impact on social movements across the planet. The first Zapatista encuentro in 1996, for example, eventually led to the formation of an international network (People’s Global Action, or PGA), based on principles of autonomy, horizontality, and direct democracy, that included such disparate groups as the Movimento dos Trabalhadores Rurais Sem Terra (MST) in Brazil; the Karnataka State Farmer’s Association (KRSS), a Gandhian socialist direct...
conversation and compromise required by anything but the most abstract form of democratic process, such as the periodic participation in elections.

World-Systems Reconfigured

The reader may feel entitled to ask: If “the West” is a meaningless category, how can we talk about such matters? It seems to me we need an entirely new set of categories. While this is hardly the place to develop them, I’ve suggested elsewhere (Graeber 2004) that there are a whole series of terms—starting with the West, but also including terms like “modernity”—that effectively substitute for thought. If one looks either at concentrations of urbanism, or literary-philosophical traditions, it becomes hard to avoid the impression that Eurasia was for most of its history divided into three main centers: an Eastern system centered on China, a South Asian one centered on what’s now India, and a Western civilization that centered on what we now called “the Middle East,” extending sometimes further, sometimes less, into the Mediterranean.7

In world-system terms, for most of the Middle Ages, Europe and Africa both seem to have almost precisely the same relation with the core states of Mesopotamia and the Levant: they were classic economic peripheries, importing manufactures and supplying raw materials like gold and silver, and, significantly, large numbers of slaves. (After the revolt of African slaves in Basra from 868–883 CE, the Abbasid Caliphate seem to have begun importing Europeans instead, as they were considered more docile.) Europe and Africa were, for most of this period, cultural peripheries as well. Islam resembles what was later to be called “the Western tradition” in so many ways—the intellectual efforts to fuse Judeo-Christian scripture with the categories of Greek philosophy, the literary emphasis on courtly love, the scientific rationalism, the legalism, puritanical monotheism, missionary impulse, the expansionist mercantile capitalism—even the periodic waves of fascination with “Eastern India alike, sovereign assemblies appear at the beginnings of written history and disappear quickly thereafter.) The fate of the Mayas is instructive here. Sometime in the late first millennium, Classic Maya civilization collapsed. Archeologists argue about the reasons; presumably they always will; but most theories assume popular rebellions played at least some role. By the time the Spaniards arrived six hundred years later, Mayan societies were thoroughly decentralized, with an endless variety of tiny city-states, some apparently with elected leaders. Conquest took much longer than it did in Peru and Mexico, and Maya communities have proved so consistently rebellious that, over the last five hundred years, there has been virtually no point during which at least some have not been in a state of armed insurrection. Most ironic of all, the current wave of the global justice movement was largely kicked off by the EZLN, or Zapatista Army of National Liberation, a group of largely Maya-speaking rebels in Chiapas, mostly drawn from campesinos who had resettled in new communities in the Lacandon rain forest. Their insurrection in 1994 was carried out explicitly in the name of democracy, by which they meant something much more like Athenian-style direct democracy than the republican forms of government that have since appropriated the name. The Zapatistas developed an elaborate system in which communal assemblies, operating on consensus, supplemented by women and youth caucuses to counterbalance the traditional dominance of adult males, are knitted together by councils with recallable delegates. They claim it to be rooted in, but a radicalization of, the way that Maya-speaking communities have governed themselves for thousands of years. We do know that most highland Maya communities have been governed by some kind of consensus system since we have records: that is, for at least five hundred years. While it’s possible that nothing of the sort existed in rural communities during the Classic Maya heyday a little over thousand years ago, it seems rather unlikely.
power within the chiefdom or state that could have held him in check” (29). Linda Scheie, the foremost authority on the Classic Maya, concurs, adding that this shamanic cosmos “is still alive and functioning today” in “modern Maya communities” (54). Other scholars try to put in a good word for their own parts of the ancient world: Egypt, Israel, the Harappan civilization.

At times, these arguments seem almost comical parodies of the kind of logic I’ve been criticizing in historians: most obviously, the line of reasoning that assumes that, if there is no direct evidence for something, it can be treated as if it does not exist. This seems especially inappropriate when dealing with early antiquity, an enormous landscape on which archeology and linguistics can at best throw open a few tiny windows. For example: the fact that “primitive Celts and Germans” met in communal assemblies does not in itself prove that communal assemblies have an Indo-European origin—unless, that is, one can demonstrate that stateless societies speaking non-Indo-European languages at the time did not. In fact, the argument seems almost circular, since by “primitive,” the author seems to mean “stateless” or “relatively egalitarian,” and such societies almost by definition cannot be ruled autocratically, no matter what language people speak. Similarly, when characterizing the Classic Maya as lacking any form of “countervailing institutions” (Willey describes even the bloodthirsty Aztecs as less authoritarian, owing to their more developed markets), it doesn’t seem to occur to any of the authors to wonder what ancient Rome or Medieval England might look like if they had to be reconstructed exclusively through ruined buildings and official statements carved in stone.

In fact, if my argument is right, what these authors are doing is searching for the origins of democracy precisely where they are least likely to find it: in the proclamations of the states that largely suppressed local forms of self-governance and collective deliberation, and the literary-philosophical traditions that justified their doing so. (This, at least, would help explain why, in Italy, Greece, and
Part II: Democracy Was Not Invented

I began this essay by suggesting that one can write the history of democracy in two very different ways. Either one can write a history of the word “democracy,” beginning with ancient Athens, or one can write a history of the sort of egalitarian decision-making procedures that in Athens came to be referred to as “democratic.”

Normally, we tend to assume the two are effectively identical because common wisdom has it that democracy—much like, say, science, or philosophy—was invented in ancient Greece. On the face of it this seems an odd assertion. Egalitarian communities have existed throughout human history—many of them far more egalitarian than fifth-century Athens—and they each had some kind of procedure for coming to decisions in matters of collective importance. Often, this involved assembling everyone for discussions in which all members of the community, at least in theory, had equal say. Yet somehow, it is always assumed that these procedures could not have been, properly speaking, “democratic.”

The main reason this argument seems to make intuitive sense is because in these other assemblies, things rarely actually came to a vote. Almost invariably, they used some form of consensus-finding. Now this is interesting in itself. If we accept the idea that a show of hands, or having everyone who supports a proposition stand on one side of the plaza and everyone against stand on the other, are not really such incredibly sophisticated ideas that some ancient genius had to “invent” them, then why are they so rarely employed? Why, instead, did communities invariably prefer the apparently much more difficult task of coming to unanimous decisions?

The explanation I would propose is this: it is much easier, in a face-to-face community, to figure out what most members of that community want to do, than to figure out how to change the minds of those who don’t want to do it. Consensus decision-making is typical of societies where there would be no way to compel a mi-
invention of “the West,” neither was this process of recuperation and refoundation. True, elites in India started playing the game some sixty years later than those in England and France, but, historically, this is not a particularly long period of time. Rather than seeing Indian, or Malagasy, or Tswana, or Maya claims to being part of an inherently democratic tradition as an attempt to ape the West, it seems to me we are looking at different aspects of the same planetary process: a crystallization of longstanding democratic practices in the formation of a global system, in which ideas were flying back and forth in all directions, and the gradual, usually grudging adoption of some by ruling elites.

The temptation to trace democracy to some particular cultural “origins,” though, seems almost irresistible. Even serious scholars continue to indulge it. Let me return to Harvard to provide one final, to my mind particularly ironic, example: a collection of essays called *The Breakout: The Origins of Civilization* (M. Lamberg-Karlovsky 2000), put together by leading American symbolic archeologists.¹⁵ The line of argument sets out from a suggestion by archeologist K.C. Chang, that early Chinese civilization was based on a fundamentally different sort of ideology than Egypt or Mesopotamia. It was essentially a continuation of the cosmos of earlier hunting societies, in which the monarch replaced the shaman as having an exclusive and personal connection with divine powers. The result was absolute authority. Chang was fascinated by the similarities between early China and the Classic Maya, as reconstructed through recently translated inscriptions: the “stratified universe with bird-perched cosmic tree and religious personnel interlinking the Upper, Middle, and Under Worlds,” animal messengers, use of writing mainly for politics and ritual, veneration of ancestors, and so on (1988, 2000: 7). The states that emerged in the third millennium in the Middle East, in contrast, represented a kind of breakthrough to an alternate, more

¹⁵ Most were in fact published in a journal called *Symbols.*
It is of obvious relevance that Ancient Greece was one of the most competitive societies known to history. It was a society that tended to make everything into a public contest, from athletics to philosophy or tragic drama or just about anything else. So it might not seem entirely surprising they made political decision-making into a public contest as well. Even more crucial, though, was the fact that decisions were made by a populace in arms. Aristotle, in his *Politics*, remarks that the constitution of a Greek city-state will normally depend on the chief arm of its military: if this is cavalry, it will be an aristocracy, since horses are expensive. If hoplite infantry, it will be oligarchic, as all could not afford the armor and training. If its power was based in the navy or light infantry, one can expect a democracy, as anyone can row, or use a sling. In other words, if a man is armed, then one pretty much has to take his opinions into account. One can see how this worked at its starkest in Xenophon's *Anabasis*, which tells the story of an army of Greek mercenaries who suddenly find themselves leaderless and lost in the middle of Persia. They elect new officers, and then hold a collective vote to decide what to do next. In a case like this, even if the vote was 60/40, everyone could see the balance of forces and what would happen if things actually came to blows. Every vote was, in a real sense, a conquest.

In other words, here too decision-making and the means of enforcement were effectively collapsed (or could be), but in a rather different way.

Roman legions could be similarly democratic; this was the main reason they were never allowed to enter the city of Rome. And, when Machiavelli revived the notion of a democratic republic at the dawn of the “modern” era, he immediately reverted to the notion of a populace in arms.

This in turn might help explain the term “democracy” itself, which appears to have been coined as something of a slur by its elitist opponents: it literally means the “force” or even “violence” of the people. *Kratos*, not *archos*. The elitists who coined the term

Greek accounts of Alexander’s campaigns but also early Buddhist documents in Pali and early Hindu vocabularies and works of political theory. They discovered dozens of local equivalents to fifth-century Athens on South Asian soil: cities and political confederations in which all men formally classified as warriors—which in some cases meant a very large proportion of adult males—were expected to make important decisions collectively, through public deliberation in communal assemblies. The literary sources of the time were mostly just as hostile to popular rule as Greek ones, but, at least until around 400 AD, such polities definitely existed, and the deliberative mechanisms they employed continue to be employed, in everything from the governance of Buddhist monasteries to craft guilds, until the present day. It was possible, then, to say that the Indian, or even Hindu, tradition was always inherently democratic; and this became a strong argument for those seeking independence.

These early historians clearly overstated their case. After independence came the inevitable backlash. Historians began to point out that these “clan republics” were very limited democracies at best, that the overwhelming majority of the population—women, slaves, those defined as outsiders—were completely disenfranchized. Of course, all this was true of Athens as well, and historians have pointed that out at length. But it seems to me questions of authenticity are of at best secondary importance. Such traditions are always largely fabrications. To some degree, that’s what traditions are: the continual process of their own fabrication. The point is that, in every case, what we have are political elites—or would-be political elites—identifying with a tradition of democracy in order to validate essentially republican forms of government. Also, not only was democracy not the special

---

14 I say “almost.” Early Buddhism was quite sympathetic: particularly the Buddha himself. The Brahmical tradition however is as one might expect uniformly hostile.
striking things is how quickly almost everyone else in the world began playing the same game. To some degree, as the example of al Malibari suggests, it was probably happening in other parts of the world even before it began happening in Europe. Of course, overseas movements only started using the word “democracy” much later—but even in the Atlantic world, that term only came into common usage around the middle of the nineteenth century. It was also around the middle of the nineteenth century—just as European powers began recuperating notions of democracy for their own tradition—when Britain led the way in a very self-conscious policy of suppressing anything that looked like it might even have the potential to become a democratic, popular movement overseas. The ultimate response, in much of the colonial world, was to begin playing the exact same game. Opponents to colonial rule scoured their own literary-philosophical traditions for parallels to ancient Athens, along with examining traditional communal decision-making forms in their hinterlands. As Steve Muhlenberger and Phil Payne (1993; Baechler 1985), for example, have documented, if one simply defines it as decision-making by public discussion, “democracy” is a fairly common phenomenon; examples can be found even under states and empires, if only, usually, in those places or domains of human activity in which the rulers of states and empires took little interest. Greek historians writing about India, for example, witnessed any number of polities they considered worthy of the name. Between 1911 and 1918, a number of Indian historians (K.P. Jayaswal, D.R. Bhandarkar, R.C. Majumdar) began examining some of these sources, not only always considered democracy not too far from simple rioting or mob rule; though, of course, their solution was the permanent conquest of the people by someone else. Ironically, when they did manage to suppress democracy for this reason, which was usually, the result was that the only way the general populace’s will was known was precisely through rioting, a practice that became quite institutionalized in, say, imperial Rome or eighteenth-century England.

One question that bears historical investigation is the degree to which such phenomena were in fact encouraged by the state. Here, I’m not referring to literal rioting, of course, but to what I would call the “ugly mirrors”: institutions promoted or supported by elites that reinforced the sense that popular decision-making could only be violent, chaotic, and arbitrary “mob rule.” I suspect that these are quite common to authoritarian regimes. Consider, for example, that while the defining public event in democratic Athens was the agora, the defining public event in authoritarian Rome was the circus, assemblies in which the plebs gathered to witness races, gladiatorial contests, and mass executions. Such games were sponsored either directly by the state, or more often, by particular members of the elite (Veyne 1976; Kyle 1998; Lomar and Cornell 2003). The fascinating thing about gladiatorial contests in particular, is that they did involve a kind of popular decision-making: lives would be taken, or spared, by popular acclaim. However, where the procedures of the Athenian agora were designed to maximize the dignity of the demos and the thoughtfulness of its deliberations—despite the underlying element of coercion, and its occasional capability of making terrifyingly bloodthirsty decisions—the Roman circus was almost exactly the opposite. It had more the air of regular, state-sponsored lynchings. Almost every quality normally ascribed to “the mob” by later writers hostile to democracy—the capriciousness, overt cruelty, factionalism (supporters of rival chariot teams would regularly do battle in the streets), hero worship, mad passions—all were not only tolerated,
but actually encouraged, in the Roman amphitheatre. It was as if an authoritarian elite was trying to provide the public with constant nightmare images of the chaos that would ensue if they were to take power into their own hands.

My emphasis on the military origins of direct democracy is not meant to imply that popular assemblies in, say, Medieval cities or New England town meetings were not normally orderly and dignified procedures; though one suspects this was in part due to the fact that here, too, in actual practice, there was a certain baseline of consensus-seeking going on. Still, they seem to have done little to disabuse members of political elites of the idea that popular rule would more resemble the circuses and riots of imperial Rome and Byzantium. The authors of the Federalist Papers, like almost all other literate men of their day, took it for granted that what they called “democracy”—by which they meant, direct democracy, “pure democracy” as they sometimes put it—was in its nature the most unstable, tumultuous form of government, not to mention one which endangers the rights of minorities (the specific minority they had in mind in this case being the rich). It was only once the term “democracy” could be almost completely transformed to incorporate the principle of representation—a term which itself has a very curious history, since as Cornelius Castoriadis liked to point out (1991; Godbout 2005), it originally referred to representatives of the people before the king, internal ambassadors in fact, rather than those who wielded power in any sense themselves—that it was rehabilitated, in the eyes of well-born political theorists, and took on the meaning it has today. In the next section let me pass, however briefly, to how this came about.

From Leibniz’s famous remark that the Chinese should really be sending missionaries to Europe rather than the other way around, to the work of Montesquieu and Voltaire, one sees a succession of political philosophers extolling Chinese institutions—as well as a popular fascination with Chinese art, gardens, fashions, and moral philosophy (Lovejoy 1955)—at exactly the time that Absolutism took form; only to fade away in the nineteenth century once China had become the object of European imperial expansion. Obviously none of this constitutes proof that the modern nation-state is in any way of Chinese inspiration. But considering the nature of the literary traditions we’re dealing with, even if it were true, this would be about as much proof as we could ever expect to get.

So, is the modern nation-state really a Chinese model of administration, adopted to channel and control democratic impulses derived largely from the influence of Native American societies and the pressures of the Atlantic proletariat, that ultimately came to be justified by a social contract theory derived from Africa? Probably not. At least, this would no doubt be wildly overstating things. But neither do I think it a coincidence either that democratic ideals of statecraft first emerged during a period in which the Atlantic powers were at the center of vast global empires, and an endless confluence of knowledge and influences, or that they eventually developed the theory that those ideals sprang instead exclusively from their own “Western” civilization—despite the fact that, during the period in which Europeans had not been at the center of global empires, they had developed nothing of the kind.

Finally, I think it’s important to emphasize that this process of recuperation is by no means limited to Europe. In fact, one of the
wished to enter into ongoing economic relations with one another, and were accompanied by agreements on property rights and the rules of exchange; those violating them were to be destroyed by the objects’ power. In other words, just as in Hobbes, social relations are created when a group of men agreed to create a sovereign power to threaten them with violence if they failed to respect their property rights and contractual obligations. Later, African texts even praised the fetish as preventing a war of all against all. Unfortunately, it’s completely impossible to find evidence that Hobbes was aware of any of this; he lived most of his life in a port town and very likely had met traders familiar with such customs; but his political works contain no references to the African continent whatever.

China and the European nation-state. Over the course of the early Modern period, European elites gradually conceived the ideal of governments that ruled over uniform populations, speaking the same language, under a uniform system of law and administration; and eventually that this system also should be administered by a meritocratic elite whose training should consist largely in the study of literary classics in that nation’s vernacular language. The odd thing is nothing approaching a precedent for a state of this sort existed anywhere in previous European history, though it almost exactly corresponded to the system Europeans believed to hold sway (and which to a large extent, did hold sway) in Imperial China. Is

---

12 Obviously the Chinese state was profoundly different in some ways as well: first of all it was a universalistic empire. But, Tooker to the contrary, one can borrow an idea without embracing every element.

---

Part III: On the Emergence of the “Democratic Ideal”

The remarkable thing is just how long it took. For the first three hundred years of the North Atlantic system, democracy continued to mean “the mob.” This was true even in the “Age of Revolutions.” In almost every case, the founders of what are now considered the first democratic constitutions in England, France, and the United States, rejected any suggestion that they were trying to introduce “democracy.” As Francis Dupuis-Deri (1999,2004) has observed:

The founders of the modern electoral systems in the United States and France were overtly anti-democratic. This anti-democratism can be explained in part by their vast knowledge of the literary, philosophical and historical texts of Greco-Roman antiquity. Regarding political history, it was common for American and French political figures to see themselves as direct heirs to classical civilization and to believe that, all through history, from Athens and Rome to Boston and Paris, the same political forces have faced off in eternal struggles. The founders sided with the historical republican forces against the aristocratic and democratic ones, and the Roman republic was the political model for both the Americans and the French, whereas Athenian democracy was a despised counter-model. (Dupuis-Deri 2004: 120)

In the English-speaking world, for example, most educated people in the late eighteenth century were familiar with Athenian democracy largely through a translation of Thucydides by Thomas Hobbes. Their conclusion, that democracy was unstable, tumultuous, prone to factionalism and demagoguery, and marked by a strong tendency to turn into despotism, was hardly surprising.
Most politicians, then, were hostile to anything that smacked of democracy precisely because they saw themselves as heirs to what we now call "the Western tradition." The ideal of the Roman republic was enshrined, for example, in the American constitution, whose framers were quite consciously trying to imitate Rome’s “mixed constitution,” balancing monarchical, aristocratic, and democratic elements. John Adams, for example, in his Defense of the Constitution (1797) argued that truly egalitarian societies do not exist; that every known human society has a supreme leader, an aristocracy (whether of wealth or a “natural aristocracy” of virtue) and a public, and that the Roman Constitution was the most perfect in balancing the powers of each. The American constitution was meant to reproduce this balance by creating a powerful presidency, a senate to represent the wealthy, and a congress to represent the people—though the powers of the latter were largely limited to ensuring popular control over the distribution of tax money. This republican ideal lies at the basis of all “democratic” constitutions and to this day many conservative thinkers in America like to point out that “America is not a democracy: it’s a republic.”

On the other hand, as John Markoff notes, “those who called themselves democrats at the tail end of the eighteenth century were likely to be very suspicious of parliaments, downright hostile to competitive political parties, critical of secret ballots, uninterested or even opposed to women’s suffrage, and sometimes tolerant of slavery” (1999: 661)—again, hardly surprising, for those who wished to revive something along the lines of ancient Athens.

At the time, outright democrats of this sort—men like Tom Paine, for instance—were considered a tiny minority of rabble rousers even within revolutionary regimes. Things only began to change over the course of the next century. In the United States, as the franchise widened in the first decades of the nineteenth century, and politicians were increasingly forced to seek the votes of small farmers and urban laborers, some began to adopt the term. Andrew and to have been reabsorbed within the tradition that eventually came to be known as "Western." The actual genealogy of the elements that came together in the modern state, for example, is probably impossible to reconstruct—if only because the very process of recuperation tends to scrub away the more exotic elements in written accounts, or, if not, integrate them into familiar topoi of invention and discovery. Historians, who tend to rely almost exclusively on texts and pride themselves on exacting standards of evidence, therefore, often end up, as they did with the Iroquois influence theory, feeling it is their professional responsibility to act as if new ideas do emerge from within textual traditions. Let me throw out two examples:

African fetishism and the idea of the social contract.
The Atlantic system, of course, began to take form in West Africa even before Columbus sailed to America. In a fascinating series of essays, William Pietz (1985, 1987, 1988) has described the life of the resulting coastal enclaves where Venetian, Dutch, Portuguese, and every other variety of European merchant and adventurer cohabited with African merchants and adventurers speaking dozens of different languages, a mix of Muslim, Catholic, Protestant, and a variety of ancestral religions. Trade, within these enclaves, was regulated by objects the Europeans came to refer to as “fetishes,” and Pietz does much to elaborate the European merchants’ theories of value and materiality to which this notion ultimately gave rise. More interesting, perhaps, is the African perspective. Insofar as it can be reconstructed, it appears strikingly similar to the kind of social contract theories developed by men like Thomas Hobbes in Europe at the same time (MacGaffey 1994; Graeber 2005). Essentially, fetishes were created by a series of contracting parties who
All of this has very little to do with the great literary-
philosophical traditions that tend to be seen as the pillars of
great civilizations: indeed, with few exceptions, those traditions
are overall explicitly hostile to democratic procedures and the
sort of people that employ them. Governing elites, in turn, have
tended either to ignore these forms, or to try to stomp them out.

At a certain point in time, however, first in the core states of the
Atlantic system—notably England and France, the two that had the
largest colonies in North America—this began to change. The cre-
ation of that system had been heralded by such unprecedented de-
struction that it allowed endless new improvisational spaces for the
emerging “Atlantic proletariat.” States, under pressure from social
movements, began to institute reforms; eventually, those working
in the elite literary tradition started seeking precedents for them.
The result was the creation of representative systems modeled on
the Roman Republic that then were later redubbed, under popular
pressure, “democracies” and traced to Athens.

Actually, I would suggest that this process of democratic recu-
peration and refoundation was typical of a broader process that
probably marks any civilizational tradition, but was at that time
entering a phase of critical intensity. As European states expanded
and the Atlantic system came to encompass the world, all sorts of
global influences appear to have coalesced in European capitals,

10 Usually, one can pick out pro-democratic voices here and there, but they
tend to be in a distinct minority. In ancient Greece, for instance, there would ap-
pear to be precisely three known authors who considered themselves democrats:
Hippodamus, Protagoras, and Democritus. None of their works, however, have
survived so their views are only known by citations in anti-democratic sources.

11 It’s interesting to think about Athens itself in this regard. The results are
admittedly a bit confusing: it was by far the most cosmopolitan of Greek cities
(though foreigners were not allowed to vote), and historians have yet to come to
consensus over whether it can be considered a state. The latter largely depends
on whether one takes a Marxian or Weberian perspective: there was clearly a
ruling class, if a very large one, but there was almost nothing in the way of an
administrative apparatus.
was a distinctly “Western” ideal only came much later. For most of the nineteenth century, when Europeans defined themselves against “the East” or “the Orient,” they did so precisely as “Europeans,” not “Westerners.” With few exceptions, “the West” referred to the Americas. It was only in the 1890s, when Europeans began to see the United States as part of the same, coequal civilization, that many started using the term in its current sense (GoGwilt 1995; Martin & Wigan 1997: 49-62). Huntington’s “Western civilization” comes even later: this notion was first developed in American universities in the years following World War I (Federici 1995: 67), at a time when German intellectuals were already locked in debate about whether they were part of the West at all. Over the course of the twentieth century, the concept of “Western civilization” proved perfectly tailored for an age that saw the gradual dissolution of colonial empires, since it managed to lump together the former colonial metropoles with their wealthiest and most powerful settler colonies, at the same time insisting on their shared moral and intellectual superiority, and abandoning any notion that they necessarily had a responsibility to “civilize” anybody else. The peculiar tension evident in phrases like “Western science,” “Western freedoms,” or “Western consumer goods”—do these reflect universal truths that all human beings should recognize? or are they the products of one tradition among many?—would appear to stem directly from the ambiguities of the historical moment. The resulting formulation is, as I’ve noted, so riddled with contradictions that it’s hard to see how it could have arisen except to fill a very particular historical need.

If you examine these terms more closely, however, it becomes obvious that all these “Western” objects are the products of endless entanglements. “Western science” was patched together out often complained that it was difficult to preach to Seneca in their own languages, because a majority were not completely fluent in it (Quain 1937). Even during the eighteenth century, for instance, while Canassatoga was an Onondaga sachem, the other main negotiator with the colonists, Swatane (called Schickallemy) was actually French—or, at least, born to French parents in what’s now Canada. On all sides, then, borders were blurred. We are dealing with a graded succession of spaces of democratic improvisation, from the Puritan communities of New England with their town councils, to frontier communities, to the Iroquois themselves.

Traditions as Acts of Endless Refoundation

Let me try to pull some of the pieces together now.

Throughout this essay, I’ve been arguing that democratic practice, whether defined as procedures of egalitarian decision-making, or government by public discussion, tends to emerge from situations in which communities of one sort or another manage their own affairs outside the purview of the state. The absence of state power means the absence of any systematic mechanism of coercion to enforce decisions; this tends to result either in some form of consensus process, or, in the case of essentially military formations like Greek hoplites or pirate ships, sometimes a system of majority voting (since, in such cases, the results, if it did come down to a contest of force, are readily apparent). Democratic innovation, and the emergence of what might be called democratic values, has a tendency to spring from what I’ve called zones of cultural improvisation, usually also outside of the control of states, in which diverse sorts of people with different traditions and experiences are obliged to figure out some way to deal with one another. Frontier communities whether in Madagascar or Medieval Iceland, pirate ships, Indian Ocean trading communities, Native American confederations on the edge of European expansion, are all examples here.

---

7 One reason this is often overlooked is that Hegel was among the first to use “the West” in its modern sense, and Marx often followed him in this. However, this usage was, at the time, extremely unusual.
colonial governments entirely (Sakolsky & Koehnline 1993), or island enclaves of what Linebaugh and Rediker (1991) have called “the Atlantic proletariat,” the motley collection of freedmen, sailors, ships whores, renegades, Antinomians, and rebels that developed in the port cities of the North Atlantic world before the emergence of modern racism, and from whom much of the democratic impulse of the American—and other—revolutions seems to have first emerged. But it was true for ordinary settlers as well. The irony is that this was the real argument of Bruce Johansen’s book Forgotten Founders (1982), which first kicked off the “influence debate”—an argument that largely ended up getting lost in all the sound and fury about the constitution: that ordinary Englishmen and Frenchmen settled in the colonies only began to think of themselves as “Americans,” as a new sort of freedom-loving people, when they began to see themselves as more like Indians. And that this sense was inspired not primarily by the sort of romanticization at a distance one might encounter in texts by Jefferson or Adam Smith, but rather, by the actual experience of living in frontier societies that were essentially, as Calloway puts it, “amalgams.” The colonists who came to America, in fact, found themselves in a unique situation: having largely fled the hierarchy and conformism of Europe, they found themselves confronted with an indigenous population far more dedicated to principles of equality and individualism than they had hitherto been able to imagine; and then proceeded to largely exterminate them, even while adopting many of their customs, habits, and attitudes.

I might add that during this period the Five Nations were something of an amalgam as well. Originally a collection of groups that had made a kind of contractual agreement with one another to create a way of mediating disputes and making peace, they became, during their period of expansion in the seventeenth century, an extraordinary jumble of peoples, with large proportions of the population war captives adopted into Iroquois families to replace family members who were dead. Missionaries in those days of discoveries made on many continents, and is now largely produced by non-Westerners. “Western consumer goods” were always drawn from materials taken from all over the world, many explicitly imitated Asian products, and nowadays, are all produced in China. Can we say the same of “Western freedoms”?

The reader can probably guess what my answer will be.

**Part IV: Recuperation**

In debates about the origins of capitalism, one of the main bones of contention is whether capitalism—or, alternately, industrial capitalism—emerged primarily within European societies, or whether it can only be understood in the context of a larger world-system connecting Europe and its overseas possessions, markets and sources of labor overseas. It is possible to have the argument, I think, because so many capitalist forms began so early—many could be said to already be present, at least in embryonic form, at the very dawn of European expansion. This can hardly be said for democracy. Even if one is willing to follow by-now accepted convention and identify republican forms of government with that word, democracy only emerges within centers of empire like England and France, and colonies like the United States, after the Atlantic system had existed for almost three hundred years.

Giovanni Arrighi, Ifitikhar Ahmad, and Min-wn Shih (1997) have produced what’s to my mind one of the more interesting responses to Huntington: a world-systemic analysis of European expansion, particularly in Asia, over the last several centuries. One of the most fascinating elements in their account is how, at exactly the same time as European powers came to start thinking themselves as “democratic”—in the 1830s, 1840s, and 1850s—those same powers began pursuing an intentional policy of supporting reactionary elites against those pushing for anything remotely resembling democratic reforms overseas. Great Britain
was particularly flagrant in this regard: whether in its support for the Ottoman Empire against the rebellion of Egyptian governor Muhammad Ali after the Balta Limani Treaty of 1838, or in its support for the Qing imperial forces against the Taiping rebellion after the Nanjing Treaty of 1842. In either case, Britain first found some excuse to launch a military attack on one of the great Asian \textit{ancien regimes}, defeated it militarily, imposed a commercially advantageous treaty, and then, almost immediately upon doing so, swung around to prop that same regime up against political rebels who clearly were closer to their own supposed “Western” values than the regime itself: in the first case a rebellion aiming to turn Egypt into something more like a modern nation-state, in the second, an egalitarian Christian movement calling for universal brotherhood. After the Great Rebellion of 1857 in India, Britain began employing the same strategy in her own colonies, self-consciously propping up “landed magnates and the petty rulers of ‘native states’ within its own Indian empire” (1997: 34). All of this was buttressed on the intellectual level by the development around the same time of Orientalist theories that argued that, in Asia, such authoritarian regimes were inevitable, and democratizing movements were unnatural or did not exist.\footnote{One should probably throw in a small proviso here: Orientalism allowed colonial powers to make a distinction between rival civilizations, which were seen as hopelessly decadent and corrupt, and “savages,” who insofar as they were not seen as hopelessly racially inferior, could be considered possible objects of a “civilizing mission.” Hence Britain might have largely abandoned attempts to reform Indian institutions in the 1860s, but it took up the exact same rhetoric later in Africa. Africa was thus in some ways relegated to the “savage slot” that had been the place of the West—that is, had been before Europeans decided they were themselves “Westerners.”}

In sum, Huntington’s claim that Western civilization is the bearer of a heritage of liberalism, constitution-ality, human rights, equality, liberty, the rule of law, democracy, free markets, and other similarly attrac-

knowledge. This is not to say that pirate practices were likely to have influenced democratic constitutions. Only that we would not know if they did. One can hardly imagine things would be too different with those they ordinarily referred to as “the American savages.”

The other reason is that frontier societies in the Americas were probably more similar to pirate ships than we would be given to imagine. They might not have been as densely populated as pirate ships, or in as immediate need of constant cooperation, but they were spaces of intercultural improvisation, largely outside of the purview of states. Colin Calloway (1997; cf. Axtell 1985) has documented just how entangled the societies of settlers and natives often were, with settlers adopting Indian crops, clothes, medicines, customs, and styles of warfare; trading with them, often living side by side, sometimes intermarrying, and most of all, inspiring endless fears among the leaders of colonial communities and military units that their subordinates were absorbing Indian attitudes of equality and individual liberty. At the same time, as New England Puritan minister Cotton Mather, for example, was inveighing against pirates as a blaspheming scourge of mankind, he was also complaining that fellow colonists had begun to imitate Indian customs of child-rearing (for example, by abandoning corporal punishment), and increasingly forgetting the principles of proper discipline and “severity” in the governance of families for the “foolish indulgence” typical of Indians, whether in relations between masters and servants, men and women, or young and old (Calloway 1997: 192).\footnote{“Though the first English planters in this country had usually a government and a discipline in their families and had a sufficient severity in it, yet, as if the climate had taught us to Indianize, the relaxation of it is now such that it is wholly laid aside, and a foolish indulgence to children is become an epidemical miscarriage of the country, and like to be attended with many evil consequences” (op. Cit.).} This was true most of all in communities, often made up of escaped slaves and servants who “became Indians,” outside the control of
even the most minor matters, always, apparently, by majority show of hands.

All this might seem less surprising if one considers the pirates’ origins. Pirates were generally mutineers, sailors often originally pressed into service against their will in port towns across the Atlantic, who had mutinied against tyrannical captains and “declared war against the whole world.” They often became classic social bandits, wreaking vengeance against captains who abused their crews, and releasing or even rewarding those against whom they found no complaints. The make-up of crews was often extraordinarily heterogeneous. “Black Sam Bellamy’s crew of 1717 was ‘a Mix’d Multitude of all Country’s,’ including British, French, Dutch, Spanish, Swedish, Native American, African American, and two dozen Africans who had been liberated from a slave ship” (Rediker 2004: 53). In other words, we are dealing with a collection of people in which there was likely to be at least some first-hand knowledge of a very wide range of directly democratic institutions, ranging from Swedish tings to African village assemblies to Native American councils such as those from which the League of Six Nations itself developed, suddenly finding themselves forced to improvise some mode of self-government in the complete absence of any state. It was the perfect intercultural space of experiment. In fact, there was likely to be no more conducive ground for the development of new democratic institutions anywhere in the Atlantic world at the time.

I bring this up for two reasons. One is obvious. We have no evidence that democratic practices developed on Atlantic pirate ships in the early part of the eighteenth century had any influence, direct or indirect, on the evolution of democratic constitutions sixty or seventy years later. Nor could we. While accounts of pirates and their adventures circulated widely, having much the same popular appeal as they do today (and presumably, at the time, were likely to be at least a little more accurate than contemporary Hollywood versions), this would be about the very last influence a French, English, or colonial gentleman would ever have been willing to accept—ideals—all of which are said to have permeated other civilizations only superficially—rings false to anyone familiar with the Western record in Asia in the so-called age of nation-states. In this long list of ideals, it is hard to find a single one that was not denied in part or full by the leading Western powers of the epoch in their dealings either with the peoples they subjected to direct colonial rule or with the governments over which they sought to establish suzerainty. And conversely, it is just as hard to find a single one of those ideals that was not upheld by movements of national liberation in their struggle against the Western powers. In upholding these ideals, however, non-Western peoples and governments invariably combined them with ideals derived from their own civilizations in those spheres in which they had little to learn from the West (Arrighi, Ahmad, and Shih 1997: 25).

Actually, I think one could go much further. Opposition to European expansion in much of the world, even quite early on, appears to have been carried out in the name of “Western values” that the Europeans in question did not yet even have. Engseng Ho (2004: 222—24) for example draws our attention to the first known articulation of the notion of jihad against Europeans in the Indian Ocean: a book called Gift of the Jihad Warriors in Matters Regarding the Portuguese, written in 1574 by an Arab jurist named Zayn al-Din al Malibari and addressed to the Muslim sultan of the Deccan state of Bijapur. In it, the author makes a case that it is justified to wage war against the Portuguese specifically because they destroyed a tolerant, pluralistic society in which Muslims, Hindus, Christians, and Jews had always managed to coexist.

In the Muslim trading ecumene of the Indian Ocean, some of Huntington’s values—a certain notion of liberty, a certain notion...
of equality, some very explicit ideas about freedom of trade and the rule of law—had long been considered important; others, such as religious tolerance, might well have become values as a result of Europeans coming onto the scene—if only by point of contrast. My real point is that one simply cannot lay any of these values down to the one particular moral, intellectual, or cultural tradition. They arise, for better or worse, from exactly this sort of interaction.

I also want to make another point, though. We are dealing with the work of a Muslim jurist, writing a book addressed to a South Indian king. The values of tolerance and mutual accommodation he wishes to defend—actually, these are our terms; he himself speaks of “kindness”—might have emerged from a complex intercultural space, outside the authority of any overarching state power, and they might have only crystallized, as values, in the face of those who wished to destroy that space. Yet, in order to write about them, to justify their defense, he was forced to deal with states and frame his argument in terms of a single literary-philosophical tradition: in this case, the legal tradition of Sunni Islam. There was an act of reincorporation. There inevitably must be, once one reenters the world of state power and textual authority. And, when later authors write about such ideas, they tend to represent matters as if the ideals emerged from that tradition, rather than from the spaces in between.

So do historians. In a way, it’s almost inevitable that they should do so, considering the nature of their source material. They are, after all, primarily students of textual traditions, and information about the spaces in between is often very difficult to come by. What’s more, they are—at least when dealing with the “Western tradition”—writing, in large part, within the same literary tradition as their sources. This is what makes the real origins of democratic ideals—especially that popular enthusiasm for ideas of liberty and popular sovereignty that obliged politicians to adopt the term to begin with—so difficult to reconstruct. Recall here what I said earlier about the “slipperiness of the Western eye.” The tradition

its history. Actually, the men who wrote the Constitution were not only for the most part wealthy landowners, few had a great deal of experience in sitting down with a group of equals—at least, until they became involved in colonial congresses. Democratic practices tend to first get hammered out in places far from the purview of such men, and, if one sets out in search for which of their contemporaries had the most hands-on experience in such matters, the results are sometimes startling. One of the leading contemporary historians of European democracy, John Markoff, in an essay called “Where and When Was Democracy Invented?,” remarks, at one point, very much in passing:

that leadership could derive from the consent of the led, rather than be bestowed by higher authority, would have been a likely experience of the crews of pirate vessels in the early modern Atlantic world. Pirate crews not only elected their captains, but were familiar with countervailing power (in the forms of the quartermaster and ship’s council) and contractual relations of individual and collectivity (in the form of written ship’s articles specifying shares of booty and rates of compensation for on-the-job injury) (Markoff 1999: 673n62).

As a matter of fact, the typical organization of eighteenth-century pirate ships, as reconstructed by historians like Marcus Rediker (2004: 60–82), appears to have been remarkably democratic. Captains were not only elected, they usually functioned much like Native American war chiefs: granted total power during chase or combat, they were otherwise were treated like ordinary crewmen. Those ships whose captains were granted more general powers also insisted on the crew’s right to remove them at any time for cowardice, cruelty, or any other reason. In every case, ultimate power rested in a general assembly that often ruled on
hearts of the Founding Fathers than this one. There was nothing to
be gained by looking to the New World for inspiration” (Newman
1998: 18). If one is speaking of the immediate perceptions of many
of the United States’ “founding fathers,” this may well be true, but
if we are trying to understand the Iroquois influence on American
democracy, then matters look quite different. As we’ve seen,
the Constitution’s framers did indeed identify with the classical
tradition, but they were hostile to democracy for that very reason.
They identified democracy with untrammeled liberty, equality,
and, insofar as they were aware of Indian customs at all, they were
likely to see them as objectionable for precisely the same reasons.

If one reexamines some of the mooted passages, this is precisely
what one finds. John Adams, remember, had argued in his Defense
of the Constitution that egalitarian societies do not exist; political
power in every human society is divided between the monarchical,
aristocratic, and democratic principles. He saw the Indians as re-
ssembling the ancient Germans in that “the demo-
cratic branch,
in particular, is so determined, that real sovereignty resided in the
body of the people,” which, he said, worked well enough when one
was dealing with populations scattered over a wide territory with
no real concentrations of wealth, but, as the Goths found when they
conquered the Roman empire, could only lead to confusion, insta-
bility, and strife as soon as such populations became more settled
and have significant resources to administer (Adams: 296; see Levy
1999: 598; Payne 1999: 618). His observations are typical. Madison,
even Jefferson, tended to describe Indians much as did John Locke,
as exemplars of an individual liberty untrammeled by any form
of state or systematic coercion—a condition made possible by the fact
that Indian societies were not marked by significant divisions of
property. They considered Native institutions obviously inappro-
priate for a society such as their own, which did.

Still, Enlightenment theory to the contrary, nations are not re-
ally created by the acts of wise lawgivers. Neither is democracy
invented in texts; even if we are forced to rely on texts to divine
has long had a tendency to describe alien societies as puzzles to
be deciphered by a rational observer. As a result, descriptions
of alien societies were often used, around this time, as a way of
making a political point: whether contrasting European societies
with the relative freedom of Native Americans, or the relative
order of China. But they did not tend to acknowledge the degree
to which they were themselves entangled with those societies and
to which their own institutions were influenced by them. In fact,
as any student of early anthropology knows, even authors who
were themselves part Native American or part Chinese, or who
had never set foot in Europe, would tend to write this way. As
men or women of action, they would negotiate their way between
worlds. When it came time to write about their experiences, they
would become featureless abstractions. When it came time to
write institutional histories, they referred back, almost invariably,
to the Classical world.

The “Influence Debate”

In 1977, an historian of the Iroquois confederacy (himself a
Native American and member of AIM, the American Indian Move-
ment) wrote an essay proposing that certain elements of the US
constitution—particularly its federal structure—were inspired in
part by the League of Six Nations. He expanded on the argument
in the 1980s with another historian, David Johansen (1982; Grinde
and Johansen 1990), suggesting that, in a larger sense, what
we now would consider America’s democratic spirit was partly
inspired by the example of Native Americans.

Some of the specific evidence they assembled was quite com-
pelling. The idea of forming some sort of federation of colonies was
indeed proposed by an Onondaga ambassador named Canassatego,
exhausted by having to negotiate with so many separate colonies
during negotiations over the Lancaster Treaty in 1744. The image
he used to demonstrate the strength of union, a bundle of six ar-
rows, still appears on the Seal of the Union of the United States (the number later increased to thirteen). Ben Franklin, present at the event, took up the idea and promoted it widely through his printing house over the next decade, and, in 1754, his efforts came to fruition with a conference in Albany, New York—with representatives of the Six Nations in attendance—that drew up what came to be known as the Albany Plan of Union. The plan was ultimately rejected both by British authorities and colonial parliaments, but it was clearly an important first step. More importantly, perhaps, proponents of what has come to be called the “influence theory” argued that the values of egalitarianism and personal freedom that marked so many Eastern Woodlands societies served as a broader inspiration for the equality and liberty promoted by colonial rebels. When Boston patriots triggered their revolution by dressing up as Mohawks and dumping British tea into the harbor, they were making a self-conscious statement of their model for individual liberty.

That Iroquois federal institutions might have had some influence on the US constitution was considered a completely unremarkable notion, when it was occasionally proposed in the nineteenth century. When it was proposed again in the 1980s it set off a political maelstrom. Many Native Americans strongly endorsed the idea, Congress passed a bill acknowledging it, and all sorts of right-wing commentators immediately pounced on it as an example of the worst sort of political correctness. At the same time, though, the argument met immediate and quite virulent opposition both from most professional historians considered authorities on the constitution and from anthropological experts on the Iroquois.

The actual debate ended up turning almost entirely on whether one could prove a direct relation between Iroquois institutions and the thinking of the framers of the constitution. Payne (1999), for example, noted that some New England colonists were discussing federal schemes before they were even aware of the League’s existence; in a larger sense, they argued that proponents of the “influence theory” had essentially cooked the books by picking out every existing passage in the writings of colonial politicians that praised Iroquoian institutions, while ignoring hundreds of texts in which those same politicians denounced the Iroquois, and Indians in general, as ignorant murdering savages. Their opponents, they said, left the reader with the impression that explicit, textual proof of an Iroquois influence on the constitution existed, and this was simply not the case. Even the Indians present at constitutional conventions appear to have been there to state grievances, not to offer advice. Invariably, when colonial politicians discussed the origins of their ideas, they looked to Classical, Biblical, or European examples: the book of Judges, the Achaean League, the Swiss Confederacy, the United Provinces of the Netherlands. Proponents of the influence theory, in turn, replied that this kind of linear thinking was simplistic: no one was claiming the Six Nations were the only or even primary model for American federalism, just one of many elements that went into the mix—and considering that it was the only functioning example of a federal system of which the colonists had any direct experience, to insist it had no influence whatever was simply bizarre. Indeed, some of the objections raised by anthropologists seem so odd—for example, Elisabeth Tooker’s objection (1998) that, since the League worked by consensus and reserved an important place for women, and the US constitution used a majority system and only allowed men to vote, one could not possibly have served as inspiration for the other, or Dean Snow’s remark (1994: 154) that such claims “muddle and denigrate the subtle and remarkable features of Iroquois government”—one can only conclude that Native American activist Vine Deloria probably did have a point in suggesting much of this was simply an effort by scholars to protect what they considered their turf—a matter of intellectual property rights (in Johansen 1998: 82).

The proprietary reaction is much clearer in some quarters. “This myth isn’t just silly, it’s destructive,” wrote one contributor to The New Republic. “Obviously ‘Western civilization, beginning in Greece, had provided models of government much closer to the
