tance against the societies of control? Can we already grasp the rough outlines of these coming forms, capable of threatening the joys of marketing? Many young people strangely boast of being “motivated”; they re-request apprenticeships and permanent training. It’s up to them to discover what they’re being made to serve, just as their elders discovered, not without difficulty, the telos of the disciplines. The coils of a serpent are even more complex than the burrows of a molehill.

1. Historical

Foucault located the disciplinary societies in the eighteenth and nineteenth centuries; they reach their height at the outset of the twentieth. They initiate the organization of vast spaces of enclosure. The individual never ceases passing from one closed environment to another, each having its own laws: first, the family; then the school (“you are no longer in your family”); then the barracks (“you are no longer at school”); then the factory; from time to time the hospital; possibly the prison, the pre-eminent instance of the enclosed environment. It’s the prison that serves as the analogical model: at the sight of some laborers, the heroine of Rossellini’s Europa ’51 could exclaim, “I thought I was seeing convicts.”

Foucault has brilliantly analyzed the ideal project of these environments of enclosure, particularly visible within the factory: to concentrate; to distribute in space; to order in time; to compose a productive force within the dimension of space-time whose effect will be greater than the sum of its component forces. But what Foucault recognized as well was the transience of this model: it succeeded that of the societies of sovereignty, the goal and functions of which were something quite different (to tax rather than to organize production, to rule on death rather than to administer life); the transition took place over time, and Napoleon seemed to effect the large-scale conversion from one society to the other. But in their turn the disciplines underwent a crisis to the benefit of new forces that were gradually instituted and which accelerated after World War II: a disciplinary society was what we already no longer were, what we had ceased to be.

We are in a generalized crisis in relation to all the environments of enclosure—prison, hospital, factory, school, family. The family is an “interior,” in crisis like all other interiors—scholarly, professional, etc. The administrations in
charge never cease announcing supposedly necessary reforms:
to reform schools, to reform industries, hospitals, the armed
forces, prisons. But everyone knows that these institutions are
finished, whatever the length of their expiration periods. It’s
only a matter of administering their last rites and of keeping
people employed until the installation of the new forces
knocking at the door.

These are the *societies of control*, which are in the process
of replacing the disciplinary societies. “Control” is the name
Burroughs proposes as a term for the new monster, one that
Foucault recognizes as our immediate future. Paul Virilio also
is continually analyzing the ultra-rapid forms of free-floating
control that replaced the old disciplines operating in the time
frame of a closed system. There is no need here to invoke the
extraordinary pharmaceutical productions, the molecular engi-
neering, the genetic manipulations, although these are slated
to enter into the new process. There is no need to ask which
is the toughest or most tolerable regime, for it’s within each of
them that liberating and enslaving forces confront one another.
For example, in the crisis of the hospital as environment of en-
closure, neighborhood clinics, hospices, and day care could at
first express new freedom, but they could participate as well
in mechanisms of control that are equal to the harshest of con-
finements. There is no need to fear or hope, but only to look
for new weapons.

2. Logic

The different internments or spaces of enclosure through
which the individual passes are independent variables: each
time one is supposed to start from zero, and although a com-
mon language for all these places exists, it is *analogical*. On the
other hand, the different control mechanisms are inseparable
variations, forming a system of variable geometry the language
be able to leave one’s apartment, one’s street, one’s neighbor-
hood, thanks to one’s (dividual) electronic card that raises a
given barrier; but the card could just as easily be rejected on a
given day or between certain hours; what counts is not the bar-
rier but the computer that tracks each person’s position—licit
or illicit—and effects a universal modulation.

The socio-technological study of the mechanisms of control,
grasped at their inception, would have to be categorical and
to describe what is already in the process of substitution for
the disciplinary sites of enclosure, whose crisis is everywhere
proclaimed. It may be that older methods, borrowed from the
former societies of sovereignty, will return to the fore, but with
the necessary modifications. What counts is that we are at the
beginning of something. In the *prison system*: the attempt to
find penalties of “substitution,” at least for petty crimes, and
the use of electronic collars that force the convicted person to
stay at home during certain hours. For the *school system*: con-
tinuous forms of control, and the effect on the school of perpet-
ual training, the corresponding abandonment of all university
research, the introduction of the “corporation” at all levels of
schooling. For the *hospital system*: the new medicine “without
doctor or patient” that singles out potential sick people and
subjects at risk, which in no way attests to individuation—as
they say—but substitutes for the individual or numerical body
the code of a “dividual” material to be controlled. In the *corpo-
rate system*: new ways of handling money, profits, and humans
that no longer pass through the old factory form.

These are very small examples, but ones that will allow for
better understanding of what is meant by the crisis of the in-
stitutions, which is to say, the progressive and dispersed in-
station of a new system of domination. One of the most im-
portant questions will concern the ineptitude of the unions:
tied to the whole of their history of struggle against the dis-
ciplines or within the spaces of enclosure, will they be able to
adapt themselves or will they give way to new forms of resis-
production but for the product, which is to say, for being sold or marketed. Thus it is essentially dispersive, and the factory has given way to the corporation. The family, the school, the army, the factory are no longer the distinct analogical spaces that converge towards an owner—state or private power—but coded figures—deformable and transformable—of a single corporation that now has only stockholders.

Even art has left the spaces of enclosure in order to enter into the open circuits of the bank. The conquests of the market are made by grabbing control and no longer by disciplinary training, by fixing the exchange rate much more than by lowering costs, by transformation of the product more than by specialization of production. Corruption thereby gains a new power. Marketing has become the center or the “soul” of the corporation. We are taught that corporations have a soul, which is the most terrifying news in the world. The operation of markets is now the instrument of social control and forms the impudent breed of our masters. Control is short-term and of rapid rates of turnover, but also continuous and without limit, while discipline was of long duration, infinite and discontinuous. Man is no longer man enclosed, but man in debt. It is true that capitalism has retained as a constant the extreme poverty of three-quarters of humanity, too poor for debt, too numerous for confinement: control will not only have to deal with erosions of frontiers but with the explosions within shanty towns or ghettos.

3. Program

The conception of a control mechanism, giving the position of any element within an open environment at any given instant (whether animal in a reserve or human in a corporation, as with an electronic collar), is not necessarily one of science fiction. Felix Guattari has imagined a city where one would
The Trial, Kafka, who had already placed himself at the pivotal point between two types of social formation, described the most fearsome of juridical forms. The apparent acquittal of the disciplinary societies (between two incarcerations); and the limitless postponements of the societies of control (in continuous variation) are two very different modes of juridical life, and if our law is hesitant, itself in crisis, it’s because we are leaving one in order to enter into the other. The disciplinary societies have two poles: the signature that designates the individual, and the number or administrative numeration that indicates his or her position within a mass. This is because the disciplines never saw any incompatibility between these two, and because at the same time power individualizes and masses together, that is, constitutes those over whom it exercises power into a body and molds the individuality of each member of that body. (Foucault saw the origin of this double charge in the pastoral power of the priest—the flock and each of its animals—but civil power moves in turn and by other means to make itself lay “priest.”)

In the societies of control, on the other hand, what is important is no longer either a signature or a number, but a code: the code is a password, while on the other hand the disciplinary societies are regulated by watchwords (as much from the point of view of integration as from that of resistance). The numerical language of control is made of codes that mark access to information, or reject it. We no longer find ourselves dealing with the mass/individual pair. Individuals have become “dividuals,” and masses, samples, data, markets, or “banks.” Perhaps it is money that expresses the distinction between the two societies best, since discipline always referred back to minted money that locks gold in as numerical standard, while control relates to floating rates of exchange, modulated according to a rate established by a set of standard currencies. The old monetary mole is the animal of the spaces of enclosure, but the serpent is that of the societies of control. We have passed from one animal to the other, from the mole to the serpent, in the system under which we live, but also in our manner of living and in our relations with others. The disciplinary man was a discontinuous producer of energy, but the man of control is undulatory, in orbit, in a continuous network. Everywhere surfing has already replaced the older sports.

Types of machines are easily matched with each type of society—not that machines are determining, but because they express those social forms capable of generating them and using them. The old societies of sovereignty made use of simple machines—levers, pulleys, clocks; but the recent disciplinary societies equipped themselves with machines involving energy, with the passive danger of entropy and the active danger of sabotage; the societies of control operate with machines of a third type, computers, whose passive danger is jamming and whose active one is piracy and the introduction of viruses. This technological evolution must be, even more profoundly, a mutation of capitalism, an already well-known or familiar mutation that can be summed up as follows: nineteenth-century capitalism is a capitalism of concentration, for production and for property. It therefore erects the factory as a space of enclosure, the capitalist being the owner of the means of production but also, progressively, the owner of other spaces conceived through analogy (the worker’s familial house, the school).

As for markets, they are conquered sometimes by specialization, sometimes by colonization, sometimes by lowering the costs of production. But, in the present situation, capitalism is no longer involved in production, which it often relegates to the Third World, even for the complex forms of textiles, metallurgy, or oil production. It’s a capitalism of higher-order production. It no longer buys raw materials and no longer sells the finished products: it buys the finished products or assembles parts. What it wants to sell is services and what it wants to buy is stocks. This is no longer a capitalism for
