A History of Money

Davies, Glyn. *A History of Money: From Ancient Times to the Present Day* [1994]. Cardiff: University of Wales Press, 2003, third revised edition, 720 pages. This is an esteemed, comprehensive, scholarly, general history.

The Nature of Money

Ingham, Geoffrey. *The Nature of Money*. Cambridge, UK: Polity Press, 2004, 254 pages.

Next. Ingham (together with a small group of economists clustered mostly at the University of Missouri in Kansas City) has been revolutionizing the study of money. They have proved that money did not originate from barter, but was instead invented by states, as a means of collecting taxes. This casts an entirely new light on the prospects of getting rid of money: if you get rid of states you might be able to get rid of money too (although they do not draw this conclusion themselves; they argue that since money reflects the power relations in the society, if you equalize the power, money would not be a problem – to which I raise a very skeptical eye.) This

Money and Finance in Capitalism

Arrighi, Giovanni. *The Long Twentieth Century: Money, Power, and the Origins of Our Times* [1994]. London: Verso, 2010, updated edition, 416 pages. This is an outstanding, scholarly account of the role of money during the past five hundred years of capitalism. It covers the four great cycles of capital accumulation, those based in Genoa, Amsterdam, London, and New York City. Each cycle has two phases: the first based on real production, and the second on financial speculation. This is an absolutely essential read.

Also relevant is the long standing debate over the labor theory of value. The basic question of course is how we are to determine the value of something, in comparison to something else, to serve as a basis for exchange? Or is determining value even necessary for exchange? What about gifts and mutual aid? To begin with, see:

This is a brilliant reconstruction of the decades-long dispute between Marx and Proudhon over the market. Marx rejected the market, McNally claims, while Proudhon didn't. This is an insightful book, and is very helpful in getting a handle on so-called market

Gifts

Graeber, David. *Toward an Anthropological Theory of Value*. New York: Palgrave, 2001, 337 pages.

For those who are interested in establishing an anarchist world without money, this is a good place to begin. Graeber tackles the question of the how humans assign value to things (and where prices come from and what are they based on), relying on his extensive knowledge of the anthropological literature to help answer it. A key part of the book is his long chapter on "Marcel Mauss Revisited" (the author of *The Gift*). Thus the book is directly relevant to the current revival of interest in the so-called "gift economy." It is an extended examination of the "value" question in non-market situations.
