that is, he gets down on his knees before the capitalists and recognises the sovereignty of monopoly.” Given that Proudhon saw the state as an instrument of the capitalist class, asking that state to abolish capitalism was illogical and impossible. Moreover, by getting the funds for the “social workshop” from capitalists, Blanc’s scheme was hardly undermining their power. “Capital and power,” Proudhon argued, “secondary organs of society, are always the gods whom socialism adores; if capital and power did not exist, it would invent them.” [quoted by Vincent, Op. Cit., p. 157] He stressed the authoritarian nature of Blanc’s scheme:

“M. Blanc is never tired of appealing to authority, and socialism loudly declares itself anarchistic; M. Blanc places power above society, and socialism tends to subordinate it to society; M. Blanc makes social life descend from above, and socialism maintains that it springs up and grows from below; M. Blanc runs after politics, and socialism is in quest of science. No more hypocrisy, let me say to M. Blanc: you desire neither Catholicism nor monarchy nor nobility, but you must have a God, a religion, a dictatorship, a censorship, a hierarchy, distinctions, and ranks. For my part, I deny your God, your authority, your sovereignty, your judicial State, and all your representative mystifications.” [System of Economical Contradictions, p. 263]

Equally, Proudhon opposed the “top-down” nature of Blanc’s ideas. As it was run by the state, the system of workshops would hardly be libertarian as “hierarchy would result from the elective principle . . . as in constitutional politics. But these social workshops again, regulated by law, — will they be anything but corporations? What is the bond of corporations? The law. Who will make the law? The government.” Such a regime, Proudhon argued, would be unlikely to function well and the net result would be “all reforms ending, now in hierarchical corporation, now in State monopoly, or the destruction of the classes by means of a social revolution which eliminates, with the classes, the State. The Marxists, moreover, do not propose the armed conquest of the Commune by the whole proletariat, but the propose the conquest of the State by the party which imagines that it represents the proletariat. The Anarchists allow the use of direct power by the proletariat, but they understand by the organ of this power to be formed by the entire corpus of systems of communist administration-corporate organisations [i.e. industrial unions], communal institutions, both regional and national-freely constituted outside and in opposition to all political monopoly by parties and endeavouring to a minimum administrative centralisation.” ["Dictatorship of the Proletariat and State Socialism", pp. 51–2, Cienfuegos Press Anarchist Review, no. 4, p. 52]

Clearly, Lenin’s assertions are little more than straw men. Anarchists are not only well aware of the need for a federation of working class associations (workers’ councils or soviets) to replace the state, they were advocating it long before Lenin took up this perspective in 1917 (as we discuss in section H.3.10). The key difference being, of course, anarchists meant it will Lenin saw it as a means of securing Bolshevik party power.

Lastly, it should also be noted that Marxists, having taken so long to draw the same conclusions as anarchists like Proudhon and Bakunin, have tended to make a fetish of workers councils. As an example, we find Chris Harman of the British SWP complaining that the Argentinean masses organised themselves in the wrong way as part of their revolt against neo-liberalism which started in December 2001. He states that the “neighbourhood committees and popular assemblies” created by the revolt “express the need of those who have overthrown presidents to organise themselves” and notes “they have certain similarities with the characteristic forms of
... Federation of Communes and organisation of the masses, with an eye to the revolution’s enduring until such time as all reactionary activity has been completely eradicated ... Once trade bodies have been have been established, the next step is to organise local life. The organ of this life is to be the federation of trades bodies and it is this local federation which is to constitute the future Commune.” [No Gods, No Masters, vol. 1, pp. 246–7]

Clearly, anarchists do have some ideas on what the working class will “replace” the state with and how it will use its “revolutionary power”!

Similarly, Lenin’s statement that “the anarchists even deny that the revolutionary proletariat should utilise its state power, its revolutionary dictatorship” again distorts the anarchist position. As we argued in the last section, our objection to the “state power” of the proletariat is precisely because it cannot, by its very nature as a state, actually allow the working class to manage society directly (and, of course, it automatically excludes other sections of the working masses, such as the peasantry and artisans). We argued that, in practice, it would simply mean the dictatorship of a few party leaders. This position, we must stress, was one Lenin himself was arguing in the year after completing State and Revolution and so the leading Bolsheviks confirmed the anarchist argument that the “dictatorship of the proletariat” would, in fact, become a dictatorship over the proletariat by the party.

Italian anarchist Camillo Berneri summed up the differences well:

“The Marxists ... foresee the natural disappearance of the State as a consequence of the destruction of classes by the means of ‘the dictatorship of the proletariat,’ that is to say State Socialism, whereas the Anarchists desire the tyranny of communism.” [Op. Cit., p. 269 and p. 271] This was because of the perspective of state socialists:

“As you cannot conceive of society without hierarchy, you have made yourselves the apostles of authority; wor-shipers of power, you think only of strengthening it and muzzling liberty; your favourite maxim is that the welfare of the people must be achieved in spite of the people; instead of proceeding to social reform by the extermina-tion of power and politics, you insist on a reconstruction of power and politics.” [Op. Cit., p. 397]

Instead of reform from above, Proudhon stressed the need for working class people to organise themselves for their own liberation. As he put it, the “problem before the labouring classes ... [is] not in capturing, but in subduing both power and monopoly, — that is, in generating from the bowels of the people, from the depths of labour, a greater authority, a more potent fact, which shall envelop capital and the state and subjugate them.” For, “to combat and reduce power, to put it in its proper place in society, it is of no use to change the holders of power or introduce some variation into its workings: an agricultural and industrial combination must be found by means of which power, today the ruler of society, shall become its slave.” This was because the state “finds itself inevitably enchained to capital and directed against the proletariat.” [Op. Cit., p. 398, p. 397 and p. 399] Unsurprisingly, Proudhon stressed in 1848 that “the proletariat must emancipate itself without the help of the government.” [quoted by George Woodcock, Pierre-Joseph Proudhon, p. 125]

In addition, by guaranteeing interest payments, Blanc’s scheme insured the continued exploitation of labour by capital and, of course, while opposing capitalist competition, Proudhon did not consider it wise to abolish all forms of the market.

Proudhon argued for a two-way approach to undermining capitalism from below: the creation of workers associations and
the organisation of credit. By creating mutual banks, which provided credit at cost, workers could create associations to compete with capitalist firms, drive them out of business and so eliminate exploitation once and for all by workers’ self-management. In this way, the working class would emancipate itself from capitalism and build a socialist society from below upwards by their own efforts and activities. Proudhon, as Marxist Paul Thomas notes, “believed fervently … in the salvation of working men, by their own efforts, through economic and social action alone … Proudhon advocated, and to a considerable extent inspired, the undercutting of this terrain [of the state] from without by means of autonomous working-class associations.” [Karl Marx and the Anarchists, pp. 177–8] Rejecting violent revolution (as well as strikes as counter-productive), Proudhon argued for economic means to end economic exploitation and, as such, he saw anarchism as coming about by reform (unlike later social anarchists, who were generally revolutionaries and argued that capitalism cannot be reformed away and so supported strikes and other forms of collective working class direct action, struggle and combative organisation).

Unsurprisingly, Proudhon’s ideas were shaped by the society in lived and agitated in. In the mid-nineteenth century, the bulk of the French working class were artisans and peasants and so such an approach reflected the social context in which it was proposed. With a predominance of small-scale industry, the notion of free credit provided by mutual banks as the means of securing working class people access to the means of production is theoretically feasible. It was this social context which informed Proudhon’s ideas (see section H.2.3). He never failed to stress that association would be tyranny if imposed upon peasants and artisans (rather, he thought that associations would be freely embraced by these workers if they thought it was in their interests to). However, he did not ignore the rise of large-scale industry and explicitly proposed workers’ associations (i.e., co-operatives) for those industries which objectively needed it (i.e. capitalist industry) and for those other toilers who

As for Lenin’s comment that we have “absolutely no ideas” of how the working class “will use its revolutionary power” suggests more ignorance, as we have urged working people to expropriate the expropriators, reorganise production under workers’ self-management and start to construct society from the bottom upwards (a quick glance at Kropotkin’s Conquest of Bread, for example, would soon convince any reader of the inaccuracy of Lenin’s comment). This summary by the anarchist Jura Federation (written in 1880) gives a flavour of anarchist ideas on this subject:

“The bourgeoisie’s power over the popular masses springs from economic privileges, political domination and the enshrining of such privileges in the laws. So we must strike at the wellsprings of bourgeois power, as well as its various manifestations.

“The following measures strike us as essential to the welfare of the revolution, every bit as much as armed struggle against its enemies:

“The insurgents must confiscate social capital, landed estates, mines, housing, religious and public buildings, instruments of labour, raw materials, gems and precious stones and manufactured products:

“All political, administrative and judicial authorities are to be deposed … What should the organisational measures of the revolution be?

“Immediate and spontaneous establishment of trade bodies: provisional assumption by those of … social capital …: local federation of a trades bodies and labour organisation:

“Establishment of neighbourhood groups and federations of same …

“Organisation of the insurgent forces … the federation of all the revolutionary forces of the insurgent Communes
Barrett’s answer contains the standard anarchist position on what will be the organisational basis of a revolutionary society, namely that the “only thing then that will be put in the place of government will be the free organisation of the workers.” This is a concise summary of anarchist theory and cannot be bettered. This vision, as we discuss in section I.2.3 in some detail, can be found in the work of Bakunin, Kropotkin, Malatesta and a host of other anarchist thinkers. Since anarchists from Bakunin onwards have stressed that a federation of workers’ associations would constitute the framework of a free society, to assert otherwise (as Lenin did) is little more than a joke or a slander. To quote Bakunin:

“The future social organisation must be made solely from the bottom up, by the free association or federation of workers, firstly in their unions, then in the communes, regions, nations and finally in a great federation, international and universal.” [Michael Bakunin: Selected Writings, p. 206]

Similar ideas can easily be found in the works of other anarchists. While the actual names and specific details of these federations of workers’ associations may change (for example, the factory committees and soviets in the Russian Revolution, the collectives in Spain, the section assemblies in the French Revolution are a few of them) the basic ideas are the same. Bakunin also pointed to the means of defence, a workers’ militia (the people armed, as per the Paris Commune — section H.2.1).

A major difference between anarchism and Marxism which Lenin points to is, clearly, false. Anarchists are well aware of what should “replace” the bourgeois state and have always been so. The real difference is simply that anarchists say what they mean while Lenin’s “new” state did not, in fact, mean working class power but rather party power. desired it. The net effect was the same, though, namely to abolish wage labour.

It was this opposition to wage labour which drove Proudhon’s critique of state socialism. He continually stressed that state ownership of the means of production was a danger to the liberty of the worker and simply the continuation of capitalism with the state as the new boss. As he put it in 1848, he “did not want to see the State confiscate the mines, canals and railways; that would add to monarchy, and more wage slavery. We want the mines, canals, railways handed over to democratically organised workers’ associations... these associations [will] be models for agriculture, industry and trade, the pioneering core of that vast federation of companies and societies woven into the common cloth of the democratic social Republic.” He contrasted workers’ associations run by and for their members to those “subsidised, commanded and directed by the State,” which would crush “all liberty and all wealth, precisely as the great limited companies are doing.” [No Gods, No Masters, vol. 1, p. 62 and p. 105]

Marx, of course, had replied to Proudhon’s work System of Economic Contradictions with his Poverty of Philosophy. However, Marx’s work aroused little interest when published although Proudhon did carefully read and annotate his copy of it, claiming it to be “a libel” and a “tissue of abuse, calumny, falsification and plagiarism” (he even called Marx “the tapeworm of Socialism.”) [quoted by Woodcock, Op. Cit., p. 102] Sadly, Proudhon did not reply publicly to Marx’s work due to an acute family crisis and then the start of the 1848 revolution in France. However, given his views of Louis Blanc and other socialists who saw socialism being introduced after the seizing of state power, he would hardly have been supportive of Marx’s ideas.

So while none of Proudhon’s and Stirner’s arguments were directly aimed at Marxism, their critiques are applicable to much of mainstream Marxism as this inherited many of the ideas of the state socialism they attacked. Much of their analysis was incor-
porated in the collectivist and communist ideas of the anarchists that followed them (some directly, as from Proudhon, some by co-incidence as Stirner’s work was quickly forgotten and only had an impact on the anarchist movement when he was rediscovered in the 1890s). This can be seen from the fact that Proudhon’s ideas on the management of production by workers’ associations, opposition to nationalisation as state-capitalism and the need for action from below by working people themselves, all found their place in communist-anarchism and anarcho-syndicalism and in their critique of mainstream Marxism (such as social democracy) and Leninism. Echoes of these critiques can be found Bakunin’s comments of 1868:

“I hate Communism because it is the negation of liberty and because for me humanity is unthinkable without liberty. I am not a Communist, because Communism concentrates and swallows up in itself for the benefit of the State all the forces of society, because it inevitably leads to the concentration of property in the hands of the State ... I want to see society and collective or social property organised from below upwards, by way of free associations, not from above downwards, by means of any kind of authority whatsoever ... That is the sense in which I am a Collectivist and not a Communist.” [quoted by K.J. Kenafick, Michael Bakunin and Karl Marx, pp. 67–8]

It is with Bakunin that Marxism and Anarchism came into direct conflict as it was Bakunin who lead the struggle against Marx in the International Workingmen’s Association between 1868 and 1872. It was in these exchanges that the two schools of socialism (the libertarian and the authoritarian) clarified themselves. With Bakunin, the anarchist critique of Marxism (and state socialism in general) starts to reach its mature form. We discuss Bakunin’s critique in the next section.

H.1.4 Do anarchists have “absolutely no idea” of what to put in place of the state?

Lenin’s second claim was that anarchists, “while advocating the destruction of the state machine, have absolutely no idea of what the proletariat will put in its place” and compared this to the Marxists who argued for a new state machine “consisting of armed workers, after the type of the [Paris] Commune.” [Essential Works of Lenin, p. 358]

For anarchists, Lenin’s assertion simply shows his unfamiliarity with anarchist literature and need not be taken seriously — anyone familiar with anarchist theory would simply laugh at such comments. Sadly, most Marxists are not familiar with that theory, so we need to explain two things. Firstly, anarchists have very clear ideas on what to “replace” the state with (namely a federation of communes based on working class associations). Secondly, that this idea is based on the idea of armed workers, inspired by the Paris Commune (although predicted by Bakunin).

Moreover, for anarchists Lenin’s comment seems somewhat incredulous. As George Barrett put it, in reply to the question “if you abolish government, what will you put it its place,” this “seems to an Anarchist very much as if a patient asked the doctor, ‘If you take away my illness, what will you give me in its place?’” The Anarchist’s argument is that government fulfils no useful purpose ... It is the headquarters of the profit-makers, the rent-takers, and of all those who take from but who do not give to society. When this class is abolished by the people so organising themselves to run the factories and use the land for the benefit of their free communities, i.e. for their own benefit, then the Government must also be swept away, since its purpose will be gone. The only thing then that will be put in the place of government will be the free organisation of the workers. When Tyranny is abolished, Liberty remains, just as when disease is eradicated health remains.” [Objections to Anarchism, p. 356]
eliminate their power in favour of party power ("the principle error of the [Paris] Commune, an unavoidable error, since it derived from the very principle on which power was constituted, was precisely that of being a government, and of substituting itself for the people by force of circumstances." [Elisée Reclus, quoted John P. Clark and Camille Martin, Anarchy, Geography, Modernity, p. 72]).

In place of a state anarchists’ argue for a free federation of workers’ organisations as the means of conducting a revolution (and the framework for its defence). Most Marxists seem to confuse centralism and federalism, with Lenin stating that “if the proletariat and the poor peasants take state power into their own hands, organise themselves quite freely in communes, and unite the action of all the communes in striking at capital … won’t that be centralism? Won’t that be the most consistent democratic centralism and, moreover, proletarian centralism?” No, it would be federalism, the most consistent federalism as advocated by Proudhon and Bakunin and, under the influence of the former, suggested by the Paris Commune. Lenin argued that some “simply cannot conceive of the possibility of voluntary centralism, of the voluntary fusion of the proletarian communes, for the sole purpose of destroying bourgeois rule and the bourgeois state machine.” [The Lenin Anthology, p. 348] Yet “voluntary centralism” is, at best, just another why of describing federalism — assuming that “voluntary” really means that, of course. At worse, and in practice, such centralism simply places all the decision making at the centre, at the top, and all that is left is for the communes to obey the decisions of a few party leaders.

As we discuss in the next section, anarchists see this federation of workers’ associations and communes (the framework of a free society) as being based on the organisations working class people create in their struggle against capitalism. These self-managed organisations, by refusing to become part of a centralised state, will ensure the success of a revolution.

**H.1.1 What was Bakunin’s critique of Marxism?**

Bakunin and Marx famously clashed in the first International Working Men’s Association between 1868 and 1872. This conflict helped clarify the anarchist opposition to the ideas of Marxism and can be considered as the first major theoretical analysis and critique of Marxism by anarchists. Later critiques followed, of course, particularly after the degeneration of Social Democracy into reformism and the failure of the Russian Revolution (both of which allowed the theoretical critiques to be enriched by empirical evidence) but the Bakunin/Marx conflict laid the ground for what came after. As such, an overview of Bakunin’s critique is essential as anarchists continued to develop and expand upon it (particularly after the experiences of actual Marxist movements and revolutions confirmed it).

First, however, we must stress that Marx and Bakunin had many similar ideas. They both stressed the need for working people to organise themselves to overthrow capitalism by a social revolution. They argued for collective ownership of the means of production. They both constantly stressed that the emancipation of the workers must be the task of the workers themselves. They differed, of course, in exactly how these common points should be implemented in practice. Both, moreover, had a tendency to misrepresent the opinions of the other on certain issues (particularly as their struggle reached its climax). Anarchists, unsurprisingly, argue Bakunin has been proved right by history, so confirming the key aspects of his critique of Marx.

So what was Bakunin’s critique of Marxism? There are six main areas. Firstly, there is the question of current activity (i.e. whether the workers’ movement should participate in “politics” and the nature of revolutionary working class organisation). Secondly, there is the issue of the form of the revolution (i.e. whether it should
be a political then an economic one, or whether it should be both at the same time). Thirdly, there is the prediction that state socialism will be exploitative, replacing the capitalist class with the state bureaucracy. Fourthly, there is the issue of the “dictatorship of the proletariat.” Fifthly, there is the question of whether political power can be seized by the working class as a whole or whether it can only be exercised by a small minority. Sixthly, there was the issue of whether the revolution be centralised or decentralised in nature. We shall discuss each in turn.

On the issue of current struggle, the differences between Marx and Bakunin are clear. For Marx, the proletariat had to take part in bourgeois elections as an organised political party. As the resolution of the (gerrymandered) Hague Congress of First International put it: "In its struggle against the collective power of the propertied classes the proletariat cannot act as a class except by constituting itself a political party, distinct from and opposed to, all old parties formed by the propertied classes... The conquest of political power has therefore become the great duty of the working class.” [Collected Works, vol. 23, p. 243]

This political party must stand for elections and win votes. As Marx argued in the preamble of the French Workers’ Party, the workers must turn the franchise “from a means of deception ... into an instrument of emancipation.” This can be considered as part of the process outlined in the Communist Manifesto, where it was argued that the “immediate aim of the Communists is the same as that of all the other proletarian parties,” namely the “conquest of political power by the proletariat,” the “first step in the revolution by the working class” being “to raise the proletariat to the position of ruling class, to win the battle of democracy.” Engels later stressed (in 1895) that the "Communist Manifesto had already proclaimed the winning of universal suffrage, of democracy, as one of the first and most important tasks of the militant proletariat” and that German Social Democracy had showed workers of all countries “how to make use

This is because of the hierarchical nature of the state, its delegation of power into the hands of the few and so a so-called “revolutionary” government can have no other result than a substitution of the few (the government) for the many (the masses). This, in turn, undermines the mass participation and action from below that a revolution needs to succeed and flourish. “Instead of acting for themselves,” Kropotkin argued, “instead of marching forward, instead of advancing in the direction of the new order of things, the people, confiding in their governors, entrusted to them the charge of taking the initiative.” However, social change is the product of “the people in action” and “the brain of a few individuals [are] absolutely incapable of finding solutions” to the problems it will face “which can only spring from the life of the people.” For anarchists, a revolution “is not a simple change of governors. It is the taking possession by the people of all social wealth” and this cannot be achieved “be decrees emanating from a government.” This “economic change” will be “so immense and so profound” that it is “impossible for one or any individual to elaborate the different social forms which must spring up in the society of the future. This elaboration of new social forms can only be made by the collective work of the masses” and “[a]ny authority external to it will only be an obstacle, a “drag on the action of the people.” A revolutionary state, therefore, “becomes the greatest obstacle to the revolution” and to “dislodge it” requires the people “to take up arms, to make another revolution.” [Anarchism, p. 240, p. 241, pp. 247–8, p. 248, p. 249, p. 241 and p. 242] Which, we should stress, was exactly what happened in Russia, where anarchists and others (such as the Kronstadt rebels) called for a "Third Revolution" against the Bolshevik state and the party dictatorship and state capitalism it had created.

For anarchists, the abolition of the state does not mean rejecting the need to extend or defend a revolution (quite the reverse!). It means rejecting a system of organisation designed by and for minorities to ensure their rule. To create a state (even a “workers’ state”) means to delegate power away from the working class and
So anarchists argue that the state has to be abolished “overnight” simply because a state is marked by hierarchical power and the exclusion of the bulk of the population from the decision making process. It cannot be used to implement socialism simply because it is not designed that way. To extend and defend a revolution a state is not required. Indeed, it is a hindrance:

“The mistake of authoritarian communists in this connection is the belief that fighting and organising are impossible without submission to a government; and thus they regard anarchists ... as the foes of all organisation and all co-ordinated struggle. We, on the other hand, maintain that not only are revolutionary struggle and revolutionary organisation possible outside and in spite of government interference but that, indeed, that is the only effective way to struggle and organise, for it has the active participation of all members of the collective unit, instead of their passively entrusting themselves to the authority of the supreme leaders.

“Any governing body is an impediment to the real organisation of the broad masses, the majority. Where a government exists, then the only really organised people are the minority who make up the government; and ... if the masses do organise, they do so against it, outside it, or at the very least, independently of it. In ossifying into a government, the revolution as such would fall apart, on account of its awarding that government the monopoly of organisation and of the means of struggle.” [Luigi Fabbri, “Anarchy and ‘Scientific’ Communism”, pp. 13–49. The Poverty of Statism, Albert Meltzer (ed.), p. 27]
departing world of states.” [Bakunin on Anarchism, pp. 262–3, p. 270 and p. 174] To Marx’s argument that workers should organise politically (i.e., send their representations to Parliament) Bakunin realised that when “common workers” are sent “to Legislative Assemblies” the result is that the “worker-deputies, transplanted into a bourgeois environment, into an atmosphere of purely bourgeois ideas, will in fact cease to be workers and, becoming Statesmen, they will become bourgeois … For men do not make their situations; on the contrary, men are made by them.” [The Basic Bakunin, p. 108]

As far as history goes, the experience of Social Democracy confirmed Bakunin’s analysis. A few years after Engels death in 1895, German Social Democracy was racked by the “revisionism” debate. This debate did not spring from the minds of a few leaders, isolated from the movement itself. In effect, the revisionists wanted to adjust the party rhetoric to what the party was actually doing and so the battle against the revisionists basically represented a battle between what the party said it was doing and its actual practice. As one of the most distinguished historians of this period put it, the “distinction between the contenders remained largely a subjective one, a difference of ideas in the evaluation of reality rather than a difference in the realm of action.” [C. Schorske, German Social Democracy, p. 38] By the start of the First World War, the Social Democrats had become so corrupted by its activities in bourgeois institutions they supported its state (and ruling class) and voted for war credits rather than denounce the war as Imperialist slaughter for profits. Clearly, Bakunin was proved right. (see also section J.2.6 for more discussion on the effect of electioneering on radical parties).

However, we must stress that because Bakunin rejected participating in bourgeois politics, it did not mean that he rejected “politics” or “political struggle” in general (see section J.2.10). Bakunin clearly advocated what would later by termed a syndicalist strategy (see section H.2.8). This union movement would be complemented by a specific anarchist organisation which would work within it to power in the recognised sense of the term can only take place through the agency of an exclusive group practising a monopoly of power, separating itself from the class and oppressing it. And this is how the attempt to use a State apparatus can reduce the dictatorship of the proletariat to the dictatorship of the party over the masses.

“But if by dictatorship of the proletariat is understood collective and direct exercise of ‘political power’, this would mean the disappearance of ‘political power’ since its distinctive characteristics are supremacy, exclusivity and monopoly. It is no longer a question of exercising or seizing political power, it is about doing away with it all together!

“If by dictatorship is meant the domination of the majority by a minority, then it is not a question of giving power to the proletariat but to a party, a distinct political group. If by dictatorship is meant the domination of a minority by the majority (domination by the victorious proletariat of the remnants of a bourgeoisie that has been defeated as a class) then the setting up of dictatorship means nothing but the need for the majority to efficiently arrange for its defence its own social Organisation.

[…]”

“The terms ‘domination’, ‘dictatorship’ and ‘state’ are as little appropriate as the expression ‘taking power’ for the revolutionary act of the seizure of the factories by the workers.

“We reject then as inaccurate and causes of confusion the expressions ‘dictatorship of the proletariat’, ‘taking political power’, ‘workers state’, ‘socialist state’ and ‘proletar-
they would be in the “dictatorship of the proletariat,” then it would not be a state. As Bakunin put it: “Where all rule, there are no more ruled, and there is no State.” [Op. Cit., p. 223]

The idea that anarchists, by rejecting the “dictatorship of the proletariat,” also reject defending a revolution is false. We do not equate the “dictatorship of the proletariat” with the need to defend a revolution or expropriating the capitalist class, ending capitalism and building socialism. Anarchists from Bakunin onwards have taken both of these necessities for granted. As we discuss this particular Marxist straw man in section H.2.1, we will leave our comments on anarchist awareness of the need to defend a revolution at this.

Anarchists, then, do not reject defending a revolution and our opposition to the so-called “revolutionary” or “socialist” state is not based on this, regardless of what Marx and Lenin asserted. Rather, we argue that the state can and must be abolished “overnight” during the social revolution because any state, including the so-called “dictatorship of the proletariat”, is marked by hierarchical power and can only empower the few at the expense of the many. The state will not “wither away” as Marxists claim simply because it excludes, by its very nature, the active participation of the bulk of the population and ensures a new class division in society: those in power (the party) and those subject to it (the working class). Georges Fontenis sums up anarchist concerns on this issue:

“The formula ‘dictatorship of the proletariat’ has been used to mean many different things. If for no other reason it should be condemned as a cause of confusion. With Marx it can just as easily mean the centralised dictatorship of the party which claims to represent the proletariat as it can the federalist conception of the Commune.

“Can it mean the exercise of political power by the victorious working class? No, because the exercise of political influence it towards anarchist aims by the “natural influence” of its members (see section J.3.7).

Comparing Bakunin and Marx, it is clear whom history has validated. Even that anti-anarchist Stalinist hack Eric Hobsbawn could not avoid admitting that “the remarkable achievement of Spanish anarchism which was to create a working-class movement that remained genuinely revolutionary. Social democratic and ... even communist trade unions have rarely been able to escape either schizophrenia [i.e., revolutionary rhetoric hiding reformist practice] or betrayal of their socialists convictions.” [Revolutionaries, p. 104] This is probably the only accurate comment made in his various diatribes on anarchism but, of course, he did not allow the implications of his statement to bother his faith in Leninist ideology. So given the long history of reformism and betrayal of socialist principles by radicals utilising elections and political parties, it comes as no surprise that anarchists consider both Bakunin’s critique and alternative to be confirmed by experience (section J.2 discusses direct action and electioneering).

Which brings us to the second issue, namely the nature of the revolution itself. For Bakunin, a revolution meant a social revolution from below. This involved both the abolition of the state and the expropriation of capital. In his words, “the revolution must set out from the first [to] radically and totally to destroy the State.” The “natural and necessary consequences” of which will be the “confiscation of all productive capital and means of production on behalf of workers’ associations, who are to put them to collective use . . . the federative Alliance of all working men’s associations . . . will constitute the Commune.” There “can no longer be any successful political . . . revolution unless the political revolution is transformed into social revolution.” [Michael Bakunin: Selected Writings, p. 170 and p. 171]

Which, incidentally, disproves Engels’ claims that Bakunin “does not regard capital . . . but the state as the main evil to be abolished” after which “capitalism will go to blazes of itself.” [The Marx-Engels
Reader, p. 728] This misrepresents Bakunin’s position, as he always stressed that economic and political transformation “must be accomplished together and simultaneously.” [The Basic Bakunin, p. 106] Given that Bakunin thought the state was the protector of capitalism, no economic change could be achieved until such time as it was abolished. This also meant that Bakunin considered a political revolution before an economic one to mean the continued slavery of the workers. As he argued, “[t]o win political freedom first can signify no other thing but to win this freedom only, leaving for the first days at least economic and social relations in the same old state, — that is, leaving the proprietors and capitalists with their insolent wealth, and the workers with their poverty.” With capitalists’ economic power intact, could the workers’ political power remain strong? As such, “every political revolution taking place prior to and consequently without a social revolution must necessarily be a bourgeois revolution, and a bourgeois revolution can only be instrumental in bringing about bourgeois Socialism — that is, it is bound to end in a new, more hypocritical and more skilful, but no less oppressive, exploitation of the proletariat by the bourgeois.” [The Political Philosophy of Bakunin, p. 294 and p. 289]

Did Marx and Engels hold this position? Apparently so. Discussing the Paris Commune, Marx noted that it was “the political form at last discovered under which to work out the economic emancipation of labour,” and as the “political rule of the producer cannot coexist with the perpetuation of his social slavery” the Commune was to “serve as a lever for uprooting the economic foundations upon which rests the existence of classes.” Engels argued that the “proletariat seizes the public power, and by means of this transforms the … means of production … into public property.” In the Communist Manifesto they argued that “the first step in the revolution by the working class” is the “rais[ing] the proletariat to the position of ruling class, to win the battle of democracy.” The proletariat “will use its political supremacy to wrest, by degrees, all capital from the bourgeois, to centralise all instruments of production in the hands of the workers “laying down their arms” after a successful revolution. Such a “laying down [of] their arms” would mean “abolishing the state” while keeping their arms “in order to crush the resistance of the bourgeoisie” would mean “giv[ing] the state a revolutionary and transitory form,” so setting up “their revolutionary dictatorship in place of the dictatorship of the bourgeoisie.” [Marx, quoted by Lenin, Op. Cit., p. 315]

That such an argument can be made, never mind repeated, suggests a lack of honesty. It assumes that the Marxist and Anarchist definitions of “the state” are identical. They are not. For anarchists the state, government, means “the delegation of power, that is the abdication of initiative and sovereignty of all into the hands of a few.” [Malatesta, Anarchy, p. 41] For Marxists, the state is “an organ of class rule, an organ for the oppression of one class by another.” [Lenin, Op. Cit., p. 274] That these definitions are in conflict is clear and unless this difference is made explicit, anarchist opposition to the “dictatorship of the proletariat” cannot be clearly understood.

Anarchists, of course, agree that the current state is the means by which the bourgeois class enforces its rule over society. In Bakunin’s words, “the political state has no other mission but to protect the exploitation of the people by the economically privileged classes.” [The Political Philosophy of Bakunin, p. 221] “Throughout history, just as in our time, government is either the brutal, violent, arbitrary rule of the few over the many or it is an organised instrument to ensure that domination and privilege will be in the hands of those who … have cornered all the means of life.” Under capitalism, as Malatesta succulently put, the state is “the bourgeoisie’s servant and gendarme.” [Op. Cit., p. 21 and p. 23] The reason why the state is marked by centralised power is due to its role as the protector of (minority) class rule. As such, a state cannot be anything but a defender of minority power as its centralised and hierarchical structure is designed for that purpose. If the working class really were running society, as Marxists claim
place and how it will use its revolutionary power; the anarchists even deny that the revolutionary proletariat should utilise its state power, its revolutionary dictatorship; 3) the former demand that the proletariat be prepared for revolution by utilising the present state; the latter reject this.” [Essential Works of Lenin, p. 358]

We will discuss each of these points in the next three sections. Point one will be discussed in section H.1.3, the second in section H.1.4 and the third and final one in section H.1.5.

H.1.3 Why do anarchists wish to abolish the state “overnight”?

As indicated at the end of the last section, Lenin argued that while Marxists aimed “at the complete abolition of the state” they “recognise that this aim can only be achieved after classes have been abolished by the socialist revolution” while anarchists “want to abolish the state completely overnight.” This issue is usually summarised by Marxists arguing that a new state is required to replace the destroyed bourgeois one. This new state is called by Marxists “the dictatorship of the proletariat” or a workers’ state. Anarchists reject this transitional state while Marxists embrace it. Indeed, according to Lenin “a Marxist is one who extends the acceptance of the class struggle to the acceptance of the dictatorship of the proletariat.” [Essential Works of Lenin, p. 358 and p. 294]

So what does the “dictatorship of the proletariat” actually mean? Generally, Marxists seem to imply that this term simply means the defence of the revolution and so the anarchist rejection of the dictatorship of the proletariat means, for Marxists, the denial the need to defend a revolution. This particular straw man was used by Lenin in The State and Revolution when he quoted Marx’s article “Indifference to Politics” to suggest that anarchists advocated work-

State, i.e. of the proletariat organised as the ruling class.” [Op. Cit., p. 635, p. 717 and p. 490]

This is made even clearer in Engels’ “Principles of Communism” (often considered as a draft of the Manifesto). That document stressed that it was not possible for “private property to be abolished at one stroke”, arguing that “the proletarian revolution will transform existing society gradually.” The revolution “will establish a democratic constitution, and through this, the direct or indirect dominance of the proletariat. Direct in England, where the proletarians are already a majority of the people.” “Democracy”, Engels went on, “would be quite useless to the proletariat if it were not immediately used as a means of carrying through further measures directly attacking private ownership.” [Collected Works, vol. 6, p. 350]

Decades later, when Marx discussed what the “dictatorship of the proletariat” meant, he argued (in reply to Bakunin’s question of “over whom will the proletariat rule?”) that it simply meant “that so long as other classes continue to exist, the capitalist class in particular, the proletariat fights it (for with the coming of the proletariat to power, its enemies will not yet have disappeared), it must use measures of force, hence governmental measures; if it itself still remains a class and the economic conditions on which the class struggle and the existence of classes have not yet disappeared, they must be forcibly removed or transformed, and the process of their transformation must be forcibly accelerated.” [The Marx-Engels Reader, pp. 542–3]

Note, “capitalists,” not “former capitalists,” so implying that the members of the proletariat are, in fact, still proletarians after the “socialist” revolution and so still subject to wage slavery under economic masters. Which makes perfect sense, as otherwise the term “dictatorship of the proletariat” would be meaningless.

Then there is the issue of when the working class could seize political power. As Engels put it, the struggle “between bourgeoisie and proletariat can only be fought out in a republic.” This is “the form in which the struggle must be fought out” and in countries without a republic, such as Germany at the time, workers would “have to
conquer it.” [Marx and Engels, The Socialist Revolution, p. 264] Decades previously, Engels has argued that the “first, fundamental condition for the introduction of community of property is the political liberation of the proletariat through a democratic constitution.” [Collected Works, vol. 6, p. 102] Thus the bourgeois revolution would come first, then the proletarian one. The Communist Manifesto had raised the possibility of a bourgeois revolution in Germany being “but a prelude to an immediately following proletarian revolution.” [Selected Writings, p. 63] Within two years, Marx and Engels argued that this was wrong, that a socialist revolution was not possible in Continental Europe for some time. Even in the 1880s, Engels was still arguing that a proletarian revolution was not immediately possible in Germany and the first results of any revolution would be a bourgeois republic within which the task of social democracy was to build its forces and influence.

Clearly, then, Marx and Engels considered the creation of a republic in a well developed capitalist economy as the basis for seizing of state power as the key event and, later, the expropriation of the expropriators would occur. Thus the economic power of the capitalists would remain, with the proletariat utilising political power to combat and reduce it. Anarchists argue that if the proletariat does not hold economic power, its political power would at best be insecure and would in fact degenerate. Would the capitalists just sit and wait while their economic power was gradually eliminated by political action? And what of the proletariat during this period? Will they patiently obey their bosses, continue to be oppressed and exploited by them until such time as the end of their “social slavery” has been worked out (and by whom)? Would they be happy to fight for a bourgeois republic first, then wait for an unspecified period of time before the party leadership proclaimed that the time was ripe to introduce socialism?

As the experience of the Russian Revolution showed, the position of Marx and Engels proved to be untenable. Bakunin’s per-
Significantly, this position on party rule has its roots in the uneven political development within the working class (i.e. that the working class contains numerous political perspectives within it). As the party (according to Leninist theory) contains the most advanced ideas (and, again according to Leninist theory, the working class cannot reach beyond a trade union consciousness by its own efforts), the party must take power to ensure that the masses do not make “mistakes” or “waver” (show “vacillation”) during a revolution. From such a perspective to the position of party dictatorship is not far (and a journey that all the leading Bolsheviks, including Lenin and Trotsky did in fact take).

These arguments by leading Bolsheviks confirm Bakunin’s fear that the Marxists aimed for “a tyranny of the minority over a majority in the name of the people — in the name of the stupidity of the many and the superior wisdom of the few.” [Marxism, Freedom and the State, p. 63]

In contrast, anarchists argue that precisely because of political differences we need the fullest possible democracy and freedom to discuss issues and reach agreements. Only by discussion and self-activity can the political perspectives of those in struggle develop and change. In other words, the fact Bolshevism uses to justify its support for party power is the strongest argument against it. For anarchists, the idea of a revolutionary government is a contradiction. As Malatesta put it, “if you consider these worthy electors as unable to look after their own interests themselves, how is it that they will know how to choose for themselves the shepherds who must guide them? And how will they be able to solve this problem of social alchemy, of producing a genius from the votes of a mass of fools?” [Anarchy, pp. 53–4] As such, anarchists think that power should be in the hands of the masses themselves. Only freedom or the struggle for freedom can be the school of freedom. That means that, to quote Bakunin, “since it is the people which must make the revolution everywhere … the ultimate direction of it must at all times be vested in the people organised into a free federation of agricul-

Some Russian worker, expressed his impatience with Menshevik strategy:

“Here [the Mensheviks] … tells us that the workers’ congress is the best means of assuring the independence of the proletariat in the bourgeois revolution; otherwise, we workers will play the role of cannon fodder in it. So I ask: what is the insurance for? Will we really make the bourgeois revolution? Is it possible that we will spill blood twice — once for the victory of the bourgeois revolution, and the time for the victory of our proletarian revolution? No, comrades, it is not to be found in the party programme [that this must be so]; but if we workers are to spill blood, then only once, for freedom and socialism.” [quoted by Abraham Ascher, The Mensheviks in the Russian Revolution, p. 43]

In 1917, this lesson was well learned and the Russian workers initially followed Bakunin’s path (mostly spontaneously and without significant influence by anarchists and anarcho-syndicalists). The Mensheviks repeated their mistakes of 1905 as they “proved unable to harness this revolutionary potential to any practical purpose. They were blinded by their rigid marxist formula of ‘bourgeois revolution first, socialist revolution later’ and tired to restrain the masses. They preached self-abnegation to them, told them to stand aside until such times as the bourgeoisie had built a solid capitalist system. This made no sense to workers and peasants — why should they renounce the power that was in their hands already?” Leading Menshevik Fedor Dan “admitted in 1946 that the Menshevik concept of the bourgeois revolution rested on ‘illusions’” [Vera Broido, Lenin and the Mensheviks, p. 14 and p. 15] Once Lenin returned to Russia, the Bolsheviks broke with this previously shared perspective and started to support and encourage the radicalisation of the workers and so
managed to gain popular support. However, they did so partially and incompletely and, as a consequence, finally held back and so fatally undermined the revolution.

After the February revolution paralysed the state, the workers organised factory committees and raised the idea and practice of workers self-management of production. The Russian anarchists supported this movement whole-heartedly, arguing that it should be pushed as far as it would go. In contrast, Lenin argued for “workers’ control over the capitalists.” [The Lenin Anthology, p. 402] This was, unsurprisingly, the policy applied immediately after the Bolshevik seizure of power. However, as one Leninist writer admits, “[t]wo overwhelmingly powerful forces obliged the Bolsheviks to abandon this ‘reformist’ course.” One was the start of the civil war, the other “was the fact that the capitalists used their remaining power to make the system unworkable. At the end of 1917 the All Russian Congress of employers declared that those ‘factories in which the control is exercised by means of active interference in the administration will be closed.’ The workers’ natural response to the wave of lockouts which followed was to demand that their [sic!] state nationalise the factories.” [John Rees, “In Defence of October”; pp. 3–82, International Socialism, no. 52, p. 42] By July 1918, only one-fifth of nationalised firms had been done so by the state, the rest by local committees from below (which, incidentally, shows the unresponsiveness of centralised power). Clearly, the idea that a social revolution can come after a political one is shown to be a failure — the capitalist class used its powers to disrupt the economic life of Russia.

Faced with the predictable opposition by capitalists to their system of “control” the Bolsheviks nationalised the means of production. Sadly, within the nationalised workplace the situation of the worker remained essentially unchanged. Lenin had been arguing for one-man management (appointed from above and armed with “dictatorial” powers) since late April 1918 (see section H.3.14). This aimed at replacing the capitalists with state appointed managers, How these positions can be reconciled with workers’ democracy, power or freedom is not explained. As such, the idea that Leninism (usually considered as mainstream Marxism) is inherently democratic or a supporter of power to the people is clearly flawed. Equally flawed are the attempts by Leninists to distance themselves from, and rationalise, these positions in terms of the “objective circumstances” (such as civil war) facing the Russian Revolution. As we discuss in section H.6, Bolshevik authoritarianism started before these problems began and continued long after they ended (in part because the policies pursued by the Bolshevik leadership had roots in their ideology and, as a result, that ideology itself played a key role in the failure of the revolution).

Ultimately, though, the leading lights of Bolshevism concluded from their experiences that the dictatorship of the proletariat could only be achieved by the dictatorship of the party and they generalised this position for all revolutions. Even in the prison camps in the late 1920s and early 1930s, “almost all the Trotskyists continued to consider that ‘freedom of party’ would be ‘the end of the revolution.’ ‘Freedom to choose one’s party — that is Menshevism,’ was the Trotskyists’ final verdict.” [Ante Ciliga, The Russian Enigma, p. 280] While few Leninists today would subscribe to this position, the fact is when faced with the test of revolution the founders of their ideology not only practised the dictatorship of the party, they raised it to an ideological truism. Sadly, most modern day Trotskyists ignore this awkward fact in favour of inaccurate claims that Trotsky’s Left Opposition “framed a policy along [the] lines” of “returning to genuine workers’ democracy”. [Chris Harman, Bureaucracy and Revolution in Eastern Europe, p. 19] In reality, as “Left Oppositionist” Victor Serge pointed out, “the greatest reach of boldness of the Left Opposition in the Bolshevik Party was to demand the restoration of inner-Party democracy, and it never dared dispute the theory of single-party government — by this time, it was too late.” [The Serge-Trotsky Papers, p. 181]
Significantly, this was the year after his apparent (and much belated) embrace of soviet democracy in *The Revolution Betrayed*. Moreover, as we discuss in section H.3.8, he was just repeating the same arguments he had made while in power during the Russian Revolution. Nor was he the only one. Zinoviev, another leading Bolshevik, argued in 1920 along the same lines:

“soviet rule in Russia could not have been maintained for three years — not even three weeks — without the iron dictatorship of the Communist Party. Any class conscious worker must understand that the dictatorship of the working class can be achieved only by the dictatorship of its vanguard, i.e., by the Communist Party ... All questions of economic reconstruction, military organisation, education, food supply — all these questions, on which the fate of the proletarian revolution depends absolutely, are decided in Russia before all other matters and mostly in the framework of the party organisations ... Control by the party over soviet organs, over the trade unions, is the single durable guarantee that any measures taken will serve not special interests, but the interests of the entire proletariat.” [quoted by Oskar Anweiler, *The Soviets*, pp. 239–40]

Three years later, at the Communist Party’s congress, he made light of “comrades who think that the dictatorship of the party is a thing to be realised in practice but not spoken about.” He went on to argue that what was needed was “a single powerful central committee which is leader of everything ... in this is expressed the dictatorship of the party.” The Congress itself resolved that “the dictatorship of the working class cannot be assured otherwise than in the form of a dictatorship of its leading vanguard, i.e., the Communist Party.” [quoted by E.H. Carr, *The Bolshevik Revolution 1917–1923*, vol. 1, p. 236, pp. 236–7 and p. 237]

not workers self-management. In fact, as we discuss in section H.6.2 the party leaders repeatedly overruled the factory committees’ suggestions to build socialism based on their management of the economy in favour of centralised state control. Bakunin’s fear of what would happen if a political revolution preceded a social one came true. The working class continued to be exploited and oppressed as before, first by the bourgeoisie and then by the new bourgeoisie of state appointed managers armed with all the powers of the old ones (plus a few more). Russia confirmed Bakunin’s analysis that a revolution must immediately combine political and economic goals in order for it to be successful.

The experience of Bolshevik Russia also confirms Bakunin’s prediction that state socialism would simply be state capitalism. As Bakunin stressed, the state “is the government from above downwards of an immense number of men [and women], very different from the point of view of the degree of their culture, the nature of the countries or localities that they inhabit, the occupations they follow, the interests and aspirations directing them — the State is the government of all these by one or another minority.” The state “has always been the patrimony of some privileged class” and “when all other classes have exhausted themselves” it “becomes the patrimony of the bureaucratic class.” The Marxist state “will not content itself with administering and governing the masses politically” it will “also administer the masses economically, concentrating in the hands of the State the production and distribution of wealth.” This will result in “a new class, a new hierarchy of real and counterfeit scientists and scholars, and the world will be divided into a minority ruling in the name of knowledge, and an immense ignorant majority. And then, woe unto the mass of ignorant ones!” Thus exploitation by a new bureaucratic class would be the only result when the state becomes “the sole proprietor” and “the only banker, capitalist, organiser, and director of all national labour, and the distributor of all its products.” [Bakunin on Anarchism, pp. 317–8, p. 318 and p. 217] Subsequent an-
archists have tended to call such a regime state capitalism (see section H.3.13).

The Bolshevik leadership’s rejection of the factory committees and their vision of socialism also confirmed Bakunin’s fear that Marxism urges the people "not only not abolish the State, but, on the contrary, they must strengthen it and enlarge it, and turn it over to ... the leaders of the Communist party ... who will then liberate them in their own way." The economic regime imposed by the Bolsheviks, likewise, confirmed Bakunin critique as the state “control[led] all the commerce, industry, agriculture, and even science. The mass of the people will be divided into two armies, the agricultural and the industrial under the direct command of the state engineers, who will constitute the new privileged political-scientific class.” Unsurprisingly, this new state-run economy was a disaster which, again, confirmed his warning that unless this minority “were endowed with omniscience, omnipresence, and the omnipotence which the theologians attribute to God, [it] could not possibly know and foresee the needs of its people, or satisfy with an even justice those needs which are most legitimate and pressing.” [Op. Cit., p. 332, pp. 332–3 and p. 318]

Which brings us to the “dictatorship of the proletariat.” While many Marxists basically use this term to describe the defence of the revolution and so argue that anarchists do not see the for that, this is incorrect. Anarchists from Bakunin onwards have argued that a revolution would have to defend itself from counter revolution and yet we reject the concept totally (see section H.2.1 for a refutation of claims that anarchists think a revolution does not need defending). To understand why Bakunin rejected the concept, we must provide some historical context.

Anarchists in the nineteenth century rejected the idea of the “dictatorship of the proletariat” in part because the proletariat was a minority of working class people at the time. To argue for a dictatorship of the proletariat meant to argue for the dictatorship of a minority class, a class which excluded the majority of toiling peo-

dictatorship could not exist ... Dictatorship is the most highly concentrated function of function of a class, and therefore the basic instrument of a dictatorship is a party. In the most fundamental aspects a class realises its dictatorship through a party. That is why Lenin spoke not only of the dictatorship of the class but also the dictatorship of the party and, in a certain sense, made them identical.” [Op. Cit., pp. 75–6]

He repeated this position on party dictatorship into the late 1930s, long after it had resulted in the horrors of Stalinism:

“The revolutionary dictatorship of a proletarian party is for me not a thing that one can freely accept or reject: It is an objective necessity imposed upon us by the social realities — the class struggle, the heterogeneity of the revolutionary class, the necessity for a selected vanguard in order to assure the victory. The dictatorship of a party belongs to the barbarian prehistory as does the state itself, but we can not jump over this chapter, which can open (not at one stroke) genuine human history... The revolutionary party (vanguard) which renounces its own dictatorship surrenders the masses to the counter-revolution ... Abstractly speaking, it would be very well if the party dictatorship could be replaced by the 'dictatorship' of the whole toiling people without any party, but this presupposes such a high level of political development among the masses that it can never be achieved under capitalist conditions. The reason for the revolution comes from the circumstance that capitalism does not permit the material and the moral development of the masses.” [Writings of Leon Trotsky 1936–37, pp. 513–4]
often unaware, torn by feelings and instincts inherited from the past.” So "revolutionaries will have to take on the dictatorship without delay." The experience of Russia "reveals an energetic and innovative minority which is compelled to make up for the deficiencies in the education of the backward masses by the use of compulsion.” And so the party "is in a sense the nervous system of the class. Simultaneously the consciousness and the active, physical organisation of the dispersed forces of the proletariat, which are often ignorant of themselves and often remain latent or express themselves contradictorily." And what of the masses? What was their role? Serge was equally blunt. While the party is "supported by the entire working population," strangely enough, "it maintains its unique situation in dictatorial fashion" while the workers are "behind" the communists, "sympathising instinctively with the party and carrying out the menial tasks required by the revolution." [Revolution in Danger, p. 106, p. 92, p. 115, p. 67, p. 66 and p. 6]

Such are the joys of socialist liberation. The party thinks for the worker while they carry out the "menial tasks" of the revolution. Like doing the work and following the orders — as in any class system.

Trotsky agreed with this lesson and in 1926 opined that the "dictatorship of the party does not contradict the dictatorship of the class either theoretically or practically; but is the expression of it, if the regime of workers' democracy is constantly developed more and more." [The Challenge of the Left Opposition (1926–27), p. 76] The obvious contradictions and absurdities of this assertion are all too plain. Needless to say, when defending the concept of "the dictatorship of the party" he linked it to Lenin (and so to Leninist orthodoxy):

"Of course, the foundation of our regime is the dictatorship of a class. But this in turn assumes ... it is class that has come to self-consciousness through its vanguard, which is to say, through the party. Without this, the people. When Marx and Engels wrote the Communist Manifesto, for example, over 80% of the population of France and Germany were peasants or artisans — what they termed the "petit-bourgeois". This meant that their claim that the "proletarian movement is the self-conscious, independent movement of the immense majority, in the interests of the immense majority" was simply not true. Rather, for Marx's life-time (and for many decades afterwards) the proletarian movement was like "[a]ll previous movements," namely "movements of minorities, or in the interests of minorities." Not that Marx and Engels were unaware of this for they also noted that "[i]n countries like France" the peasants "constitute far more than half of the population." In 1875 Marx commented that "the majority of the 'toiling people' in Germany consists of peasants, and not of proletarians." He stressed elsewhere around the same time that "the peasant ... forms a more of less considerable majority ... in the countries of the West European continent." [The Marx-Engels Reader, p. 482, p. 493, p. 536 and p. 543]

Clearly, then, Marx and Engels vision of proletarian revolution was one which involved a minority dictating to the majority and so Bakunin rejected it. His opposition rested on the fact that a "dictatorship of the proletariat," at the time, actually meant a dictatorship by a minority of working people and so a “revolution” which excluded the majority of working people (i.e. artisans and peasants). As he argued in 1873:

"If the proletariat is to be the ruling class ... then whom will it rule? There must be yet another proletariat which will be subject to this new rule, this new state. It may be the peasant rabble ... which, finding itself on a lower cultural level, will probably be governed by the urban and factory proletariat." [Statism and Anarchy, pp. 177–8]

For Bakunin, to advocate the "dictatorship of the proletariat" in an environment where the vast majority of working people were
peasants would be a disaster. It is only when we understand this social context that we can understand Bakunin’s opposition to Marx’s “dictatorship of the proletariat” — it would be a dictatorship of a minority class over the rest of the working population (he took it as a truism that the capitalist and landlord classes should be expropriated and stopped from destroying the revolution!). Bakunin continually stressed the need for a movement and revolution of all working class people (see section H.2.7) and that the peasants “will join cause with the city workers as soon as they become convinced that the latter do not pretend to impose their will or some political or social order invented by the cities for the greater happiness of the villages; they will join cause as soon as they are assured that the industrial workers will not take their lands away.” For an “uprising by the proletariat alone would not be enough; with that we would have only a political revolution which would necessarily produce a natural and legitimate reaction on the part of the peasants, and that reaction, or merely the indifference of the peasants, would strangle the revolution of the cities.” [The Political Philosophy of Bakunin, p. 401 and p. 378]

This explains why the anarchists at the St. Imier Congress argued that “every political state can be nothing but organised domination for the benefit of one class, to the detriment of the masses, and that should the proletariat itself seize power, it would in turn become a new dominating and exploiting class.” As the proletariat was a minority class at the time, their concerns can be understood. For anarchists then, and now, a social revolution has to be truly popular and involve the majority of the population in order to succeed. Unsurprisingly, the congress stressed the role of the proletariat in the struggle for socialism, arguing that “the proletariat of all lands ... must create the solidarity of revolutionary action ... independently of and in opposition to all forms of bourgeois politics.” Moreover, the aim of the workers’ movement was “free organisations and federations ... created by the spontaneous action of the proletariat it-

the dictatorship of the masses with a dictatorship of the leaders is ridiculously absurd, and stupid.” [The Lenin Anthology, p. 575, p. 567 and p. 568]

Lenin stressed this idea numerous times. For example, he argued that “the dictatorship of the proletariat cannot be exercised through an organisation embracing the whole of the class, because in all capitalist countries (and not only over here, in one of the most backward) the proletariat is still so divided, so degraded, and so corrupted in parts ... that an organisation taking in the whole proletariat cannot directly exercise proletarian dictatorship. It can be exercised only by a vanguard ... Such is the basic mechanism of the dictatorship of the proletariat, and the essentials of transition from capitalism to communism ... for the dictatorship of the proletariat cannot be exercised by a mass proletarian organisation.” [Collected Works, vol. 32, p. 21] This position had become Communist orthodoxy both in Russia and internationally since early 1919. The American socialist John Reed, author of Ten Days that Shook the World, was a defender of “the value of centralisation” and “the dictatorship of a revolutionary minority” (noting that “the Communist Party is supreme in Russia”). [Shaking the World, p. 238] Similarly with the likes of Amedeo Bordiga, the first leader of the Communist Party in Italy.

Victor Serge, the ex-anarchist and enthusiastic convert to Bolshevism, argued this mainstream Bolshevik position until the mid-1930s. In 1919, it was a case that “dictatorship” was not some kind of “proletarian” dictatorship by the masses. He, like the leading Bolsheviks, explicitly argued against this. Yes, he wrote, “if we are looking at what should, that is at what ought to, be the case” but this “seems doubtful” in reality. “For it appears that by force of circumstances one group is obliged to impose itself on the others and to go ahead of them, breaking them if necessary, in order then to exercise exclusive dictatorship.” The militants “leading the masses ... cannot rely on the consciousness, the goodwill or the determination of those they have to deal with; for the masses who will follow them or surround them will be warped by the old regime, relatively uncultivated,
ist rhetoric tends to hide this reality. As an example, we can point to Lenin’s comments in October, 1921. In an essay marking the fourth anniversary of the Bolshevik Revolution, Lenin stated that the Soviet system “provides the maximum of democracy for the workers and peasants; at the same time, it marks a break with bourgeois democracy and the rise of a new, epoch-making type of democracy, namely, proletarian democracy, or the dictatorship of the proletariat.” [Collected Works, vol. 33, p. 55] Yet Lenin’s comments came just a few months after factions within the Communist Party had been banned and after the Kronstadt rebellion and a wave of strikes calling for free soviet elections had been repressed. It was written years after Lenin had asserted that “[w]hen we are reproached with having established a dictatorship of one party … we say, ‘Yes, it is a dictatorship of one party! This is what we stand for and we shall not shift from that position ...”’ [Op. Cit., vol. 29, p. 535] And, of course, they had not shifted from that position! Clearly, the term “proletarian democracy” had a drastically different meaning to Lenin than to most people!

The identification of party power and working class power reaches its height (or, more correctly, depth) in the works of Lenin and Trotsky. Lenin, for example, argued that “the Communists’ correct understanding of his tasks” lies in “correctly gauging the conditions and the moment when the vanguard of the proletariat can successfully assume power, when it will be able — during and after the seizure of power — to win adequate support from sufficiently broad strata of the working class and of the non-proletarian working masses, and when it is able thereafter to maintain, consolidate, and extend its rule by educating, training and attracting ever broader masses of the working people.” Note, the vanguard (the party) seizes power, not the masses. Indeed, he stressed that the “mere presentation of the question — ‘dictatorship of the party or dictatorship of the class: dictatorship (party) of the leaders or dictatorship (party) of the masses?’ — testifies to most incredible and hopelessly muddled thinking” and “[t]o go so far ... as to contrast, in general, self, [that is, by] the trade bodies and the autonomous communes.” [quoted in Bakunin on Anarchism, p. 438, p. 439 and p. 438]

Hence Bakunin’s comment that “the designation of the proletariat, the world of the workers, as class rather than as mass” was “deeply antipathetic to us revolutionary anarchists who unconditionally advocate full popular emancipation.” To do so, he argued, meant “[n]othing more or less than a new aristocracy, that of the urban and industrial workers, to the exclusion of the millions who make up the rural proletariat and who ... will in effect become subjects of this great so-called popular State.” [Michael Bakunin: Selected Writings, pp. 253–4]

Again, the experiences of the Russian Revolution confirm Bakunin’s worries. The Bolsheviks implemented the dictatorship of the city over the countryside, with disastrous results (see section H.6.2 for more details).

One last point on this subject. While anarchists reject the "dictatorship of the proletariat" we clearly do not reject the key role the proletariat must play in any social revolution (see section H.2.2 on why the Marxist assertion anarchists reject class struggle is false). We only reject the idea that the proletariat must dictate over other working people like peasants and artisans. We do not reject the need for working class people to defend a revolution, nor the need for them to expropriate the capitalist class nor for them to manage their own activities and so society.

Then there is the issue of whether, even if the proletariat does seize political power, whether the whole class can actually exercise it. Bakunin raised the obvious questions:

“For, even from the standpoint of that urban proletariat who are supposed to reap the sole reward of the seizure of political power, surely it is obvious that this power will never be anything but a sham? It is bound to be impossible for a few thousand, let alone tens or hundreds of thousands of men to wield that power effectively. It will
have to be exercised by proxy, which means entrusting it to a group of men elected to represent and govern them, which in turn will unfailingly return them to all the deceit and subservience of representative or bourgeois rule. After a brief flush of liberty or orgiastic revolution, the citizens of the new State will wake up slaves, puppets and victims of a new group of ambitious men.” [Op. Cit., pp. 254–5]

He repeated this argument: “What does it mean, ‘the proletariat raised to a governing class?’ Will the entire proletariat head the government? The Germans number about 40 million. Will all 40 millions be members of the government? The entire nation will rule, but no one will be ruled. Then there will be no government, no state; but if there is a state, there will also be those who are ruled, there will be slaves.” Bakunin argued that Marxism resolves this dilemma “in a simple fashion. By popular government they mean government of the people by a small number of representatives elected by the people. So-called popular representatives and rulers of the state elected by the entire nation on the basis of universal suffrage — the last word of the Marxists, as well as the democratic school — is a lie behind which lies the despotism of a ruling minority is concealed, a lie all the more dangerous in that it represents itself as the expression of a sham popular will.” [Statism and Anarchy, p. 178]

So where does Marx stand on this question. Clearly, the self-proclaimed followers of Marx support the idea of “socialist” governments (indeed, many, including Lenin and Trotsky, went so far as to argue that party dictatorship was essential for the success of a revolution — see next section). Marx, however, is less clear. He argued, in reply to Bakunin’s question if all Germans would be members of the government, that “[c]ertainly, because the thing starts with the self-government of the township.” However, he also commented that ”[c]an it really be that in a trade union, for example, the entire union forms its executive committee,” suggesting that

‘workers’ republic’ might well prove to be a despotism (to use one of Bakunin’s more favourite terms) of unparalleled oppression ...

“Republican institutions, however much they are intended to express the interests of the workers, necessarily place policy-making in the hands of deputies and categorically do not constitute a ‘proletariat organised as a ruling class.’ If public policy, as distinguished from administrative activities, is not made by the people mobilised into assemblies and confederally co-ordinated by agents on a local, regional, and national basis, then a democracy in the precise sense of the term does not exist. The powers that people enjoy under such circumstances can be usurped without difficulty … [I]f the people are to acquire real power over their lives and society, they must establish — and in the past they have, for brief periods of time established — well-ordered institutions in which they themselves directly formulate the policies of their communities and, in the case of their regions, elect confederal functionaries, revocable and strictly controllable, who will execute them. Only in this sense can a class, especially one committed to the abolition of classes, be mobilised as a class to manage society.” [“The Communist Manifesto: Insights and Problems”, pp. 14–17, Black Flag, no. 226, pp. 16–7]

This is why anarchists stress direct democracy (self-management) in free federations of free associations. It is the only way to ensure that power remains in the hands of the people and is not turned into an alien power above them. Thus Marxist support for statist forms of organisation will inevitably undermine the liberatory nature of the revolution.

Thus the real meaning of a workers state is simply that the party has the real power, not the workers. That is nature of a state. Marx-
short list of these differences would include the question of the “dictatorship of the proletariat”, the standing of revolutionaries in elections, centralisation versus federalism, the role and organisation of revolutionaries, whether socialism can only come “from below” or whether it is possible for it come “from below” and “from above” and a host of others (i.e. some of the differences we indicated in the last section during our discussion of Bakunin’s critique of Marxism). Indeed, there are so many it is difficult to address them all here. As such, we can only concentrate on a few in this and the following sections.

One of the key issues is on the issue of confusing party power with popular power. The logic of the anarchist case is simple. In any system of hierarchical and centralised power (for example, in a state or governmental structure) then those at the top are in charge (i.e. are in positions of power). It is not “the people,” nor “the proletariat,” nor “the masses,” it is those who make up the government who have and exercise real power. As Malatesta argued, government means “the delegation of power, that is the abdication of initiative and sovereignty of all into the hands of a few” and “if ..., as do the authoritarians, one means government action when one talks of social action, then this is still the resultant of individual forces, but only of those individuals who form the government.” [Anarchy, p. 40 and p. 36] Therefore, anarchists argue, the replacement of party power for working class power is inevitable because of the nature of the state. In the words of Murray Bookchin:

“Anarchist critics of Marx pointed out with considerable effect that any system of representation would become a statist interest in its own right, one that at best would work against the interests of the working classes (including the peasantry), and that at worst would be a dictatorial power as vicious as the worst bourgeois state machines. Indeed, with political power reinforced by economic power in the form of a nationalised economy, a

there will be a division of labour between those who govern and those who obey in the Marxist system of socialism. [The Marx-Engels Reader, p. 545 and p. 544] Elsewhere he talks about “a socialist government” coming “to the helm in a country”. [Collected Works, vol. 46, p. 66] As we discuss in section H.3.10, both Marx and Engels saw universal suffrage in a republic as expressing the political power of the working class.

So Bakunin’s critique holds, as Marx clearly saw the “dictatorship of the proletariat” involving a socialist government having power. For Bakunin, like all anarchists, if a political party is the government, then clearly its leaders are in power, not the mass of working people they claim to represent. Anarchists have, from the beginning, argued that Marx made a grave mistake confusing working class power with the state. This is because the state is the means by which the management of people’s affairs is taken from them and placed into the hands of a few. It signifies delegated power. As such, the so-called “workers’ state” or “dictatorship of the proletariat” is a contradiction in terms. Instead of signifying the power of the working class to manage society it, in fact, signifies the opposite, namely the handing over of that power to a few party leaders at the top of a centralised structure. This is because “all State rule, all governments being by their very nature placed outside the people, must necessarily seek to subject it to customs and purposes entirely foreign to it. We therefore declare ourselves to be foes... of all State organisations as such, and believe that the people can be happy and free, when, organised from below upwards by means of its own autonomous and completely free associations, without the supervision of any guardians, it will create its own life.” [Bakunin, Marxism, Freedom and the State, p. 63] Hence Bakunin’s constant arguments for a decentralised, federal system of workers councils organised from the bottom-up. Again, the transformation of the Bolshevik government into a dictatorship over the proletariat during the early stages of the Russian Revolution supports Bakunin’s critique of Marxism.
Related to this issue is Bakunin’s argument that Marxism created a privileged position for socialist intellectuals in both the current social movement and in the social revolution. This was because Marx stressed that his theory was a “scientific socialism” and, Bakunin argued, that implied “because thought, theory and science, at least in our times, are in the possession of very few, these few ought to be the leaders of social life” and they, not the masses, should organise the revolution “by the dictatorial powers of this learned minority, which presumes to express the will of the people.” This would be “nothing but a despotic control of the populace by a new and not at all numerous aristocracy of real and pseudoscientists” and so there would “be a new [ruling] class, a new hierarchy of real and counterfeit scientists and scholars, and the world will be divided into a minority ruling in the name of knowledge, and an immense ignorant majority. And then, woe unto the mass of ignorant ones!” Thus “every state, even the pseudo-People’s State concocted by Mr. Marx, is in essence only a machine ruling the masses from above, through a privileged minority of conceited intellectuals who imagine that they know what the people need and want better than do the people themselves.” The Russian anarchist predicted that “the organisation and the rule of the new society by socialist savants” would be “the worse of all despotic governments!” [Bakunin on Anarchism, pp. 328–9, p. 331, p. 319, p. 338 and p. 295] History proved Bakunin right, with the Bolshevik regime being precisely that. As we discuss in section H.5, Lenin’s vanguardism did produce such a result, with the argument that the party leadership knew the objective needs of working class people better than they themselves did being used to justify party dictatorship and the strict centralisation of social life in the hands of its leadership.

Which brings us to the last issue, namely whether the revolution will be decentralised or centralised. For Marx, the issue is somewhat confused by his support for the Paris Commune and its federalist programme (written, we must note, by a follower of Proudhon). However, in 1850, Marx stood for extreme centralisation of state, support and encourage working class organisation and action and see class struggle as the means of creating a social revolution which will transform society into a new one. However, the differences between these socialist theories are equally important. In the words of Errico Malatesta:

“The important, fundamental dissension [between anarchists and Marxists] is [that] … [Marxist] socialists are authoritarians, anarchists are libertarians.

“Socialists want power … and once in power wish to impose their programme on the people... Anarchists instead maintain, that government cannot be other than harmful, and by its very nature it defends either an existing privileged class or creates a new one; and instead of inspiring to take the place of the existing government anarchists seek to destroy every organism which empowers some to impose their own ideas and interests on others, for they want to free the way for development towards better forms of human fellowship which will emerge from experience, by everyone being free and, having, of course, the economic means to make freedom possible as well as a reality.” [Errico Malatesta: His Life and Ideas, p. 142]

The other differences derive from this fundamental one. So while there are numerous ways in which anarchists and Marxists differ, their root lies in the question of power. Socialists seek power (in the name of the working class and usually hidden under rhetoric arguing that party and class power are the same). Anarchists seek to destroy hierarchical power in all its forms and ensure that everyone is free to manage their own affairs (both individually and collectively). From this comes the differences on the nature of a revolution, the way the working class movement should organise and the tactics it should apply and so on. A
Communal Council” composed of “delegates … vested with plenary but accountable and removable mandates.” [Michael Bakunin: Selected Writings, p. 261 and pp. 170–1] As such, the Paris Commune was a striking confirmation of Bakunin’s ideas on many levels, not Marx’s (who adjusted his ideas to bring them in line with Bakunin’s!).

Since Bakunin, anarchists have deepen this critique of Marxism and, with the experience of both Social-Democracy and Bolshevism, argue that he predicted key failures in Marx’s ideas. Given that his followers, particularly Lenin and Trotsky, have emphasised (although, in many ways, changed them) the centralisation and “socialist government” aspects of Marx’s thoughts, anarchists argue that Bakunin’s critique is as relevant as ever. Real socialism can only come from below.

For more on Bakunin’s critique of Marxism, Mark Leier’s excellent biography of the Russian Anarchist ([Bakunin: The Creative Passion]) is worth consulting, as is Brian Morris’s [Bakunin: The Philosophy of Freedom]. John Clark has two useful essays on this subject in his [The Anarchist Moment] while Richard B. Saltman’s [The Social and Political Thought of Michael Bakunin] contains an excellent chapter on Bakunin and Marx. A good academic account can be found in Alvin W. Gouldner’s “[Marx’s Last Battle: Bakunin and the First International]” ([Theory and Society, Vol. 11, No. 6]) which is a revised and shortened version of a chapter of his [Against Fragmentation: the Origins of Marxism and the Sociology of Intellectuals]. Obviously, though, Bakunin’s original writings should be the first starting point.

H.1.2 What are the key differences between Anarchists and Marxists?

There are, of course, important similarities between anarchism and Marxism. Both are socialist, oppose capitalism and the current power, arguing that the workers “must not only strive for a single and indivisible German republic, but also within this republic for the most determined centralisation of power in the hands of the state authority.” He argued that in a nation like Germany “where there is so many relics of the Middle Ages to be abolished” it “must under no circumstances be permitted that every village, every town and every province should put a new obstacle in the path of revolutionary activity, which can proceed with full force from the centre.” He stressed that “[a]s in France in 1793 so today in Germany it is the task of the really revolutionary party to carry through the strictest centralisation.” [The Marx-Engels Reader, pp. 509–10] Lenin followed this aspect of Marx’s ideas, arguing that “Marx was a centralist” and applying this perspective both in the party and once in power ([The Essential Works of Lenin, p. 310]).

Obviously, this issue dovetails into the question of whether the whole class exercises power under the “dictatorship of the proletariat.” In a centralised system, obviously, power has to be exercised by a few (as Marx’s argument in 1850 showed). Centralism, by its very nature excludes the possibility of extensive participation in the decision making process. Moreover, the decisions reached by such a body could not reflect the real needs of society. In the words of Bakunin:

“What man, what group of individuals, no matter how great their genius, would dare to think themselves able to embrace and understand the plethora of interests, attitudes and activities so various in every country, every province, locality and profession.” [Michael Bakunin: Selected Writings, p. 240]

He stressed that “the revolution should be and should everywhere remain independent of the central point, which must be its expression and product — not its source, guide and cause ... the awakening of all local passions and the awakening of spontaneous life at all points,
must be well developed in order for the revolution to remain alive, real
and powerful.” Anarchists reject centralisation because it destroys
the mass participation a revolution requires in order to succeed.
Therefore we do “not accept, even in the process of revolutionary
transition, either constituent assemblies, provisional governments or
so-called revolutionary dictatorships; because we are convinced that
revolution is only sincere, honest and real in the hands of the masses,
and that when it is concentrated in those of a few ruling individuals
it inevitably and immediately becomes reaction.” Rather, the revolu-
tion “everywhere must be created by the people, and supreme control
must always belong to the people organised into a free federation of
agricultural and industrial associations ... organised from the bottom
80, p. 237 and p. 172]
This, we must stress, does not imply isolation. Bakunin always
emphasised the importance of federal organisation to co-ordinate
struggle and defence of the revolution. As he put it, all revolu-
tionary communes would need to federate in order “to organise the
necessary common services and arrangements for production and ex-
change, to establish the charter of equality, the basis of all liberty —
a charter utterly negative in character, defining what has to be abol-
ished for ever rather than the positive forms of local life which can be
created only by the living practice of each locality — and to organise
common defence against the enemies of the Revolution.” [Op. Cit.,
p. 179]
Ironically, it is a note by Engels to the 1885 edition of Marx’s 1850
article which shows the fallacy of the standard Marxist position on
centralisation and the validity of Bakunin’s position. As Engels
put it, “this passage is based on a misunderstanding” and it was now
“a well known fact that throughout the whole [Great French] revolu-
tion ... the whole administration of the departments, arrondissements
and communes consisted of authorities elected by the respective con-
stituents themselves, and that these authorities acted with complete
freedom within general state laws [and] that precisely this provincial
and local self-government ... became the most powerful lever of the
revolution.” [The Marx-Engels Reader, p. 510f] Marx’s original
comments imply the imposition of freedom by the centre on a pop-
ulation not desiring it (and how could the centre be representative
of the majority in such a case?). Moreover, how could a revolution
be truly social if it was not occurring in the grassroots across a
country? Unsurprisingly, local autonomy has played a key role in
every real revolution.
As such, Bakunin has been proved right. Centralism has always
killed a revolution and, as he always argued, real socialism can
only be worked from below, by the people of every village, town,
and city. The problems facing the world or a revolution cannot
be solved by a few people at the top issuing decrees. They can
only be solved by the active participation of the mass of working
class people, the kind of participation centralism and government
by their nature exclude.
Given Marx’s support for the federal ideas of the Paris Com-
mune, it can be argued that Marxism is not committed to a pol-
icy of strict centralisation (although Lenin, of course, argued that
Marx was a firm supporter of centralisation). What is true is, to
quote Daniel Guérin, that Marx’s comments on the Commune dif-
fer “noticeably from Marx’s writings of before and after 1871” while
Bakunin’s were “in fact quite consistent with the lines he adopted in
his earlier writings.” [No Gods, No Masters, vol. 1, p. 167] Indeed,
as Bakunin himself noted, while the Marxists “saw all their ideas up-
set by the uprising” of the Commune, they “found themselves com-
pelled to take their hats off to it. They went even further, and pro-
claimed that its programme and purpose were their own, in face of
the simplest logic and their own true sentiments.” This modification
of ideas by Marx in the light of the Commune was not limited just
to federalism, he also praised its system of mandating recallable del-
geates. This was a position which Bakunin had been arguing for a
number of years previously but which Marx had never advocated.
In 1868, for example, Bakunin was talking about a “Revolutionary
tion and distribution which will prevail in the different localities and among the many ... groupings that will exist.” He argued that while, eventually, all groups of workers (particularly the peasants) will “understand the advantages of communism or at least of the direct exchange of goods for goods,” this may not happen “in a day.” If some kind of money was used, then people should “ensure that [it] truly represents the useful work performed by its possessors” rather than being that “powerful means of exploitation and oppression” is currently is. [Errico Malatesta: His Life and Ideas, pp. 198–9 and pp. 100–1] Emma Goldman, also, saw “a society based on voluntary co-operation of productive groups, communities and societies loosely federated together, eventually developing into a free communism, actuated by a solidarity of interests.” [Red Emma Speaks, p. 50]

So rather than seeing a “full blown” communist society appearing instantly from a revolution, anarcho-communists see a period of transition in which the degree of communism in a given community or area is dependent on the objective conditions facing it. This period of transition would see different forms of social experimentation but the desire is to see libertarian communist principles as the basis of as much of this experimentation as possible. To claim that anarcho-communists ignore reality and see communism as being created overnight is simply a distortion of their ideas. Rather, they are aware that the development towards communism is dependent on local conditions, conditions which can only be overcome in time and by the liberated community re-organising production and extending it as required. Thus we find Malatesta arguing 1884 that communism could be brought about immediately only in a very limited number of areas and, “for the rest,” collectivism would have to be accepted “for a transitional period.” This was because, “[f]or communism to be possible, a high stage of moral development is required of the members of society, a sense of solidarity both elevated and profound, which the upsurge of the revolution may not suffice to induce. This doubt is the more justified in that material con-

Likewise, Engels praised the fact that, to combat the independence of the state from society, the Commune introduced wages for officials the same as that “received by other workers” and the use of “the binding mandate to delegates to representative bodies.” [Op. Cit., p. 258] Compare this to Engels attack on anarchist support for binding mandates (which, like our support for free federation, pre-dated the Commune). Then it was a case of this being part of Bakunin’s plans to control the international “for a secret society ... there is nothing more convenient than the imperative mandate” as all its members vote one way, while the others will “contradict one another.” Without these binding mandates, “the common sense of the independent delegates will swiftly unite them in a common party against the party of the secret society.” Obviously the notion that delegates from a group should reflect the wishes of that group was lost on Engels. He even questioned the utility of this system for “if all electors gave their delegates imperative mandates concerning all points in the agenda, meetings and debates of the delegates would be superfluous.” [Collected Works, vol. 22, p. 281 and p. 277] It should be noted that Trotsky shared Engels dislike of “representatives” being forced to actually represent the views of their constituents within the party. [In Defense of Marxism, pp. 80–1]

Clearly a “free federation” of Communes and binding mandates are bad when anarchists advocate them but excellent when workers in revolt implement them! Why this was the case Engels failed to explain. However, it does suggest that anarchist ideas that we must reflect the future in how we organise today is no hindrance to revolutionary change and, in fact, reflects what is required to turn a revolt into a genuine social revolution.

Engels asserted that the anarchist position meant that “the proletariat is told to organise not in accordance with the requirements of the struggle ... but according to the vague notions of a future society entertained by some dreamers.” [Op. Cit., vol. 23, p. 66] In this he was wrong, as he failed to understand that the anarchist position was produced by the class struggle itself. He failed to understand
how that struggle reflects our aspirations for a better world, how we see what is wrong with modern society and seek to organise to end such abuses rather than perpetuate them in new forms. Thus the trade unions which Bakunin argued would be the basis of a free society are organised from the bottom-up and based upon the direct participation of the workers. This form of organisation was not forced upon the workers by some intellectuals thinking they were a good idea. Rather they were created to fight the bosses and reflected the fact that workers were sick of being treating as servants and did not wish to see that repeated in their own organisations.

As Bakunin argued, when a union delegates authority to its officials it may be “very good for the committees, but [it is] not at all favourable for the social, intellectual, and moral progress of the collective power of the International.” The committees “substituted their own will and their own ideas for that of the membership” while the membership expressed “indifference to general problems” and left “all problems to the decisions of committees.” This could only be solved by “call[ing] general membership meetings,” that is “popular assemblies.” Bakunin goes on to argue that the “organisation of the International, having as its objective not the creation of new despotism but the uprooting of all domination, will take on an essentially different character than the organisation of the State.” This must be the “organisation of the trade sections and their representation by the Chambers of Labour” and these “bear in themselves the living seeds of the new society which is to replace the old world. They are creating not only the ideas, but also the facts of the future itself.” [Bakunin on Anarchism, pp. 246–7 and p. 255]

Ou Shengbai, a Chinese anarchist, argued that libertarians “deeply feel that the causes of popular misery are these: (1) Because of the present political system power is concentrated in a few hands with the result that the majority of the people do not have the opportunity for free participation. (2) Because of the capitalist system all means of production are concentrated in the hands of the capitalists with the results that the benefits that ought to accrue to labourers

Berkman also acknowledged that “full blown” communism was not likely after a successful revolution. “Of course,” he argued, “when the social revolution has become thoroughly organised and production is functioning normally there will be enough for everybody. But in the first stages of the revolution, during the process of re-construction, we must take care to supply the people as best we can, and equally, which means rationing.” Clearly, in such circumstances “full blown” communism would be impossible and, unsurprisingly, Berkman argued that would not exist. However, the principles that inspire communism and anarchism could be applied immediately. This meant that both the state and capitalism would be abolished. While arguing that “[t]here is no other way of securing economic equality, which alone is liberty” than communist anarchism, he also stated that it is “likely ... that a country in social revolution may try various economic experiments ... different countries and regions will probably try out various methods, and by practical experience learn the best way. The revolution is at the same time the opportunity and justification for it.” Rather than “dictate to the future, to prescribe its mode of conduct”, Berkman argued that his “purpose is to suggest, in board outline the principles which must animate the revolution, the general lines of action it should follow if it is to accomplish its aim — the reconstruction of society on a foundation of freedom and equality.” [Op. Cit., p. 215 and p. 230]

Malatesta argued along similar lines. While urging the “complete destruction of the domination and exploitation of man by man” by the “expropriation of landlords and capitalists for the benefit of all” and “the abolition of government,” he recognised that in “the post-revolutionary period, in the period of reorganisation and transition, there might be ‘offices for the concentration and distribution of the capital of collective enterprises’, that there might or might not be titles recording the work done and the quantity of goods to which one is entitled.” However, he stressed that this “is something we shall have to wait and see about, or rather, it is a problem which will have many and varied solutions according to the system of produc-
to understand the anarchist vision of revolution. We consider it a **process** and not an event: “By revolution we do not mean just the insurrectionary act.” [Malatesta, *Errico Malatesta: His Life and Ideas*, p. 156]

Once this is understood, the idea that anarchists think a “full blown” anarchist society will be created “overnight” is a fallacy. As Murray Bookchin pointed out, “Bakunin, Kropotkin, Malatesta were not so naive as to believe that anarchism could be established overnight. In imputing this notion to Bakunin, Marx and Engels wilfully distorted the Russian anarchist’s views.” [Post-Scarcity Anarchism, p. 137] Indeed, Kropotkin stressed that anarchists “do not believe that in any country the Revolution will be accomplished at a stroke, in the twinkling of an eye, as some socialists dream.” Moreover, “[n]o fallacy more harmful has ever been spread than the fallacy of a ‘One-day Revolution.’” [The Conquest of Bread, p. 81] Bakunin argued that a “more or less prolonged transitional period” would “naturally follow in the wake of the great social crisis” implied by social revolution. [The Political Philosophy of Bakunin, p. 412] The question, therefore, is not whether there will be a “transitional” society after a revolution but what kind of transition will it be.

So anarchists are aware that a “full blown” communist society will not come about immediately. Rather, the creation of such a society will be a **process** which the revolution will start off. As Alexander Berkman put it in his classic introduction to communist-anarchist ideas “you must not confuse the social revolution with anarchy. Revolution, in some of its stages, is a violent upheaval; anarchy is a social condition of freedom and peace. The revolution is the **means** of bringing anarchy about but it is not anarchy itself. It is to pave the road for anarchy, to establish conditions which will make a life of liberty possible.” However, the “end shapes the means” and so “to achieve its purpose the revolution must be imbued with and directed by the anarchist spirit and ideas ... the social revolution must be anarchist in method as in aim.” [What is Anarchism?, p. 231]

are usurped by capitalists. [quoted by Arif Dirlik, *Anarchism in the Chinese Revolution*, p. 235] Does it make much sense to organise in ways which reflect these problems? Surely the reason why people become socialists is because they seek to change society, to give the mass of the population an opportunity for free participation and to manage their own affairs. Why destroy those hopes and dreams by organising in a way which reflects the society we oppose rather than the one we desire?

Ultimately, Engels dismissed the practical experiences of working class people, dismissed our ability to create a better world and our ability to dream. In fact, he seems to think there is some division of labour between “the proletariat” who do the struggling and “some dreamers” who provide the ideas. The notion that working class people can both struggle and dream was lost on him, as was the notion that our dreams shape our struggles and our struggles shape our dreams. People resist oppression and exploitation because we want to determine what goes on in our lives and to manage our own affairs. In that process, we create new forms of organisation which allows that to happen, ones that reflect our dreams of a better world. This is not in opposition to the needs of the struggle, as Engels asserted, but are rather an expression of it. To dismiss this process, to advocate organisational methods which are the very antithesis of what working class people have shown, repeatedly, what they want, is the height of arrogance and, ultimately, little more than a dismissal of the hopes, dreams and creative self-activity of working class people. As libertarian socialist Cornelius Castoriadis put it:

“the organisation’s inspiration can come only from the socialist structures created by the working class in the course of its own history. It must let itself be guided by the principles on which the soviet and the factory council were founded ... the principles of workers’ management must govern the operation and structure of the organi-
sation. Apart from them, there are only capitalist principles, which, as we have seen, can only result in the establishment of capitalist relationships.” [Political and Social Writings, vol. 2, pp. 217–8]

Ironically enough, given their own and their followers claims of Marxism’s proletarian core, it was Marx and Engels who were at odds with the early labour movement, not Bakunin and the anarchists. Historian Gwyn A. Williams notes in the early British labour movement there were “to be no leaders” and the organisations were “consciously modelled on the civil society they wished to create.” [Artisans and Sans-Culottes, p. 72] Lenin, unsurprisingly, dismissed the fact that the British workers “thought it was an indispensable sign of democracy for all the members to do all the work of managing the unions” as “primitive democracy” and “absurd.” He also complained about “how widespread is the ‘primitive’ conception of democracy among the masses of the students and workers” in Russia. [Essential Works of Lenin, pp. 162–3] Clearly, the anarchist perspective reflects the ideas the workers’ movement before it degenerates into reformism and bureaucracy while Marxism reflects it during this process of degeneration. Needless to say, the revolutionary nature of the early union movement clearly shows who was correct!

Anarchists, in other words, simply generalised the experiences of the workers in struggle and Bakunin and his followers were expressing a common position held by many in the International. Even Marx paid lip-service to this when he stated “in contrast to old society... a new society is springing up” and the “Pioneer of that new society is the International Working Men’s Association.” [Selected Works, p. 263] Clearly, considering the International as the embryo of the future society is worthy only of scorn as the correct position is to consider it merely as a pioneer!

As such, libertarians “lay no claims to originality in proposing this [kind of prefigurative organisation]. In every revolution, during most much larger context of hierarchy and domination as a whole.” [Murray Bookchin, The Ecology of Freedom, p. 28] This has been the anarchist position from the nineteenth century onwards and one which is hard not to recognise if you are at all familiar with the anarchist movement and its theory. As one historian notes, we have never been purely anti-state, but also anti-capitalist and opposed to all forms of oppression:

“Anarchism rejected capitalism ... not only because it viewed it as inimical to social equality, but also because it saw it as a form of domination detrimental to individual freedom. Its basic tenet regarded hierarchical authority — be it the state, the church, the economic elite, or patriarchy — as unnecessary and deleterious to the maximisation of human potential.” [Jose Moya, Italians in Buenos Aires’s Anarchist Movement, p. 197]

So we oppose the state because it is just one aspect of a class ridden and hierarchical system. We just recognise that all the evils of that system must be destroyed at the same time to ensure a social revolution rather than just a change in who the boss is.

H.2.5 Do anarchists think “full blown” socialism will be created overnight?

Another area in which Marxists misrepresent anarchism is in the assertion that anarchists believe a completely socialist society (an ideal or “utopian” society, in other words) can be created “overnight.” As Marxist Bertell Ollman puts it, “[u]nlike anarcho-communists, none of us [Marxists] believe that communism will emerge full blown from a socialist revolution. Some kind of transition and period of indeterminate length for it to occur are required.” [Bertell Ollman (ed.), Market Socialism: The Debate among Socialists, p. 177] This assertion, while it is common, fails
Little wonder Bertrand Russell stated that anarchism “is associated with belief in the communal ownership of land and capital” because, like Marxism, it has the “perception that private capital is a source of tyranny by certain individuals over others.” [Roads to Freedom, p. 40] Russell was, of course, simply pointing out the obvious. As Brian Morris correctly summarises:

“Another criticism of anarchism is that it has a narrow view of politics: that it sees the state as the source of all evil, ignoring other aspects of social and economic life. This is a misrepresentation of anarchism. It partly derives from the way anarchism has been defined, and partly because Marxist historians have tried to exclude anarchism from the broader socialist movement. But when one examines the writings of classical anarchists... as well as the character of anarchist movements... it is clearly evident that it has never had this limited vision. It has always challenged all forms of authority and exploitation, and has been equally critical of capitalism and religion as it has been of the state.” [‘Anthropology and Anarchism,” pp. 35–41, Anarchy: A Journal of Desire Armed, no. 45, p. p. 40]

All in all, Marxist claims that anarchists view the state as the “chief evil” or see the destruction of the state as the “main idea” of anarchism are simply talking nonsense. In fact, rather than anarchists having a narrow view of social liberation, it is, in fact, Marxists who do so. By concentrating almost exclusively on the (economic) class source of exploitation, they blind themselves to other forms of exploitation and domination that can exist independently of (economic) class relationships. This can be seen from the amazing difficulty that many of them got themselves into when trying to analyse the Stalinist regime in Russia. Anarchists are well aware that the state is just one aspect of the current class system but unlike Marxists we recognise that “class rule must be placed in the

strikes and daily at the level of workshop organisation, the working class resorts to this type of direct democracy.” [Maurice Brinton, For Workers’ Power, p. 48] Given how Marxists pay lip-service to such forms of working class self-organisation, it seems amusing to hear them argue that this is correct for everyone else but not themselves and their own organisations! Apparently, the same workers who are expected to have the determination and consciousness necessary to overthrow capitalism and create a new world in the future are unable to organise themselves in a socialist manner today. Instead, we have to tolerate so-called “revolutionary” organisations which are just as hierarchical, top-down and centralised as the system which provoked our anger at its injustice in the first and which we are trying to end!

Related to this is the fact that Marxists (particularly Leninists) favour centralisation while anarchists favour decentralisation within a federal organisation. Anarchists do not think that decentralisation implies isolation or narrow localism. We have always stressed the importance of federalism to co-ordinate decisions. Power would be decentralised, but federalism ensures collective decisions and action. Under centralised systems, anarchists argue, power is placed into the hands of a few leaders. Rather than the real interests and needs of the people being co-ordinated, centralism simply means the imposition of the will of a handful of leaders, who claim to “represent” the masses. Co-ordination from below, in other words, is replaced by coercion from above in the centralised system and the needs and interests of all are replaced by those of a few leaders at the centre.

Such a centralised, inevitably top-down, system can only be counter-productive, both practically and in terms of generating socialist consciousness:

“Bolsheviks argue that to fight the highly centralised forces of modern capitalism requires an equally centralised type of party. This ignores the fact that
capitalist centralisation is based on coercion and force and the exclusion of the overwhelming majority of the population from participating in any of its decisions ...

“The very structure of these organisations ensures that their personnel do not think for themselves, but unquestioningly carry out the instructions of their superiors ...

“Advocates of ‘democratic centralism’ insist that it is the only type of organisations which can function effectively under conditions of illegality. This is nonsense. The ‘democratic centralist’ organisation particularly vulnerable to police persecution. When all power is concentrated in the hands of the leaders, their arrest immediately paralyses the whole organisation. Members trained to accept unquestioningly the instruction of an all-wise Central Committee will find it very difficult to think and act for themselves. The experiences of the German Communist Party [under the Nazis] confirm this. With their usual inconsistency, the Trotskyists even explain the demise of their Western European sections during World War II by telling people how their leaders were murdered by the Gestapo!” [Maurice Brinton, Op. Cit., p. 43]

As we discuss in depth in section H.5 the Leninist vanguard party does, ironically, create in embryo a new world simply because once in power it refashions society in its image. However, no anarchist would consider such a centralised, hierarchical top-down class system rooted in bureaucratic power as being remotely desirable or remotely socialist.

Therefore anarchists “recognised neither the state nor pyramidal organisation” Kropotkin argued, while Marxists “recognised the state and pyramidal methods of organisation” which “stifled the revolutionary spirit of the rank-and-file workers.” [Conquest of

power to subdue, to crush, to exploit, the power to enslave, to outrage, to degrade.” She considered property “not only a hindrance to human well-being, but an obstacle, a deadly barrier, to all progress.” A key problem of modern society was that “man must sell his labour” and so “his inclination and judgement are subordinated to the will of a master.” Anarchism, she stressed, was the “only philosophy that can and will do away with this humiliating and degrading situation ... There can be no freedom in the large sense of the word ... so long as mercenary and commercial considerations play an important part in the determination of personal conduct.” The state, ironically for Stack’s claim, was “necessary only to maintain or protect property and monopoly.” [Red Emma Speaks, p. 73, p. 66, p. 50 and p. 51]

Errico Malatesta, likewise, stressed that, for “all anarchists,” it was definitely a case that the “abolition of political power is not possible without the simultaneous destruction of economic privilege.” The “Anarchist Programme” he drafted listed “Abolition of private property” before “Abolition of government” and argued that “the present state of society” was one in “which some have inherited the land and all social wealth, while the mass of the people, dispossessed, is exploited and oppressed by a small possessing class.” It ends by arguing that anarchism wants “the complete destruction of the domination and exploitation of man by man” and for “expropriation of landowners and capitalists for the benefit of all; and the abolition of government.” [Errico Malatesta: His Life and Ideas, p. 158, p. 184, p. 183, p. 197 and p. 198] Nearly three decades previously, we find Malatesta arguing the same idea. As he put it in 1891, anarchists “struggle for anarchy, and for socialism, because we believe that anarchy and socialism must be realised immediately, that is to say that in the revolutionary act we must drive government away, abolish property ... human progress is measured by the extent government power and private property are reduced.” [Anarchy, p. 54]
avail themselves of the first opportunity of taking possession of land and the mines, of railways and factories,” to bring working class people “to the conviction that they must reply on themselves to get rid of the oppression of Capital.” [Act for Yourselves, p. 32] Strange words if Marxist assertions were true. As can be seen, Kropotkin is simply following Bakunin’s ideas on the matter. He, like Bakunin, was well aware of the evils of capitalism and that the state protects these evils.

Unsurprisingly, he called anarchism “the no-government system of socialism.” [Anarchism, p. 46] For Kropotkin, the “State is there to protect exploitation, speculation and private property; it is itself the by-product of the rapine of the people. The proletariat must rely on his own hands; he can expect nothing of the State. It is nothing more than an organisation devised to hinder emancipation at all costs.” [Words of a Rebel, p. 27] Rather than see the state as the main evil, he clearly saw it as the protector of capitalism — in other words, as one aspect of a class system which needed to be replaced by a better society:

“The very words Anarchist-Communism show in what direction society, in our opinion, is already going, and one what lines it can get rid of the oppressive powers of Capital and Government ... The first conviction to acquire is that nothing short of expropriation on a vast scale, carried out by the workmen themselves, can be the first step towards a reorganisation of our production on Socialist principles.” [Kropotkin, Act for Yourselves, pp. 32–3]

Similarly with all other anarchists. Emma Goldman, for example, summarised for all anarchists when she argued that anarchism “really stands for” the “liberation of the human body from the domination of property; liberation from the shackles and restraint of government.” Goldman was well aware that wealth “means power; the

Bread and Other Writings, p. 212] The Marxist perspective inevitably places power into the hands of a few leaders, who then decree which movements to support and encourage based on what is best for the long term benefit of the party itself rather than the working class. Thus we find Engels arguing while Marxists were “obliged to support every real popular movement” they also had to ensure “that the scarcely formed nucleus of our proletarian Party is not sacrificed in vain and that the proletariat is not decimated in futile local revolts,” for example “a blood-letting like that of 1871 in Paris.” [Marx and Engels, The Socialist Revolution, p. 294 and p. 320] This produces a conservative approach to social struggle, with mass actions and revolutionary situations ignored or warned against because of the potential harm it could inflict on the party. Unsurprisingly, every popular revolution has occurred against the advice of the so-called “revolutionary” Marxist leadership including the Paris Commune and the 1917 February revolution in Russia (even the October seizure of power was done in the face of resistance from the Bolshevik party machine).

It is for these reasons that anarchists “[a]s much as is humanly possible ... try to reflect the liberated society they seek to achieve” and “not slavishly duplicate the prevailing system of hierarchy, class and authority.” Rather than being the abstract dreams of isolated thinkers, these “conclusions ... emerge from an exacting study of past revolutions, of the impact centralised parties have had on the revolutionary process” and history has more than confirmed the anarchist warning that the “revolutionary party, by duplicating these centralistic, hierarchical features would reproduce hierarchy and centralism in the post revolutionary society.” [Murray Bookchin, Post-Scarcity Anarchism, p. 138, p. 139 and p. 137] Moreover, we base our arguments on how social movements should organise on the experiences of past struggles, of the forms of organisation spontaneously produced by those struggles and which, therefore, reflect the needs of those struggles and the desire for a better way of life which produced them. Ultimately, no one knows when a revolution turns
the hopes and aspirations of today into tomorrow’s reality and it would be wise to have some experience of managing our own affairs before hand.

By failing to understand the importance of applying a vision of a free society to the current class struggle, Marxists help ensure that society never is created. By copying bourgeois methods within their “revolutionary” organisations (parties and unions) they ensure bourgeois ends (inequality and oppression).

H.1.7 Haven’t you read Lenin’s “State and Revolution”? This question is often asked of people who critique Marxism, particularly its Leninist form. Lenin’s State and Revolution is often considered his most democratic work and Leninists are quick to point to it as proof that Lenin and those who follow his ideas are not authoritarian. As such, it is an important question. So how do anarchists reply when people point them to Lenin’s work as evidence of the democratic (even libertarian) nature of Marxism? Anarchists reply in two ways.

Firstly, we argue many of the essential features of Lenin’s ideas are to be found in anarchist theory and, in fact, had been aspects of anarchism for decades before Lenin put pen to paper. Bakunin, for example, talked about mandated delegates from workplaces federating into workers’ councils as the framework of a (libertarian) socialist society in the 1860s as well as popular militias to defend a revolution. Moreover, he was well aware that revolution was a process rather than an event and so would take time to develop and flourish. Hence Murray Bookchin:

“Bakunin, Kropotkin, and Malatesta were not so naive as to believe that anarchism could be established over night. In imputing this notion to Bakunin, Marx and Engels wil-

other evils of the current system while focusing exclusively on the state, is simply distorting his ideas. As Mark Leier summarises in his excellent biography of Bakunin, Engels “was just flat-out wrong ... What Bakunin did argue was that the social revolution had to be launched against the state and capitalism simultaneously, for the two reinforced each other.” [Bakunin: The Creative Passion, p. 274]

Kropotkin, unsurprisingly, argued along identical lines as Bakunin. He stressed that “the revolution will burn on until it has accomplished its mission: the abolition of property-owning and of the State.” This revolution, he re-iterated, would be a “mass rising up against property and the State.” Indeed, Kropotkin always stressed that “there is one point to which all socialists adhere: the expropriation of capital must result from the coming revolution.” This mean that “the area of struggle against capital, and against the sustainer of capital — government” could be one in which “various groups can act in agreement” and so “any struggle that prepares for that expropriation should be sustained in unanimity by all the socialist groups, to whatever shading they belong.” [Words of a Rebel, p. 75 and p. 204] Little wonder Kropotkin wrote his famous article “Expropriation” on this subject! As he put it:

“Expropriation — that is the guiding word of the coming revolution, without which it will fail in its historic mis-

This was because he was well aware of the oppressive nature of capitalism: “For the worker who must sell his labour, it is impossible to remain free, and it is precisely because it is impossible that we are anarchists and communists.” [Selected Writings on Anarchism and Revolution, p. 305] For Kropotkin, “the task we impose ourselves” is to acquire “sufficient influence to induce the workmen to
direction of it must at all times be vested in the people organised into a free federation of agricultural and industrial associations ... organised from the bottom up.” [Op. Cit., pp. 152–6]

As these the words of a person who considered the state as the “chief evil” or “that the state is the main enemy”? Of course not, rather Bakunin clearly identified the state as one aspect of a class society that has to be destroyed. As he put it, the “State, which has never had any task other than to regularise, sanction and ... protect the rule of the privileged classes and exploitation of the people’s labour for the rich, must be abolished. Consequently, this requires that society be organised from the bottom up through the free formation and free federation of worker associations, industrial, agricultural, scientific and artisan alike, ... founded upon collective ownership of the land, capital, raw materials and the instruments of labour, which is to say, all large-scale property ... leaving to private and hereditary possession only those items that are actually for personal use.” [Op. Cit., p. 182] Clearly, as Wayne Thorpe notes, for Bakunin “[o]nly the simultaneous destruction of the state and of the capitalist system, accompanied by the organisation from below of a federalist system of administration based upon labour’s economic associations ... could achieve true liberty.” [“The Workers Themselves”, p. 6]

Rather than seeing the state as the main evil to be abolished, Bakunin always stressed that a revolution must be economic and political in nature, that it must ensure political, economic and social liberty and equality. As such, he argued for both the destruction of the state and the expropriation of capital (both acts conducted, incidentally, by a federation of workers’ associations or workers’ councils). While the apparatus of the state was being destroyed (“Dissolution of the army, magistracy, bureaucracy, police and clergy”), capitalism was also being uprooted and destroyed (“All productive capital and instruments of labour ... confiscated for the benefit of toilers associations”). To assert, as Engels did, that Bakunin ignored the necessity of abolishing capitalism and the fully distorted the Russian anarchist’s views. Nor did the anarchists ... believe that abolition of the state involved ‘laying down of arms’ immediately after the revolution, to use Marx’s obscurantist choice of terms, thoughtlessly repeated by Lenin in State and Revolution. Indeed, much that passes for ‘Marxism’ in State and Revolution is pure anarchism — for example, the substitution of revolutionary militias for professional armed bodies and the substitution of organs of self-management for parliamentary bodies. What is authentically Marxist in Lenin’s pamphlet is the demand for ‘strict centralism,’ the acceptance of a ‘new’ bureaucracy, and the identification of soviets with a state.” [Post-Scarcity Anarchism, p. 137]

That this is the case is hidden in Lenin’s work as he deliberately distorts anarchist ideas in it (see sections H.1.3 and H.1.4 for example). Therefore, when Marxists ask whether anarchist have read Lenin’s State and Revolution we reply by arguing that most of Lenin’s ideas were first expressed by anarchists and his work just strikes anarchists as little more than a re-hash of many of our own ideas but placed in a statist context which totally and utterly undermines them in favour of party rule.

Secondly, anarchists argue that regardless of what Lenin argued for in State and Revolution, he did not apply those ideas in practice (indeed, he did the exact opposite). Therefore, the question of whether we have read Lenin’s work simply drives home how the ideological nature and theoretical bankruptcy of Leninism. This is because the person is asking you to evaluate their politics based on what they say rather than on what they do, like any politician.

To use an analogy, what would you say to a politician who has cut welfare spending by 50% and increased spending on the military and who argues that this act is irrelevant and that you should look at their manifesto which states that they were going to do
the opposite? You would dismiss this argument as laughable and them as liars as you would evaluate them by their actions, not by what they say. Leninists, by urging you to read Lenin’s *State and Revolution* are asking you to evaluate them by what their manifesto says and ignore what they did. Anarchists, on the other hand, ask you to evaluate the Leninist manifesto by comparing it to what they actually did in power. Such an evaluation is the only means by which we can judge the validity of Leninist claims and politics.

As we discuss the role of Leninist ideology in the fate of the Russian Revolution in section H.6 we will provide a summary of Lenin’s claims in his famous work *State and Revolution* and what he did in practice here. Suffice to say the difference between reality and rhetoric was extremely large and, therefore, it is a damning indictment of Bolshevism. Post-October, the Bolsheviks not only failed to introduce the ideas of Lenin’s book, they in fact introduced the exact opposite. As one historian puts it:

“To consider ‘State and Revolution’ as the basic statement of Lenin’s political philosophy — which non-Communists as well as Communists usually do — is a serious error. Its argument for a utopian anarchism never actually became official policy. The Leninism of 1917 ... came to grief in a few short years; it was the revived Leninism of 1902 which prevailed as the basis for the political development of the USSR.” [Robert V. Daniels, *The Conscience of the Revolution*, pp. 51–2]

Daniels is being far too lenient with the Bolsheviks. It was not, in fact, “a few short years” before the promises of 1917 were broken. In some cases, it was a few short hours. In others, a few short months. However, in a sense Daniels is right. It did take until 1921 before all hope for saving the Russian Revolution finally ended.

Simply put, if the *State and Revolution* is the manifesto of Bolshevism, then not a single promise in that work was kept by the of another man’s labour, a thief.” They must also “understand that there is no liberty in the absence of equality” and so the “attainment of the widest liberty” is possible only “amid the most perfect (de jure and de facto) political, economic and social equality.” The “sole and supreme objective” of the revolution “will be the effective political, economic and social emancipation of the people.” This was because political liberty “is not feasible without political equality. And the latter is impossible without economic and social equality.” This means that the “land belongs to everyone. But usufruct of it will belong only to those who till it with their own hands.” As regards industry, “through the unaided efforts and economic powers of the workers’ associations, capital and the instruments of labour will pass into the possession of those who will apply them ... through their own labours.” He opposed sexism, for women are “equal in all political and social rights.” Ultimately, “[n]o revolution could succeed ... unless it was simultaneously a political and a social revolution. Any exclusively political revolution ... will, insofar as it consequently does not have the immediate, effective, political and economic emancipation of the people as its primary objective, prove to be ... illusory, phoney.” [No Gods, No Masters, vol. 1, pp. 134–41]

In 1868, Bakunin was arguing the same ideas. The “Association of the International Brethren seeks simultaneously universal, social, philosophical, economic and political revolution, so that the present order of things, rooted in property, exploitation, domination and the authority principle” will be destroyed. The “revolution as we understand it will ... set about the ... complete destruction of the State ... The natural and necessary upshot of that destruction” will include the “[d]issolution of the army, magistracy, bureaucracy, police and clergy” and “[a]ll productive capital and instruments of labour ... be[ing] confiscated for the benefit of toilers associations, which will have to put them to use in collective production” as well as the “[s]eizure of all Church and State properties.” The “federated Alliance of all labour associations ... will constitute the Commune.” The people “must make the revolution everywhere, and ... ultimate
at the same time. That this is the case can be seen from John Stuart Mill who, unlike Engels, saw that Bakunin’s ideas meant “not only the annihilation of all government, but getting all property of all kinds out of the hands of the possessors to be used for the general benefit.” [“Chapters on Socialism,” Principles of Political Economy, p. 376] If the great liberal thinker could discern this aspect of anarchism, why not Engels?

After all, this vision of a social revolution (i.e. one that combined political, social and economic goals) occurred continuously throughout Bakunin’s writings when he was an anarchist. Indeed, to claim that he, or anarchists in general, just opposed the state suggests a total unfamiliarity with anarchist theory. For Bakunin, like all anarchists, the abolition of the state occurs at the same time as the abolition of capital. This joint abolition is precisely the social revolution. As one academic put it:

“In Bakunin’s view, the struggle against the main concentration of power in society, the state, was no less necessary than the struggle against capital. Engels, however, puts the matter somewhat differently, arguing that for Bakunin the state was the main enemy, as if Bakunin had not held that capital, too, was an enemy and that its expropriation was a necessary even if not sufficient condition for the social revolution. . . . [Engels’] formulation . . . distorts Bakunin’s argument, which also held capital to be an evil necessary to abolish” [Alvin W. Gouldner, “Marx’s Last Battle: Bakunin and the First International”, pp. 853–884, Theory and Society, Vol. 11, No. 6, pp. 863–4]

In 1865, for example, we discover Bakunin arguing that anarchists “seek the destruction of all States” in his “Program of the Brotherhood.” Yet he also argued that a member of this association “must be socialist” and see that “labour” was the “sole producer of social assets” and so “anyone enjoying these without working is an exploiter Bolsheviks when they got into power. As such, Lenin’s work cannot be used to evaluate Bolshevik ideology as Bolshevism paid no attention to it once it had taken state power. While Lenin and his followers chant rhapsodies about the Soviet State (this ‘highest and most perfect system of democracy’) they quickly turned its democratic ideas into a fairy-tale, and an ugly fairy-tale at that, by simply ignoring it in favour of party power (and party dictatorship). To state the obvious, to quote theory and not relate it to the practice of those who claim to follow it is a joke. If you look at the actions of the Bolsheviks after the October Russian Revolution you cannot help draw the conclusion that Lenin’s State and Revolution has nothing to do with Bolshevik policy and presents a false image of what Leninists desire. As such, we must present a comparison between rhetoric and reality.

In order to show that this is the case, we need to summarise the main ideas contained in Lenin’s work. Moreover, we need to indicate what the Bolsheviks did, in fact, do. Finally, we need to see if the various rationales justifying these actions hold water.

So what did Lenin argue for in State and Revolution? Writing in the mid-1930s, anarchist Camillo Berneri summarised the main ideas of that work as follows:

“The Leninist programme of 1917 included these points: the discontinuance of the police and standing army, abolition of the professional bureaucracy, elections for all public positions and offices, revocability of all officials, equality of bureaucratic wages with workers’ wages, the maximum of democracy, peaceful competition among the parties within the soviets, abolition of the death penalty.” [“The Abolition and Extinction of the State,” pp. 50–1, Cienfuegos Press Anarchist Review, no. 4, p. 50]

As he noted, “[n]ot a single one of the points of this programme has been achieved.” This was, of course, under Stalinism and most
Leninists will concur with Berneri. However what Leninists tend not to mention is that by the end of the 7 month period of Bolshevik rule before the start of the civil war (i.e., from November 1917 to May 1918) none of these points existed. So, as an example of what Bolshevism “really” stands for it seems strange to harp on about a work which was never really implemented when its author was in a position to do so (i.e. before the onslaught of a civil war Lenin thought was inevitable anyway!). Similarly, if State and Revolution indicates the features a “workers’ state” must have then, by May 1918, Russia did not have such a state and so, logically, it can only be considered as such only if we assume that the good intentions of its rulers somehow overcome its political and economic structure (which, sadly, is the basic Trotskyist defence of Leninism against Stalinism!).

To see that Berneri’s summary is correct, we need to quote Lenin directly. Obviously the work is a wide ranging defence of Lenin’s interpretation of Marxist theory on the state. As it is an attempt to overturn decades of Marxist orthodoxy, much of the work is quotes from Marx and Engels and Lenin’s attempts to enlist them for his case (we discuss this issue in section H.3.10). Equally, we need to ignore the numerous straw men arguments about anarchism Lenin inflicts on his reader. Here we simply list the key points as regards Lenin’s arguments about his “workers’ state” and how the workers would maintain control of it:

1) Using the Paris Commune as a prototype, Lenin argued for the abolition of “parliamentarianism” by turning “representative institutions from mere ‘talking shops’ into working bodies.” This would be done by removing “the division of labour between the legislative and the executive.” [Essential Works of Lenin, p. 304 and p. 306]
tion of human needs — is consequently the last subject which one expects to find treated in a concrete form in economical treatises.” [Op. Cit., p. 17]

Kropotkin’s ideas were, therefore, an attempt to discuss how a post-capitalist society could develop, based on an extensive investigation of current trends within capitalism, and reflecting the needs which capitalism ignores. To fetishise big industry, as Leninists tend to do, means locking socialism itself into the logic of capitalism and, by implication, sees a socialist society which will basically be the same as capitalism, using the technology, industrial structure and industry developed under class society without change (see section H.3.12). Rather than condemn Kropotkin, Stack’s comments (and those like them) simply show the poverty of the Leninist critique of capitalism and its vision of the socialist future.

All in all, anyone who claims that anarchism is “backward looking” or “yearns for the past” simply has no idea what they are talking about.

H.2.4 Do anarchists think “the state is the main enemy”?

Pat Stack argues that “the idea that dominates anarchist thought” is “that the state is the main enemy; rather than identifying the state as one aspect of a class society that has to be destroyed.” [“Anarchy in the UK?”, Socialist Review, no. 246] Marxist Paul Thomas states that “Anarchists insist that the basis source of social injustice is the state.” [Karl Marx and the Anarchists, p. 2]

On the face of it, such assertions make little sense. After all, was not the first work by the first self-declared anarchist called What is Property? and contained the revolutionary maxim “property is theft”? Surely this fact alone would be enough to put to rest the notion that anarchists view the state as the main problem in

2) “All officials, without exception, to be elected and subject to recall at any time” and so “directly responsible to their constituents.” [Op. Cit., p. 302 and p. 306]

3) The “immediate introduction of control and superintendence by all, so that all shall become ‘bureaucrats’ for a time and so that, therefore, no one can become a ‘bureaucrat’.” Proletarian democracy would “take immediate steps to cut bureaucracy down to the roots ... to the complete abolition of bureaucracy” as the “essence of bureaucracy” is officials becoming transformed “into privileged persons divorced from the masses and superior to the masses.” [Op. Cit., p. 355 and p. 360]

4) There should be no “special bodies of armed men” standing apart from the people “since the majority of the people itself suppresses its oppressors, a ‘special force’ is no longer necessary.” Using the example of the Paris Commune, Lenin suggested this meant “abolition of the standing army” by the “armed masses.” [Op. Cit., p. 275, p. 301 and p. 339]

5) The new (workers) state would be “the organisation of violence for the suppression of ... the exploiting class, i.e. the bourgeoisie. The toilers need a state only to overcome the resistance of the exploiters” who are “an insignificant minority,” that is “the landlords and the capitalists.” This would see “an immense expansion of democracy ... for the poor, democracy for the people” while, simultaneously, imposing “a series of restrictions on the freedom of the oppressors, the exploiters, the capitalists ... their resistance must be broken by force: it is clear that where there is suppression there is also violence, there is no freedom, no democracy.” [Op. Cit., p. 287 and pp. 337–8]
This would be implemented after the current, bourgeois, state had been smashed. This would be the “dictatorship of the proletariat” and be “the introduction of complete democracy for the people.” [Op. Cit., p. 355] However, the key practical ideas on what the new “semi-state” would be are contained in these five points. He generalised these points, considering them valid for all countries.

The first point as the creation of “working bodies”, the combining of legislative and executive bodies. The first body to be created by the Bolshevik revolution was the “Council of People’s Commissars” (CPC) This was a government separate from and above the Central Executive Committee (CEC) of the soviets congress which, in turn, was separate from and above the national soviet congress. It was an executive body elected by the soviet congress, but the soviets themselves were not turned into “working bodies.” The promises of Lenin’s State and Revolution did not last the night.

The Bolsheviks, it must be stressed, clearly recognised that the Soviets had alienated their power to this body with the party’s Central Committee arguing in November 1917 that “it is impossible to refuse a purely Bolshevik government without treason to the slogan of the power of the Soviets, since a majority at the Second All-Russian Congress of Soviets ... handed power over to this government.” [contained in Robert V. Daniels (ed.), A Documentary History of Communism, vol. 1, pp. 128–9] However, it could be argued that Lenin’s promises were kept as the new government simply gave itself legislative powers four days later. Sadly, this is not the case. In the Paris Commune the delegates of the people took executive power into their own hands. Lenin reversed this and his executive took legislative power from the hands of the people’s delegates. As we discuss in section H.6.1, this concentration of power into executive committees occurred at all levels of the soviet hierarchy.

What of the next principle, namely the election and recall of all officials? This lasted slightly longer, namely around 5 months. By March of 1918, the Bolsheviks started a systematic campaign

production” (he still saw the need for factories, for example) but rather for production geared to appropriate levels, based on the objective needs of production (without the distorting effects generated by the needs of capitalist profits and power) and, of necessity, the needs of those who work in and live alongside industry (and today we would add, the needs of the environment). In other words, the transformation of capitalism into a society human beings could live full and meaningful lives in. Part of this would involve creating an industry based on human needs. “Have the factory and the workshop at the gates of your fields and gardens and work in them.” he argued. “Not those large establishments, of course, in which huge masses of metals have to be dealt with and which are better placed at certain spots indicated by Nature, but the countless variety of workshops and factories which are required to satisfy the infinite diversity of tastes among civilised men [and women].” The new factories and workplaces would be “airy and hygienic, and consequently economical, ... in which human life is of more account than machinery and the making of extra profits.” [Fields, Factories and Workshops Tomorrow, p. 197] Under capitalism, he argued, the whole discourse of economics (like industrial development itself) was based on the logic and rationale of the profit motive:

“Under the name of profits, rent and interest upon capital, surplus value, and the like, economists have eagerly discussed the benefits which the owners of land or capital, or some privileged nations, can derive, either from the under-paid work of the wage-labourer, or from the inferior position of one class of the community towards another class, or from the inferior economical development of one nation towards another nation...

“In the meantime the great question — ‘What have we to produce, and how?’ necessarily remained in the background ... The main subject of social economy — that is, the economy of energy required for the satisfac-
as pleasant as possible. As Avrich summarises, "[p]laced in small voluntary workshops, machinery would rescue human beings from the monotony and toil of large-scale capitalist enterprise, allow time for leisure and cultural pursuits, and remove forever the stamp of inferiority traditionally borne by manual labour." [Op. Cit., p. 63] Hardly "backward looking" to desire the application of science and technology to transform the industrial system into one based on the needs of people rather than profit!

Stack must be hoping that the reader has, like himself, not read Kropotkin’s classic work Fields, Factories and Workshops for if they have then they would be aware of the distortion Stack subjects Kropotkin’s ideas to. While Avrich does present, in general, a reasonable summary of Kropotkin’s ideas, he does place it into a framework of his own making. Kropotkin while stressing the importance of decentralising industry within a free society did not look backward for his inspiration. Rather, he looked to trends within existing society, trends he thought pointed in an anti-capitalist direction. This can be seen from the fact he based his ideas on detailed analysis of current developments in the economy and came to the conclusion that industry would spread across the global (which has happened) and that small industries will continue to exist side by side with large ones (which also has been confirmed). From these facts he argued that a socialist society would aim to decentralise production, combining agriculture with industry and both using modern technology to the fullest. This was possible only after a social revolution which expropriated industry and the land and placed social wealth into the hands of the producers. Until then, the positive trends he saw in modern society would remain circumcised by the workings of the capitalist market and the state.

As we discuss the fallacy that Kropotkin (or anarchists in general) have argued for “small autonomous communities, devoted to small scale production” in section I.3.8, we will not do so here. Suffice to say, he did not, as is often asserted, argue for “small-scale against the elective principle in the workplace, in the military and even in the soviets. In the workplace, Lenin was arguing for appointed one-man managers “vested with dictatorial powers” by April 1918 (see section H.3.14). In the military, Trotsky simply decreed the end of elected officers in favour of appointed officers. As far as the soviets go, the Bolsheviks were refusing to hold elections because they “feared that the opposition parties would show gains.” When elections were held, “Bolshevik armed force usually overthrew the results” in provincial towns. Moreover, the Bolsheviks “pack[ed] local soviets” with representatives of organisations they controlled “once they could not longer count on an electoral majority.” [Samuel Farber, Before Stalinism, p. 22, p. 24 and p. 33] This kind of packing was even practised at the national level when the Bolsheviks gerrymandered a Bolshevik majority at the Fifth Congress of Soviets. So much for competition among the parties within the soviets! And as far as the right of recall went, the Bolsheviks only supported this when the workers were recalling the opponents of the Bolsheviks, not when the workers were recalling them.

Then there was the elimination of bureaucracy. The new state soon had a new bureaucratic and centralised system quickly emerge around it. Rather than immediately cutting the size and power of the bureaucracy, it “grew by leaps and bounds. Control over the new bureaucracy constantly diminished, partly because no genuine opposition existed. The alienation between ‘people’ and ‘officials,’ which the soviet system was supposed to remove, was back again. Beginning in 1918, complaints about ‘bureaucratic excesses,’ lack of contact with voters, and new proletarian bureaucrats grew louder and louder.” [Oskar Anweiler, The Soviets, p. 242] So the rise of a state bureaucracy started immediately with the seizure of power by the Bolsheviks, particularly as the state’s functions grew to include economic decisions as well as political ones. Instead of the state starting to “wither away” it grew:
“The old state’s political apparatus was ‘smashed,’ but in its place a new bureaucratic and centralised system emerged with extraordinary rapidity. After the transfer of government to Moscow in March 1918 it continued to expand... As the functions of the state expanded so did the bureaucracy, and by August 1918 nearly a third of Moscow’s working population were employed in offices. The great increase in the number of employees... took place in early to mid-1918 and, thereafter, despite many campaigns to reduce their number, they remained a steady proportion of the falling population” [Richard Sakwa, “The Commune State in Moscow in 1918,” pp. 429–449, Slavic Review, vol. 46, no. 3/4, pp. 437–8]

This, anarchists would stress, is an inherent feature of centralised system. As such, this rise of bureaucracy confirmed anarchist predictions that centralisation will recreate bureaucracy. After all, some means were required to gather, collate and provide information by which the central bodies made their decisions. Overtime, this permanent collection of bodies would become the real power in the state, with the party members nominally in charge really under the control of an unelected and uncontrolled officialdom. Thus a necessary side-effect of Bolshevik centralism was bureaucracy and it soon became the real power in the state (and, ultimately, in the 1920s became the social base for the rise of Stalin). This is to be expected as any state “is already a privileged class and cut off from the people” and would “seek to extend its powers, to be beyond public control, to impose its own policies and to give priority to special interests.” Moreover, “what an all-powerful, oppressive, all-absorbing oligarchy must be one which has at its services, that is at its disposal, all social wealth, all public services.” [Malatesta, Anarchy, p. 36 and p. 37]

Then there is the fourth point, namely the elimination of the standing army, the suppression of “special bodies of armed men”

“Proudhon and Bakunin were ‘collectivists,’ which is to say they declared themselves without equivocation in favour of the common exploitation, not by the State but by associated workers of the large-scale means of production and of the public services. Proudhon has been quite wrongly presented as an exclusive enthusiast of private property.” [“From Proudhon to Bakunin”, pp. 25–33, The Radical Papers, Dimitrios I. Roussopoulos (ed.), p. 32]

Clearly, Stack does not have the faintest idea of what he is talking about! Nor is Kropotkin any safer than Proudhon or Bakunin from Stack’s distortions:

“Peter Kropotkin, another famous anarchist leader to emerge in Russia, also looked backwards for change. He believed the ideal society would be based on small autonomous communities, devoted to small scale production. He had witnessed such communities among Siberian peasants and watchmakers in the Swiss mountains.”

First, we must note the plagiarism. Stack is summarising Paul Avrich’s summary of Kropotkin’s ideas. [Op. Cit., p. 62] Rather than go to the source material, Stack provides an interpretation of someone else’s interpretation of someone else’s ideas! Clearly, the number of links in the chain means that something is going to get lost in the process and, of course, it does. The something which “gets lost” is, unfortunately, Kropotkin’s ideas.

Ultimately, Stack is simply showing his total ignorance of Kropotkin’s ideas by making such a statement. At least Avritch expanded upon his summary to mention that Kropotkin’s positive evaluation of using modern technology and the need to apply it on an appropriate level to make work and the working environment
thought “industrialisation was an evil,” a key aspect of Bakunin’s ideas on social revolution was the seizing of industry and its placing under social ownership. As he put it, “capital and all tools of labour belong to the city workers — to the workers associations. The whole organisation of the future should be nothing but a free federation of workers — agricultural workers as well as factory workers and associations of craftsmen.” [The Political Philosophy of Bakunin, p. 410] Bakunin argued that “to destroy … all the instruments of labour … would be to condemn all humanity — which is infinity too numerous today to exist … on the simple gifts of nature … — to … death by starvation. Thus capital cannot and must not be destroyed. It must be preserved.” Only when workers “obtain not individual but collective property in capital” and when capital is no longer “concentrated in the hands of a separate, exploiting class” will they be able “to smash the tyranny of capital.” [The Basic Bakunin, pp. 90–1] He stressed that only “associated labour, this is labour organised upon the principles of reciprocity and co-operation, is adequate to the task of maintaining the existence of a large and somewhat civilised society.” Moreover, the “whole secret of the boundless productivity of human labour consists first of all in applying … scientifically developed reason … and then in the division of that labour.” [The Political Philosophy of Bakunin, pp. 341–2] Hardly the thoughts of someone opposed to industrialisation! Unsurprisingly, then, Eugene Pyziu noted that “[i]n an article printed in 1868 [Bakunin] rejected outright the doctrine of the rottenness of the West and of the messianic destiny of Russia.” [The Doctrine of Anarchism of Michael A. Bakunin, p. 61]

Rather than oppose industrialisation and urge the destruction of industry, Bakunin considered one of the first acts of the revolution would be workers’ associations taking over the means of production and turning them into collective property managed by the workers themselves. Hence Daniel Guérin’s comment:

by the “armed masses.” This promise did not last two months. On the 20th of December, 1917, the Council of People’s Commissars decreed the formation of a political (secret) police force, the “Extraordinary Commission to Fight Counter-Revolution.” This was more commonly known by the Russian initials of the first two terms of its official name: The Cheka.

While it was initially a small organisation, as 1918 progressed it grew in size and activity. The Cheka soon became a key instrument of Bolshevist rule and it was most definitely a “special body of armed men” and not the same as the “armed workers.” In other words, Lenin’s claims in State and Revolution did not last two months and in under six months the Bolshevik state had a mighty group of “armed men” to impose its will. This is not all. The Bolsheviks also conducted a sweeping transformation of the military within the first six months of taking power. During 1917, the soldiers and sailors (encouraged by the Bolsheviks and other revolutionaries) had formed their own committees and elected officers. In March 1918, Trotsky simply abolished all this by decree and replaced it with appointed officers (usually ex-Tsarist ones). In this way, the Red Army was turned from a workers’ militia (i.e. an armed people) into a “special body” separate from the general population.

So instead of eliminating a “special force” above the people, the Bolsheviks did the opposite by creating a political police force (the Cheka) and a standing army (in which elections were a set aside by decree). These were special, professional, armed forces standing apart from the people and accountable to them. Indeed, they were used to repress strikes and working class unrest which refutes the idea that Lenin’s “workers’ state” would simply be an instrument of violence directed at the exploiters. As the Bolsheviks lost popular support, they turned the violence of the “worker’s state” against the workers (and, of course, the peasants). When the Bolsheviks lost soviet elections, force was used to disband them. Faced with strikes and working class protest during this period, the Bolsheviks responded with state violence (see section H.6.3). So, as
regards the claim that the new (“workers”) state would repress only the exploiters, the truth was that it was used to repress whoever opposed Bolshevik power, including workers and peasants. If, as Lenin stressed, “where there is suppression there is also violence, there is no freedom, no democracy” then there cannot be working class freedom or democracy if the “workers’ state” is suppressing that class.

As can be seen, after the first six months of Bolshevik rule not a single measure advocated by Lenin in *State and Revolution* existed in “revolutionary” Russia. Some of the promises were broken quite quickly (overnight, in one case). Most took longer. Yet Leninists may object by noting that many Bolshevik degrees did, in fact, reflect *State and Revolution*. For example, the democratisation of the armed forces was decreed in late December 1917. However, this was simply acknowledging the existing revolutionary gains of the military personnel. Similarly, the Bolsheviks passed a decree on workers’ control which, again, simply acknowledged the actual gains by the grassroots (and, in fact, limited them for further development).

Yet this cannot be taken as evidence of the democratic nature of Bolshevism as most governments faced with a revolutionary movement will acknowledge and “legalise” the facts on the ground (until such time as they can neutralise or destroy them). For example, the Provisional Government created after the February Revolution also legalised the revolutionary gains of the workers (for example, legalising the soviets, factory committees, unions, strikes and so forth). The real question is whether Bolshevism continued to encourage these revolutionary gains once it had consolidated its power. It did not. Indeed, it can be argued that the Bolsheviks simply managed to do what the Provisional Government it replaced had failed to do, namely destroy the various organs of popular self-management created by the revolutionary masses. So the significant fact is not that the Bolsheviks recognised the gains of the masses but that their toleration of the application of what their followers say were incorporated the development of large-scale industry within his mutualist ideas and so the need to abolish wage labour by workers’ associations and workers’ control of production. Perhaps Stack can fault Proudhon for seeking the end of capitalism too soon and for not waiting patiently will it developed further (if he does, he will also have to attack Marx, Lenin and Trotsky as well for the same failing!), but this has little to do with “yearn[ing] for what has gone before.”

After distorting Proudhon’s ideas on industry, Stack does the same with Bakunin. He asserts the following:

“Similarly, the Russian anarchist leader Bakunin argued that it was the progress of capitalism that represented the fundamental problem. For him industrialisation was an evil. He believed it had created a decadent western Europe, and therefore had held up the more primitive, less industrialised Slav regions as the hope for change.”

Now, it would be extremely interesting to find out where, exactly, Stack discovered that Bakunin made these claims. After all, they are at such odds with Bakunin’s anarchist ideas that it is tempting to conclude that Stack is simply making it up. This, we suggest, explains the total lack of references for such an outrageous claim. Looking at what appears to be his main source, we discover Paul Avrich writing that “[i]n 1848” (i.e. nearly 20 years before Bakunin became an anarchist!) Bakunin “spoke of the decadence of Western Europe and saw hope in the primitive, less industrialised Slavs for the regeneration of the Continent.” [Anarchist Portraits, p. 8] The plagiarism is obvious, as are the distortions. Given that Bakunin became an anarchist in the mid-1860s, how his pre-anarchist ideas are relevant to an evaluation of anarchism escapes logic. It makes as much sense as quoting Marx to refute fascism as Mussolini was originally the leader of the left-wing of the Italian Socialist Party!

It is, of course, simple to refute Stack’s claims. We need only do that which he does not, namely quote Bakunin. For someone who
ing most of the century.” [Pierre-Joseph Proudhon and the Rise of French Republican Socialism, p. 5 and p. 282] Proudhon himself noted in 1851 that of a population of 36 million, 24 million were peasants and 6 million were artisans. Of the remaining 6 million, these included wage-workers for whom “workmen’s associations” would be essential as “a protest against the wage system,” the “denial of the rule of capitalists” and for “the management of large instruments of labour.” [The General Idea of the Revolution, pp. 97–8]

To summarise, if the society in which you live is predominately made-up of peasants and artisans then it is hardly an insult to be called “the socialist of the small peasant or master craftsman.” Equally, it can hardly represent a desire for “what has gone before” to tailor your ideas to the actual conditions in the country in which you live! And Stack accuses anarchists of ignoring “material conditions”!

Neither can it be said that Proudhon ignored the development of industrialisation in France during his lifetime. Quite the reverse, in fact, as indicated above. Proudhon did not ignore the rise of large-scale industry and argued that such industry should be managed by the workers’ themselves via workers associations. As he put it, “certain industries” required “the combined employment of a large number of workers” and so the producer is “a collectivity.” In such industries “we have no choice” and so “it is necessary to form an association among the workers” because “without that they would remain related as subordinates and superiors, and there would ensue two industrial castes of masters and wage-workers, which is repugnant to a free and democratic society.” [Op. Cit., pp. 215–6] Even Engels had to grudgingly admit that Proudhon supported “the association of workers” for “large-industry and large establishments, such as railways.” [Op. Cit., p. 626]

All in all, Stack is simply showing his ignorance of both Proudhon’s ideas and the society (the “material conditions”) in which they were shaped and were aimed for. As can be seen, Proudhon their real principles did not last long and, significantly, the leading Bolsheviks did not consider the abolition of such principles as harming the “communist” nature of the regime.

We have stressed this period for a reason. This was the period before the out-break of major Civil War and thus the policies applied show the actual nature of Bolshevism, it’s essence if you like. This is a significant period as most Leninists blame the failure of Lenin to live up to his promises on this even. In reality, the civil war was not the reason for these betrayals — simply because it had not started yet. Each of the promises were broken in turn months before the civil war happened. “All Power to the Soviets” became, very quickly, “All Power to the Bolsheviks.” Unsurprisingly, as this was Lenin’s aim all along and so we find him in 1917 continually repeating this basic idea (see section H.3.3).

Given this, the almost utter non-mention of the party and its role in State and Revolution is deeply significant. Given the emphasis that Lenin had always placed on the party, it’s absence is worrying. When the party is mentioned in that work, it is done so in an ambiguous manner. For example, Lenin noted that “[b]y educating the workers’ party, Marxism educates the vanguard of the proletariat which is capable of assuming power and of leading the whole people to socialism, of directing and organising the new order.” It is not clear whether it is the vanguard or the proletariat as a whole which assumes power. Later, he stated that “the dictatorship of the proletariat” was “the organisation of the vanguard of the oppressed as the ruling class for the purpose of crushing the oppressors.” [Essential Works of Lenin, p. 288 and p. 337] Based on subsequent Bolshevik practice after the party seized power, it seems clear that it is the vanguard which assumes power rather than the whole class.

As such, given this clear and unambiguous position throughout 1917 by Lenin, it seems incredulous, to say the least, for Leninist Tony Cliff to assert that “[t]o start with Lenin spoke of the proletariat, the class — not the Bolshevik Party — assuming state power.”
[Lenin, vol. 3, p. 161] Surely the title of one of Lenin's most famous pre-October essays, usually translated as "Can the Bolsheviks Retain State Power?", should have given the game away? As would, surely, quoting numerous calls by Lenin for the Bolsheviks to seize power? Apparently not.

Where does that leave Lenin's State and Revolution? Well, modern-day Leninists still urge us to read it, considering it his greatest work and the best introduction to what Leninism really stands for. For example, we find Leninist Tony Cliff calling that book "Lenin's real testament" while, at the same time, acknowledging that its "message ... which was the guide for the first victorious proletarian revolution, was violated again and again during the civil war." Not a very good "guide" or that convincing a "message" if it was not applicable in the very circumstances it was designed to be applied in (a bit like saying you have an excellent umbrella but it only works when it is not raining). Moreover, Cliff is factually incorrect. As we discuss in section H.6, the Bolsheviks "violated" that "guide" before the civil war started (i.e. when "the victories of the Czechoslovak troops over the Red Army in June 1918, that threatened the greatest danger to the Soviet republic," to quote Cliff). [Op. Cit., p. 161 and p. 18] Similarly, much of the economic policies implemented by the Bolsheviks had their roots in that book and the other writings by Lenin from 1917.

The conclusions of dissent Marxist Samuel Farber seem appropriate here. As he puts it, "the very fact that a Sovnarkom had been created as a separate body from the CEC [Central Executive Committee] of the soviets clearly indicates that, Lenin's State and Revolution notwithstanding, the separation of at least the top bodies of the executive and the legislative wings of the government remained in effect in the new Soviet system." This suggests "that State and Revolution did not play a decisive role as a source of policy guidelines for 'Leninism in power.'" After all, "immediately after the Revolution the Bolsheviks established an executive power ... as a clearly separate body from the leading body of the legislature ... Therefore, some sec-

so in his claims against Proudhon. Stack calls the Frenchman "the founder of modern anarchism" and states that Marx dubbed Proudhon "the socialist of the small peasant or master craftsman." Typically, Stack gets even this wrong as it was Engels who used those words, although Marx would probably have not disagreed if he had been alive when they were penned. [The Marx-Engels Reader, p. 626] From this, Stack implies that Proudhon was "yearning for the past" when he advanced his mutualist ideas.

Nothing, however, could be further from the truth. This is because the society in which the French anarchist lived was predominately artisan and peasant in nature. This was admitted by Marx and Engels in the Communist Manifesto ("[i]n countries like France" the peasants "constitute far more than half of the population," [Op. Cit., p. 493]). As such, for Proudhon to incorporate the aspirations of the majority of the population is not to "yearn for what has gone before" but rather an extremely sensible position to take. This suggests that for Engels to state that the French anarchist was "the socialist of the small peasant or master craftsman" was unsurprising, a simple statement of fact, as the French working classes were, at the time, predominately small peasants or master craftsmen (or artisans). It, in other words, reflected the society Proudhon lived in and, as such, did not reflect desires for the past but rather a wish to end exploitation and oppression now rather than some unspecified time in the future.

Moreover, Proudhon’s ideas cannot be limited to just that as Marxists try to do. As K. Steven Vincent points out Proudhon’s "social theories may not be reduced to a socialism for only the peasant class, nor was it a socialism only for the petite bourgeoisie; it was a socialism of and for French workers. And in the mid-nineteenth century ... most French workers were still artisans." Indeed, "[w]hile Marx was correct in predicting the eventual predominance of the industrial proletariat vis-à-vis skilled workers, such predominance was neither obvious nor a foregone conclusion in France during the nineteenth century. The absolute number of small industries even increased dur-
ucts by meaningful work which does not harm the environment, society or those who do the actual tasks? A further aspect of this is that many of the struggles today, from the Zapatistas in Chiapas to those against Genetically Modified (GM) food and nuclear power are precisely based on the understanding that capitalist “progress” can not be uncritically accepted. To resist the expulsion of people from the land in the name of progress or the introduction of terminator seeds is not to look back to “what had gone”, although this is also precisely what the proponents of capitalist globalisation often accuse us of. Rather, it is to put “people before profit.”

That so many Marxists fail to understand this suggests that their ideology subscribes to notions of “progress” which simply builds upon capitalist ones. As such, only a sophist would confuse a critical evaluation of trends within capitalism with a yearning for the past. It means to buy into the whole capitalist notion of “progress” which has always been part of justifying the inhumanities of the status quo. Simply put, just because a process is rewarded by the profit driven market it does not mean that it makes sense from a human or ecological perspective. For example, as we argue in section J.5.11, the capitalist market hinders the spread of co-operatives and workers’ self-management in spite of their well documented higher efficiency and productivity. From the perspective of the needs of the capitalists, this makes perfect sense. In terms of the workers and efficient allocation and use of resources, it does not. Would Marxists argue that because co-operatives and workers’ self-management of production are marginal aspects of the capitalist economy it means that they will play no part in a sane society or that if a socialist expresses interest in them it means that are “yearning” for a past mode of production? We hope not.

This common Marxist failure to understand anarchist investigations of the future is, ironically enough, joined with a total failure to understand the social conditions in which anarchists have put forward their ideas. For all his claims that anarchists ignore “material conditions,” it is Pat Stack (and others like him) who does
by their support for party dictatorship). You cannot have it both ways.

Lenin at no time indicated in *State and Revolution* that it was impossible or inapplicable to apply those ideas during a revolution in Russia (quite the reverse!). Given that Marxists, including Lenin, argue that a “dictatorship of the proletariat” is required to defend the revolution against capitalist resistance it seems incredulous to argue that Lenin’s major theoretical work on that regime was impossible to apply in precisely the circumstances it was designed for.

All in all, discussing Lenin’s *State and Revolution* without indicating that the Bolsheviks failed to implement its ideas (indeed, did the exact opposite) suggests a lack of honesty. It also suggests that the libertarian ideas Lenin appropriated in that work could not survive being grafted onto the statist ideas of mainstream Marxism. In the words of historian Marc Ferro:

> “In a way, *The State and Revolution* even laid the foundations and sketched out the essential features of an alternative to Bolshevik power, and only the pro-Leninist tradition has used it, almost to quieten its conscience, because Lenin, once in power, ignored its conclusions. The Bolsheviks, far from causing the state to wither away, found endless reasons for justifying its enforcement.” [October 1917, pp. 213–4]

Anarchists would suggest that this alternative was anarchism. The Russian Revolution shows that a workers state, as anarchists have long argued, means minority power, not working class self-management of society. As such, Lenin’s work indicates the contradictory nature of Marxism — while claiming to support democratic/libertarian ideals they promote structures (such as centralised states) which undermine those values in favour of party rule. The lesson is clear, only libertarian means can ensure
flag of strikes.” [The Red Virgin: Memoirs of Louise Michel, p. 168] If anarchism does, as some Marxists assert, reject class conflict and collective struggle then using a flag associated with an action which expresses both seems somewhat paradoxical. However, for those with even a basic understanding of anarchism and its history there is no paradox as anarchism is obviously based on class conflict and collective struggle.

Also see section H.2.8 for a discussion of the relationship of anarchism to syndicalism.

H.2.3 Does anarchism yearn “for what has gone before”?

Leninist Pat Stack states that one of the “key points of divergence” between anarchism and Marxism is that the former, “far from understanding the advances that capitalism represented, tended to take a wistful look back. Anarchism shares with Marxism an abhorrence of the horrors of capitalism, but yearns for what has gone before.” [“Anarchy in the UK?”, Socialist Review, no. 246]

Like his other “key point” (namely the rejection of class struggle — see last section), Stack is simply wrong. Even the quickest look at the works of Proudhon, Bakunin and Kropotkin would convince the reader that this is simply distortion. Rather than look backwards for our ideas of social life, anarchists have always been careful to base our ideas on the current state of society and what anarchist thinkers considered positive current trends within it.

The dual element of progress is important to remember. Capitalism is a class society, marked by exploitation, oppression and various social hierarchies. In such a society progress can hardly be neutral. It will reflect vested interests, the needs of those in power, the rationales of the economic system (e.g. the drive for profits) and those who benefit from it, the differences in power between states and companies and so on. Equally, it will be shaped by the libertarian ends and they have to be applied consistently within libertarian structures to work. To apply them to statist ones will simply fail.
H.2 What parts of anarchism do Marxists particularly misrepresent?

Many people involved in politics will soon discover that Marxist groups (particularly Leninist ones) organise “debates” about anarchism. These meetings are usually entitled “Marxism and Anarchism” and are usually organised after anarchists have been active in the area or have made the headlines somewhere.

These meetings, contrary to common sense, are usually not a debate as (almost always) no anarchists are invited to argue the anarchist viewpoint and, therefore, they present a one-sided account of “Marxism and Anarchism” in a manner which benefits the organisers. Usually, the format is a speaker distorting anarchist ideas and history for a long period of time (both absolutely in terms of the length of the meeting and relatively in terms of the boredom inflicted on the unfortunate attendees). It will soon become obvious to those attending that any such meeting is little more than an unprincipled attack on anarchism with little or no relationship to what anarchism is actually about. Those anarchists who attend such meetings usually spend most of their allotted (usually short) speaking time refuting the nonsense that is undoubtedly presented. Rather than a real discussion between the differences between anarchism and “Marxism” (i.e. Leninism), the meeting simply becomes one where anarchists correct the distortions and misrepresentations of the speaker in order to create the basis of a
not the means”! Truly incredible and a total and utter distortion of Kropotkin’s ideas on the subject.

As for other anarchists, we discover the same concern over class conflict, collective struggle and organisation and the awareness of a mass social revolution by the working class. Emma Goldman, for example, argued that anarchism “stands for direct action” and that “[t]rade unionism, the economic area of the modern gladiator, owes its existence to direct action... In France, in Spain, in Italy, in Russian, nay even in England (witness the growing rebellion of English labour unions), direct, revolutionary economic action has become so strong a force in the battle for industrial liberty as to make the world realise the tremendous importance of labour’s power. The General Strike [is] the supreme expression of the economic consciousness of the workers... Today every great strike, in order to win, must realise the importance of the solidaric general protest.” [Anarchism and Other Essays, pp. 65–6] She placed collective class struggle at the centre of her ideas and, crucially, she saw it as the way to create an anarchist society:

“It is this war of classes that we must concentrate upon, and in that connection the war against false values, against evil institutions, against all social atrocities. Those who appreciate the urgent need of co-operating in great struggles... must organise the preparedness of the masses for the overthrow of both capitalism and the state. Industrial and economic preparedness is what the workers need. That alone leads to revolution at the bottom... That alone will give the people the means to take their children out of the slums, out of the sweat shops and the cotton mills... That alone leads to economic and social freedom, and does away with all wars, all crimes, and all injustice.” [Red Emma Speaks, pp. 355–6]
that anarchists think the capitalist class will just disappear being, probably, the most famous one).

Moreover, Marxists make many major and minor distortions of anarchist theory in passing. For example, Eric Hobsbawm wrote of the “extremism of the anarchist rejection of state and organisation” while being well aware, as a leading Marxist historian, of numerous anarchist organisations. [Revolutionaries, p. 113] This kind of nonsense has a long history, with Engels asserting in his infamous diatribe “The Bakuninists at work” that Bakunin “[a]s early as September 1870 (in his Lettres à un français [Letters to a Frenchman]) ... had declared that the only way to drive the Prussians out of France by a revolutionary struggle was to do away with all forms of centralised leadership and leave each town, each village, each parish to wage war on its own.” For Engels anarchist federalism “consisted precisely in the fact that each town acted on its own, declaring that the important thing was not co-operation with other towns but separation from them, this precluding any possibility of a combined attack.” This meant “the fragmentation and isolation of the revolutionary forces which enabled the government troops to smash one revolt after the other.” According to Engels, the anarchists “proclaimed [this] a principle of supreme revolutionary wisdom.” [Collected Works, vol. 23, p. 592]

In fact, the truth is totally different. Bakunin did, of course, reject “centralised leadership” as it would be “necessarily very circumscribed, very short-sighted, and its limited perception cannot, therefore, penetrate the depth and encompass the whole complex range of popular life.” However, it is a falsehood to state that he denied the need for co-ordination of struggles and federal organisations from the bottom up. As he put it, the revolution must “foster the self-organisation of the masses into autonomous bodies, federated from the bottom upwards.” With regards to the peasants, he thought they will “come to an understanding, and form some kind of organisation ... to further their mutual interests ... the necessity to defend their homes, their families, and their own lives against unforeseen have to constitute itself outside the bourgeoisie ... it will have to take action of its own during the period which will precede the revolution. .. and this sort of action can only be carried out when a strong workers’ organisation exists.” This meant, of course, it was “the mass of workers we have to seek to organise. We ... have to submerge ourselves in the organisation of the people. When the mass of workers is organised and we are with it to strengthen its revolutionary idea, to make the spirit of revolt against capital germinate there ... then it will be the social revolution.” [quoted by Caroline Cahn, Op. Cit., pp. 153–4]

He saw the class struggle in terms of “a multitude of acts of revolt in all countries, under all possible conditions: first, individual revolt against capital and State; then collective revolt — strikes and working-class insurrections — both preparing, in men’s minds as in actions, a revolt of the masses, a revolution.” Clearly, the mass, collective nature of social change was not lost on Kropotkin who pointed to a “multitude of risings of working masses and peasants” as a positive sign. Strikes, he argued, “were once ‘a war of folded arms’” but now were “easily turning to revolt, and sometimes taking the proportions of vast insurrections.” [Anarchism, p. 144]

Kropotkin could not have been clearer. Somewhat ironically, given Stack’s assertions, Kropotkin explicitly opposed the Marxism of his time (Social Democracy) precisely because it had “moved away from a pure labour movement, in the sense of a direct struggle against capitalists by means of strikes, unions, and so forth.” The Marxists, he stated, opposed strikes and unions because they “diverted forces from electoral agitation” while anarchists “reject(ed) a narrowly political struggle [and] inevitably became a more revolutionary party, both in theory and in practice.” [The Conquest of Bread and Other Writings, pp. 207–8, p. 208 and p. 209]

And Pat Stack argues that Kropotkin did not see “class conflict as the dynamic for social change,” nor “class conflict” as “the motor of change” and the working class “not the agent and collective struggle
the worker to obtain some temporary improvements in the present conditions of work, while it opens his eyes to the evil done by Capitalism and the State that supports it, and wakes up his thoughts concerning the possibility of organising consumption, production, and exchange without the intervention of the capitalist and the State.” [Evolution and Environment, pp. 82–3] In his article on “Anarchism” for the Encyclopaedia Britannica, Kropotkin stressed that anarchists “have endeavoured to promote their ideas directly amongst the labour organisations and to induce those unions to a direct struggle against capital, without placing their faith in parliamentary legislation.” [Anarchism, p. 287]

Far from denying the importance of collective class struggle, he actually stressed it again and again. As he once wrote, “to make the revolution, the mass of workers will have to organise themselves. Resistance and the strike are excellent means of organisation for doing this.” He argued that it was “a question of organising societies of resistance for all trades in each town, of creating resistance funds against the exploiters, of giving more solidarity to the workers’ organisations of each town and of putting them in contact with those of other towns, of federating them ... Workers’ solidarity must no longer be an empty word by practised each day between all trades and all nations.” [quoted by Cahm, Op. Cit., pp. 255–6]

As can be seen, Kropotkin was well aware of the importance of popular, mass, struggles. As he put it, anarchists “know very well that any popular movement is a step towards the social revolution. It awakens the spirit of revolt, it makes men [and women] accustomed to seeing the established order (or rather the established disorder) as eminently unstable.” [Words of a Rebel, p. 203] As regards the social revolution, he argues that “a decisive blow will have to be administered to private property: from the beginning, the workers will have to proceed to take over all social wealth so as to put it into common ownership. This revolution can only be carried out by the workers themselves.” In order to do this, the masses have to build their own organisation as the “great mass of workers will not only attack ... will undoubtedly soon compel them to contract new and mutually suitable arrangements.” The peasants would be “freely organised from the bottom up.” Rather than deny the need for coordination, Bakunin stressed it: “the peasants, like the industrial city workers, should unite by federating the fighting battalions, district by district, assuring a common co-ordinated defence against internal and external enemies.” [“Letters to a Frenchman on the present crisis”, Bakunin on Anarchism, p. 196, p. 206, p. 207 and p. 190]

In this he repeated his earlier arguments concerning social revolution — arguments that Engels was well aware of.

In other words, Engels deliberately misrepresented Bakunin’s ideas while being an attack on federalism when, in fact, federalism was not actually implemented. It should also be mentioned that Engels opposed the Spanish workers rising in revolt in the first place. “A few years of peaceful bourgeois republic,” he argued, “would prepare the ground in Spain for a proletarian revolution” and “instead of staging isolated, easily crushed rebellions,” he hoped that the “Spanish workers will make use of the republic” with a “view to an approaching revolution.” He ended by asking them not to give the bourgeois government “an excuse to suppress the revolutionary movement.” [Op. Cit., pp. 420–1] In his post-revolt diatribe, Engels repeated this analysis and suggested that the “Bakuninists” should have simply stood for election:

“At quiet times, when the proletariat knows beforehand that at best it can get only a few representatives to parliament and have no chance whatever of winning a parliamentary majority, the workers may sometimes be made to believe that it is a great revolutionary action to sit out the elections at home, and in general, not to attack the State in which they live and which oppresses them, but to attack the State as such which exists nowhere and which accordingly cannot defend itself.” [Op. Cit., p. 583]
For some reason, few Leninist quote these recommendations to the Spanish workers nor do they dwell on the reformist and bureaucratic nature of the Socialist party inspired by this advice. As we discuss in section H.3.10, the notion that voting in elections was to "attack the State" fits in well with the concept that universal suffrage equalled the "political power" of the proletariat and the democratic republic was the "specific form" of its dictatorship. Again, for some strange reason, few Leninists mention that either.

The distortions can be somewhat ironic, as can be seen when Trotsky asserted in 1937 that anarchists are "willing to replace Bakunin’s patriarchal ‘federation of free communes’ by the more modern federation of free soviets." [Writings 1936–37, p. 487] It is hard to know where to start in this incredulous rewriting of history. Firstly, Bakunin’s federation of free communes was, in fact, based on workers’ councils ("soviets") — see section I.2.3. As for the charge of supporting "patriarchal" communes, nothing could be further from the truth. In his discussion of the Russian peasant commune (the mir) Bakunin argued that "patriarchalism" was one of its "three dark features," indeed "the main historical evil ... against which we are obliged to struggle with all our might." This "evil", he stressed, "has distorted the whole of Russian life" and the "despotism of the father" turned the family "into a school of triumphant force and tyranny, of daily domestic baseness and depravity." The "same patriarchal principle, the same vile despotism, and the same base obedience prevail within" the peasant commune. Any revolt against "the hated state power and bureaucratic arbitrariness ... simultaneously becomes a revolt against the despotism of the commune." The "war against patriarchalism is now being waged in virtually every village and every family."[Statism and Anarchy, p. 206, pp. 209–10, p. 210 and p. 214]

As can be seen Trotsky’s summary of Bakunin’s ideas is totally wrong. Not only did his ideas on the organisation of the free commune as a federation of workers’ associations predate the soviets by decades, he also argued against patriarchal relationships and  

The link between present and future would be labour unions (workers’ associations), which played the key role of both the means to abolish capitalism and the state and as the framework of a socialist society. For Bakunin, the "very essence of socialism" lies in "the irrepressible conflict between the workers and the exploiters of labour." A "living, powerful, socialist movement" can "be made a reality only by the awakened revolutionary consciousness, the collective will, and the organisation of the working masses themselves." [Bakunin on Anarchism, p. 191 and p. 212] Therefore, it was essential to "organise always more and more the practical militant international solidarity of the toilers of all trades and of all countries, and remember... you will find an immense, an irresistible force in this universal collectivity." Hence Bakunin’s support for self-discipline within self-managed organisations, which came directly from the his awareness of the collective nature of social change: “Today, in revolutionary action as in labour itself, collectivism must replace individualism. Understand clearly that in organising yourselves you will be stronger than all the political leaders in the world.” [quoted by Kenafick, Op. Cit., p. 291 and p. 244]

All of which is quite impressive for someone who was a founding father of a theory which, according to Stack, downplayed the "centrality of the working class," argued that the working class was "not the key to change," dismissed "the importance of the collective nature of change" as well as "collective struggle or advance" and "despises the collectivity"! Clearly, to argue that Bakunin held any of these views simply shows that the person making such statements does not have a clue what they are talking about.

The same, needless to say, applies to all revolutionary anarchists. Kropotkin built upon Bakunin’s arguments and, like him, based his politics on collective working class struggle and organisation. He consistently stressed that "The Anarchists have always advised taking an active part in those workers’ organisations which carry on the direct struggle of Labour against Capital and its protector — the State." Such struggle, “better than any other indirect means, permits...
policy.” He stressed that “to create a people’s force capable of crushing the military and civil force of the State, it is necessary to organise the proletariat.” [quoted by K.J. Kenafick, Michael Bakunin and Karl Marx, p. 95 and p. 254]

Strikes played a very important role in Bakunin’s ideas (as they do in all revolutionary anarchist thought). He saw the strike as “the beginnings of the social war of the proletariat against the bourgeoisie. Strikes are a valuable instrument from two points of view. Firstly, they electrify the masses … awaken in them the feeling of the deep antagonism which exists between their interests and those of the bourgeoisie … secondly they help immensely to provoke and establish between the workers of all trades, localities and countries the consciousness and very fact of solidarity: a twofold action, both negative and positive, which tends to constitute directly the new world of the proletariat, opposing it almost in an absolute way to the bourgeois world.” [quoted by Caroline Cahm, Kropotkin and the Rise of Revolutionary Anarchism 1872–1886, pp. 216–217] For Bakunin, strikes train workers for social revolution as they “create, organise, and form a workers’ army, an army which is bound to break down the power of the bourgeoisie and the State, and lay the ground for a new world.” [The Political Philosophy of Bakunin, pp. 384–5]

The revolution would be “an insurrection of all the people and the voluntary organisation of the workers from below upward.” [Statism and Anarchy, p. 179] As we argue in section I.2.3, the very process of collective class struggle would, for Bakunin and other anarchists, create the basis of a free society. Thus, in Bakunin’s eyes, the “future social organisation must be made solely from the bottom upwards, by the free association or federation of workers, firstly in their unions, then in the communes, regions, nations and finally in a great federation, international and universal.” [Michael Bakunin: Selected Writings, p. 206]

In other words, the basic structure created by the revolution would be based on the working classes own combat organisations, as created in their struggles against oppression and exploitation.

urged their destruction in the Russian peasant commune (and elsewhere). Indeed, if any one fits Trotsky’s invention it is Marx, not Bakunin. After all, Marx came round (eventually) to Bakunin’s position that the peasant commune could be the basis for Russia to jump straight to socialism (and so by-passing capitalism) but without Bakunin’s critical analysis of that institution and its patriarchal and other “dark” features. Similarly, Marx never argued that the future socialist society would be based on workers’ associations and their federation (i.e. workers’ councils). His vision of revolution was formulated in typically bourgeois structures such as the Paris Commune’s municipal council.

We could go on, but space precludes discussing every example. Suffice to say, it is not wise to take any Marxist assertion of anarchist thought or history at face value. A common technique is to quote anarchist writers out of context or before they become anarchists. For example, Marxist Paul Thomas argues that Bakunin favoured “blind destructiveness” and yet quotes more from Bakunin’s pre-anarchist works (as well as Russian nihilists) than Bakunin’s anarchist works to prove his claim. Similarly, Thomas claims that Bakunin "defended the federes of the Paris Commune of 1871 on the grounds that they were strong enough to dispense with theory altogether," yet his supporting quote clearly does not, in fact, say this. [Karl Marx and the Anarchists, pp. 288–90 and p. 285] What Bakunin was, in fact, arguing was simply that theory must progress from experience and that any attempt to impose a theory on society would be doomed to create a “Procrustean bed” as no government could “embrace the infinite multiplicity and diversity of the real aspirations, wishes and needs whose sum total constitutes the collective will of a people.” He explicitly contrasted the Marxist system of “want[ing] to impose science upon the people” with the anarchist desire “to diffuse science and knowledge among the people, so that the various groups of human society, when convinced by propaganda, may organise and spontaneously combine into federations, in accordance with their
natural tendencies and their real interests, but never according to a plan traced in advance and imposed upon the ignorant masses by a few ‘superior’ minds.” [The Political Theory of Bakunin, p. 300] A clear misreading of Bakunin’s argument but one which fits nicely into Marxist preconceptions of Bakunin and anarchism in general.

This tendency to quote out of context or from periods when anarchists were not anarchists probably explains why so many of these Marxist accounts of anarchism are completely lacking in references. Take, for example, the British SWP’s Pat Stack who, in the face of stiff competition, wrote one of the most inaccurate diatribes against anarchism the world has had the misfortune to see (namely “Anarchy in the UK?” [Socialist Review, no. 246]). There is not a single reference in the whole article, which is just as well, given the inaccuracies contained in it. Without references, the reader would not be able to discover for themselves the distortions and simple errors contained in it.

For example, Stack asserts that Bakunin “claimed a purely ‘instinctive socialism.’” However, the truth is different and this quote from Bakunin is one by him comparing himself and Marx in the 1840s! In fact, the anarchist Bakunin argued that “instinct as a weapon is not sufficient to safeguard the proletariat against the reactionary machinations of the privileged classes,” as instinct “left to itself, and inasmuch as it has not been transformed into consciously reflected, clearly determined thought, lends itself easily to falsification, distortion and deceit.” [The Political Philosophy of Bakunin, p. 215] Bakunin saw the process of class struggle as the means of transforming instinct into conscious thought. As he put it, the “goal, then, is to make the worker fully aware of what he [or she] wants, to unjam within him [or her] a steam of thought corresponding to his [or her] instinct.” This is done by “a single path, that of emancipation through practical action,” by “workers’ solidarity in their struggle against the bosses,” of “collective struggle of the workers against the bosses.” This would be complemented by so-

of the bourgeoisie as a distinct class.” In order for the worker to “become strong” he “must unite” with other workers in “the union of all local and national workers’ associations into a world-wide association, the great International Working-Men’s Association.” It was only “through practice and collective experience” and “the progressive expansion and development of the economic struggle [that] will bring [the worker] more to recognise his [or her] true enemies: the privileged classes, including the clergy, the bourgeoisie, and the nobility; and the State, which exists only to safeguard all the privileges of those classes.” There was “but a single path, that of emancipation through practical action” which “has only one meaning. It means workers’ solidarity in their struggle against the bosses. It means trades-unions, organisation, and the federation of resistance funds.” Then, “when the revolution — brought about by the force of circumstances — breaks out, the International will be a real force and know what it has to do”, namely to “take the revolution into its own hands” and become “an earnest international organisation of workers’ associations from all countries” which will be “able to replace this departing political world of States and bourgeoisie.” [The Basic Bakunin, pp. 97–8, p. 103 and p. 110]

Hardly the words of a man who rejected class conflict, the working class and the collective nature of change! Nor is this an isolated argument from Bakunin, it recurs continuously throughout Bakunin’s works. For Bakunin, the “initiative in the new movement will belong to the people ... in Western Europe, to the city and factory workers — in Russia, Poland, and most of the Slavic countries, to the peasants.” However, “in order that the peasants rise up, it is absolutely necessary that the initiative in this revolutionary movement be taken up by the city workers ... who combine in themselves the instincts, ideas, and conscious will of the Social Revolution.” [The Political Philosophy of Bakunin, p. 375] Similarly, he argued that “equality” was the “aim” of the International Workers’ Association and “the organisation of the working class its strength, the unification of the proletariat the world over ... its weapon, its only
For example, Pat Stack of the British SWP argued that anarchists “dismiss … the importance of the collective nature of change” and so “downplays the centrality of the working class” in the revolutionary process. This, he argues, means that for anarchism the working class “is not the key to change.” He stresses that for Proudhon, Bakunin and Kropotkin “revolutions were not about … collective struggle or advance” and that anarchism “despises the collectivity.” Amazingly he argues that for Kropotkin, “far from seeing class conflict as the dynamic for social change as Marx did, saw co-operation being at the root of the social process.” Therefore, “[i]t follows that if class conflict is not the motor of change, the working class is not the agent and collective struggle not the means. Therefore everything from riot to bomb, and all that might become between the two, was legitimate when ranged against the state, each with equal merit.” ["Anarchy in the UK?", Socialist Review, no. 246] Needless to say, he makes the usual exception for anarcho-syndicalists, thereby showing his total ignorance of anarchism and syndicalism (see section H.2.8).

Assertions like these are simply incredible. It is hard to believe that anyone who is a leading member of a Leninist party could write such nonsense which suggests that Stack is aware of the truth and simply decides to ignore it. All in all, it is very easy to refute these assertions. All we have to do is, unlike Stack, to quote from the works of Bakunin, Kropotkin and other anarchists. Even the briefest familiarity with the writings of revolutionary anarchism would soon convince the reader that Stack really does not know what he is talking about.

Take, for example, Bakunin. Rather than reject class conflict, collective struggle or the key role of the working class, Bakunin based his political ideas on all three. As he put it, there was, “between the proletariat and the bourgeoisie, an irreconcilable antagonism which results inevitably from their respective stations in life.” He stressed that “war between the proletariat and the bourgeoisie is unavoidable” and would only end with the “abolition of capitalist organisations “propagandis[ing] its principles.” [The Basic Bakunin, p. 102, p. 103 and p. 109] Clearly, Stack is totally distorting Bakunin’s ideas on the subject.

This technique of quoting Bakunin when he spoke about (or when he wrote in) his pre-anarchist days in the 1840s, i.e. nearly 20 years before he became an anarchist, or from Proudhon’s non-anarchist and posthumously published work on property (in which Proudhon saw small-scale property as a bulwark against state tyranny) to attack anarchism is commonplace. So it is always wise to check the source material and any references (assuming that they are provided). Only by doing this can it be discovered whether a quote reflects the opinions of individuals when they were anarchists or whether they are referring to periods when they were no longer, or had not yet become, anarchists.

Ultimately, though, these kinds of articles by Marxists simply show the ideological nature of their own politics and say far more about Marxism than anarchism. After all, if their politics were strong they would not need to distort anarchist ideas! In addition, these essays are usually marked by a lot of (usually inaccurate) attacks on the ideas (or personal failings) of individual anarchists (usually Proudhon and Bakunin and sometimes Kropotkin). No modern anarchist theorist is usually mentioned, never mind discussed. Obviously, for most Marxists, anarchists must repeat parrot-like the ideas of these “great men.” However, while Marxists may do this, anarchists have always rejected this approach. We deliberately call ourselves anarchists rather than Proudhonists, Bakuninists, Kropotkinists, or after any other person. As Malatesta argued in 1876 (the year of Bakunin’s death) “[w]e follow ideas and not men, and rebel against this habit of embodying a principle in a man.” [Errico Malatesta: His Life and Ideas, p. 198]

Therefore, anarchists, unlike many (most?) Marxists do not believe that some prophet wrote down the scriptures in past centuries and if only we could reach a correct understanding of these writ-
Anarchist movement, and this movement was certainly based on a libertarian version of the concept of the class struggle.

“Most of the leaders of this movement — first Michael Bakunin, James Guillaume, Errico Malatesta, Carlo Caliero, later Peter Kropotkin, Louise Michel, Emile Pouget, Jean Grave, and so on — took for granted that there was a struggle between the proletariat and the bourgeoisie and that the social revolution would be conducted by the former against the latter. They derived such ideas … from the traditional theory of revolutionary socialism and the traditional practice of working-class action …

“The great revolutions of the early twentieth century — in Mexico, Russia, Spain — all derived from the class struggle and all involved anarchist intervention on the side of the working class. The great martyrs of the anarchist movement — from Haymarket in 1887 through Francisco Ferrer in 1909 to Sacco and Vanzetti in 1927 — were killed in the class struggle. The great partisans of anarchist warfare — from Emiliano Zapata through Nestor Makhno to Buenaventura Durruti — were all fighting in the class struggle.

“So … class struggle in anarchism … [and] its importance in the anarchist movement is incontrovertible.” [The Anarchist Past and other essays, pp. 60–2]

Anyone even remotely aware of anarchism and its history could not fail to notice that class struggle plays a key role in anarchist theory, particularly (but not exclusively) in its revolutionary form. To assert otherwise is simply to lie about anarchism. Sadly, Marxists have been known to make such an assertion.
H.2.2 Do anarchists reject “class conflict” and “collective struggle”? 

Of course not. Anarchists have always taken a keen interest in the class struggle, in the organisation, solidarity and actions of working class people. Anarchist Nicholas Walter summarised the obvious and is worth quoting at length:

“Virtually all forms of revolutionary socialism during the nineteenth century, whether authoritarian or libertarian, were based on the concept of class struggle … The term anarchist was first adopted by Pierre-Joseph Proudhon in 1840, and although he disliked the class struggle, he recognised it existed, and took sides in it when he had to … during the French Revolution of 1848, he insisted that he was on the side of the proletariat against the bourgeoisie … his last book was a positive study of the need for specially proletarian politics …

“The actual anarchist movement was founded later, by the anti-authoritarian sections of the First International … They accepted [its] founding Address …, drafted by Karl Marx, which assumed the primacy of the class struggle and insisted that ‘the emancipation of the working classes must be conquered by the working classes themselves’; they accepted the Programme of the International Alliance of Social Democracy (1869), drafted by Michael Bakunin, which assumed the primacy of the class struggle … and they accepted the declaration of the St. Imier Congress which assumed the primacy of the class struggle and insisted that ‘rejecting all compromise to arrive at the accomplishment of the social revolution, the proletarians of all countries must establish, outside all bourgeois politics, the solidarity of revolutionary action’ … This was certainly the first copy. This means to attack anarchism by, say, attacking Bakunin’s or Proudhon’s personal failings is to totally miss the point. While anarchists may be inspired by the ideas of, say, Bakunin or Proudhon it does not mean we blindly follow all of their ideas. Far from it! We critically analyse their ideas and keep what is living and reject what is useless or dead. Sadly, such common sense is lacking in many who critique anarchism.

However, the typical Marxist approach does have its benefits from a political perspective. It is very difficult for Marxists and Leninists to make an objective criticism of Anarchism for, as Albert Meltzer pointed out, “by its nature it undermines all the suppositions basic to Marxism. Marxism was held out to be the basic working class philosophy (a belief which has utterly ruined the working class movement everywhere). It holds that the industrial proletariat cannot owe its emancipation to anyone but themselves alone. It is hard to go back on that and say that the working class is not yet ready to dispense with authority placed over it … Marxism normally tries to refrain from criticising anarchism as such — unless driven to doing so, when it exposes its own authoritarianism … and concentrates its attacks not on Anarchism, but on Anarchists.” [Anarchism: Arguments for and Against, p. 62] Needless to say, this technique is the one usually applied by Marxists (although, we must stress that usually their account of the ideas of Proudhon, Bakunin, and Kropotkin are so distorted that they fail even to do this!).

So anarchist theory has developed since Proudhon, Bakunin and Kropotkin. At each period in history anarchism advanced in its understanding of the world, the anarchism of Bakunin was a development of that of Proudhon, these ideas were again developed by the anarcho-communists of the 1880s and by the syndicalists of the 1890’s, by the Italian Malatesta, the Russian Kropotkin, the Mexican Flores Magon and many other individuals and movements. Today we stand on their shoulders, not at their feet.

As such, to concentrate on the ideas of a few “leaders” misses the point totally. While anarchism contains many of the core insights
of, say, Bakunin, it has also developed them and added to them. It has, concretely, taken into account, say, the lessons of the Russian and Spanish revolutions and so on. As such, even assuming that Marxist accounts of certain aspects of the ideas of Proudhon, Bakunin and Kropotkin were correct, they would have to be shown to be relevant to modern anarchism to be of any but historical interest. Sadly, Marxists generally fail to do this and, instead, we are subject to a (usually inaccurate) history lesson.

In order to understand, learn from and transcend previous theorists we must honestly present their ideas. Unfortunately many Marxists do not do this and so this section of the FAQ involves correcting the many mistakes, distortions, errors and lies that Marxists have subjected anarchism to. Perhaps this dialogue between libertarian Marxists and anarchists is to be expected, as the mainstream Marxists have often misrepresented the ideas of libertarian Marxists as well — when not dismissing them as anarchists!

H.2.1 Do anarchists reject defending a revolution?

According to many Marxists anarchists either reject the idea of defending a revolution or think that it is not necessary. The Trotskyists of *Workers’ Power* present a typical Marxist account of what they consider as anarchist ideas on this subject:

> “the anarchist conclusion is not to build any sort of state in the first place — not even a democratic workers’ state. But how could we stop the capitalists trying to get their property back, something they will definitely try and do?”

... whereas the Party — as it repeatedly was by the Bolsheviks ... What ‘taking power’ really implies is that the vast majority of the working class at last realises its ability to manage both production and society — and organises to this end.” [*The Bolsheviks and Workers’ Control*, p. xiv]

In summary, therefore, anarchists reject the idea that the defence of a revolution can be conducted by a state. As Bakunin once put it, there is the “Republic-State” and there is “the system of the Republic-Commune, the Republic-Federation, i.e. the system of Anarchism. This is the politics of the Social Revolution, which aims at the abolition of the State and establishment of the economic, entirely free organisation of the people — organisation from bottom to top by means of federation.” [*The Political Philosophy of Bakunin*, p. 314]

Indeed, creating a new state will simply destroy the most important gain of any revolution — working class autonomy — and its replacement by another form of minority rule (by the party). Anarchists have always argued that the defence of a revolution must not be confused with the state and so argue for the abolition of the state and the defence of a revolution. Only when working class people actually run themselves society will a revolution be successful. For anarchists, this means that “effective emancipation can be achieved only by the direct, widespread, and independent action ... of the workers themselves, grouped ... in their own class organisations ... on the basis of concrete action and self-government, helped but not governed, by revolutionaries working in the very midst of, and not above the mass and the professional, technical, defence and other branches.” [Voline, *Op. Cit.*, p. 197]

This means that anarchists argue that the state cannot be transformed or adjusted, but has to be smashed by a social revolution and replaced with organisations and structures created by working class people during their own struggles (see section H.1.4 for details). Anarchist opposition to the so-called workers’ state has absolutely nothing to do with the issue of defending a revolution, regardless of what Marxists assert.
Anarchists argue that the state is designed to exclude the mass of the population from the decision making process. This, ironically for Trotskyism, was one of the reasons why leading Bolsheviks (including Lenin and Trotsky) argued for a workers state. The centralisation of power implied by the state was essential so that the vanguard party could ignore (to use Worker’s Power’s phrase) “the will of the majority.” This particular perspective was clearly a lesson they learned from their experiences during the Russian Revolution—as we discussed in section H.1.2 the notion that the “dictatorship of the proletariat” was, in fact, the “dictatorship of the party” was a commonplace ideological truism in Leninist circles. As anarchists had warned, it was a dictatorship over the proletariat and acknowledged as such by the likes of Lenin and Trotsky.

Needless to say, Workers’ Power (like most Trotskyists) blame the degeneration of the Russian revolution on the Civil War and its isolation. However, the creation of a party dictatorship was not seen in these terms and, moreover, as we discuss in detail in section H.6 the Bolshevik undermining of working class autonomy and democracy started well before the outbreak of civil war, thus confirming anarchist theory. These conclusions of leading Leninists simply justified the actions undertaken by the Bolsheviks from the start.

This is why anarchists reject the idea of a “democratic workers’ state.” Simply put, as far as it is a state, it cannot be democratic and in as far as it is democratic, it cannot be a state. The Leninist idea of a “workers’ state” means, in fact, the seizure of power by the party. This, we must stress, naturally follows from the reality of the state. It is designed for minority rule and excludes, by its very nature, mass participation and this aspect of the state was one which the leading lights of Bolshevism agreed with. Little wonder, then, that in practice the Bolshevik regime suppressed of any form of democracy which hindered the power of the party. Maurice Brinton summed up the issue well when he argued that “‘workers’ power’ cannot be identified or equated with the power of

“Should the people organise to stop the capitalists raising private armies and resisting the will of the majority? If the answer is yes, then that organisation — whatever you prefer to call it — is a state: an apparatus designed to enable one class to rule over another.

“The anarchists are rejecting something which is necessary if we are to beat the capitalists and have a chance of developing a classless society.” [“What’s wrong with anarchism?”, pp. 12–13, World Revolution: Prague S26 2000, p. 13]

It would be simple to quote Malatesta from 1891 on this issue and leave it at that. As he put some seem to suppose “that anarchists, in the name of their principles, would wish to see that strange freedom respected which violates and destroys the freedom and life of others. They seem almost to believe that after having brought down government and private property we would allow both to be quietly built up again, because of respect for the freedom of those who might feel the need to be rulers and property owners. A truly curious way of interpreting our ideas.” [Anarchy, pp. 42–3] Pretty much common sense, so you would think! Sadly, this appears to not be the case. As such, we have to explain anarchist ideas on the defence of a revolution and why this necessity need not imply a state and, if it did, then it signifies the end of the revolution.

The argument by Workers’ Power is very common with the Leninist left and contains three fallacies, which we expose in turn. Firstly, we have to show that anarchists have always seen the necessity of defending a revolution. This shows that the anarchist opposition to the “democratic workers’ state” (or “dictatorship of the proletariat”) has nothing to do with beating the ruling class and stopping them regaining their positions of power. Secondly, we have to discuss the anarchist and Marxist definitions of what constitutes a “state” and show what they have in common and how they differ. Thirdly, we must summarise why anarchists oppose
the idea of a “workers’ state” in order for the real reasons why anarchists oppose it to be understood. Each issue will be discussed in turn.

For revolutionary anarchists, it is a truism that a revolution will need to defend itself against counter-revolutionary threats. Bakunin, for example, while strenuously objecting to the idea of a “dictatorship of the proletariat” also thought a revolution would need to defend itself:

“Immediately after established governments have been overthrown, communes will have to reorganise themselves along revolutionary lines . . . In order to defend the revolution, their volunteers will at the same time form a communal militia. But no commune can defend itself in isolation. So it will be necessary to radiate the revolution outward, to raise all of its neighbouring communes in revolt . . . and to federate with them for common defence.” [No Gods, No Masters, vol. 1, p. 142]

And:

“The Alliance of all labour associations . . . will constitute the Commune . . . there will be a standing federation of the barricades and a Revolutionary Communal Council . . . [made up of] delegates . . . invested with binding mandates and accountable and revocable at all times . . . all provinces, communes and associations . . . [will] delegate deputies to an agreed place of assembly (all . . . invested with binding mandated and accountable and subject to recall), in order to found the federation of insurgent associations, communes and provinces . . . and to organise a revolutionary force with the capacity of defeating the reaction . . . it is through the very act of extrapolation and extrapolation that we must understand the revolutionary process.” [Malatesta, No Gods, No Masters, vol. 2, pp. 38–9]

The question is, therefore, one of who “seizes power” — will it be the mass of the population or will it be a party claiming to represent it. The difference is vital and it confuses the issue to use the same word “state” to describe two such fundamentally different structures as a “bottom-up” self-managed communal federation and a “top-down” hierarchical centralised organisation (such as has been every state that has existed). This explains why anarchists reject the idea of a “democratic workers’ state” as the means by which a revolution defends itself. Rather than signify working class power or management of society, it signifies the opposite — the seizure of power of a minority (in this case, the leaders of the vanguard party).
from the beginning, the equalitarian principle and strikes at the heart of the Social Revolution … [It] inevitably becomes a source of other privileges, even if it does not depend on the bourgeoisie. Having taken over the Revolution, having mastered it, and bridled it, power is compelled to create a bureaucratic apparatus, indispensable to all authority which wants to maintain itself, to command, to order — in a word, ‘to govern’. Rapidly, it attracts around itself all sorts of elements eager to dominate and exploit.

"Thus it forms a new privileged caste, at first politically and later economically … It sows everywhere the seed of inequality and soon infects the whole social organism." [Voline, The Unknown Revolution, p. 249]

So if it were simply a question of consolidating a revolution and its self-defence then there would be no argument:

"But perhaps the truth is simply this: … [some] take the expression 'dictatorship of the proletariat' to mean simply the revolutionary action of the workers in taking possession of the land and the instruments of labour, and trying to build a society and organise a way of life in which there will be no place for a class that exploits and oppresses the producers.

"Thus constructed, the 'dictatorship of the proletariat' would be the effective power of all workers trying to bring down capitalist society and would thus turn into Anarchy as soon as resistance from reactionaries would have ceased and no one can any longer seek to compel the masses by violence to obey and work for him. In which case, the discrepancy between us would be nothing more than a question of semantics. Dictatorship of the proletariat would signify the dictatorship of organisation of the Revolution with an eye to the mutual defences of insurgent areas that the universality of the Revolution … will emerge triumphant." [Op. Cit., pp. 155–6]

Malatesta agreed, explicitly pointing to "corps of volunteers (anarchist formations)" as a means of defending a revolution from "attempts to reduce a free people to a state of slavery again." To defend a revolution required "the necessary geographical and mechanical knowledge, and above all large masses of the population willing to go and fight. A government can neither increase the abilities of the former nor the will and courage of the latter." [Anarchy, p. 42] Decades later, his position had not changed and he was still arguing for the "creation of voluntary militia, without powers to interfere as militia in the life of the community, but only to deal with any armed attacks by the forces of reaction to re-establish themselves, or to resist outside intervention" for only "the people in arms, in possession of the land, the factories and all the natural wealth" could "defend … the revolution." [Errico Malatesta: His Life and Ideas, p. 166 and p. 170]

Alexander Berkman concurred. In his classic introduction to anarchism, he devoted a whole chapter to the issue which he helpfully entitled "Defense of the Revolution". He noted that it was "your duty, as an Anarchist, to protect your liberty, to resist coercion and compulsion … the social revolution … will defend itself against invasion from any quarter … The armed workers and peasants are the only effective defence of the revolution. By means of their unions and syndicates they must always be on guard against counter-revolutionary attack." [What is Anarchism?, pp. 231–2] Emma Goldman clearly and unambiguously stated that she had "always insisted that an armed attack on the Revolution must be met with armed force" and that "an armed counter-revolutionary and fascist attack can be met in no way except by an armed defence." [Vision on Fire, p. 222 and p. 217] Kropotkin, likewise, took it as a given that "a society in which the
workers would have a dominant voice” would require a revolution to create and “each time that such a period of accelerated evolution and reconstruction on a grand scale begins, civil war is liable to break out on a small or large scale.” The question was “how to attain the greatest results with the most limited amount of civil war, the smallest number of victims, and a minimum of mutual embitterment.” To achieve this there was “only one means; namely, that the oppressed part of society should obtain the clearest possible conception of what they intend to achieve, and how, and that they should be imbued with the enthusiasm which is necessary for that achievement.” Thus, “there are periods in human development when a conflict is unavoidable, and civil war breaks out quite independently of the will of particular individuals.” [Memiors of a Revolutionist, pp. 270–1]

So Durruti, while fighting at the front during the Spanish revolution, was not saying anything new or against anarchist theory when he stated that “the bourgeois won’t let us create a libertarian communist society simply because we want to. They’ll fight back and defend their privileges. The only way we can establish libertarian communism is by destroying the bourgeoisie” [quoted by Abel Paz, Durruti in the Spanish Revolution, p. 484] Clearly, anarchism has always recognised the necessity of defending a revolution and proposed ideas to ensure it (ideas applied with great success by, for example, the Makhnovists in the Ukrainian Revolution and the CNT militias during the Spanish). As such, any assertion that anarchism rejects the necessity of defending a revolution is simply false. Sadly, it is one Marxists make repeatedly (undoubtedly inspired by Engels similar distortions — see section H.4.7).

Which, of course, brings us to the second assertion, namely that any attempt to defend a revolution means that a state has been created (regardless of what it may be called). For anarchists, such an argument simply shows that Marxists do not really understand what a state is. While the Trotskyist definition of a “state” may be (to quote Workers’ Power) “an apparatus designed to enable one class to rule another,” the anarchist definition is somewhat different. to subject the free people to authority. Why is this not a society which “knows no state”? Is it because the anarchist commune is fighting against the capitalist class? If so, does this mean that the Iroquois Confederacy became a state when it waged war against those seeking to impose bourgeois rule on it? That is doubtful and so Marx’s assertion is simply wrong and reflects both the confusion at the heart of the Marxist theory of the state and the illogical depths Marxists sink to when attacking anarchism.

This not a matter of mere “labels” as Marxists assert, but rather gets to the key issue of who has the real power in a revolution — the people armed or a new minority (the “revolutionary” government). In other words, most Marxists cannot tell the difference between libertarian organisation (power to the base and decision making from the bottom-up) and the state (centralised power in a few hands and top-down decision making). Which helps explain why the Bolshevik revolution was such a failure. The confusion of working class power with party power is one of the root problems with Marxism. So why do most Marxists tend to call their post-revolutionary organisation a state? Simply because, at some level, they recognise that, in reality, the working class does not wield power in the so-called “workers’ state”: the party does. This was the case in Russia. The working class never wielded power under the Bolsheviks and here is the most obvious contradiction in the Marxist theory of the state — a contradiction which, as we discuss in section H.3.8 the Leninists solved by arguing that the party had to assert its power over the working class for its own good.

Moreover, as we discuss in section H.3.9, it is both simplistic and wrong to argue that the state is simply the tool of economic classes. The state is a source of social inequality in and of itself and, consequently, can oppress and exploit the working class just as much as, and independently of, any economically dominant class:

“All political power inevitably creates a privileged situation for the men who exercise it. Thus it violates,
or semantics as it gets to the heart of the difference between libertarian and authoritarian conceptions of society and social change. Anarchists argue that the state is structured to ensure minority rule and, consequently, a “workers’ state” would be a new form of minority rule over the workers. For this reason we argue that working class self-management from the bottom-up cannot be confused with a “state.” The Russian Revolution showed the validity of this, with the Bolsheviks calling their dictatorship a “workers’ state” in spite of the workers having no power in it.

Anarchists have long pointed out that government is not the same as collective decision making and to call the bottom-up communal system anarchists aim for a “state” when its role is to promote and ensure mass participation in social life is nonsense. That Marxists are vaguely aware of this obvious fact explains why they often talk of a “semi-state”, a “new kind of state”, a state “unique in history,” or use some other expression to describe their post-revolutionary system. This would be a state (to use Engels words) which is “no longer a state in the proper sense of the word.” [quoted by Lenin, Op. Cit., p. 319] If that is the case, then why call it state?

Somewhat ironically, Engels provided more than enough support for the anarchist position. It is perfectly possible to have social organisation and it not be a state. When discussing the Native American Iroquois Confederacy, Engels noted that “organ of the Confederacy was a Federal Council” which was “elected ... and could always be removed” by popular assemblies. There was “no chief executive” but “two supreme war chiefs” and “[w]hen war broke out it was carried on mainly by volunteers.” Yet this was “the organisation of a society which as yet knows no state.” [Selected Works, p. 517, p. 518 and p. 516] In the anarchist commune there is a federal council elected and mandated by popular assemblies. These, in turn, are federated in a similar bottom-up manner. The means of production have been expropriated and held by society as a whole and so classes have been abolished. Volunteer militias have been organised for self-defence against counter-revolutionary attempts

Anarchists, of course, do not deny that the modern state is (to use Malatesta’s excellent expression) “the bourgeoisie’s servant and gendarme.” [Anarchy, p. 23] However, as we discuss in section H.3.7, the Marxist analysis is superficial and fundamentally metaphysical rather than scientific. Anarchists take an evolutionary perspective on the state and, as a result, argue that every state that has ever existed has defended the power of a minority class and, unsurprisingly, has developed certain features to facilitate this. The key one is centralisation of power. This ensures that the working people are excluded from the decision making process and power remains a tool of the ruling class. As such, the centralisation of power (while it may take many forms) is the key means by which a class system is maintained and, therefore, a key aspect of a state.

As Kropotkin put, the State idea “includes the existence of a power situated above society” as well as “a territorial concentration as well as the concentration of many functions of the life of societies in the hands of a few.” It “implies some new relationships between members of society ... in order to subject some classes to the domination of others” and this becomes obvious “when one studies the origins of the State.” [The State: Its Historic Role, p. 10] This was the case with representative democracy:

“To attack the central power, to strip it of its prerogatives, to decentralise, to dissolve authority, would have been to abandon to the people the control of its affairs, to run the risk of a truly popular revolution. That is why the bourgeoisie sought to reinforce the central government even more.” [Kropotkin, Words of a Rebel, p. 143]

This meant, Kropotkin continued, that the “representative system was organised by the bourgeoisie to ensure their domination, and it will disappear with them. For the new economic phase that is about to begin we must seek a new form of political organisation, based on a principle quite different from that of representation. The logic of
events imposes it.” [Op. Cit., p. 125] This suggests that the Marxist notion that we can use a state (i.e., any centralised and hierarchical social structure) to organise and defend a social revolution is based on flawed reasoning in which it “seems to be taken for granted that Capitalism and the workers’ movement both have the same end in view. If this were so, they might perhaps use the same means; but as the capitalist is out to perfect his system of exploitation and government, whilst the worker is out for emancipation and liberty, naturally the same means cannot be employed for both purposes.” [George Barrett, Objections to Anarchism, p. 343]

To reproduce in the new society social structures which share the same characteristics (such as centralisation and delegation of power) which mark the institutions of class society would be a false step, one which can only recreate a new form of class system in which a new ruling elite govern and exploit the many. So while we agree with Marxists that the main function of the state is to defend class society, we also stress the structure of the state has evolved to execute that role. In the words of Rudolf Rocker:

“[S]ocial institutions ... do not arise arbitrarily, but are called into being by special needs to serve definite purposes ... The newly arisen possessing classes had need of a political instrument of power to maintain their economic and social privileges over the masses of their own people ... Thus arose the appropriate social conditions for the evolution of the modern state, as the organ of political power of privileged castes and classes for the forcible subjugation and oppression of the non-possessing classes ... Its external forms have altered in the course of its historical development, but its functions have always been the same ... And just as the functions of the bodily organs of ... animals cannot be arbitrarily altered, so that, for example, one cannot at will hear with his eyes and see with his ears, so also one cannot at pleasure transform an organ of social oppression into an instrument for the liberation of the oppressed. The state can only be what it is: the defender of mass-exploitation and social privileges, and creator of privileged classes.” [Anarcho-Syndicalism, pp. 14–5]

As such, a new form of society, one based on the participation of all in the affairs of society (and a classless society can be nothing else) means the end of the state. This is because it has been designed to exclude the participation a classless society needs in order to exist. In anarchist eyes, it is an abuse of the language to call the self-managed organisations by which the former working class manage (and defend) a free society a state.

However, as Workers Power indicate, it could be objected that the anarchist vision of a federation of communal and workplace assemblies and volunteer militias to defend it is simply a new form of state. In other words, that the anarchists advocate what most people (including most Marxists) would call a state as this federal system is based on social organisation, collective decision making and (ultimately) the armed people. This was the position of Marx and Engels, who asserted against Bakunin that “to call this machine a ‘revolutionary Commune organised from the bottom to top’ makes little difference. The name changes nothing of the substance” for to be able to do anything at all the communal councils “must be vested with some power and supported by a public force.” [Collected Works, vol. 23, p. 469]

Anarchists reject this argument. To quote Daniel Guérin, initially Bakunin used the term state “as synonyms for ‘social collective.’ The anarchists soon saw, however, that it was rather dangerous for them to use the same word as the authoritarians while giving it a quite different meaning. They felt that a new concept called for a new word and that the use of the old term could be dangerously ambiguous; so they ceased to give the name ‘State’ to the social collective of the future.” [Anarchism, pp. 60–1] This is more than mere labels
ganisations, which influence others by the force of their ideas and by their example, be “elitist” or “downright bizarre”? Little wonder, then, that Stack used an example from 1868 to attack anarchism in the twenty-first century! If he actually presented an honest account of anarchist ideas then his claims would quickly be seen to be nonsense. And as for the claim of being “ineffective,” well, given that Stack’s article is an attempt to combat anarchist influence in the anti-globalisation movement it would suggest the opposite.

Even looking at the example of Bakunin’s Alliance, we can see evidence that Stack’s summary is simply wrong. It seems strange for Stack to claim that the Alliance was “ineffective.” After all, Marx spent many years combating it (and Bakunin’s influence) in the First International. Indeed, so effective was it that anarchist ideas dominated most sections of that organisation, forcing Marx to move the General Council to America to ensure that it did not fall into the hands of the anarchists (i.e. of the majority). Moreover, it was hardly “ineffective” when it came to building the International. As Marxist Paul Thomas notes, “the International was to prove capable of expanding its membership only at the behest of the Bakuninists [sic!]” and “[w]herever the International was spreading, it was doing so under the mantle of Bakuninism.” [Karl Marx and the Anarchists, p. 315 and p. 319] Even Engels had to admit that the Spanish section was “one of finest organisations within the International (which the Spanish Marxists had to ‘rescue from the influence of the Alliance humbugs’).” [Collected Works, vol. 23, p. 292]

Yet Stack considers this as an example of an “ineffective” organisation! But, to be fair, this seems to have been a common failing with Marxists. In 1877, for example, Engels showed his grasp of things by saying “we may safely predict that the new departure [in Spain] will not come from these ‘anarchist’ spouters, but from the small body of intelligent and energetic workmen who, in 1872, remained true to the International.” [Marx, Engels, Lenin, Anarchism and Anarcho-Syndicalism, p. 163] In reality, the Spanish

ditions favourable to this development will not exist at the beginning.” [quoted by Daniel Guérin, Anarchism, p. 51]

Clearly, our argument contradicts the widely held view that anarchists believed an utopian world would be created instantly after a revolution. Of course, by asserting that anarchists think “full blown communism” will occur without some form of transitional period, Marxists paint a picture of anarchism as simply utopian, a theory which ignores objective reality in favour of wishful thinking. However, as seen above, such is not the case. Anarchists are aware that “full blown communism” is dependent on objective conditions and, therefore, cannot be implemented until those conditions are meet. Until such time as the objective conditions are reached, various means of distributing goods, organising and managing production, and so on will be tried. Such schemes will be based as far as possible on communist principles.

Such a period of transition would be based on libertarian and communist principles. The organisation of society would be anarchist — the state would be abolished and replaced by a free federation of workers and community associations. The economic structure would be socialist — production would be based on self-managed workplaces and the principles of distribution would be as communist as possible under the given objective conditions.

It also seems strange for Marxists to claim that anarchists thought a “full blown” communist society was possible “overnight” given that anarchists had always noted the difficulties facing a social revolution. Kropotkin, for example, continually stressed that a revolution would face extensive economic disruption. In his words:

“A political revolution can be accomplished without shaking the foundations of industry, but a revolution where the people lay hands upon property will inevitably paralyse exchange and production ... This point cannot be too much insisted upon; the reorganisation of
industry on a new basis ... cannot be accomplished in a few days; nor, on the other hand, will people submit to be half starved for years in order to oblige the theorists who uphold the wage system. To tide over the period of stress they will demand what they have always demanded in such cases — communisation of supplies — the giving of rations.” [The Conquest of Bread, pp. 72–3]

The basic principles of this “transition” period would, therefore, be based on the “socialising of production, consumption and exchange.” The state would be abolished and “federated Communes” would be created. The end of capitalism would be achieved by the “expropriation” of “everything that enables any man — be he financier, mill-owner, or landlord — to appropriate the product of others’ toil.” Distribution of goods would be based on “no stint or limit to what the community possesses in abundance, but equal sharing and dividing of those commodities which are scarce or apt to run short.” [Op. Cit., p. 136, p. 61 and p. 76] Clearly, while not “full blown” communism by any means, such a regime does lay the ground for its eventual arrival. As Max Nettlau summarised, “[n]othing but a superficial interpretation of some of Kropotkin’s observations could lead one to conclude that anarchist communism could spring into life through an act of sweeping improvisation, with the waving of a magic wand.” [A Short History of Anarchism, p. 80]

This was what happened in the Spanish Revolution, for example. Different collectives operated in different ways. Some tried to introduce free communism, some a combination of rationing and communism, others introduced equal pay, others equalised pay as much as possible and so on. Over time, as economic conditions changed and difficulties developed the collectives changed their mode of distribution to take them into account. These collectives

mittee”, and, finally, within the central Geneva section a “Central Bureau”, which was to be both the “executive power ... composed of three, or five, or even seven members” of the secret organisation and the executive directory of the public organisation.’

“That this was far more elitist and less democratic than Lenin’s model is clear.” [“Anarchy in the UK?”; Socialist Review, no. 246]

There are, as is obvious, numerous problems with Stack’s assertions. Firstly, he makes absolutely no attempt to discuss anarchist ideas on the question of revolutionary organisation. Rather, he prefers to present a somewhat distorted account of the ideas of Bakunin on the structural aspects of his organisation, ideas which died with him in 1876! Secondly, as Stack fails to discuss how anarchists (including Bakunin) see their organisations operating, its hard to determine whether they are “ineffective” or “elitist.” This is hardly surprising, as they are neither. Thirdly, even as regards his own example (Bakunin’s Alliance) his claim that it was “ineffec- tual” seems inappropriate in the extreme. Whether it was “elitist” or “downright bizarre” is hard to determine, as Stack quotes an unnamed author and their quotes from its structure. Fourthly, and ironically for Stack, Lenin’s “model” shared many of the same features as those of Bakunin’s!

Significantly, Stack fails to discuss any of the standard anarchist ideas on how revolutionaries should organise. As we discuss in section J.3, there are three main types: the “synthesis” federation, the “class struggle” federation and those inspired by the “Platform.” In the twenty-first century, these are the main types of anarchist organisation. As such, it would be extremely hard to argue that these are “elitist,” “ineffective” or “downright bizarre.” What these organisational ideas have in common is the vision of an anarchist organisation as a federation of autonomous self-managed groups which work with others as equals. How can directly democratic or-
In summary, while anarchists reject standing of socialists in elections ("political action," narrowly defined), we do not reject the need to fight for political reforms or specific political issues. However, we see such action as being based on collective working class direct action organised around combative organs of working class self-management and power rather than the individualistic act of placing a cross on a piece of power once every few years and letting leaders fight your struggles for you.

H.2.14 Are anarchist organisations “ineffective,” “elitist” or “downright bizarre”?  

Marxists often accuse anarchist organisations of being “elitist” or “secret.” Pat Stack (of the British SWP) ponders the history of anarchist organisation (at least the SWP version of that history):

"how otherwise [than Leninist vanguard political parties] do revolutionaries organise? Apart from the serious efforts of anarcho-syndicalists to grapple with this problem, anarchists have failed to pose any serious alternative. In as much as they do, they have produced either the ineffective, the elitist or the downright bizarre. Bakunin’s organisation, the ‘Alliance of Social Democracy’, managed all three: ‘The organisation had two overlapping forms, one secret, involving only the “intimates”, and one public, the Alliance of Social Democracy. Even in its open, public mode, the alliance was to be a highly centralised organisation, with all decisions on the national level approved by the Central Committee. Since it was the real controlling body, the secret organisation was even more tightly centralised ... with first a Central Committee, then a “central Geneva section” acting as the “permanent delegation of the permanent Central Com-

indicate well the practical aspects of anarchist and its desire to accommodate and not ignore reality.

Lastly, and as an aside, it this anarchist awareness of the disruptive effects of a revolution on a country’s economy which, in part, makes anarchists extremely sceptical of pro-Bolshevik rationales that blame the difficult economic conditions facing the Russian Revolution for Bolshevik authoritarianism (see section H.6.1 for a fuller discussion of this). If, as Kropotkin argued, a social revolution inevitably results in massive economic disruption then, clearly, Bolshevism should be avoided if it cannot handle such inevitable events. In such circumstances, centralisation would only aid the disruption, not reduce it. This awareness of the problems facing a social revolution also led anarchists to stress the importance of local action and mass participation. As Kropotkin put it, the “immense constructive work demanded by a social revolution cannot be accomplished by a central government ... It has need of knowledge, of brains and of the voluntary collaboration of a host of local and specialised forces which alone can attack the diversity of economic problems in their local aspects.” [Anarchism, pp. 255–6] Without this local action, co-ordinated joint activity would remain a dead letter.

In summary, anarchists acknowledge that politically there is no transitional period (i.e. the state must be abolished and replaced by a free federation of self-managed working class organisations). Economically anarchists recognise that different areas will develop in different ways and so there will be various economical transitional forms. Rather than seeing “full blown communism” being the instant result of a socialist revolution, anarchist-communists actually argue the opposite — “full blown communism” will develop only after a successful revolution and the inevitable period of social reconstruction which comes after it. A “full blown” communist economy will develop as society becomes ready for it. What we do argue is that any transitional economic form must be based on the principles of the type of society it desires. In other words, any tran-
sitional period must be as communistic as possible if communism is your final aim and, equally, it must be libertarian if your final goal is freedom.

Also see section I.2.2 for further discussion on this issue.

**H.2.6 How do Marxists misrepresent Anarchist ideas on mutual aid?**

Anarchist ideas on mutual aid are often misrepresented by Marxists. Looking at Pat Stack’s “Anarchy in the UK?” article, for example, we find a particularly terrible misrepresentation of Kropotkin’s ideas. Indeed, it is so incorrect that it is either a product of ignorance or a desire to deceive (and as we shall indicate, it is probably the latter). Here is Stack’s account of Kropotkin’s ideas:

“*And the anarchist Peter Kropotkin, far from seeing class conflict as the dynamic for social change as Marx did, saw co-operation being at the root of the social process. He believed the co-operation of what he termed ‘mutual aid’ was the natural order, which was disrupted by centralised states. Indeed in everything from public walkways and libraries through to the Red Cross, Kropotkin felt he was witnessing confirmation that society was moving towards his mutual aid, prevented only from completing the journey by the state. It follows that if class conflict is not the motor of change, the working class is not the agent and collective struggle not the means.*” [*Anarchy in the UK?*, Socialist Review, no. 246]

There are three issues with Stack’s summary. Firstly, Kropotkin did not, in fact, reject class conflict as the “dynamic of social change” nor reject the working class as its “agent.” Secondly, all of Stack’s examples of “Mutual Aid” do not, in fact, appear in

In addition, as we argue in section J.2.5, direct action is either based on (or creates) forms of self-managed working class organisations. The process of collective struggle, in other words, necessitates collective forms of organisation and decision making. These combative organisations, as well as conducting the class struggle under capitalism, can also be the framework of a free society (see section H.1.4). However, standing in elections does *not* produce such alternative social structures and, indeed, hinders them as the focus for social changes becomes a few leaders working in existing (i.e. bourgeois) structures and bodies (see section H.1.5).

As can be seen, anarchists reject “political” struggle (i.e. electioneering) for good (and historically vindicated) reasons. This makes a mockery of Marxists assertions (beginning with Marx) that anarchists like Bakunin “opposed all political action by the working class since this would imply ‘recognition’ of the existing state.” [Derek Howl, *The Legacy of Hal Draper,* pp. 13–49, International Socialism, no. 52, p. 147] This, in fact, is a common Marxist claim, namely that anarchists reject “political struggle” on principle (i.e. for idealistic purposes). In the words of Engels, Bakunin was “opposed to all political action by the working class, since this would in fact involve recognition of the existing state.” [Marx, Engels and Lenin, *Anarchism and Anarcho-Syndicalism,* p. 49] Sadly, like all Marxists, he failed to indicate where, in fact, Bakunin actually said that. As can be seen, this was *not* the case. Bakunin, like all revolutionary anarchists, rejected “political action” (in the sense of electioneering) simply because they feared that such tactics would be counterproductive and undermine the revolutionary nature of the labour movement. As the experience of Marxist Social Democracy showed, he was correct.
system and to abolish individual ownership of ... social capital”) and passing over into the camp of the bourgeoisie, while retaining, so as to hide their turnabout, the label of socialism.” [Words of a Rebel, p. 181 and p. 180] The differences in results between direct action and electioneering were obvious:

“However moderate the war cry — provided it is in the domain of relations between capital and labour — as soon as it proceeds to put it into practice by revolutionary methods, it ends by increasing it and will be led to demand the overthrow of the regime of property. On the other hand a party which confines itself to parliamentary politics ends up abandoning its programme, however advanced it may have been at the beginning.” [Kropotkin, quoted by Cahm, Op. Cit., p. 252]

Ultimately, the bourgeois tactics used ended up with bourgeois results. As Emma Goldman argued, socialism “was led astray by the evil spirit of politics” and “landed in the [political] trap and has now but one desire — to adjust itself to the narrow confines of its cage, to become part of the authority, part of the very power that has slain the beautiful child Socialism and left behind a hideous monster.” [Red Emma Speaks, p. 103] The net effect of “political action” was the corruption of the socialist movement into a reformist party which betrayed the promise of socialism in favour of making existing society better (so it can last longer). This process confirmed Bakunin’s predictions. As Kropotkin put it:

“The middle class will not give up its power without a struggle. It will resist. And in proportion as Socialists will become part of the Government and share power with the middle class, their Socialism will grow paler and paler. This is, indeed, what Socialism is rapidly doing.

Kropotkin’s classic book Mutual Aid. They do appear in other works by Kropotkin but not as examples of “mutual aid.” Thirdly, in Mutual Aid Kropotkin discusses such aspects of working class “collective struggle” as strikes and unions. All in all, it is Stack’s total and utter lack of understanding of Kropotkin’s ideas which immediately stands out from his comments.

As we have discussed how collective, working class direct action, organisation and solidarity in the class struggle were at the core of Kropotkin’s politics in section H.2.2, we will not do so here. Rather, we will discuss how Stack lies about Kropotkin’s ideas on mutual aid. As just noted, the examples Stack lists are not to be found in Kropotkin’s classic work Mutual Aid. Now, if Kropotkin had considered them as examples of “mutual aid” then he would have listed them in that work. This does not mean, however, that Kropotkin did not mention these examples. He does, but in other works (notably his essay Anarchist-Communism: Its Basis and Principles) and he does not use them as examples of mutual aid. Here are Kropotkin’s own words on these examples:

“We maintain, moreover, not only that communism is a desirable state of society, but that the growing tendency of modern society is precisely towards communism — free communism — notwithstanding the seemingly contradictory growth of individualism. In the growth of individualism ... we see merely the endeavours of the individual towards emancipating himself from the steadily growing powers of capital and the State. But side by side with this growth we see also ... the latent struggle of the producers of wealth to maintain the partial communism of old, as well as to reintroduce communist principles in a new shape, as soon as favourable conditions permit it... the communist tendency is continually reasserting itself and trying to make its way into public life. The penny bridge disappears before the
This means that the question of whether to conduct political struggles is not the one which divides anarchists from Marxists. Rather, it is a question of how this struggle is fought. For anarchists, this struggle is best fought using direct action (see section J.2) and fighting working class organisations based in our workplaces and communities. For Marxists, the political struggle is seen as being based on standing candidates in bourgeois elections. This can be seen from the resolution passed by the socialist (“Second”) International in 1893. This resolution was designed to exclude anarchists and stated that only “those Socialist Parties and Organisations which recognise the organisation of workers and of political action” could join the International. By “political action” it meant “that the working-class organisations seek, in as far as possible, to use or conquer political rights and the machinery of legislation for the furthering of the interests of the proletariat and the conquest of political power.” [quoted by Susan Milner, The Dilemmas of Internationalism, p. 49] Significantly, while this International and its member parties (particular the German Social Democrats) were happy to expel anarchists, they never expelled the leading reformists from their ranks.

So, in general, anarchists use the word “political action” to refer exclusively to the taking part of revolutionaries in bourgeois elections (i.e. electioneering or parliamentarianism). It does not mean a rejection of fighting for political reforms or a lack of interest in political issues, quite the reverse in fact. The reason why anarchists reject this tactic is discussed in section J.2.6.

For Kropotkin, the idea that you could somehow “prepare” for a revolution by electioneering was simply a joke. “As if the bourgeoisie,” he argued, “still holding on to its capital, could allow them [the socialists] to experiment with socialism even if they succeeded in gaining control of power! As if the conquest of the municipalities were possible without the conquest of the factories.” He saw that “those who yesterday were considered socialists are today letting go of socialism, by renouncing its mother idea [“the need to replace the wage...
cial question compels attention.” This fact implied two responses: “the workers’ organisation propels itself either into the sterile path of parliamentary politics as in Germany, or into the path of revolution.” [quoted by Caroline Cahn, *Kropotkin and the rise of Revolutionary Anarchism, 1872–1886*, p. 241]

So while Marxists often argue that anarchists are exclusively interested in economic struggle and reject “politics” or “political action,” the truth of the matter is different. We are well aware of the importance of political issues, although anarchists reject using bourgeois methods in favour of direct action. Moreover, we are aware that any social or economic struggle has its political aspects and that such struggles bring the role of the state as defender of capitalism and the need to struggle against it into focus:

“There is no serious strike that occurs today without the appearance of troops, the exchange of blows and some acts of revolt. Here they fight with the troops; there they march on the factories; … in Pittsburgh in the United States, the strikers found themselves masters of a territory as large as France, and the strike became the signal for a general revolt against the State; in Ireland the peasants on strike found themselves in open revolt against the State. Thanks to government intervention the rebel against the factory becomes the rebel against the State.” [Kropotkin, quoted by Caroline Cahn, *Op. Cit.*, p. 256]  

As Malatesta argued, from “the economic struggle one must pass to the political struggle, that is to struggle against government; and instead of opposing the capitalist millions with the workers’ few pennies scraped together with difficulty, one must oppose the rifles and guns which defend property with the more effective means that the people will be able to defeat force by force.” [*Errico Malatesta: His Life and Ideas*, pp. 193–4]  

All this would suggest that Stack has either not read Kropotkin’s works or that he has and consciously decided to misrepresent his ideas. In fact, its a combination of the two. Stack (as proven by his talk at *Marxism 2001*) gathered his examples of “mutual aid” from Paul Avrich’s essay “Kropotkin’s Ethical Anarchism” contained in his *Anarchist Portraits*. As such, he has not read the source material. Moreover, he simply distorted what Avrich wrote. In other words, not only has he not read Kropotkin’s works, he consciously decided to misrepresent the secondary source he used. This indicates the quality of almost all Marxist critiques of anarchism.

For example, Avrich correctly noted that Kropotkin did not “deny that the ‘struggle for existence’ played an important role in the evolution of species. In *Mutual Aid* he declares unequivocally that ‘life is struggle; and in that struggle the fittest survive.’” Kropotkin simply argued that co-operation played a key role in determining who was, in fact, the fittest. Similarly, Avrich listed many of the same examples Stack presents but not in his discussion of Kropotkin’s ideas on mutual aid. Rather, he correctly did so in his discussion of how Kropotkin saw examples of anarchist communism “manifesting itself ‘in the thousands of developments of modern life.’” This did not mean that Kropotkin did not see the need for a social revolution, quite the reverse. As Avrich noted, Kropotkin “did not shrink from the necessity of revolution” as he “did not expect the propertied classes to give up their privileges and possession without a fight.” This “was to be a social revolution, carried out by the masses themselves” achieved by means of “expropriation” of social wealth. [*Anarchist Portraits*, p. 58, p. 62 and p. 66]

So much for Stack’s claims. As can be seen, they are not only a total misrepresentation of Kropotkin’s work, they are also a distortion of his source!

A few more points need to be raised on this subject.

Firstly, Kropotkin never claimed that mutual aid “was the natural order.” Rather, he stressed that Mutual Aid was (to use the subti-
tle of his book on the subject) "a factor of evolution." As he put it, mutual aid "represents one of the factors of evolution", another being "the self-assertion of the individual, not only to attain personal or caste superiority, economical, political, and spiritual, but also in its much more important although less evident function of breaking through the bonds, always prone to become crystallized, which the tribe, the village community, the city, and the State impose upon the individual." Thus Kropotkin recognised that there is class struggle within society as well as "the self-assertion of the individual taken as a progressive element" (i.e., struggle against forms of social association which now hinder individual freedom and development). Kropotkin did not deny the role of struggle, in fact the opposite as he stressed that the book’s examples concentrated on mutual aid simply because mutual struggle (between individuals of the same species) had "already been analysed, described, and glorified from time immemorial" and, as such, he felt no need to illustrate it. He did note that it “was necessary to show, first of all, the immense part which this factor plays in the evolution of both the animal world and human societies. Only after this has been fully recognized will it be possible to proceed to a comparison between the two factors.” [Mutual Aid, p. 231 and pp. 231–2] So at no stage did Kropotkin deny either factor (unlike the bourgeois apologists he was refuting).

Secondly, Stack’s argument that Kropotkin argued that co-operation was the natural order is in contradiction with his other claims that anarchism “despises the collectivity” and “dismisses the importance of the collective nature of change” (see section H.2.2). How can you have co-operation without forming a collective? And, equally, surely support for co-operation clearly implies the recognition of the "collective nature of change"? Moreover, had Stack bothered to read Kropotkin’s classic he would have been aware that both unions and strikes are listed as expressions of “mutual aid” (a fact, of course, which would undermine Stack’s silly assertion that anarchists reject collective working class the elements of the Commune praised by Marx can be found in the works of Proudhon and Bakunin which pre-date the uprising. Similarly, the idea that workers’ fighting organisations (“soviets”) would be the means to abolish the state and the framework of a socialist society can be found in Bakunin’s works, decades before Lenin paid lip-service to this idea in 1917. For a theory allegedly resting on “non-proletarian” elements anarchism has successfully predicted many of the ideas Marxists claim to have learnt from proletarian class struggle!

So, in summary, the claims that anarchism is “alien” to working class life, that it is “non-proletarian” or “survives in the absence of a strong workers’ movement” are simply false. Looking objectively at the facts of the matter quickly shows that this is the case.

H.2.13 Do anarchists reject “political” struggles and action?

A common Marxist claim is that anarchists and syndicalists ignore or dismiss the importance of “political” struggles or action. This is not true. Rather, as we discuss in section J.2.10, we think that “political” struggles should be conducted by the same means as social and economic struggles, namely by direct action, solidarity and working class self-organisation.

As this is a common assertion, it is useful to provide a quick summary of why anarchists do not, in fact, reject “political” struggles and action as such. Rather, to quote Bakunin, anarchism “does not reject politics generally. It will certainly be forced to involve itself insofar as it will be forced to struggle against the bourgeois class. It only rejects bourgeois politics” as it “establishes the predatory domination of the bourgeoisie.” [The Political Philosophy of Bakunin, p. 313] For Kropotkin, it was a truism that it was “absolutely impossible ... to confine the ideas of the working mass within the narrow circle of reductions in working hours and wage increases ...
Of course, this perspective of basing yourself on the ideas and tactics generated by the class struggle was rejected in favour of a return to the principles of Marx and Engels and their vision of what constituted a genuine “proletarian” movement. If these tactics were the correct ones, then why did they not lead to a less dismal set of results? After all, the degeneration of social democracy into reformism would suggest their failure and sticking “revolutionary” before their tactics (as in “revolutionary parliamentarianism”) changes little. Marxists, like anarchists, are meant to be materialists, not idealists. What was the actual outcome of the Leninist strategies? Did they result in successful proletarian revolutions. No, they did not. The revolutionary wave peaked and fell and the Leninist parties themselves very easily and quickly became Stalinised. Significantly, those areas with a large anarchist, syndicalist or quasi-syndicalist (e.g. the council communists) workers movements (Italy, Spain and certain parts of Germany) came closest to revolution and by the mid-1930s, only Spain with its strong anarchist movement had a revolutionary labour movement. Therefore, rather than representing “non-proletarian” or “sectarian” politics forced upon the working class, anarchism reflected the politics required to build a revolutionary workers’ movement rather than a reformist mass party.

As such, perhaps we can finally lay to rest the idea that Marx predicted the whole future of the labour movement and the path it must take like some kind of socialist Nostradamus. Equally, we can dismiss Marxist claims of the “non-proletarian” nature of anarchism as uninformed and little more than an attempt to squeeze history into an ideological prison. As noted above, in order to present such an analysis, the actual class compositions of significant events and social movements have to be manipulated. This is the case of the Paris Commune, for example, which was predominantly a product of artisans (i.e. the “petit bourgeoisie”), not the industrial working class and yet claimed by Marxists as an example of the “dictatorship of the proletariat.” Ironically, many of struggle and organisation). Thus we find Kropotkin stating that “Unionism” expressed the “worker’s need of mutual support” as well as discussing how the state “legislated against the workers’ unions” and that these were “the conditions under which the mutual-aid tendency had to make its way.” “To practise mutual support under such circumstances was anything but an easy task.” This repression failed, as “the workers’ unions were continually reconstituted” and spread, forming “vigorous federal organisations … to support the branches during strikes and prosecutions.” In spite of the difficulties in organising unions and fighting strikes, he noted that “every year there are thousands of strikes … the most severe and protracted contests being, as a rule, the so-called ‘sympathy strikes,’ which are entered upon to support locked-out comrades or to maintain the rights of the unions.” Anyone (like Kropotkin) who had “lived among strikers speak with admiration of the mutual aid and support which are constantly practised by them.” [Op. Cit. pp. 210–3]

Kropotkin, as noted, recognised the importance of struggle or competition as a means of survival but also argued that co-operation within a species was the best means for it to survive in a hostile environment. This applied to life under capitalism. In the hostile environment of class society, then the only way in which working class people could survive would be to practice mutual aid (in other words, solidarity). Little wonder, then, that Kropotkin listed strikes and unions as expressions of mutual aid in capitalist society. Moreover, if we take Stack’s arguments at face value, then he clearly is arguing that solidarity is not an important factor in the class struggle and that mutual aid and co-operation cannot change the world! Hardly what you would expect a socialist to argue. In other words, his inaccurate diatribe against Kropotkin backfires on his own ideas.

Thirdly, Mutual Aid is primarily a work of popular science and not a work on revolutionary anarchist theory like, say, The Conquest of Bread or Words of a Rebel. As such, it does not present a full example of Kropotkin’s revolutionary ideas and how mutual
aid fits into them. However, it does present some insights on the question of social progress which indicate that he did not think that “co-operation” was “at the root of the social process,” as Stack claims. For example, Kropotkin noted that “[w]hen Mutual Aid institutions ... began ... to lose their primitive character, to be invaded by parasitic growths, and thus to become hindrances to process, the revolt of individuals against these institutions took always two different aspects. Part of those who rose up strove to purify the old institutions, or to work out a higher form of commonwealth.” But at the same time, others “endeavoured to break down the protective institutions of mutual support, with no other intention but to increase their own wealth and their own powers.” In this conflict “lies the real tragedy of history.” He also noted that the mutual aid tendency “continued to live in the villages and among the poorer classes in the towns.” Indeed, “in so far as” as new “economical and social institutions” were “a creation of the masses” they “have all originated from the same source” of mutual aid. [Op. Cit., pp. 18–9 and p. 180] Clearly, Kropotkin saw history marked by both co-operation and conflict as you would expect in a society divided by class and hierarchy.

Significantly, Kropotkin considered Mutual Aid as an attempt to write history from below, from the perspective of the oppressed. As he put it, history, “such as it has hitherto been written, is almost entirely a description of the ways and means by which theocracy, military power, autocracy, and, later on, the richer classes’ rule have been promoted, established, and maintained.” The “mutual aid factor has been hitherto totally lost sight of; it was simply denied, or even scoffed at.” [Op. Cit., p. 231] He was well aware that mutual aid (or solidarity) could not be applied between classes in a class society. Indeed, as noted, his chapters on mutual aid under capitalism contain the strike and union. As he put it in an earlier work:

“What solidarity can exist between the capitalist and the worker he exploits? Between the head of an army and

of Bakunin and the anarchists within the First International were proved correct).

This tendency to squeeze the revolutionary workers’ movement into the forms decreed by two people in the mid-nineteenth century has proved to be disastrous for it. Even after the total failure of social democracy, the idea of “revolutionary” parliamentarianism was fostered onto the Third International by the Bolsheviks in spite of the fact that more and more revolutionary workers in advanced capitalist nations were rejecting it in favour of direct action and autonomous working class self-organisation. Anarchists and libertarian Marxists based themselves on this actual movement of working people, influenced by the failure of “political action,” while the Bolsheviks based themselves on the works of Marx and Engels and their own experiences in a backward, semi-feudal society whose workers had already created factory committees and soviets by direct action. It was for this reason that the anarcho-syndicalist Augustin Souchy said he referred “to the tendencies that exist in the modern workers’ movement” when he argued at the Second Congress of the Communist International:

“It must be granted that among revolutionary workers the tendency toward parliamentarism is disappearing more and more. On the contrary, a strong anti-parliamentary tendency is becoming apparent in the ranks of the most advanced part of the proletariat. Look at the Shop Stewards’ movement [in Britain] or Spanish syndicalism ... The IWW is absolutely antiparliamentary ... I want to point out that the idea of antiparliamentarism is asserting itself more strongly in Germany ... as a result of the revolution itself ... We must view the question in this light.” [Proceedings and Documents of the Second Congress 1920, vol. 1, pp. 176–7]
1895 comment that "[t]here had long been universal suffrage in France, but it had fallen into disrepute through the misuse to which the Bonapartist government had put it ... It also existed in Spain since the republic, but in Spain boycott of elections was ever the rule of all serious opposition parties ... The revolutionary workers of the Latin countries had been wont to regard the suffrage as a snare, as an instrument of government trickery." [Marx-Engels Reader, p. 565] Needless to say, he had failed to mention those little facts when he was attacking anarchists for expressing the opinions of the "revolutionary workers of the Latin countries" and "all serious opposition parties" in the 1870s! Similarly, the Haymarket Martyrs had moved from a Marxist position on elections to an anarchist one after their own experiences using the ballot box, as did the many British socialists who became syndicalists in the early years of the 20th century. It seems strange to conclude that these positions are not expressions of working class struggle while that of Marx and Engels are, particularly given the terrible results of that strategy!

Thus the Marxist claim that true working class movements are based on mass political parties based on hierarchical, centralised, leadership and those who reject this model and political action (electioneering) are sects and sectarians is simply their option and little more. Once we look at the workers’ movement without the blinkers created by Marxism, we see that Anarchism was a movement of working class people using what they considered valid tactics to meet their own social, economic and political goals - tactics and goals which evolved to meet changing circumstances. Seeing the rise of anarchism and syndicalism as the political expression of the class struggle, guided by the needs of the practical struggle they faced naturally follows when we recognise the Marxist model for what it is - just one possible interpretation of the future of the workers’ movement rather than the future of that movement (and as the history of Social Democracy indicates, the predictions the soldier? Between the governing and the governed?"
[Words of a Rebel, p. 30]

In summary, Stack’s assertions about Kropotkin’s theory of “Mutual Aid” are simply false. He simply distorts the source material and shows a total ignorance of Kropotkin’s work (which he obviously has not bothered to read before criticising it). A truthful account of “Mutual Aid” would involve recognising that Kropotkin showed it being expressed in both strikes and labour unions and that he saw solidarity between working people as the means of not only surviving within the hostile environment of capitalism but also as the basis of a mass revolution which would end it.

H.2.7 Who do anarchists see as their “agents of social change”?

It is often charged, usually without any evidence, that anarchists do not see the working class as the “agent” of the social revolution. Pat Stack, for example, states “the failure of anarchism [is] to understand the centrality of the working class itself.” He argues that for Marx, “the working class would change the world and in the process change itself. It would become the agent for social advance and human liberty.” For Bakunin, however, “skilled artisans and organised factory workers, far from being the source of the destruction of capitalism, were ‘tainted by pretensions and aspirations’. Instead Bakunin looked to those cast aside by capitalism, those most damaged, brutalised and marginalised. The lumpen proletariat, the outlaws, the ‘uncivilised, disinherit, illiterate’, as he put it, would be his agents for change.” [“Anarchy in the UK?”, Socialist Review, no. 246]

He fails to provide any references for his accusations. This is unsurprising, as to do so would mean that the reader could check for themselves the validity of Stack’s claims.
Take, for example, the quote “uncivilised, disinherited, illiterate” Stack uses as evidence. This expression is from an essay written by Bakunin in 1872 and which expressed what he considered the differences between his ideas and those of Marx. The quote can be found on page 294 of Bakunin on Anarchism. On the previous page, we discover Bakunin arguing that “for the International to be a real power, it must be able to organise within its ranks the immense majority of the proletariat of Europe, of America, of all lands.” [p. 293] Clearly Stack is quoting out of context, distorting Bakunin’s position to present a radically false image of anarchism. Moreover, as we will indicate, Stack’s also quotes them outside the historical context as well.

Let us begin with Bakunin’s views on “skilled artisans and organised factory workers.” In Statism and Anarchy, for example, we discover Bakunin arguing that the “proletariat … must enter the International [Workers’ Association] en masse, form factory, artisan, and agrarian sections, and unite them into local federations” for “the sake of its own liberation.” [p. 51] This perspective is the predominant one in Bakunin’s ideas with the Russian continually arguing that anarchists saw “the new social order” being “attained … through the social (and therefore anti-political) organisation and power of the working masses of the cities and villages.” He argued that “only the trade union sections can give their members … practical education and consequently only they can draw into the organisation of the International the masses of the proletariat, those masses without whose practical co-operation … the Social Revolution will never be able to triumph.” The International, in Bakunin’s words, “organises the working masses … from the bottom up” and that this was “the proper aim of the organisation of trade union sections.” He stressed that revolutionaries must “[o]rganise the city proletariat in the name of revolutionary Socialism … [and] unite it into one preparatory organisation together with the peasantry.” [The Political Philosophy of Bakunin, p. 300, p. 310, p. 319 and p. 378]

Sectarian politics onto the workers movement, they themselves fostered their own perspective onto it. Originally, because the various sections of the International worked under different circumstances and had attained different degrees of development, the theoretical ideals which reflected the real movement also diverged. The International, therefore, was open to all socialist and working class tendencies and its general policies would be, by necessity, based on conference decisions that reflected this divergence. These decisions would be determined by free discussion within and between sections of all economic, social and political ideas. Marx, however, replaced this policy with a common program of “political action” (i.e. electioneering) by mass political parties via the fixed Hague conference of 1872. Rather than having this position agreed by the normal exchange of ideas and theoretical discussion in the sections guided by the needs of the practical struggle, Marx imposed what he considered as the future of the workers movement onto the International — and denounced those who disagreed with him as sectarian. The notion that what Marx considered as necessary might be another sectarian position imposed on the workers’ movement did not enter his head nor those of his followers:

“Marx had indeed insisted, in the earlier years of the First International, on the need for building on actual movements rather than constructing a dogma which movements were then required to fit. But when the actual movements took forms which he disliked, as they largely did in Spain and Italy, in Germany under Lassalle’s influence, and in Great Britain as soon as the Trade Unions’ most immediate demands had been met, he was apt to forget his own precepts and to become the grand inquisitor into heretical misdeeds.” [G.D.H. Cole, A History of Socialist Thought, vol. 2, p. 256]

That support for “political action” was just as “sectarian” as support for non-participation in elections can be seen from Engels
not Marxist in any meaningful sense of the word. Most of the socialist ones used to be Marxist, although they relatively quickly stopped being revolutionary in any meaningful sense of the word a very long time ago (some, like the German Social Democrats, organised counter-revolutionary forces to crush working class revolt after the First World War). As for the Stalinist parties, it would be better to consider it a sign of shame that they get any support in the working class at all. In terms of revolutionary Marxists, there are various Trotskyist sects arguing amongst themselves on who is the real vanguard of the proletariat, but no Marxist labour movement.

Which, of course, brings us to the next point, namely the ideological problems for Leninists themselves by such an assertion. After all, Lenin himself argued that “the life of modern working people” could only produce “trade-union consciousness.” According to him, socialist ideas were developed independently of working people by the socialist (middle-class) “intelligentsia.” As we discuss in section H.5.1, for Lenin, socialism was an ideology which was alien to the life of modern working class people.

Lastly, there is the question of whether Marx and Engels can seriously be thought of as being able to decree once and for all what is and is not “proletarian” politics. Given that neither of these men were working class (one was a capitalist!) it makes the claim that they would know “proletarian” politics suspect. Moreover, they formulated their ideas of what constitute “proletarian” politics before a modern working class actually developed in any country bar Britain. This means, that from the experience of one section of the proletariat in one country in the 1840s, Marx and Engels have decreed for all time what is and is not a “proletarian” set of politics! On the face of it, it is hardly a convincing argument, particularly as we have over 150 years of experience of these tactics with which to evaluate them!

Based on this perspective, Marx and Engels opposed all other socialist groups as “sects” if they did not subscribe to their ideas. Ironically, while arguing that all other socialists were fostering their

This support for organised workers and artisans can also be seen from the rest of the essay Stack distorts, in which Bakunin discusses the “flower of the proletariat” as well as the policy that the International Workingmen’s Association should follow (i.e. the organised revolutionary workers). He argued that its “sections and federations [must be] free to develop its own policies ... [to attain real unity, basically economic, which will necessarily lead to real political unity ... The foundation for the unity of the International ... has already been laid by the common sufferings, interests, needs, and real aspirations of the workers of the whole world.” He stressed that “the International has been ... the work of the proletariat itself ... It was their keen and profound instinct as workers ... which impelled them to find the principle and true purpose of the International. They took the common needs already in existence as the foundation and saw the international organisation of economic conflict against capitalism as the true objective of this association. In giving it exclusively this base and aim, the workers at once established the entire power of the International. They opened wide the gates to all the millions of the oppressed and exploited.” The International, as well as “organising local, national and international strikes” and “establishing national and international trade unions,” would discuss “political and philosophical questions.” The workers “join the International for one very practical purpose: solidarity in the struggle for full economic rights against the oppressive exploitation by the bourgeoisie.” [Bakunin on Anarchism, pp. 297–8, pp. 298–9 and pp. 301–2]

All this, needless to say, makes a total mockery of Stack’s claim that Bakunin did not see “skilled artisans and organised factory workers” as “the source of the destruction of capitalism” and “agents for change.” Indeed, it is hard to find a greater distortion of Bakunin’s ideas. Rather than dismiss “skilled artisans” and “organised factory workers” Bakunin desired to organise them along with agricultural workers into unions and get these unions to affiliate to the International Workers’ Association. He argued again and again that the working class, organised in union,
were the means of making a revolution (i.e. “the source of the destruction of capitalism,” to use Stack’s words).

Only in this context can we understand Bakunin’s comments which Stack (selectively) quotes. Any apparent contradiction generated by Stack’s quoting out of context is quickly solved by looking at Bakunin’s work. This reference to the “uncivilised, disinherited, illiterate” comes from a polemic against Marx. From the context, it can quickly be seen that by these terms Bakunin meant the bulk of the working class. In his words:

“To me the flower of the proletariat is not, as it is to the Marxists, the upper layer, the aristocracy of labour, those who are the most cultured, who earn more and live more comfortably that all the other workers. Precisely this semi-bourgeois layer of workers would, if the Marxists had their way, constitute their fourth governing class. This could indeed happen if the great mass of the proletariat does not guard against it. By virtue of its relative well-being and semi-bourgeois position, this upper layer of workers is unfortunately only too deeply saturated with all the political and social prejudices and all the narrow aspirations and pretensions of the bourgeoisie. Of all the proletariat, this upper layer is the least socialist, the most individualist.

“By the flower of the proletariat, I mean above all that great mass, those millions of the uncultivated, the disinherited, the miserable, the illiterates ... I mean precisely that eternal ‘meat’ (on which governments thrive), that great rabble of the people (underdogs, ‘dregs of society’) ordinarily designated by Marx and Engels by the phrase ... Lumpenproletariat” [Bakunin on Anarchism, p. 294]

not been anarchist, it is true, but neither was it (nor did it become) Marxist. Rather, it has been a mishmash of conflicting ideas, predominately reformist state socialist ones which owe little, if anything, to Marx. Indeed, the closest Britain came to developing a wide scale revolutionary working class movement was during the “syndicalist revolt” of the 1910s. Ironically, some Marxists joined this movement simply because the existing Marxist parties were so reformist or irrelevant to the “life of modern working people.”

Looking at other countries, we find the same process. The rise of social democracy (Marxism) in the international labour movement simply signified the rise of reformism. Instead of producing a revolutionary labour movement, Marxism helped produce the opposite (although, initially, hiding reformist activity behind revolutionary rhetoric). So when Howl asserts that anarchism “survives in the absence of a strong workers’ movement,” we have to wonder what planet he is on.

Thus, to state matters more correctly, anarchism flourishes during those periods when the labour movement and its members are radical, taking direct action and creating new forms of organisation which are still based on workers’ self-management. This is to be expected as anarchism is both based upon and is the result of workers’ self-liberation through struggle. In less militant times, the effects of bourgeois society and the role of unions within the capitalist economy can de-radicalise the labour movement and lead to the rise of bureaucracy within it. It is then, during periods when the class struggle is low, that reformist ideas spread. Sadly, Marxism aided that spread by its tactics — the role of electioneering focused struggle away from direct action and into the ballot-box and so onto leaders rather than working class self-activity.

Moreover, if we look at the current state of the labour movement, then we would have to conclude that Marxism is “an ideology alien to the life of modern working people.” Where are the large Marxist working class unions and parties? There are a few large reformist socialist and Stalinist parties in continental Europe, but these are
Moreover, the logic of dismissing anarchism as “non-proletarian” because it organised “newly proletarianised peasants” is simply laughable. After all, capitalism needed landless labours in order to start. This meant that the first proletarians lived in rural areas and were made up of ex-peasants. When these ex-peasants arrived in the towns and cities, they were still “newly proletarianised peasants.” To ignore these groups of workers would mean potentially harming the labour movement. And, of course, a large section of Bolshevik support in 1917 was to be found in “newly proletarianised peasants” whether in the army or working in the factories. Ironically enough, the Mensheviks argued that the Bolsheviks gained their influence from worker-peasant industrial “raw recruits” and not from the genuine working class. [Orlando Figes, A People’s Tragedy, p. 830] As such, to dismiss anarchism because it gained converts from similar social strata as the Bolsheviks seems, on the face of it, a joke.

As can be seen Howl’s attempts to subject anarchism to a “class analysis” simply fails. He selects the evidence which fits his theory and ignores that which does not. However, looking at the very examples he bases his case on shows how nonsensical it is. Simply put, anarchist ideas appealed to many types of workers, including typically “proletarian” ones who worked in large-scale industries. What they seem to have in common is a desire for radical social change, organised by themselves in their own combative class organs (such as unions). Moreover, like the early British workers movement, they considered these unions, as well as being organs of class struggle, could also be the framework of a free socialist society. Such a perspective is hardly backward (indeed, since 1917 most Marxists pay lip-service to this vision!).

Which brings us to the next major problem with Howl’s argument, namely the fate of Marxism and the “strong” labour movement it allegedly is suited for. Looking at the only nation which did have a “modern” working class during the most of Marx’s life, Britain, the “strong” labour movement it produced was (and has)

Thus Bakunin contrasted a “semi-bourgeois” layer to the “great mass of the proletariat.” In a later work, Bakunin makes the same point, namely that there was “a special category of relatively affluent workers, earning higher wages, boasting of their literary capacities and ... impregnated by a variety of bourgeois prejudices ... in Italy. ... they are insignificant in number and influence ... In Italy it is the extremely poor proletariat that predominates. Marx speaks disdainfully, but quite unjustly, of this Lumpenproletariat. For in them, and only in them, and not in the bourgeois strata of workers, are the crystallised the entire intelligence and power of the coming Social Revolution.” [Op. Cit., p. 334] Again it is clear that Bakunin is referring to a small minority within the working class and not dismissing the working class as a whole. He explicitly pointed to the “bourgeois-influenced minority of the urban proletariat” and contrasted this minority to “the mass of the proletariat, both rural and urban.” [Michael Bakunin: Selected Writings, p. 254]

Clearly, Stack is distorting Bakunin’s ideas on this subject when he claims that Bakunin thought all workers were “tainted by pretensions and aspirations.” In fact, like Marx, Engels and Lenin, Bakunin differentiated between different types of workers. This did not mean he rejected organised workers or skilled artisans nor the organisation of working people into revolutionary unions, quite the reverse. As can be seen, Bakunin argued there was a group of workers who accepted bourgeois society and did relatively well under it. It was these workers who were “frequently no less egoistic than bourgeois exploiters, no less pernicious to the International than bourgeois socialists, and no less vain and ridiculous than bourgeois nobles.” [The Basic Bakunin, p. 108] It is comments like this that Marxists quote out of context and use for their claims that Bakunin did not see the working class as the agent of social change. However, rather than refer to the whole working class, Stack quotes Bakunin’s thoughts in relation to a minority strata within it. Clearly, from the context, Bakunin did not mean all working class people.
Also, let us not forget the historical context. After all, when Bakunin was writing the vast majority of the working population across the world was, in fact, illiterate and disinherit. To get some sort of idea of the numbers of working people who would have been classed as “the uncultivated, the disinherit, the miserable, the illiterates” we have to provide some numbers. In Spain, for example, “in 1870, something like 60 per cent of the population was illiterate.” [Gerald Brenan, The Spanish Labyrinth, p. 50] In Russia, in 1897 (i.e. 21 years after Bakunin’s death), “only 21% of the total population of European Russia was literate. This was mainly because of the appallingly low rate of literacy in the countryside — 17% compared to 45% in the towns.” [S.A. Smith, Red Petrograd, p. 34] Stack, in effect, is excluding the majority of the working masses from the working class movement and the revolution in the 1860-70s by his comments. Little wonder Bakunin said what he said. By ignoring the historical context (as he ignores the context of Bakunin’s comments), Stack misleads the reader and presents a distinctly distorted picture of Bakunin’s thought.

In other words, Bakunin’s comments on the “flower of the proletariat” apply to the majority of the working class during his lifetime and for a number of decades afterwards and not to an underclass, not to what Marx termed the “lumpenproletariat”. As proven above, Bakunin’s “lumpenproletariat” is not what Marxists mean by the term. If Bakunin had meant the same as Marx by the “lumpenproletariat” then this would not make sense as the “lumpenproletariat” for Marx were not wage workers. This can best be seen when Bakunin argues that the International must organise this “flower of the proletariat” and conduct economic collective struggle against the capitalist class. In his other works (and in the specific essay these quotes are derived from) Bakunin stressed the need to organise all workers and peasants into unions to fight the state and bosses and his arguments that workers associations should not only be the means to fight capitalism but also the frame-

from France and Italy, represented the Left.” Unsurprisingly, these different groups of workers had different politics. The craftsmen “concentrated on … reform” while the others “nourished hopes of a complete social upheaval.” Bakunin, as would be expected, “fanned the spirit of revolt” among these, the proletarian workers and soon had a “commanding position in the Geneva International.” [Michael Bakunin, p. 361] It should be noted that Marx and the General Council of the International consistently supported the reformist wing of the International in Geneva which organised political alliances with the middle-class liberals during elections. Given these facts, it is little wonder that Howl concentrates on the support Bakunin received from domestic workers producing watches. To mention the support for Bakunin by organised, obviously proletarian, workers would undermine his case and so it is ignored.

Lastly, there is Spain. It seems funny that a Marxist would use Spain as an example against the class roots of anarchism. After all, that is one of the countries where anarchism dominated the working class movement. As one historian points out, “it was not until the 1860s — when anarchism was introduced — that a substantive working class movement began to emerge” and “throughout the history of Spanish anarchism, its survival depended in large measure on the anarchists’ ability to maintain direct links with the workers.” [George R. Esenwein, Anarchist Ideology and the Working-Class Movement in Spain, 1868–1898, p. 6 and p. 207] As well as organising “newly proletarianised peasants,” the “Bakuninists” also organised industrial workers — indeed, far more successfully than the Socialists. Ironically, the UGT only started to approach the size of the CNT once it had started to organise “newly proletarianised peasants” in the 1930s (i.e., anarchist unions organised more of the industrial working class than the Socialist ones). From such a fact, we wonder if Marxists would argue that socialism rested on “non-proletarian” elements?
ism in the 1890s, “the anarchist movement was proportionately more working-class than the PSI” and the “number of bourgeois intellectuals and professionals that supported the PSI [Italian Socialist Party] was vastly greater” than those supporting anarchism. Indeed, “the percentage of party membership derived from the bourgeoisie was significantly higher in the PSI than among the anarchists.” [Italian Anarchism, 1864–1892, p. 82 and p. 282] Ironically, given Engels diatribes against the Italian anarchists stopping workers following “proletarian” (i.e. Marxist) politics and standing for elections, “as the PSI grew more working-class, just before the outbreak of war [in 1914], its Directorate [elected by the party congress] grew more anti-parliamentary.” [Gwyn A. Williams, Proletarian Order, p. 29]

As we noted in section A.5.5, the role of the anarchists and syndicalists compared to the Marxists during the 1920 near revolution suggested that the real “proletarian” revolutionaries were, in fact, the former and not the latter. All in all, the history of the Italian labour movement clearly show that, for most Marxists, whether a group represents the “proletariat” is simply dependent on their ideological commitment, not their actual class.

As regards the Jura Federation, we discover that its support was wider than suggested. As Marxist Paul Thomas noted, “Bakunin’s initial support in Switzerland — like Marx’s in England — came from resident aliens, political refugees ... but he also gathered support among Gastarbeiter for whom Geneva was already a centre, where builders, carpenters and workers in heavy industry tended to be French or Italian ... Bakunin ... also marshalled considerable support among French speaking domestic workers and watchmakers in the Jura.” [Karl Marx and the Anarchists, p. 390] It would be interesting to hear a Marxist claim that “heavy industry” represented the past or “non-proletarian” elements! Similarly, E. H. Carr in his (hostile) biography of Bakunin, noted that the “sections of the International at Geneva fell into two groups.” Skilled craftsmen formed the “Right wing” while “the builders, carpenters, and workers in the heavier trades, the majority of whom were immigrants work of an anarchist society. Clearly, Sam Dolgoff’s summary of Bakunin’s ideas on this subject is the correct one:

“Bakunin’s Lumpenproletariat ... was broader than Marx’s, since it included all the submerged classes: unskilled, unemployed, and poor workers, poor peasant proprietors, landless agricultural labourers, oppressed racial minorities, alienated and idealistic youth, declassed intellectuals, and ‘bandits’ (by whom Bakunin meant insurrectionary ‘Robin Hoods’ like Pugachev, Stenka Razin, and the Italian Carbonari).” [“Introduction”, Bakunin on Anarchism, pp. 13–4]

Moreover, the issue is clouded by translation issues as well. As Mark Leier notes Bakunin “rarely used the word ‘lumpenproletariat.’ While he does use the French word canaille, this is better translated as ‘mob’ or ‘rabble’ ... When Bakunin does talk about the canaille or rabble, he usually refers not to the lumpenproletariat as such but to the poorer sections of the working class ... While we might translate ‘destitute proletariat’ as ‘lumpenproletariat,’ Bakunin himself ... is referring to a portion of the proletariat and the peasantry, not the lumpenproletariat.” [Bakunin: The Creative Passion, p. 221]

Nor is Stack the only Marxist to make such arguments as regards Bakunin. Paul Thomas quotes Bakunin arguing that the working class “remains socialist without knowing it” because of “the very force of its position” and “all the conditions of its material existence” and then, incredulously, adds that “[i]t is for this reason that Bakunin turned away from the proletariat and its scientific socialism” towards the peasantry. [Karl Marx and the Anarchists, p. 291] A more distorted account of Bakunin’s ideas would be hard to find (and there is a lot of competition for that particular honour). The quotes Thomas provides are from Bakunin’s “The Policy of the International” in which he discussed his ideas on how the International Working-Men’s Association
should operate (namely “the collective struggle of the workers against the bosses”). At the time (and for some time after) Bakunin called himself a revolutionary socialist and argued that by class struggle, the worker would soon “recognise himself [or herself] to be a revolutionary socialist, and he [or she] will act like one.” [The Basic Bakunin, p. 103] As such, the argument that the social position workers are placed makes them “socialist without knowing” does not, in fact, imply that Bakunin thought they would become Marxists (“scientific socialism”) and, therefore, he turned against them. Rather, it meant that, for Bakunin, anarchist ideas were a product of working class life and it was a case of turning instinctive feelings into conscious thought by collective struggle. As noted above, Bakunin did not “turn away” from these ideas nor the proletariat. Indeed, Bakunin held to the importance of organising the proletariat (along with artisans and peasants) to the end of his life. Quite simply, Thomas is distorting Bakunin’s ideas.

Lastly, we have to point out a certain irony (and hypocrisy) in Marxist attacks on Bakunin on this subject. This is because Marx, Engels, and Lenin held similar views on the corrupted “upper strata” of the working class as Bakunin did. Indeed, Marxists have a specific term to describe this semi-bourgeois strata of workers, namely the “labour aristocracy.” Marx, for example, talked about the trade unions in Britain being “an aristocratic minority” and the “great mass of workers ... has long been outside” them (indeed, “the most wretched mass has never belonged.”) [Collected Works, vol. 22, p. 614] Engels also talked about “a small, privileged, ‘protected’ minority” within the working class, which he also called “the working-class aristocracy.” [Op. Cit., vol. 27, p. 320 and p. 321] Lenin approvingly quotes Engels arguing that the “English proletariat is actually becoming more and more bourgeois, so that this most bourgeois of all nations is apparently aiming at the possession of... a bourgeois proletariat alongside the bourgeoisie.” [quoted by Lenin, Collected Works, vol. 22, p. 283] Like Lenin, Engels explained this

Taking the countries Howl lists, we can see that any claim that anarchism is “alien” to the working class is simply false. Looking at each one, it is clearly the case that, for Marxists, the politics of the people involved signify their working class credentials, not their actual economic or social class. Thus we have the sociological absurdity that makes anarchist workers “petty bourgeois” while actual members of the bourgeoisie (like Engels) or professional revolutionaries (and the sons of middle class families like Marx, Lenin, and Trotsky) are considered as representatives of “proletarian” politics. Indeed, when these radical members of the middle-class repress working class people (as did Lenin and Trotsky were in power) they remain figures to be followed and their acts justified in terms of the “objective” needs of the working people they are oppressing! Ultimately, for most Marxists, whether someone is “non-proletariat” depends on their ideological viewpoint and not, in fact, their actual class.

Hence we discover Marx and Engels (like their followers) blaming Bakunin’s success in the International, as one historian notes, “on the middle-class leadership of Italy’s socialist movement and the backwardness of the country. But if middle-class leaders were the catalysts of proletarian revolutionary efforts in Italy, this was also true of every other country in Europe, not excluding the General Council in London.” [T.R. Ravindranathan, Bakunin and the Italians, p. 168] And by interpreting the difficulties for Marxism in this way, Marx and Engels (like their followers) need not question their own ideas and assumptions. As Nunzio Pernicone notes, “[f]rom the outset, Engels had consistently underestimated Bakunin as a political adversary and refused to believe that Italian workers might embrace anarchist doctrines.” However, “even a casual perusal of the internationalist and dissident democratic press would have revealed to Engels that Bakuninism was rapidly developing a following among Italian artisans and workers. But this reality flew in the face of his unshakeable belief that Italian internationalists were all a ‘gang of classes, the refuse of the bourgeoisie.’” Even after the rise of the Italian Marx-
Ignoring the obvious contradiction of “newly proletarianised peasants” being “non-proletarians,” we have the standard Marxist “class analysis” of anarchism. This is to assert that anarchism is “non-proletarian” while Marxism is “proletarian.” On the face of it, such an assertion seems to fly in the face of historical facts. After all, when Marx and Engels were writing the Communist Manifesto, the proletariat was a tiny minority of the population of a mostly rural, barely industrialised Germany. Perhaps it was Engels’ experiences as a capitalist in England that allowed him an insight into “the life of modern working people?” It should also be noted that neither Howel or Draper is being original, they are simply repeating Marx’s assertion that anarchism “continues to exist only where there is as yet no proper workers’ movement. This is a fact.” [Collected Works, vol. 24, p. 247]

Beyond this there are a few problems with this type of argument. Firstly, there are the factual problems. Simply put, anarchism appealed to “modern” working people and Marxism has appealed to the “non-proletarian” groups and individuals (and vice versa, of course). This can be seen from the examples Howl lists as well as the rise of syndicalist ideas after the reformism of the first Marxist movement (social democracy) became apparent. In fact, the rise of Marxism within the labour movement is associated with its descent into reformism, not revolution. Secondly, there is the slight ideological problem that Lenin himself argued that the working class, by its own efforts, did not produce socialist ideas which were generated far from “the life of modern working people” by the intelligentsia. Lastly, there is the assumption that two long dead Germans, living in an environment where “modern working people” (proletarians) were a small minority of the working population, could really determine for all time what is (and is not) “proletarian” politics.
“Not restricting the revolution to those societies in which an advanced industrialism had produced a massive urban proletariat, Bakunin observed sensibly that the class composition of the revolution was bound to differ in industrially advanced Western Europe and in Eastern European where the economy was still largely agricultural... This is a far cry, then, from the Marxist stereotype of Bakunin-the-anarchist who relied exclusively on the backward peasantry and ignored the proletariat.” [Op. Cit., p. 870]

All in all, once a historic and textual context is placed on Bakunin’s words, it is clear which social class was considered as the social revolution’s “agents of change”: the working class (i.e. wage workers, artisans, peasants and so on). In this, other revolutionary anarchists follow him. Looking at Kropotkin we find a similar perspective to Bakunin’s. In his first political work, Kropotkin explicitly raised the question of “where our activity be directed” and answered it “categorically” — “unquestionably among the peasantry and urban workers.” In fact, he “consider[ed] this answer the fundamental position in our practical program.” This was because “the insurrection must proceed among the peasantry and urban workers” if it were to succeed. As such, revolutionaries “must not stand outside the people but among them, must serve not as a champion of some alien opinions worked out in isolation, but only as a more distinct, more complete expression of the demands of the people themselves.” [Selected Writings on Anarchism and Revolution, pp. 85–6]

That was in 1873. Nearly 30 years later, Kropotkin expressed identical opinions stating that he “did not need to overrate the qual-
opment of all.” [The Marx-Engels Reader, p. 491]). As such, authentic socialism is “individualist” in its aspirations and denounces capitalism for being a partial and flawed individualism which benefits the few at the expense of the many (in terms of their development and individuality). This can be seen when Goldman, for example, argued that anarchism “alone stresses the importance of the individual, his [or her] possibilities and needs in a free society.” It “insists that the centre of gravity in society is the individual — that he must think for himself, act freely, and live fully. The aim of Anarchism is that every individual in the world shall be able to do so.” Needless to say, she differentiated her position from bourgeois ideology: “Of course, this has nothing in common with a much boasted ‘rugged individualism.’ Such predatory individualism is really flabby, not rugged … Their ‘rugged individualism’ is simply one of the many pretences the ruling class makes to unbridled business and political extortion.” [Op. Cit., p. 442 and p. 443] This support for individuality did not preclude solidarity, organising unions, practising direct action, supporting syndicalism, desiring communism and so on, but rather required it (as Goldman’s own life showed). It flows automatically from a love of freedom for all. Given this, the typical Leninist attacks against anarchism for being “individualism” simply exposes the state capitalist nature of Bolshevism:

“capitalism promotes egotism, not individuality or ‘indiv-
idualism.’ … the ego it created … [is] shrivelled … The
term ‘bourgeois individualism,’ an epithet widely used
by the left today against libertarian elements, reflects
the extent to which bourgeois ideology permeates the so-
cialist project; indeed, the extent to which the ‘social-
ist’ project (as distinguished from the libertarian com-
munist project) is a mode of state capitalism.” [Murray
Bookchin, Post-Scarcity Anarchism, p. 194fn]

Therefore the Marxist attack on anarchism as “anti-democratic” is not only false, it is ironic and hypocritical. Firstly, anarchists
encompass the cultural and spiritual revolt that is taking place along with the economic struggle.” [Post-Scarcity Anarchism, p. 117, p. 150, p. 151 and p. 152]

So Bookchin’s apparent rejection of class struggle and the “proletariat” is not, on closer reading, any such thing. He urged a wider form of struggle, one which includes issues such as hierarchy, oppression, ecological matters and so on rather than the exclusive concern with economic exploitation and class which many radicals (usually Marxists) focus on. Somewhat ironically, it should be noted that this “rejection” in part flowed from Bookchin’s own past in the Stalinist and Trotskyist movements, both of which tended to idealise the industrial worker and limit “proletarian” to that specific sub-section of the working class. Bookchin himself expressed this blinkered perspective when he “dispose[d] of the notion that anyone is a ‘proletarian’ who has nothing to sell but his labour power” as Marx and Engels considered that class as “reaching its most advanced form in the industrial proletariat, which corresponded to the most advanced form of capital.” [Op. Cit., p. 115fn] Sadly, Bookchin reinforced this debased notion of working class and our struggle in the very process of trying to overcome it. Yet he always argued for a wider concept of social struggle which included, but was not limited to, economic class and exploitation and, as a result, included all sections of the working class and not just workers in large-scale industry. In this he followed a long anarchist tradition.

To conclude, for anarchists, the social revolution will be made by the working class (“Anarchists, like Socialists, usually believe in the doctrine of class war.” [Bertrand Russell, Roads to Freedom, p. 38]). However, as British anarchist Benjamin Franks summarises, “[b]ecause anarchists hold to a broader view of the working class, which includes the lumpenproletariat, they have been accused of promoting this section above others. This standard marxist interpretation of anarchism is inaccurate; anarchists simply include the lumpenproletariat as part of the working class, rather than exclude or exalt it.” [Rebel Alliances, p. 168] Ultimately, for anyone to claim that

“In any case it is not a question of being right or wrong; it is a question of freedom, freedom for all, freedom for each individual so long as he [or she] does not violate the equal freedom of others. No one can judge with certainty who is right and who is wrong, who is closer to the truth and which is the best road for the greatest good for each and everyone. Experience through freedom is the only means to arrive at the truth and the best solutions; and there is no freedom if there is not the freedom to be wrong.

“In our opinion, therefore, it is necessary that majority and minority should succeed in living together peacefully and profitably by mutual agreement and compromise, by the intelligent recognition of the practical necessities of communal life and of the usefulness of concessions which circumstances make necessary.” [Errico Malatesta: His Life and Ideas, p. 72]

Needless to say, our arguments apply with even more force to the decisions of the representatives of the majority, who are in practice a very small minority. Leninists usually try and confuse these two distinct forms of decision making. When Leninists discuss majority decision making they almost always mean the decisions of those elected by the majority — the central committee or the government — rather than the majority of the masses or an organisation. Ultimately, the Leninist support for democracy (as the Russian Revolution showed) is conditional on whether the majority supports them or not. Anarchists are not as hypocritical or as elitist as this, arguing that everyone should have the same rights the Leninists usurp for their leaders.

This counterpoising of socialism to “individualism” is significant. The aim of socialism is, after all, to increase individual liberty (to quote the Communist Manifesto, to create “an association, in which the free development of each is the condition for the free devel-
difficult to remedy the harm done, then it is a duty to rebel and to resist even at the risk of providing a split ... What is essential is that individuals should develop a sense of organisation and solidarity, and the conviction that fraternal co-operation is necessary to fight oppression and to achieve a society in which everyone will be able to enjoy his [or her] own life.” [Errico Malatesta: His Life and Ideas, pp. 132–3]

This means that anarchists are not against majority decision making as such. We simply recognise it has limitations. In practice, the need for majority and minority to come to an agreement is one most anarchists would recognise:

“But such an adaptation [of the minority to the decisions of the majority] on the one hand by one group must be reciprocal, voluntary and must stem from an awareness of need and of goodwill to prevent the running of social affairs from being paralysed by obstinacy. It cannot be imposed as a principle and statutory norm...

“So ... anarchists deny the right of the majority to govern in human society in general ... how is it possible ... to declare that anarchists should submit to the decisions of the majority before they have even heard what those might be?” [Malatesta, The Anarchist Revolution, pp. 100–1]

Therefore, while accepting majority decision making as a key aspect of a revolutionary movement and a free society, anarchists do not make a fetish of it. We recognise that we must use our own judgement in evaluating each decision reached simply because the majority is not always right. We must balance the need for solidarity in the common struggle and needs of common life with critical analysis and judgement. As Malatesta argued:

Bakunin, for any social anarchist, rejects the working class as an agent of social change simply shows their ignorance of the politics they are trying to attack.

H.2.8 What is the relationship of anarchism to syndicalism?

One of the most common Marxist techniques when they discuss anarchism is to contrast the likes of Bakunin and Kropotkin to the revolutionary syndicalists. The argument runs along the lines that “classical” anarchism is individualistic and rejects working class organisation and power while syndicalism is a step forward from it (i.e. a step closer to Marxism). Sadly, such arguments simply show the ignorance of the author rather than any form of factual basis. When the ideas of revolutionary anarchists like Bakunin and Kropotkin are compared to revolutionary syndicalism, the similarities are soon discovered.

This kind of argument can be found in Pat Stack’s essay “Anarchy in the UK?” After totally distorting the ideas of anarchists like Bakunin and Kropotkin, Stack argues that anarcho-syndicalists “tended to look to the spontaneity and anti-statism of anarchism, the economic and materialist analysis of Marxism, and the organisational tools of trade unionism. Practically every serious anarchist organisation came from or leant on this tradition ... The huge advantage they had over other anarchists was their understanding of the power of the working class, the centrality of the point of production (the workplace) and the need for collective action.” [Socialist Review, no. 246]

Given that Stack’s claims that anarchists reject the “need for collective action,” do not understand “the power of the working class” and the “centrality” of the workplace are simply inventions, it would suggest that Stack’s “huge advantage” does not, in fact, exist and is pure nonsense. Bakunin, Kropotkin and all revolutionary
anarchists, as proven in section H.2.2, already understood all
this and based their politics on the need for collective working
class struggle at the point of production. As such, by contrasting
anarcho-syndicalism with anarchism (as expressed by the likes of
Bakunin and Kropotkin) Stack simply shows his utter and total
ignorance of his subject matter.

Moreover, if he bothered to read the works of the likes of
Bakunin and Kropotkin he would discover that many of their
ideas were identical to those of revolutionary syndicalism. For
example, Bakunin argued that the “organisation of the trade sec-
tions, their federation in the International, and their representation
by Chambers of Labour, ... [allow] the workers ... [to] combin[e]
theory and practice ... [and] bear in themselves the living germs
of the social order, which is to replace the bourgeois world. They
are creating not only the ideas but also the facts of the future itself.”
[quoted by Rudolf Rocker, Anarcho-Syndicalism, p. 50] Like
the syndicalists, he argued “the natural organisation of the masses ...
is organisation based on the various ways that their various
types of work define their day-to-day life; it is organisation by trade
association” and once “every occupation ... is represented within
the International [Working-Men’s Association], its organisation, the
organisation of the masses of the people will be complete.” Moreover,
Bakunin stressed that the working class had “but a single path,
that of emancipation through practical action*** which meant “workers’ solidarity in their struggle against the
bosses” by “trades-unions, organisation, and the federation of
resistance funds” [The Basic Bakunin **, p. 139 and p. 103]

Like the syndicalists, Bakunin stressed working class self-
activity and control over the class struggle:

“Toilers count no longer on anyone but yourselves. Do
not demoralise and paralyse your growing strength by
being duped into alliances with bourgeois Radicalism
... Abstain from all participation in bourgeois Radical-
of the revolution ... is directly determined by changing political relations between the minority and the majority, between the vanguard and the class.” [Lenin and Trotsky, Kronstadt, p. 85] Not that this
makes Trotsky an elitist for Selfa, of course. The key difference is
that Goldman did not argue that this minority should seize power
and rule the masses, regardless of the wishes of that majority, as
Trotsky did (see section H.1.2). As Goldman noted, the “Socialist
demagogues know that [her argument is true] as well as I, but they
maintain the myth of the virtues of the majority, because their very
scheme means the perpetuation of power” and “authority, coercion
85]

So, yes, anarchists do support individual freedom to resist even
democratically made decisions simply because democracy has to
be based on individual liberty. Without the right of dissent, democ-
racy becomes a joke and little more than a numerical justification
for tyranny. This does not mean we are “anti-democratic,” indeed
the reverse as we hold true to the fundamental rationale for democ-
ratic decision-making — it allows individuals to combine as equals
and not as subordinates and masters. Moreover, diversity is essen-
tial for any viable eco-system and it is essential in any viable soci-
ety (and, of course, any society worth living in). This means that
a healthy society is one which encourages diversity, individuality,
dissent and, equally, self-managed associations to ensure the free-
ad of all. As Malatesta argued:

“There are matters over which it is worth accepting the
will of the majority because the damage caused by a split
would be greater than that caused by error; there are cir-
cumstances in which discipline becomes a duty because
to fail in it would be to fail in the solidarity between the
oppressed and would mean betrayal in face of the enemy.
But when one is convinced that the organisation is pur-
suing a course which threatens the future and makes it
work in context. For example, in a debate between her and a socialist she used the Lawrence strike "as an example of direct action." [Living My Life, vol. 1., p. 491] The workers in one of the mills started the strike by walking out. The next day five thousand at another mill struck and marched to another mill and soon doubled their number. The strikers soon had to supply food and fuel for 50,000. [Howard Zinn, A People's History of the United States, pp. 327–8] Rather than the strike being the act of the majority, it was the direct action of a minority which started it and it then spread to the majority (a strike, incidentally, Goldman supported and fund raised for). It should also be noted that the Lawrence strike reflected her ideas of how a general strike could be started by "one industry or by a small, conscious minority among the workers" which "is soon taken up by many other industries, spreading like wildfire." [Red Emma Speaks, p. 95]

Do Marxists really argue that this was "elitist"? If so, then every spontaneous revolt is "elitist". Every attempt by oppressed minorities to resist their oppression is "elitist." Indeed, every attempt to change society is "elitist" as if it involves a minority not limiting themselves to simply advancing new ideas but, instead, taking direct action to raise awareness or to resist hierarchy in the here and now. Revolutions occur when the ideas of the majority catch up with the minority who inspire others with their ideas and activity. So in his keenness to label the anarchist movement "elitist", Selfa has also, logically, so-labelled the labour, feminist, peace and civil rights movements (among many others).

Equally embarrassing for Selfa, Trotsky (a person whom he contrasts favourably with Goldman despite the fact he was a practitioner and advocate of party dictatorship) agreed with the anarchists on the importance of minorities. As he put it during the debate on Kronstadt in the late 1930s, a "revolution is 'made' directly by a minority. The success of a revolution is possible, however, only where this minority finds more or less support, or at least friendly neutrality, on the part of the majority. The shift in different stages

ism and organise outside of it the forces of the proletariat. The bases of this organisation are already completely given: they are the workshops and the federation of workshops, the creation of fighting funds, instruments of struggle against the bourgeoisie, and their federation, not only national, but international.

“And when the hour of revolution sounds, you will proclaim the liquidation of the State and of bourgeois society, anarchy, that is to say the true, frank people's revolution ... and the new organisation from below upwards and from the circumference to the centre.” [quoted by K.J. Kenafick, Michael Bakunin and Karl Marx, pp. 120–1]

Like the later syndicalists, Bakunin was in favour of a general strike as a means of bringing about a social revolution. As "strikes spread from one place to another, they come close to turning into a general strike. And with the ideas of emancipation that now hold sway over the proletariat, a general strike can result only in a great cataclysm which forces society to shed its old skin.” He raised the possibility that this could “arrive before the proletariat is sufficiently organised” and dismissed it because the strikes expressed the self-organisation of the workers for the “necessities of the struggle impel the workers to support one another” and the “more active the struggle becomes ... the stronger and more extensive this federation of proletarians must become.” Thus strikes “indicate a certain collective strength already” and “each strike becomes the point of departure for the formation of new groups.” He rejected the idea that a revolution could be “arbitrarily” made by “the most powerful associations.” Rather they were produced by “the force of circumstances.” As with the syndicalists, Bakunin argued that not all workers needed to be in unions before a general strike or revolution could take place. A minority (perhaps “one worker in ten”) needed to be organised and they would influence the rest so ensuring “at critical moments”
the majority would “follow the International’s lead.” [The Basic Bakunin, pp. 149–50, p. 109 and p. 139]

As with the syndicalists, the new society would be organised “by free federation, from below upwards, of workers’ associations, industrial as well as agricultural ... in districts and municipalities at first; federation of these into regions, of the regions into nations, and the nations into a fraternal Internationalism.” Moreover, “capital, factories, all the means of production and raw material” would be owned by “the workers’ organisations” while the land would be given “to those who work it with their own hands.” [quoted by Kenafick, Op. Cit., p. 241 and p. 240]

The Basic Bakunin, pp. 149–50, p. 109 and p. 139

Moreover, “capital, factories, all the means of production and raw material” would be owned “by the workers’ organisations” while the land would be given “to those who work it with their own hands.” [quoted by Kenafick, Op. Cit., p. 241 and p. 240]

The similarities with revolutionary syndicalism could not be clearer. Little wonder that all serious historians see the obvious similarities between anarcho-syndicalism and Bakunin’s anarchism. For example, George R. Esenwein’s (in his study of early Spanish anarchism) comments that syndicalism “had deep roots in the Spanish libertarian tradition. It can be traced to Bakunin’s revolutionary collectivism.” He also notes that the class struggle was “central to Bakunin’s theory.” [Anarchist Ideology and the Working Class Movement in Spain, 1868–1898, p. 209 and p. 20] Caroline Cahm, likewise, points to “the basic syndicalist ideas of Bakunin” and that he “argued that trade union organisation and activity in the International [Working Men’s Association] were important in the building of working-class power in the struggle against capital ... He also declared that trade union based organisation of the International would not only guide the revolution but also provide the basis for the organisation of the society of the future.” Indeed, he “believed that trade unions had an essential part to play in the developing of revolutionary capacities of the workers as well as building up the organisation of the masses for revolution.”

and revolutions start when a minority takes action. Trade unionism, for example, was (and still is) a minority movement in most countries. Support for racial and sexual equality was long despised (or, at best, ignored) by the majority and it took a resolute minority to advance that cause and spread the idea in the majority. The Russian Revolution did not start with the majority. It started when a minority of women workers (ignoring the advice of the local Bolsheviks) took to the streets and from these hundreds grew into a movement of hundreds of thousands.

The facts are clearly on the side of Goldman, not Selfa. Given that Goldman was expounding such an obvious law of social evolution, it seems incredulous that Selfa has a problem with it. This is particularly the case as Marxism (particularly its Leninist version) implicitly recognises this. As Marx argued, the ruling ideas of any epoch are those of the ruling class. Likewise for Goldman: “Human thought has always been falsified by tradition and custom, and perverted false education in the interests of those who held power ... by the State and the ruling class.” Hence the “continuous struggle” against “the State and even against ‘society,’ that is, against the majority subdued and hypnotised by the State and State worship.” If this was not the case, as Goldman noted, no state could save itself or private property from the masses. Hence the need for people to break from their conditioning, to act for themselves. As she argued, such direct action is “the salvation of man” as it “necessitates integrity, self-reliance, and courage.” [Red Emma Speaks, p. 111 and p. 76]

Thus Goldman, like other anarchists, was not dismissing the masses, just stressing the obvious: namely that socialism is a process of self-liberation and the task of the conscious minority is to encourage this process by encouraging the direct action of the masses. Hence Goldman’s support for syndicalism and direct action, a support Selfa (significantly) fails to inform his readers of.

So was Goldman’s rejection of “majorities” the elitism Selfa claims it was? No, far from it. This is clear from looking at that...
little more than tyranny by the majority (or, more likely, a tiny minority who claim to represent the majority).

Moreover, progress is determined by those who dissent and rebel against the status quo and the decisions of the majority. That is why anarchists support the right of dissent in self-managed groups — in fact, dissent, refusal, revolt by individuals and minorities is a key aspect of self-management. Given that Leninists do not support self-management (rather they, at best, support the Lockean notion of electing a government as being “democracy”) it is hardly surprising they, like Locke, view dissent as a danger and something to denounce. Anarchists, on the other hand, recognising that self-management’s (i.e. direct democracy’s) rationale and base is in individual freedom, recognise and support the rights of individuals to rebel against what they consider as unjust impositions. As history shows, the anarchist position is the correct one — without rebellion, numerous minorities would never have improved their position and society would stagnate. Indeed, Howl’s and Draper’s comments are just a reflection of the standard capitalist diatribe against strikers and protestors — they do not need to protest, for they live in a “democracy.”

This Marxist notion that anarchists are “anti-democratic” gets them into massive contradictions. Lance Selfa’s highly inaccurate and misleading article “Emma Goldman: A life of controversy” is an example of this [International Socialist Review, no. 34, March-April 2004] Ignoring the far more substantial evidence for Leninist elitism, Selfa asserted that “Goldman never turned away from the idea that heroic individuals, not masses, make history” and quotes from her 1910 essay “Minorities Versus Majorities” to prove this. Significantly, he does not actually refute the arguments Goldman expounded. He does, needless to say, misrepresent them.

The aim of Goldman’s essay was to state the obvious — that the mass is not the source for new ideas. Rather, new, progressive, ideas are the product of minorities and which then spread to the majority by the actions of those minorities. Even social movements
anarcho-syndicalism was “a direct continuation of those social aspirations which took shape in the bosom of the First International and which were best understood and most strongly held by the libertarian wing of the great workers’ alliance.” [Anarcho-Syndicalism, p. 54] Murray Bookchin just stated the obvious:

“Long before syndicalism became a popular term in the French labour movement of the late [eighteen]nineties, it already existed in the Spanish labour movement of the early seventies. The anarchist-influenced Spanish Federation of the old IWMA was ... distinctly syndicalist.” [“Looking Back at Spain,” pp. 53–96, Dimitrios I. Rousopoulos (ed.), The Radical Papers, p. 67]

Perhaps, in the face of such evidence (and the writings of Bakunin himself), Marxists could claim that the sources we quote are either anarchists or “sympathetic” to anarchism. To counter this is very easy, we need only quote Marx and Engels. Marx attacked Bakunin for thinking that the “working class ... must only organise themselves by trades-unions” and “not occupy itself with politics.” Engels argued along the same lines, having a go at the anarchists because in the “Bakuninist programme a general strike is the lever employed by which the social revolution is started” and that they admitted “this required a well-formed organisation of the working class” (i.e. a trade union federation). Indeed, he summarised Bakunin’s strategy as being to “organise, and when all the workers, hence the majority, are won over, dispose all the authorities, abolish the state and replace it with the organisation of the International.” [Marx, Engels and Lenin, Anarchism and Anarcho-Syndicalism, p. 48, p. 132, p. 133 and p. 72] Ignoring the misrepresentations of Marx and Engels about the ideas of their enemies, we can state that they got the basic point of Bakunin’s ideas — the centrality of trade union organisation and struggle as well as the use of strikes and the general strike. Therefore, you
does that mean that Marxists would oppose the discriminated minority taking direct action to undermine and abolish them? Or, to take an example closer to Marxism, in 1914 the leaders of the Social Democratic Party in the German Parliament voted for war credits. The anti-war minority of that group went along with the majority in the name of “democracy,” “unity” and “discipline”. Would Howl and Draper argue that they were right to do so? If they were not right to betray the ideas of Marxism and international working class solidarity, then why not? They did, after all, subject themselves to the “most perfect socialist democracy” and so, presumably, made the correct decision.

Simply put, the arguments that anarchists are “anti-democratic” are question-begging in the extreme, when not simply hypocritical. As a general rule-of-thumb, anarchists have little problem with the minority accepting the decisions of the majority after a process of free debate and discussion. As we argue in section A.2.11, such collective decision making is compatible with anarchist principles — indeed, is based on them. By governing ourselves directly, we exclude others governing us. However, we do not make a fetish of this, recognising that, in certain circumstances, the minority must and should ignore majority decisions. For example, if the majority of an organisation decide on a policy which the minority thinks is disastrous then why should they follow the majority? Equally, if the majority make a decision which harms the liberty and equality of a non-oppressive and non-exploitative minority, then that minority has the right to reject the “authority” of the majority. Hence Carole Pateman:

“The essence of liberal social contract theory is that individuals ought to promise to, or enter an agreement to, obey representatives, to whom they have alienated their right to make political decisions ... Promising ... is an expression of individual freedom and equality, yet commits individuals for the future. Promising also implies

do not have to read Bakunin to find out the similarities between his ideas and syndicalism, you can read Marx and Engels. Clearly, most Marxist critiques of anarchism have not even done that!

Latter anarchists, needless to say, supported the syndicalist movement and, moreover, drew attention to its anarchist roots. Emma Goldman noted that in the First International “Bakunin and the Latin workers” forged ahead “along industrial and Syndicalist lines” and stated that syndicalism “is, in essence, the economic expression of Anarchism” and that “accounts for the presence of so many Anarchists in the Syndicalist movement. Like Anarchism, Syndicalism prepares the workers along direct economic lines, as conscious factors in the great struggles of to-day, as well as conscious factors in the task of reconstructing society.” After seeing syndicalist ideas in action in France in 1900, she “immediately began to propagate Syndicalist ideas.” The “most powerful weapon” for liberation was “the conscious, intelligent, organised, economic protest of the masses through direct action and the general strike.” [Red Emma Speaks, p. 89, p. 91, p. 90 and p. 60]

Kropotkin argued anarchist communism “wins more and more ground among those working-men who try to get a clear conception as to the forthcoming revolutionary action. The syndicalist and trade union movements, which permit the workingmen to realise their solidarity and to feel the community of their interests better than any election, prepare the way for these conceptions.” [Anarchism, p. 174] His support for anarchist participation in the labour movement was strong, considering it a key method of preparing for a revolution and spreading anarchist ideas amongst the working classes: “The syndicat is absolutely necessary. It is the sole force of the workers which continues the direct struggle against capital without turning to parliamentism.” [quoted by Miller, Op. Cit., p. 177]

“Revolutionary Anarchist Communist propaganda within the Labour Unions,” Kropotkin stressed, “had always been a favourite mode of action in the Federalist or ‘Bakuninist’ section of the Interna-
tional Working Men’s Association. In Spain and in Italy it had been especially successful. Now it was resorted to, with evident success, in France and Freedom [the British Anarchist paper he helped create in 1886] eagerly advocated this sort of propaganda.” [Act For Yourselves, pp. 119–20] Caroline Cahm notes in her excellent account of Kropotkin’s ideas between 1872 and 1886, he “was anxious to revive the International as an organisation for aggressive strike action to counteract the influence of parliamentary socialists on the labour movement.” This resulted in Kropotkin advocating a “remarkable fusion of anarchist communist ideas with both the bakuninist [sic!] internationalist views adopted by the Spanish Federation and the syndicalist ideas developed in the Jura Federation in the 1870s.” This included seeing the importance of revolutionary labour unions, the value of the strikes as a mode of direct action and syndicalist action developing solidarity. “For Kropotkin,” she summarises, “revolutionary syndicalism represented a revival of the great movement of the Anti-authoritarian International … It seems likely that he saw in it the [strikers International] which he had advocated earlier.” [Op. Cit., p. 257 and p. 268]

Clearly, any one claiming that there is a fundamental difference between anarchism and syndicalism is talking nonsense. Syndicalist ideas were being argued by the likes of Bakunin and Kropotkin before syndicalism emerged in the French CGT in the 1890s as a clearly labelled revolutionary theory. Rather than being in conflict, the ideas of syndicalism find their roots in the ideas of Bakunin and “classical” anarchism. This would be quickly seen if the actual writings of Bakunin and Kropotkin were consulted. There are, of course, differences between anarchism and syndicalism, but they are not those usually listed by Marxists (section J.3.9 discusses these differences and, as will quickly be discovered, they are not based on a rejection of working class organisation, direct action, solidarity and collective struggle!).

Ultimately, claims like Pat Stack’s simply show how unfamiliar the author is with the ideas they are pathetically attempting to cri-

In other words, because the Bolshevik government had been given power by a national Soviet Congress in the past (and only remained there by gerrymandering and disbanding soviets), he (as its representative) had the right to ban a conference which would have expressed the wishes of millions of workers, peasants and partisans fighting for the revolution! The fallacious nature of his arguments is easily seen. Rather than executing the will of millions of toilers, Trotsky was simply executing his own will. He did not consult those millions nor the local soviets which had, in Bolshevik ideology, surrendered their power to the handful of people in the central committee of the Bolshevik Party. By banning the conference he was very effectively undermining the practical, functional democracy of millions and replacing it with a purely formal “democracy” based on empowering a few leaders at the centre. Yes, indeed, truly democracy in action when one person can deny a revolutionary people its right to decide its own fate!

Unsurprisingly, the anarchist Nestor Makhno replied by arguing that he considered it “an inviolable right of the workers and peasants, a right won by the revolution, to call congresses on their own account, to discuss their affairs. That is why the prohibition by the central authorities on the calling of such congresses … represent a direct and insolent violation of the rights of the workers.” [quoted by Peter Arshinov, The History of the Makhnovist Movement, p. 129] We will leave it to the readers to decide which of the two, Trotsky or Makhno, showed the fundamentally “anti-democratic” perspective.

Moreover, there are a few theoretical issues that need to be raised on this matter. Notice, for example, that no attempt is made to answer the simple question of why having 51% of a group automatically makes you right! It is taken for granted that the minority should subject themselves to the will of the majority before that will is even decided upon. Does that mean, for example, that Marxists refuse minorities the right of civil disobedience if the majority acts in a way which harms their liberties and equality? If, for example, the majority in community decides to implement race laws,
of authority preferred by Lenin and Trotsky. It was precisely for this reason, to differentiate between egalitarian (and so libertarian) forms of organisation and decision making and authoritarian ones, that anarchists called themselves “anti-authoritarians.”

Even if we ignore all the anti-democratic acts of Bolshevism (or justify them in terms of the problems facing the Russian Revolution, as most Leninists do), the anti-democratic nature of Leninist ideas still come to the fore. The Leninist support for centralised state power brings their attack on anarchism as being “anti-democratic” into clear perspective and, ultimately, results in the affairs of millions being decided upon by a handful of people in the Central Committee of the vanguard party. As an example, we will discuss Trotsky’s arguments against the Makhnovist movement in the Ukraine.

For Trotsky, the Makhnovists were against “Soviet power.” This, he argued, was simply “the authority of all the local soviets in the Ukraine” as they all “recognise the central power which they themselves have elected.” Consequently, the Makhnovists rejected not only central authority but also the local soviets as well. Trotsky also suggested that there were no “appointed” persons in Russia as “there is no authority in Russia but that which is elected by the whole working class and working peasantry. It follows [!] that commanders appointed by the central Soviet Government are installed in their positions by the will of the working millions.” He stressed that one can speak of “appointed” persons “only under the bourgeois order, when Tsarist officials or bourgeois ministers appointed at their own discretion commanders who kept the soldier masses subject to the bourgeois classes.” When the Makhnovists tried to call the fourth regional conference of peasants, workers and partisans to discuss the progress of the Civil War in early 1919, Trotsky, unsurprisingly enough, “categorically banned” it. With typical elitism, he noted that the Makhnovist movement had “its roots in the ignorant masses”! [How the Revolution Armed, vol. II, p. 277, p. 280, p. 295 and p. 302]

H.2.9 Do anarchists have “liberal” politics?

Another assertion by Marxists is that anarchists have “liberal” politics or ideas. For example, one Marxist argues that the “programme with which Bakunin armed his super-revolutionary vanguard called for the ‘political, economic and social equalisation of classes and individuals of both sexes, beginning with the abolition of the right of inheritance.’ This is liberal politics, implying nothing about the abolition of capitalism.” [Derek Howl, “The Legacy of Hal Draper,” pp. 137–49, International Socialism, no. 52, p. 148]

That Howl is totally distorting Bakunin’s ideas can quickly be seen by looking at the whole of the programme. The passage quoted is from item 2 of the “Programme of the Alliance.” Strangely Howle fails to quote the end of that item, namely when it states this “equalisation” was “in pursuance of the decision reached by the last working men’s Congress in Brussels, the land, the instruments of work and all other capital may become the collective property of the whole of society and be utilised only by the workers, in other words by the agricultural and industrial associations.” If this was not enough to indicate the abolition of capitalism, item 4 states that the Alliance “repudiates all political action whose target is anything except the triumph of the workers’ cause over Capital.” [Michael Bakunin: Selected Writings, p. 174]
Howl’s dishonesty is clear. Bakunin explicitly argued for the abolition of capitalism in the same item Howl (selectively) quotes from. If the socialisation of land and capital under the control of workers’ associations is not the abolition of capitalism, we wonder what is!

Equally as dishonest as this quoting out of context is Howl’s non-mention of the history of the expression “political, economic and social equalisation of classes and individuals of both sexes.” After Bakunin sent the Alliance programme to the General Council of the International Workingmen’s Association, he received a letter date March 9, 1869 from Marx which stated that the term “the equalisation of classes” “literally interpreted” would mean “harmony of capital and labour” as “persistently preached by the bourgeois socialists.” The letter argued that it was “not the logically impossible ‘equalisation of classes’, but the historically necessary, superseding ‘abolition of classes’” which was the “true secret of the proletarian movement” and which “forms the great aim of the International Working Men’s Association.” Significantly, the letter adds the following:

“Considering, however, the context in which that phrase ‘equalisation of classes’ occurs, it seems to be a mere slip of the pen, and the General Council feels confident that you will be anxious to remove from your program an expression which offers such a dangerous misunderstanding.” [Collected Works, vol. 21, p. 46]

And, given the context, Marx was right. The phrase “equalisation of classes” placed in the context of the political, economic and social equalisation of individuals obviously implies the abolition of classes. The logic is simple. If both worker and capitalist shared the same economic and social position then wage labour would not exist (in fact, it would be impossible as it is based on social and economic inequality) and so class society would not exist. Similarly, if the tenant and the landlord were socially equal then the

Similarly, it would be churlish to note that Marxists themselves have habitually rejected democratic authority when it suited them. Even that “higher type of democracy” of the soviets was ignored by the Bolshevik party once it was in power. As we discuss in section H.6.1, faced with the election of non-Bolshevik majorities to the soviets, Bolshevik armed force was used to overthrow the results. In addition, they also gerrymandered soviets once they could no longer count on an electoral majority. In the workplace, the Bolsheviks replaced workers’ economic democracy with “one-man management” appointed from above, by the state, armed with “dictatorial power” (see section H.3.14). As discussed in section H.3.8, the Bolsheviks generalised their experiences exercising power into explicit support for party dictatorship. Throughout the 1920s and 30s, Trotsky repeated this conclusion and repeated advocated party dictatorship, urging the party to use its power to crush opposition in the working class to its rule. For the Bolshevik tradition, the power of the party to ignore the wishes of the class it claims to represent is a fundamental ideological position.

So, remember when Lenin or Trotsky argue for “party dictatorship”, the over-riding of the democratic decisions of the masses by the party, the elimination of workers factory committees in favour of appointed managers armed with “dictatorial” power or when the Bolshevik disbanded soviets with non-Bolshevik majorities, it is anarchism which is fundamentally “anti-democratic”! All in all, that anyone can claim that anarchism is more “anti-democratic” than Leninism is a joke.

However, all these anti-democratic acts do fit in nicely with Howl’s “materialist” Marxist concept that “’authority’ is necessary in any society where labour is collaborative.” Since “authority” is essential and all forms of collective decision making are necessarily “authoritarian” and involve “subordination,” then it clearly does not really matter how collectives are organised and how decisions are reached. Hence the lack of concern for the liberty of the working people subjected to the (peculiarly bourgeois-like) forms
exploiter and exploited and create an environment in which individuals can associate without denying their freedom and equality.

Therefore, the positive side of anarchism (which naturally flows from its opposition to authority) results in a political theory which argues that people must control their own struggles, organisations and affairs directly. This means we support mass assemblies and their federation via councils of mandated delegates subject to recall if they break their mandates (i.e. they act as they see fit, i.e. as politicians or bureaucrats, and not as the people who elected them desire). This way people directly govern themselves and control their own lives, allowing those affected by a decision to have a say in it and so they manage their own affairs directly and without hierarchy. Rather than imply an “individualism” which denies the importance of association and the freedom it can generate, anarchism implies an opposition to hierarchy in all its forms and the support for free association of equals. In other words, anarchism can generally be taken to mean support for self-government or self-management, both by individuals and by groups.

In summary, anarchist support for individual liberty incurs a similar support for self-managed groups. In such groups, individuals co-operate as equals to maximise their liberty. This means, for anarchists, Marxists are just confusing co-operation with coercion, agreement with authority, association with subordination. Thus the Marxist “materialist” concept of authority distorts the anarchist position and, secondly, is supra-historical in the extreme. Different forms of decision making are lumped together, independent of the various forms it may assume. To equate hierarchical and self-managed decision making, antagonistic and harmonious forms of organisation, alienated authority or authority retained in the hands of those directly affected by it, can only be a source of confusion. Rather than being a “materialistic” approach, the Marxist one is pure philosophical idealism — the postulating of a-historic concepts independently of the individuals and societies that generate specific social relationships and ways of working together.

landlord would have no power over the tenant, which would be impossible. Bakunin agreed with Marx on the ambiguity of the term and the Alliance changed its Programme to call for “the final and total abolition of classes and the political, economic and social equalisation of individuals of either sex.” [Bakunin, Op. Cit. p. 174] This change ensured the admittance of the Alliance sections into the International Workingmen’s Association (although this did not stop Marx, like his followers, bringing up this “mere slip of the pen” years later). However, Howl repeating the changed phrase “equalisation of classes” out of context helps discredit anarchism and so it is done.

Simply put, anarchists are not liberals. We are well aware of the fact that without equality, liberty is impossible except for the rich. As Nicolas Walter put it, “[l]ike liberals, anarchists want freedom; like socialists, anarchists want equality. But we are not satisfied by liberalism alone or by socialism alone. Freedom without equality means that the poor and weak are less free than the rich and strong, and equality without freedom means that we are all slaves together. Freedom and equality are not contradictory, but complementary; in place of the old polarisation of freedom versus equality — according to which we are told that more freedom equals less equality, and more equality equals less freedom — anarchists point out that in practice you cannot have one without the other. Freedom is not genuine if some people are too poor or too weak to enjoy it, and equality is not genuine is some people are ruled by others.” [About Anarchism, p. 29] Clearly, anarchists do not have liberal politics. Quite the reverse, as we subject it to extensive critique from a working class perspective.

To the claim that anarchism “combines a socialist critique of capitalism with a liberal critique of socialism,” anarchists reply that it is mistaken. [Paul Thomas, Karl Marx and the Anarchists, p. 7] Rather, anarchism is simply a socialist critique of both capitalism and the state. Freedom under capitalism is fatally undermined by inequality — it simply becomes the freedom to pick a master. This
violates liberty and equality, as does the state. “Any State at all,” argued Bakunin, “no matter what kind, is a domination and exploitation. It is a negation of Socialism, which wants an equitable human society delivered from all tutelage, from all authority and political domination as well as economic exploitation.” [quoted by Kenafick, Op. Cit., pp. 95–6] As such, state structures violate not only liberty but also equality. There is no real equality in power between, say, the head of the government and one of the millions who may, or may not, have voted for them. As the Russian Revolution proved, there can be no meaningful equality between a striking worker and the “socialist” political police sent to impose the will of the state, i.e., the “socialist” ruling elite.

This means that if anarchists are concerned about freedom (both individual and collective) it is not because we are influenced by liberalism. Quite the reverse, as liberalism happily tolerates hierarchy and the restrictions of liberty implied by private property, wage labour and the state. As Bakunin argued, capitalism turns “the worker into a subordinate, a passive and obedient servant.”[The Political Philosophy of Bakunin, p. 188] So anarchism rejects liberalism (although, as Bakunin put it, “[i]f socialism disputes radicalism, this is hardly to reverse it but rather to advance it.” [The Basic Bakunin, p. 87]). Therefore, anarchism rejects liberalism, not because it supports the idea of freedom, but precisely because it does not go far enough and fails to understand that without equality, freedom is little more than freedom for the master. In fact, as we argue in section H.4, it is Marxism itself which has a distinctly liberal perspective of freedom, seeing it restricted by association rather than association being an expression of it.

Lastly, a few words on the mentality that could suggest that anarchist concern for liberty means that it is a form of liberalism. Rather than suggest the bankruptcy of anarchism it, in fact, suggests the bankruptcy of the politics of the person making the accusation. After all, the clear implication is that a concern with individual, collective and social freedom is alien to socialist ideas. It

archist theory and visions of a better world. This means that anarchism is against the “domination of man by man” (and woman by woman, woman by man, and so on). However, “[a]s knowledge has penetrated the governed masses … the people have revolted against the form of authority then felt most intolerable. This spirit of revolt in the individual and the masses, is the natural and necessary fruit of the spirit of domination; the vindication of human dignity, and the saviour of social life.” Thus “freedom is the necessary preliminary to any true and equal human association.” [Charlotte Wilson, Anarchist Essays, p. 54 and p. 40] In other words, anarchism comes from the struggle of the oppressed against their rulers and is an expression of individual and social freedom. Anarchism was born from the class struggle.

Taking individual liberty as a good thing, the next question is how do free individuals co-operate together in such a way as to ensure their continued liberty (“The belief in freedom assumes that human beings can co-operate.” [Emma Goldman, Red Emma Speaks, p. 442]). This suggests that any association must be one of equality between the associating individuals. This can only be done when everyone involved takes a meaningful role in the decision making process and because of this anarchists stress the need for self-management (usually called self-management) of both individuals and groups. Self-management within free associations and decision making from the bottom-up is the only way domination can be eliminated. This is because, by making our own decisions ourselves, we automatically end the division of society into governors and governed (i.e. end hierarchy). As Anarchism clearly means support for freedom and equality, it automatically implies opposition to all forms of hierarchical organisation and authoritarian social relationship. This means that anarchist support for individual liberty does not end, as many Marxists assert, in the denial of organisation or collective decision making but rather in support for self-managed groups. Only this form of organisation can end the division of society into rulers and ruled, oppressor and oppressed,
Perhaps, of course, these two famous anarchists were not, in fact, "consistent" anarchists, but that claim is doubtful.

The notion that anarchism is inherently an extreme form of "individualism" seems to be the great assumption of Marxism. Hence the continual repetition of this "fact" and the continual attempt to link revolutionary anarchism with Stirner’s ideas (the only anarchist to stress the importance of the ‘ego’). Thus we find Engels talking about “Stirner, the great prophet of contemporary anarchism — Bakunin has taken a great deal from him ... Bakunin blended [Stirner] with Proudhon and labelled the blend ‘anarchism’”

For Marx, “Bakunin has merely translated Proudhon’s and Stirner’s anarchy into the crude language of the Tartars.” [Marx, Engels and Lenin, Anarchism and Anarcho-Syndicalism, p. 175 and p. 153] In reality, of course, Stirner was essentially unknown to the anarchist movement until his book was rediscovered in the late nineteenth century and even then his impact was limited. In terms of Bakunin, while his debt to Proudhon is well known and obvious, the link with Stirner seems to have existed only in the heads of Marx and Engels. As Mark Leier notes, "there is no evidence of this ... Bakunin mentions Stirner precisely once in his collected works, and then only in passing ... as far as can be determined, Bakunin had no interest, even a negative one, in Stirner’s ideas." [Bakunin: The Creative Passion, p. 97] Nor was Proudhon influenced by Stirner (it is doubtful he even knew of him) while Stirner criticised the French anarchist. Does that mean Stirner is the only "consistent" anarchist? Moreover, even in terms of Stirner, Marxist diatribes about the “absolute sovereignty of the individual ego” fail to note that the egoist himself advocated organisation (“the union of egos”) and was well aware that it required agreements between individuals which, in the abstract, reduced “liberty” (the union “offer[s] a greater measure of liberty” while containing a lesser amount of “unfreedom” [The Ego and Its Own, p. 308]).

Anarchism does, of course, derive from the Greek for “without authority” or “without rulers” and this, unsurprisingly, informs an-also strikes at the heart of socialism — its concern for equality — as it clearly implies that some have more power (namely the right to suppress the liberty of others) than the rest. As such, it suggests a superficial understanding of real socialism (see also our discussion of Marxist claims about anarchist “elitism” in section H.2.11).

To argue that a concern for freedom means “liberalism” (or, equally, “individualism”) indicates that the person is not a socialist. After all, a concern that every individual controls their daily lives (i.e. to be free) means a wholehearted support for collective self-management of group affairs. It means a vision of a revolution (and post-revolutionary society) based on direct working class participation and management of society from below upwards. To dismiss this vision by dismissing the principles which inspire it as "liberalism" means to support rule from above by the “enlightened” elite (i.e. the party) and the hierarchical state structures. It means arguing for party power, not class power, as liberty is seen as a danger to the revolution and so the people must be protected against the “petty-bourgeois”/”reactionary” narrowness of the people (to requote Bakunin, “every state, even the pseudo-People’s State concocted by Mr. Marx, is in essence only a machine ruling the masses from above, through a privileged minority of conceited intellectuals who imagine that they know what the people need and want better than do the people themselves.” [Bakunin on Anarchism, p. 338]). Rather than seeing free debate of ideas and mass participation as a source of strength, it sees it as a source of “bad influences” which the masses must be protected from.

Moreover, it suggests a total lack of understanding of the difficulties that a social revolution will face. Unless it is based on the active participation of the majority of a population, any revolution will fail. The construction of socialism, of a new society, will face thousands of unexpected problems and seek to meet the needs of millions of individuals, thousands of communities and hundreds of cultures. Without the individuals and groups within that society being in a position to freely contribute to that constructive task, it
will simply wither under the bureaucratic and authoritarian rule of a few party leaders. As such, individual liberties are an essential aspect of genuine social reconstruction — without freedom of association, assembly, organisation, speech and so on, the active participation of the masses will be replaced by an isolated and atomised collective of individuals subjected to autocratic rule from above.

As ex-anarchist turned Bolshevik Victor Serge concluded in the late 1930s (when it was far too late) the “fear of liberty, which is the fear of the masses, marks almost the entire course of the Russian Revolution. If it is possible to discover a major lesson, capable of revivifying Marxism … one might formulate it in these terms: Socialism is essentially democratic — the word, ‘democratic’, being used here in its libertarian sense.” [The Serge-Trotsky Papers, p. 181]

Ultimately, as Rudolf Rocker suggested, the “urge for social justice can only develop properly and be effective, when it grows out of man’s sense of personal freedom and it based on that. In other words Socialism will be free, or it will not be at all. In its recognition of this lies the genuine and profound justification for the existence of Anarchism.” [Anarcho-Syndicalism, p. 14]

H.2.10 Are anarchists against leadership?

It is a common assertion by Marxists that anarchists reject the idea of “leadership” and so think in terms of a totally spontaneous revolution. This is also generally understood to imply that anarchists do not see the need for revolutionaries to organise together to influence the class struggle in the here and now. Hence the British SWP’s Duncan Hallas:

“That an organisation of socialist militants is necessary is common ground on the left. a few anarchist purists apart. But what kind of organisation? One view, widespread amongst newly radicalised students and

This means, just to state the obvious, that making and sticking by collective decisions are not acts of authority. Rather they simply expressions of individual autonomy. Clearly in most activities there is a need to co-operate with other people. Indeed, living involves the “absolute sovereignty of the individual ego” (as if anarchists like Bakunin used such terms!) being “restricted” by exercising that “sovereignty.” Take, for example, playing football. This involves finding others who seek to play the game, organising into teams, agreeing on rules and so on. All terrible violations of the “absolute sovereignty of the individual ego,” yet it was precisely the “sovereignty” of the “individual” which produced the desire to play the game in the first place. What sort of “sovereignty” is it that negates itself when it is exercised? Clearly, then, the Marxist “summary” of anarchist ideas on this matter, like of many others, is poverty stricken.

And, unsurprisingly enough, we find anarchist thinkers like Bakunin and Kropotkin attacking this idea of “the absolute sovereignty of the individual ego” in the most severe terms. Indeed, they thought was a bourgeois theory which simply existed to justify the continued domination and exploitation of working class people by the ruling class. Kropotkin quite clearly recognised its anti-individual and unfree nature by labelling it “the authoritarian individualism which stifles us” and stressing its “narrow-minded, and therefore foolish” nature. [Conquest of Bread, p. 130]

Similarly, it would do the Marxist argument little good if they quoted Bakunin arguing that the “freedom of individuals is by no means an individual matter. It is a collective matter, a collective product. No individual can be free outside of human society or without its co-operation” or that he considered “individualism” as a “bourgeois principle.” [The Basic Bakunin, p. 46 and p. 57] He had nothing but contempt for, as he put it, “that individualistic, egotistical, malicious and illusory freedom” which was “extolled” by all the “schools of bourgeois liberalism.” [Michael Bakunin: Selected Writings, p. 196]
most fundamentally anti-democratic in principle, since it is not only unalterably hostile to democracy in general but particularly to any socialist democracy of the most ideal kind that could be imagined.”

Such as argument is, of course, just ridiculous. Indeed, it is flawed on so many levels its hard to know where to start. The obvious place is the claim that anarchism is the most “fundamentally anti-democratic in principle.” Now, given that there are fascists, monarchists, supporters (like Trotsky) of “party dictatorship” and a host of others who advocate minority rule (even by one person) over everyone else, can it be argued with a straight face that anarchism is the most “anti-democratic” because it argues for the liberty of all? Is the idea and practice of absolute monarchy and fascism really more democratic than anarchism? Clearly not, although this does indicate the quality of this kind of argument. Equally, the notion that liberalism rests on a “presumption of opposition to ‘authority’” cannot be supported by even a casual understanding of the subject. That ideology has always sought ways to justify the authority structures of the liberal state not to mention the hierarchies produced by capitalist private property. So the notion that liberalism is against “authority” is hard to square with both its theory and reality.

Another obvious point is that anarchists do not see any authority as “despotic.” As we discuss in section H.4, this common Marxist assertion is simply not true. Anarchists have always been very clear on the fact they reject specific kinds of authority and not “authority” as such. In fact, by the term “principal of authority,” Bakunin meant hierarchical authority, and not all forms of “authority.” This explains why Kropotkin argued that “the origin of the anarchist conception of society” lies in “the criticism” of the “hierarchical organisations and the authoritarian conceptions of society” and stressed that anarchism “refuses all hierarchical organisation.”

[Anarchism, p. 158 and p. 137]

young workers, is that of the libertarians ... [They have] hostility to centralised, co-ordinated activity and profound suspicion of anything smacking of ‘leadership.’ On this view nothing more than a loose federation of working groups is necessary or desirable. The underlying assumptions are that centralised organisations inevitably undergo bureaucratic degeneration and that the spontaneous activities of working people are the sole and sufficient basis for the achievement of socialism ... some libertarians draw the conclusion that a revolutionary socialist party is a contradiction in terms. This, of course, is the traditional anarcho-syndicalist position.”

[Towards a revolutionary socialist party, p. 39]

Ignoring the usual patronising references to the age and experience of non-Leninists, this argument can be faulted on many levels. Firstly, while libertarians do reject centralised structures, it does not mean we reject co-ordinated activity. This may be a common Marxist argument, but it is a straw man one. Secondly, anarchists do not reject the idea of “leadership.” We simply reject the idea of hierarchical leadership. Thirdly, while all anarchists do think that a “revolutionary socialist party” is a contradiction in terms, it does not mean that we reject the need for revolutionary organisations (i.e. organisations of anarchists). While opposing centralised and hierarchical political parties, anarchists have long saw the need for anarchist groups and federations to discuss and spread our ideas and influence. We will discuss each issue in turn.

The first argument is the least important. For Marxists, co-ordination equals centralism and to reject centralisation means to reject co-ordination of joint activity. For anarchists, co-ordination does not each centralism or centralisation. This is why anarchism stresses federation and federalism as the means of co-ordinating joint activity. Under a centralised system, the affairs of all are handed over to a handful of people at the centre. Their decisions
are then binding on the mass of the members of the organisation whose position is simply that of executing the orders of those whom the majority elect. This means that power rests at the top and decisions flow from the top downwards. As such, the “revolutionary” party simply mimics the very society it claims to oppose (see section H.5.6) as well as being extremely ineffective (see section H.5.8)

In a federal structure, in contrast, decisions flow from the bottom up by means of councils of elected, mandated and recallable delegates. In fact, we discover anarchists like Bakunin and Proudhon arguing for elected, mandated and recallable delegates rather than for representatives in their ideas of how a free society worked years before the Paris Commune applied them in practice. The federal structure exists to ensure that any co-ordinated activity accurately reflects the decisions of the membership. As such, anarchists “do not deny the need for co-ordination between groups, for discipline, for meticulous planning, and for unity in action. But they believe that co-ordination, discipline, planning, and unity in action must be achieved voluntarily, by means of a self-discipline nourished by conviction and understanding, not by coercion and a mindless, unquestioning obedience to orders from above.” This means we “vigorously oppose the establishment of an organisational structure that becomes an end in itself, of committees that linger on after their practical tasks have been completed, of a ‘leadership’ that reduces the ‘revolutionary’ to a mindless robot.” [Murray Bookchin, Post-Scarcity Anarchism, p. 139] In other words, co-ordination comes from below rather than being imposed from above by a few leaders. To use an analogy, federalist co-ordination is the co-ordination created in a strike by workers resisting their bosses. It is created by debate amongst equals and flows from below upwards. Centralised co-ordination is the co-ordination imposed from the top-down by the boss.

Secondly, anarchists are not against all forms of “leadership.” We are against hierarchical and institutionalised forms of leadership. In other words, of giving power to leaders. This is the key difference of a social revolution then we would be living in a libertarian socialist society. The fact that we are not suggests that spontaneity, however important, is not enough in itself. This simple fact of history is understood by anarchists and we organise ourselves appropriately.

See section J.3 for more details on what organisations anarchists create and their role in anarchist revolutionary theory (Section J.3.6, for example, has a fuller discussion of the role of anarchist groups in the class struggle). For a discussion of the role of anarchists in a revolution, see section J.7.5.

H.2.11 Are anarchists “anti-democratic”?\n
One of the common arguments against anarchism is that it is “anti-democratic” (or “elitist”). For example, a member of the British Socialist Workers Party denounces anarchism for being “necessarily deeply anti-democratic” due to its “thesis of the absolute sovereignty of the individual ego as against the imposition of any ‘authority’ over it,” which, its is claimed, is the “distinctly anarchist concept.” This position is an “idealist conception” in which any authority is seen as despotic; ‘freedom’ and ‘authority’ (and therefore ‘freedom’ and ‘democracy’) are opposites. This presumption of opposition to ‘authority’ was fostered by liberalism.” This is contrasted with the Marxist “materialist understanding of society” in which it “was clear that ‘authority’ is necessary in any society where labour is collaborative.” [Derek Howl, “The Legacy of Hal Draper,” pp. 137–49, International Socialism, no. 52, p. 145] Hal Draper is quoted arguing that:

By the ‘principle of authority’ the consistent anarchist means principled opposition to any exercise of authority, including opposition to authority derived from the most complete democracy and exercised in completely democratic fashion ... Of all ideologies, anarchism is the one
it), the part which has generalised its own experiences, ideas and
needs into a theory called “anarchism” and seeks to convince the
rest of the validity of its ideas and tactics. This would be a dialogue,
based on both learning and teaching.

As such, this means that the relationship between the specifically anarchist groups and oppressed peoples in struggle is a two way one. As well as trying to influence the social struggle, anarchists also try and learn from the class struggle and try to generalise from the experiences of their own struggles and the struggles of other working class people. Rather than seeing the anarchist group as some sort of teacher, anarchists see it as simply part of the social struggle and its ideas can and must develop from active participation within that struggle. As libertarians agree with Bakunin and reject the idea that their organisations should take power on behalf of the masses, it is clear that such groups are not imposing alien ideas upon people but rather try to clarify the ideas generated by working class people in struggle. It is an objective fact that there is a great difference in the political awareness within the masses of oppressed people. This uneven development means that they do not accept, all at once or in their totality, revolutionary ideas. There are layers. Groups of people, by ones and twos and then in larger numbers, become interested, read literature, talk with others, and create new ideas. The first groups that explicitly call their ideas “anarchism” have the right and duty to try to persuade others to join them. This is not opposed to the self-organisation of the working class, rather it is how working class people self-organise.

Lastly, most anarchists recognise the need to create specifically anarchist organisations to spread anarchist ideas and influence the class struggle. Suffice to say, the idea that anarchists reject this need to organise politically in order to achieve a revolution is not to be found in the theory and practice of all the major anarchist thinkers nor in the history and current practice of the anarchist movement itself. As Leninists themselves, at times, admit. Ultimately, if spontaneity was enough to create (and ensure the succ-
specific party hierarchy) who do so and the masses role becomes, yet again, simply that of selecting which boss tells them what to do.

So the anarchist federation does not reject the need of “leadership” in the sense of giving a led, of arguing its ideas and trying to win people to them. It does reject the idea that “leadership” should become separated from the mass of the people. Simply put, no party, no group of leaders have all the answers and so the active participation of all is required for a successful revolution. It is not a question of organisation versus non-organisation, or “leadership” versus non-“leadership” but rather what kind of organisation and the kind of leadership.

Clearly, then, anarchists do not reject or dismiss the importance of politically aware minorities organising and spreading their ideas within social struggles. As Caroline Cahm summarised in her excellent study of Kropotkin’s thought, “Kropotkin stressed the role of heroic minorities in the preparation for revolution.” [Kropotkin and the Rise of Revolutionary Anarchism, 1872–86, p. 276]

Yet, as John Crump correctly argued, the “key words here are in the preparation for revolution. By their courage and daring in opposing capitalism and the state, anarchist minorities could teach by example and thereby draw increasing numbers into the struggle. But Kropotkin was not advocating substitutionism; the idea that a minority might carry out the revolution in place of the people was as alien to him as the notion that a minority would exercise rule after the revolution. In fact, Kropotkin recognised that the former would be a prescription for the latter.” [Hatta Shuzo and Pure Anarchism in Interwar Japan, p. 9] In Kropotkin’s own words:

“The idea of anarchist communism, today represented by feeble minorities, but increasingly finding popular expression, will make its way among the mass of the people. Spreading everywhere, the anarchist groups ... will take strength from the support they find among the people, and will raise the red flag of the revolution ... On that day, what is now the minority will become the People, the great mass, and that mass rising against property and the State, will march forward towards anarchist communism.” [Words of a Rebel, p. 75]

This influence would be gained simply by the correctness of our ideas and the validity of our suggestions. This means that anarchists seek influence “through advice and example, leaving the people ... to adopt our methods and solutions if these are, or seem to be, better than those suggested and carried out by others.” As such, any anarchist organisation would “strive acquire overwhelming influence in order to draw the [revolutionary] movement towards the realisation of our ideas. But such influence must be won by doing more and better than others, and will be useful if won in that way.” This means rejecting “taking over command, that is by becoming a government and imposing one’s own ideas and interests through police methods.” [Malatesta, The Anarchist Revolution, pp. 108–9]

Moreover, unlike leading Marxists like Lenin and Karl Kautsky, anarchists think that socialist ideas are developed within the class struggle rather than outside it by the radical intelligentsia (see section H.5). Kropotkin argued that “modern socialism has emerged out of the depths of the people’s consciousness. If a few thinkers emerging from the bourgeoisie have given it the approval of science and the support of philosophy, the basis of the idea which they have given their own expression has nonetheless been the product of the collective spirit of the working people. The rational socialism of the International is still today our greatest strength, and it was elaborated in working class organisation, under the first influence of the masses. The few writers who offered their help in the work of elaborating socialist ideas have merely been giving form to the aspirations that first saw their light among the workers.” [Op. Cit., p. 59] In other words, anarchists are a part of the working class (either by birth or by rejecting their previous class background and becoming part of
French mutualists argued that "[e]verything [was] to broken down into small 'groupes' or 'communes', which in turn form an 'association', but not a state." [Collected Works, vol. 42, p. 287] Unsurprisingly, then, that Kropotkin noted "the German school which takes pleasure in confusing State with Society." This was a "confusion" made by those "who cannot visualise Society without a concentration of the State." Yet this "is to overlook the fact that Man lived in Societies for thousands of years before the State had been heard of" and that "communal life" had "been destroyed by the State." So "large numbers of people [have] lived in communes and free federations" and these were not states as the state "is only one of the forms assumed by society in the course of history. Why then make no distinction between what is permanent and what is accidental?" [The State: Its Historic Role, pp. 9–10]

As we discussed in section H.2.1, anarchist opposition to the idea of a "dictatorship of the proletariat" should not be confused with idea that anarchists do not think that a social revolution needs to be defended. Rather, our opposition to the concept rests on the confusion which inevitably occurs when you mix up scientific analysis with metaphysical concepts. By drawing out an a-historic definition of the state, Engels helped ensure that the "dictatorship of the proletariat" became the "dictatorship over the proletariat" by implying that centralisation and delegated power into the hands of the few can be considered as an expression of popular power.

To explain why, we need only to study the works of Engels himself. Engels, in his famous account of the Origin of the Family, Private Property and the State, defined the state as follows:

"The state is ... by no means a power forced on society from without ... Rather, it is a product of society at a certain stage of development; it is an admission ... that it has split into irreconcilable antagonisms ... in order that these antagonisms and classes with conflicting economic interests might not consume themselves and so-

Socialist Party was bureaucratic and reformist to the core while it was the anarchists who made the Spanish labour movement the most dynamic and revolutionary in the world.

As regards Stack’s summary of Bakunin’s organisation goes, we must note that Stack is quoting an unnamed source on Bakunin’s views on this subject. We, therefore, have no way of evaluating whether this is a valid summary of Bakunin’s ideas on this matter. As we indicate elsewhere (see section J.3.7) Leninist summaries of Bakunin’s ideas on secret organising usually leave a lot to be desired (by usually leaving a lot out or quoting out of context certain phrases). As such, and given the total lack of relevance of this model for anarchists since the 1870s, we will not bother to discuss this summary. Simply put, it is a waste of time to discuss an organisational model which no modern anarchist supports.

Moreover, there is a key way in which Bakunin’s ideas on this issue were far less “elitist” and more “democratic” than Lenin’s model. Simply, Bakunin always stressed that his organisation “rules out any idea of dictatorship and custodial control.” [Michael Bakunin: Selected Writings, p. 172] The “main purpose and task of the organisation,” he argued, would be to “help the people to achieve self-determination.” It would “not threaten the liberty of the people because it is free from all official character” and “not placed above the people like state power.” Its programme “consists of the fullest realisation of the liberty of the people” and its influence is “not contrary to the free development and self-determination of the people, or its organisation from below according to its own customs and instincts because it acts on the people only by the natural personal influence of its members who are not invested with any power.” Thus the revolutionary group would be the “helper” of the masses, with an “organisation within the people itself.” [quoted by Michael Confino, Daughter of a Revolutionary, p. 259, p. 261, p. 256 and p. 261] The revolution itself would see “an end to all masters and to domination of every kind, and the free construction of popular life in accordance with popular needs, not from above
downward, as in the state, but from below upward, by the people themselves, dispensing with all governments and parliaments — a voluntary alliance of agricultural and factory worker associations, communes, provinces, and nations; and, finally, ... universal human brotherhood triumping on the ruins of all the states.” [Bakunin, Statism and Anarchy, p. 33] In other words, Bakunin saw the social revolution in terms of popular participation and control, not the seizing of power by a “revolutionary” party or group.

Unlike Lenin, Bakunin did not confuse party power with people power. His organisation, for all its faults (and they were many), did not aim to take power in the name of the working class and exercise power through a centralised, top-down state. Rather, its would be based on the “natural influence” of its members within mass organisations. The influence of anarchists would, therefore, be limited to the level by which their specific ideas were accepted by other members of the same organisations after discussion and debate. As regards the nature of the labour movement, we must point out that Bakunin provided the same “serious” answer as the anarcho-syndicalists — namely, revolutionary labour unionism. As we discuss in section H.2.8, Bakunin’s ideas on this matter are nearly identical to those of the syndicalists Stack praises.

As noted, however, no anarchist group has reproduced the internal structure of the Alliance, which means that Stack’s point is simply historical in nature. Sadly this is not the case with his own politics as the ideas he attacks actually parallel Lenin’s model in many ways (although, as indicated above, how Bakunin’s organisation would function in the class struggle was fundamentally different, as Lenin’s party sought power for itself). Given that Stack is proposing Lenin’s model as a viable means of organising revolutionaries, it is useful to summarise it. We shall take as an example two statements issued by the Second World Congress of the Communist International in 1920 under the direction of Lenin. These are “Twenty-One Conditions of Communism” and “Theses on the Role of the Communist Party in the Proletarian Revolution.” These two
see that different states exist to defend different ruling minorities. Far from it. Anarchists argue that “every economic phase has a political phase corresponding to it, and it would be impossible to touch private property unless a new mode of political life be found at the same time.” A society founded on serfdom, Kropotkin explained, “is in keeping with absolute monarchy; a society based on the wage system, and the exploitation of the masses by the capitalists finds it political expression in parliamentarianism.” As such, the state form changes and evolves, but its basic function (defender of minority rule) and structure (delegated power into the hands of a few) remains. Which means that “a free society regaining possession of the common inheritance must seek, in free groups and free federations of groups, a new organisation, in harmony with the new economic phase of history.” [The Conquest of Bread, p. 54]

As with any social structure, the state has evolved to ensure that it carries out its function. In other words, the state is centralised because it is an instrument of minority domination and oppression. Insofar as a social system is based on decentralisation of power, popular self-management, mass participation and free federation from below upwards, it is not a state. If a social system is, however, marked by delegated power and centralisation it is a state and cannot be, therefore, an instrument of social liberation. Rather it will become, slowly but surely, “whatever title it adopts and whatever its origin and organisation may be” what the state has always been, a instrument for “oppressing and exploiting the masses, of defending the oppressors and the exploiters.” [Malatesta, Anarchy, p. 23] Which, for obvious reasons, is why anarchists argue for the destruction of the state by a free federation of self-managed communes and workers’ councils (see section H.1.4 for further discussion).

This explains why anarchists reject the Marxist definition and theory of the state. For Marxists, “the state is nothing but a machine for the oppression of one class by another.” While it has been true that, historically, it is “the state of the most powerful, economically documents provide a vision of Leninist organisation which is fundamentally elitist.

Lenin’s “model” is clear from these documents. The parties adhering to the Communist International had to have two overlapping forms, one legal (i.e. public) and another “illegal” (i.e. secret). It was the “duty” of these parties “to create everywhere a parallel illegal organisational apparatus.” [Proceedings and Documents of the Second Congress 1920, vol. 2, p. 767] Needless to say, this illegal organisation would be the real controlling body, as it would have to be made up of trusted communists and could only be even more tightly centralised than the open party as its members could only be appointed from above by the illegal organisation’s central committee. To stress that the “illegal” (i.e. secret) organisation controlled the party, the Communist International agreed that that “[i]n countries where the bourgeoisie … is still in power, the Communist parties must learn to combine legal and illegal activity in a planned way. However, the legal work must be placed under the actual control of the illegal party at all times.” [Op. Cit., vol. 1, p. 198–9] In this, it should be noted, the Leninists followed Marx’s in 1850 comments (which he later rejected) on the need to “establish an independent secret and public organisation of the workers’ party.” [Collected Works, vol. 10, p. 282]

Even in its open, public mode, the Communist Party was to be a highly centralised organisation, with all decisions on the national level made by the Central Committee. The parties must be as centralised as possible, with a party centre which has strength and authority and is equipped with the most comprehensive powers. Also, the party press and other publications, and all party publishing houses, must be subordinated to the party presidium. This applied on an international level as well, with the decisions of the Communist International’s Executive Committee binding on all parties belonging to it. [Op. Cit., vol. 2, p. 769] Moreover, “Communist cells of all kinds must be subordinate to each other in a strictly hierarchical order of rank as precisely as possible.” Demo-
cratic centralism itself was fundamentally hierarchical, with its “basic principles” being that “the higher bodies shall be elected by the lower, that all instructions of the higher bodies are categorically and necessarily binding on the lower.” Indeed, “there shall be a strong party centre whose authority is universally and unquestionably recognised for all leading party comrades in the period between congresses.” Any “advocacy of broad ‘autonomy’ for the local party organisations only weakens the ranks of the Communist Party” and “favours petty-bourgeois, anarchist and disruptive tendencies.” [Op. Cit., vol. 1, p. 198]

It seems strange for Stack to argue that Bakunin’s ideas (assuming he presents an honest account of them, of course) were “far more elitist and less democratic than Lenin’s model” as they obviously were not. Indeed, the similarities between Stack’s summary of Bakunin’s ideas and Leninist theory are striking. The Leninist party has the same division between open and secret (legal and illegal) structures as in Bakunin’s, the same centralism and top-down nature. Lenin argued that “[i]n all countries, even in those that are freest, most ‘legal,’ and most ‘peaceful’ ... it is now absolutely indispensable for every Communist Party to systematically combine legal and illegal work, legal and illegal organisation.” He stressed that “[o]nly the most reactionary philistine, no matter what cloak of fine ‘democratic’ and pacifist phrases he may don, will deny this fact or the conclusion that of necessity follows from it, viz., that all legal Communist parties must immediately form illegal organisations for the systematic conduct of illegal work.” [Collected Works, vol. 31, p. 195] This was due to the threat of state repression, which also faced Bakunin’s Alliance. As Murray Bookchin argued, “Bakunin’s emphasis on conspiracy and secrecy can be understood only against the social background of Italy, Spain, and Russia the three countries in Europe where conspiracy and secrecy were matters of sheer survival.” [The Spanish Anarchists, p. 24]

For anarchists, the similarity in structure between Bakunin and Lenin is no source of embarrassment. Rather, we argue that it is

As we discussed in section B.2, the state is defined by certain characteristics (most importantly, the centralisation of power into the hands of a few). Thus, for anarchists, “the word ‘State’ ... should be reserved for those societies with the hierarchical system and centralisation.” [Peter Kropotkin, Ethics, p. 317] This defining feature of the state has not come about by chance. As Kropotkin argued in his classic history of the state, “a social institution cannot lend itself to all the desired goals, since, as with every organ, [the state] developed according to the function it performed, in a definite direction and not in all possible directions.” This means, by “seeing the State as it has been in history, and as it is in essence today” the conclusion anarchists “arrive at is for the abolition of the State.” Thus the state has “developed in the history of human societies to prevent the direct association among men [and women] to shackle the development of local and individual initiative, to crush existing liberties, to prevent their new blossoming — all this in order to subject the masses to the will of minorities.” [The State: Its Historic Role, p. 56]

So if the state, as Kropotkin stressed, is defined by “the existence of a power situated above society, but also of a territorial concentration as well as the concentration in the hands of a few of many functions in the life of societies” then such a structure has not evolved by chance. Therefore “the pyramidal organisation which is the essence of the State” simply “cannot lend itself to a function opposed to the one for which it was developed in the course of history,” such as the popular participation from below required by social revolution and socialism. [Op. Cit., p. 10, p. 59 and p. 56] Based on this evolutionary analysis of the state, Kropotkin, like all anarchists, drew the conclusion “that the State organisation, having been the force to which the minorities resorted for establishing and organising their power over the masses, cannot be the force which will serve to destroy these privileges.” [Evolution and Environment, p. 82]

This does not mean that anarchists dismiss differences between types of state, think the state has not changed over time or refuse to
power by nearly all its adherents may well be one that lends itself to such ‘vulgarisations,’ ‘betrayals,’ and bureaucratic forms as a normal condition of its existence. What may seem to be ‘vulgarisations, ‘betrayals,’ and bureaucratic manifestations of its tenets in the heated light of doctrinal disputes may prove to be the fulfilment of its tenets in the cold light of historical development.” [Toward an Ecological Society, p. 196]

Hence the overwhelming need to critically evaluate Marxist ideas and history (such as the Russian Revolution — see section H.6). Unless we honestly discuss and evaluate all aspects of revolutionary ideas, we will never be able to build a positive and constructive revolutionary movement. By seeking the roots of Marxism’s problems, we can enrich anarchism by avoiding possible pitfalls and recognising and building upon its strengths (e.g., where anarchists have identified, however incompletely, problems in Marxism which bear on revolutionary ideas, practice and transformation).

If this is done, anarchists are sure that Marxist claims that Marxism is the revolutionary theory will be exposed for the baseless rhetoric they are.

H.3.7 What is wrong with the Marxist theory of the state?

For anarchists, the idea that a state (any state) can be used for socialist ends is simply ridiculous. This is because of the nature of the state as an instrument of minority class rule. As such, it precludes the mass participation required for socialism and would create a new form of class society.

due to a similarity in political conditions in Russia and not similarities in political ideas. If we look at Bakunin’s ideas on social revolution and the workers’ movement we see a fully libertarian perspective — of a movement from the bottom-up, based on the principles of direct action, self-management and federalism. Anarchists since his death have applied these ideas to the specific anarchist organisation as well, rejecting the non-libertarian elements of Bakunin’s ideas which Stack correctly (if somewhat hypocritically and dishonestly) denounces. All in all, Stack has shown himself to be a hypocrite or, at best, a “most reactionary philistine” (to use Lenin’s choice expression).

In addition, it would be useful to evaluate the effectiveness of Stack’s Leninist alternative. Looking at the outcome of the Russian Revolution, we can only surmise that it is not very effective. This was because its goal is meant to be a socialist society based on soviet democracy. Did the Russian Revolution actually result in such a society? Far from it. The Kronstadt revolt was repressed in 1921 because it demanded soviet democracy. Nor was this an isolated example. The Bolsheviks had been disbanding soviets with elected non-Bolshevik majorities since early 1918 (i.e. before the start of the Civil War) and by 1920 leading Bolsheviks were arguing that dictatorship of the proletariat could only be expressed by means of the dictatorship of the party. Clearly, the Bolshevik method is hardly “effective” in the sense of achieving its stated goals. Nor was it particularly effective before the revolution either. During the 1905 revolution, the Bolsheviks opposed the councils of workers’ deputies (soviets) which had been formed and gave them an ultimatum: either accept the programme of the Bolsheviks or else disband! The soviets ignored them. In February 1917 the Bolshevik party opposed the actions that produced the revolution which overthrew the Tsar. Simply put, the one event that validates the Bolshevik model is the October Revolution of 1917 and even that failed (see section H.5.12).
Moreover, it backfires on his own politics. The very issues which Stack raises as being “elitist” in Bakunin (secret and open organisation, centralisation, top-down decision making) are shared by Lenin. Given that no other anarchist organisation has ever followed the Alliance structure (and, indeed, it is even doubtful the Alliance followed it!), it makes a mockery of the scientific method to base a generalisation on an exception rather than the norm (indeed, the only exception). For Stack to use Bakunin’s ideas on this issue as some kind of evidence against anarchism staggers belief. Given that anarchists reject Bakunin’s ideas on this subject while Leninists continue to subscribe to Lenin’s, it is very clear that Stack is being extremely hypocritical in this matter.

One of Stack’s comrades in the SWP highlighted another of the great Marxist myths about anarchist organisation when he stated categorically that “[a]ll the major anarchist organisations in history have been centralised but have operated in secret.” As evidence they echo Stack’s distortions of Bakunin’s Alliance before stating that the “anarchist organisation inside the Spanish C.N.T., the F.A.I., was centralised and secret. A revolutionary party thrives on open debate and common struggle with wider groups of workers.” [Socialist Worker, no. 1714, 16/09/2000]

It is just as well it stated “all the major anarchist organisations” as it is vague enough to allow the denial of obvious counter-examples as not being “major” enough. We can point to hundreds of anarchist organisations that are/were not secret. For example, the Italian Anarchist Union (UAI) was a non-secret organisation. Given that it had around 20,000 members in 1920, we wonder by what criteria the SWP excludes it from being a “major anarchist organisation”? After all, estimates of the membership of the F.A.I. vary from around 6,000 to around 30,000. Bakunin’s “Alliance” amounted to, at most, under 100. In terms of size, the UAI was equal to the F.A.I. and outnumbered the “Alliance” considerably. Why was the UAI not a “major anarchist organisation”? Then there are the French anarchist organisations. In the 1930, the Union Anarchiste had comparing Engels glowing predictions for these parties and their actual performance (in the case of Spain and Italy, his comments seem particularly ironic).

As regards Bolshevism itself, the one “revolutionary” party in the world, it avoided the fate of its sister parties simply because there was no question of applying social democratic tactics within bourgeois institutions as these did not exist in Tsarist Russia. Moreover, the net result of its seizure of power was, first, a party dictatorship and state capitalism under Lenin, then their intensification under Stalin and the creation of a host of Trotskyist sects who spend a considerable amount of time justifying and rationalising the ideology and actions of the Bolshevists which helped create the Stalinism. Given the fate of Bolshevism in power, Bookchin simply stated the obviously:

“None of the authoritarian technics of change has provided successful ‘paradigms’, unless we are prepared to ignore the harsh fact that the Russian, Chinese, and Cuban ‘revolutions’ were massive counterrevolutions that blight our entire century.” [The Ecology of Freedom, p. 446]

Clearly, a key myth of Marxism is the idea that it has been a successful movement. In reality, its failures have been consistent and devastating so suggesting it is time to re-evaluate the whole ideology and embrace a revolutionary theory like anarchism. Indeed, it would be no exaggeration to argue that every “success” of Marxism has, in fact, proved that the anarchist critique of Marxism was correct. Thus, as Bakunin predicted, the Social-Democratic parties became reformist and the “dictatorship of the proletariat” became the “dictatorship over the proletariat.” With “victories” like these, Marxism does not need failures! Thus Murray Bookchin:

“A theory which is so readily ‘vulgarised,’ ‘betrayed,’ or, more sinisterly, institutionalised into bureaucratic
has been many anarchistic revolutions which, while ultimately de-
feated, show the validity of anarchist theory (the ones in Spain and
in the Ukraine being the most significant). Moreover, there have
been serious revolutionary anarchist movements across the world,
the majority of them crushed by state repression (usually fascist
or communist based). However, this is not the most important is-
issue, which is the fate of these “successful” Marxist movements and
revolutions. The fact that there has never been a “Marxist” revolu-
tion which has not become a party dictatorship proves the need to
critique Marxism.

So, given that Marxists argue that Marxism is the revolutionary
working class political theory, its actual track record has been ap-
palling. After all, while many Marxist parties have taken part in
revolutions and even seized power, the net effect of their “success”
have been societies bearing little or no relationship to socialism.
Rather, the net effect of these revolutions has been to discredit so-
cialism by associating it with one-party states presiding over state
capitalist economies.

Equally, the role of Marxism in the labour movement has also
been less than successful. Looking at the first Marxist movement,
social democracy, it ended by becoming reformist, betraying social-
ist ideas by (almost always) supporting their own state during the
First World War and going so far as crushing the German revolu-
tion and betraying the Italian factory occupations in 1920. Indeed,
Trotsky stated that the Bolshevik party was “the only revolu-
tionary” section of the Second International, which is a damning in-
dictment of Marxism. [Stalin, vol. 1, p. 248] Just as damning is the
fact that neither Lenin or Trotsky noticed it before 1914! In fact,
Lenin praised the “fundamentals of parliamentary tactics” of Ger-
man and International Social Democracy, expressing the opinion
that they were “at the same time implacable on questions of principle
and always directed to the accomplishment of the final aim” in his
298] For those that way inclined, some amusement can be gathered
over 2,000 members, an influential newspaper and organised many
successful public meetings and campaigns (see David Berry’s A
History of the French Anarchist movement, 1917–1945 for
details). Surely that counts as a “major anarchist organisation”? Today, the French Anarchist Federation has a weekly newspaper
and groups all across France as well as in Belgium. That is not se-
cret and is one of the largest anarchist organisations in the world.
We wonder why the SWP excluded such examples? Needless to
say, all of these were based on federal structures rather than cen-
tralised ones.

As for the Spanish Anarchists, the common Leninist notion that
it was centralised seems to flow from Felix Morrow’s assertion that
“Spanish Anarchism had in the FAI a highly centralised party appara-
tus through which it maintained control of the CNT.” [Revolution
and Counter-Revolution in Spain, p. 100] Like the SWP, no
attempt was made to provide evidence to support this claim. It un-
doubtedly flows from the dogmatic Leninist belief that centralism
is automatically more efficient than federalism combined with the
fact that the Leninists could not take over the CNT. However, in
reality, the FAI neither controlled the CNT nor was it centralised
or secret.

The FAI — the Iberian Anarchist Federation — was a federation
of regional federations (including the Portuguese Anarchist Union).
These regional federations, in turn, were federations of highly
autonomous anarchist affinity groups. “Like the CNT,” noted
Murray Bookchin, “the FAI was structured along confederal lines
... Almost as a matter of second nature, dissidents were permitted a
considerable amount of freedom in voicing and publishing material
against the leadership and established policies.” The FAI “was
more loosely jointed as an organisation than many of its admirers
and critics seem to recognise. It has no bureaucratic apparatus, no
membership cards or dues, and no headquarters with paid officials,
secretaries, and clerks... They jealously guarded the autonomy of
their affinity groups from the authority of higher organisational
bodies — a state of mind hardly conducive to the development of a tightly knit, vanguard organisation. . . . It had no official program by which all faistas could mechanically guide their actions.” [The Spanish Anarchists, pp. 197–8] So regardless of Morrow’s claims, the FAI was a federation of autonomous affinity groups in which, as one member put it, “[e]ach FAI group thought and acted as it deemed fit, without bothering about what the others might be thinking or deciding . . . they had no . . . opportunity or jurisdiction . . . to foist a party line upon the grass-roots.” [Francisco Carrasquer, quoted by Stuart Christie, We, the Anarchists!, p. 28]

Was the F.A.I. a “secret” organisation? When it was founded in 1927, Spain was under the dictatorship of Primo de Rivera and so it was illegal and secret by necessity. As Stuart Christie correctly notes, “[a]s an organisation publicly committed to the overthrow of the dictatorship, the F.A.I. functioned, from 1927 to 1931, as an illegal rather than a secret organisation. From the birth of the Republic in 1931 onwards, the F.A.I. was simply an organisation which, until 1937, refused to register as an organisation as required by Republican Law.” [Op. Cit., p. 24] Thus it was illegal rather than secret. As one anarchist militant asked, “[i]f it was secret, how come I was able to attend F.A.I. meetings without ever having joined or paid dues to the ‘specific’ organisation?” [Francesco Carrasquer, quoted by Christie, Op. Cit., p. 24] The organisation held public meetings, attended by thousands, as well as journals and newspapers. Its most notable members, such as Durruti, hardly kept their affiliation secret. Moreover, given the periods of repression suffered by the Spanish libertarian movement throughout its history (including being banned and forced underground during the Republic) being an illegal organisation made perfect sense. The SWP, like most Marxists, ignore historical context and so mislead the reader.

Did the F.A.I. ignore “open debate and common struggle.” No, of course not. The members of the F.A.I. were also members of the C.N.T. The C.N.T. was based around mass assemblies in which all members could speak. It was here that members of the F.A.I. took to the side of centralisation, direct democracy to the side of delegated power, libertarian institutions to the side of bureaucracy, and spontaneity to the side of authority. Such a line, like a physical barrier, must irrevocably separate a libertarian zone of theory and practice from the hybridised socialisms that tend to denature it. This zone must build its anti-authoritarian, utopian, and revolutionary commitments into the very recognition it has of itself, in short, into the very way it defines itself. . . . to admit of domination is to cross the line that separates the libertarian zone from the [state] socialist.” [Op. Cit., pp. 223–4]

Unless we know exactly what we aim for, how to get there and who our real allies are we will get a nasty surprise once our self-proclaimed “allies” take power. As such, any attempt to appropriate anarchist rhetoric into an authoritarian ideology will simply fail and become little more than a mask obscuring the real aims of the party in question. As history shows.

**H.3.6 Is Marxism the only revolutionary politics which have worked?**

Some Marxists will dismiss our arguments, and anarchism, out of hand. This is because anarchism has not lead a “successful” revolution while Marxism has. The fact, they assert, that there has never been a serious anarchist revolutionary movement, let alone a successful anarchist revolution, in the whole of history proves that Marxism works. For some Marxists, practice determines validity. Whether something is true or not is not decided intellectually in wordy publications and debates, but in reality.

For Anarchists, such arguments simply show the ideological nature of most forms of Marxism. The fact is, of course, that there
“liberation for the masses of humanity" it “puts paid to the age of miracles — miracles from Heaven, miracles from the State — and, in contraposition to hopes vested in ‘providence’ (no matter what they may be) it announces that it will act upon the maxim: salvation lies within ourselves!” [Op. Cit., p. 3] As such, they draw upon anarchistic ideas and rhetoric (for many, undoubtedly unknowingly) and draw anarchistic conclusions. This can be seen from the works of the leading US Autonomist Marxist Harry Cleaver. His excellent essay “Kropotkin, Self-Valorisation and the Crisis of Marxism” is by far the best Marxist account of Kropotkin’s ideas and shows the similarities between communist-anarchism and Autonomist Marxism. [Anarchist Studies, vol.2, no. 2, pp. 119–36] Both, he points out, share a "common perception and sympathy for the power of workers to act autonomously" regardless of the "substantial differences" on other issues. [Reading Capital Politically, p. 15]

As such, the links between the best Marxists and anarchism can be substantial. This means that some Marxists have taken on board many anarchist ideas and have forged a version of Marxism which is basically libertarian in nature. Unfortunately, such forms of Marxism have always been a minority current within it. Most cases have seen the appropriation of anarchist ideas by Marxists simply as part of an attempt to make mainstream, authoritarian Marxism more appealing and such borrowings have been quickly forgotten once power has been seized.

Therefore appropriation of rhetoric and labels should not be confused with similarity of goals and ideas. The list of groupings which have used inappropriate labels to associate their ideas with other, more appealing, ones is lengthy. Content is what counts. If libertarian sounding ideas are being raised, the question becomes one of whether they are being used simply to gain influence or whether they signify a change of heart. As Bookchin argued:

“Ultimately, a line will have to be drawn that, by definition, excludes any project that can tip decentralisation part in forming C.N.T. policy along with other C.N.T. members. Anarchists in the C.N.T. who were not members of the F.A.I. indicate this. Jose Borras Casacarosa noted that “[o]ne has to recognise that the F.A.I. did not intervene in the C.N.T. from above or in an authoritarian manner as did other political parties in the unions. It did so from the base through militants … the decisions which determined the course taken by the C.N.T. were taken under constant pressure from these militants.” Jose Campos states that F.A.I. militants “tended to reject control of confederal committees and only accepted them on specific occasions … if someone proposed a motion in assembly, the other F.A.I. members would support it, usually successfully. It was the individual standing of the faista in open assembly.” [quoted by Stuart Christie, Op. Cit., p. 62] It should be remembered that at union conferences and congresses the “delegates, whether or not they were members of the FAI, were presenting resolutions adopted by their unions at open membership meetings. Actions taken at the congress had to be reported back to their unions at open meetings, and given the degree of union education among the members, it was impossible for delegates to support personal, non-representative positions.” [Juan Gomez Casas, Anarchist Organisation: The History of the FAI, p. 121]

Significantly, it should be noted that Morrow was re-cycling an argument which was produced by the reformist wing of the CNT in the 1930s after it had lost influence in the union rank-and-file (“The myth of the FAI as conqueror and ruler of the CNT was created basically by the Treinistas.” [Juan Gomez Casas, Op. Cit., p. 134]). That a Trotskyist should repeat the arguments of failed bureaucrats in the CNT is not too surprising in that Trotskyism itself is simply the ideology of Russian failed bureaucrats.

Clearly, the standard Marxist account of anarchist organisations leave a lot to be desired. They concentrate on just one or two examples (almost always Bakunin’s Alliance or the FAI, usually both) and ignore the vast bulk of anarchist organisations. Their accounts of the atypical organisations they do pick is usually flawed, partic-
ularly in the case of the FAI where they simply do not understand the historic context nor how it actually did organise. Finally, somewhat ironically, in their attacks on Bakunin’s ideas they fail to note the similarities between his ideas and Lenin’s and, equally significantly, the key areas in which they differ. All in all, anarchists would argue that it is Leninist ideas on the vanguard party which are “elitist,” “ineffective” and “downright bizarre.” As we discuss in section H.5, the only thing the Leninist “revolutionary” party is effective for is replacing one set of bosses with a new set (the leaders of the party).

“A novel factor has appeared on the labour market: the will of the worker! And this factor, not pertinent when it comes to setting the price of a bushel of potatoes, has a bearing upon the setting of wages; its impact may be large or small, according to the degree of tension of the labour force which is a product of the accord of individual wills beating in unison — but, whether it be strong or weak, there is no denying it.

“Thus, worker cohesion conjures up against capitalist might a might capable of standing up to it. The inequality between the two adversaries — which cannot be denied when the exploiter is confronted only by the working man on his own — is redressed in proportion with the degree of cohesion achieved by the labour bloc. From then on, proletarian resistance, be it latent or acute, is an everyday phenomenon: disputes between labour and capital quicken and become more acute. Labour does not always emerge victorious from these partial struggles: however, even when defeated, the struggle workers still reap some benefit: resistance from them has obstructed pressure from the employers and often forced the employer to grant some of the demands put.” [Op. Cit., p. 10]

The best currents of Autonomist Marxism share this anarchist stress on the power of working people to transform society and to impact on how capitalism operates. Unsurprisingly, most Autonomist Marxists reject the idea of the vanguard party and instead, like the council communists, stress the need for autonomist working class self-organisation and self-activity (hence the name!). They agree with Pouget when he argued that direct action “spells
“By way of evidence of the relentless operation of this law of wages, comparisons were made between the worker and a commodity: if there is a glut of potatoes on the market, they are cheap; if they are scarce, the price rises ... It is the same with the working man, it was said: his wages fluctuate in accordance with the plentiful supply or dearth of labour!

“No voice was raised against the relentless arguments of this absurd reasoning: so the law of wages may be taken as right ... for as long as the working man [or woman] is content to be a commodity! For as long as, like a sack of potatoes, she remains passive and inert and endures the fluctuations of the market ... For as long as he bends his back and puts up with all of the bosses’ snubs, ... the law of wages obtains.

“But things take a different turn the moment that a glimmer of consciousness stirs this worker-potato into life. When, instead of doomming himself to inertia, spinelessness, resignation and passivity, the worker wakes up to his worth as a human being and the spirit of revolt washes over him: when he bestirs himself, energetic, wilful and active ... [and] once the labour bloc comes to life and bestirs itself ... then, the laughable equilibrium of the law of wages is undone.” [Emile Pouget, Direct Action, pp. 9–10]

And Marx, indeed, had compared the worker to a commodity, stating that labour power “is a commodity, neither more nor less than sugar. The former is measured by the clock, the latter by the scale.” [Selected Works, p. 72] However, as Castoridias argued, unlike sugar the extraction of the use value of labour power “is not a technical operation; it is a process of bitter struggle in which half the time, so to speak, the capitalists turn out to be losers.” [Op. Cit., p.

H.3 What are the myths of state socialism?

Ask most people what socialism means and they will point to the Soviet Union, China, Cuba and a host of other authoritarian, centralised, exploitative and oppressive party dictatorships. These regimes have in common two things. Firstly, the claim that their rulers are Marxists or socialists. Secondly, that they have successfully alienated millions of working class people from the very idea of socialism. Indeed, the supporters of capitalism simply had to describe the “socialist paradises” as they really are in order to put people off socialism. The Stalinist regimes and their various apologists (and even “opponents”, like the Trotskyists, who defended them as “degenerated workers’ states”) let the bourgeoisie have an easy time in dismissing all working-class demands and struggles as so many attempts to set up similar party dictatorships.

The association of “socialism” or “communism” with these dictatorships has often made anarchists wary of calling themselves socialists or communists in case our ideas are associated with them. As Errico Malatesta argued in 1924:

“I foresee the possibility that the communist anarchists will gradually abandon the term ‘communist’: it is growing in ambivalence and falling into disrepute as a result of Russian ‘communist’ despotism. If the term is eventually abandoned this will be a repetition of what happened with the word ‘socialist.’ We who, in Italy at least, were the first champions of socialism and maintained
and still maintain that we are the true socialists in the broad and human sense of the word, ended by abandoning the term to avoid confusion with the many and various authoritarian and bourgeois deviations of socialism. Thus too we may have to abandon the term ‘communist’ for fear that our ideal of free human solidarity will be confused with the avaricious despotism which has for some time triumphed in Russia and which one party, inspired by the Russian example, seeks to impose worldwide.” [The Anarchist Revolution, p. 20]

That, to a large degree happened with anarchists simply calling themselves by that name (without adjectives) or libertarians to avoid confusion. This, sadly, resulted in two problems. Firstly, it gave Marxists even more potential to portray anarchism as being primarily against the state and not being as equally opposed to capitalism, hierarchy and inequality (as we argue in section H.2.4, anarchists have opposed the state as just one aspect of class and hierarchical society). Secondly, extreme right-wingers tried to appropriate the names "libertarian" and "anarchist" to describe their vision of extreme capitalism as “anarchism,” they claimed, was simply “anti-government” (see section F for discussion on why “anarcho-capitalism is not anarchist). To counter these distortions of anarchist ideas, many anarchists have re-appropriated the use of the words “socialist” and “communist,” although always in combination with the words “anarchist” and “libertarian.”

Such combination of words is essential as the problem Malatesta predicted still remains. If one thing can be claimed for the 20th century, it is that it has seen the word “socialism” become narrowed and restricted into what anarchists call “state socialism” — socialism created and run from above, by the state (i.e. by the state bureaucracy and better described as state capitalism). This restriction of “socialism” has been supported by both Stalinist and Capitalist ruling elites, for their own reasons (the former to secure it — is, as for any commodity, completely determined by the use, since its exchange value — wages — is determined solely by the laws of the market ... This postulate is necessary for there to be a ‘science of economics’ along the physico-mathematical model Marx followed ... But he contradicts the most essential fact of capitalism, namely, that the use value and exchange value of labour power are objectively indeterminate; they are determined rather by the struggle between labour and capital both in production and in society. Here is the ultimate root of the ‘objective’ contradictions of capitalism ... The paradox is that Marx, the ‘inventor’ of class struggle, wrote a monumental work on phenomena determined by this struggle in which the struggle itself was entirely absent.” [Political and Social Writings, vol. 2, pp. 202–3] Castoriadis explained the limitations of Marx’s vision most famously in his "Modern Capitalism and Revolution." [Op. Cit., pp. 226–343]

By rejecting this heritage which mainstream Marxism bases itself on and stressing the role of class struggle, Autonomist Marxism breaks decisively with the Marxist mainstream and embraces a position previously associated with anarchists and other libertarian socialists. The key role of class struggle in invalidating all deterministic economic “laws” was expressed by French syndicalists at the start of the twentieth century. This insight predated the work of Castoriadis and the development of Autonomist Marxism by over 50 years and is worth quoting at length:

“the keystone of socialism ... proclaimed that ‘as a general rule, the average wage would be no more than what the worker strictly required for survival’. And it was said: ‘That figure is governed by capitalist pressure alone and this can even push it below the minimum necessary for the working man’s subsistence ... The only rule with regard to wage levels is the plentiful or scarce supply of man-power ...’
for those ideas are just generalisations derived from past working class struggles! If anarchism ideas are applied spontaneously by those in struggle, it is because those involved are themselves drawing similar conclusions from their own experiences.

The other fact is that while mainstream Marxism often appropriated certain aspects of libertarian theory and practice, it does so selectively and places them into an authoritarian context which undermines their libertarian nature. Hence anarchist support for workers councils becomes transformed by Leninists into a means to ensure party power (i.e. state authority) rather than working class power or self-management (i.e. no authority). Similarly, anarchist support for leading by example becomes transformed into support for party rule (and often dictatorship). Ultimately, the practice of mainstream Marxism shows that libertarian ideas cannot be transplanted selectively into an authoritarian ideology and be expected to blossom.

Significantly, those Marxists who do apply anarchist ideas honestly are usually labelled by their orthodox comrades as “anarchists.” As an example of Marxists appropriating libertarian ideas honestly, we can point to the council communist and currents within Autonomist Marxism. The council communists broke with the Bolsheviks over the question of whether the party would exercise power or whether the workers’ councils would. Needless to say, Lenin labelled them an “anarchist deviation.” Currents within Autonomist Marxism have built upon the council communist tradition, stressing the importance of focusing analysis on working class struggle as the key dynamic in capitalist society.

In this they go against the mainstream Marxist orthodoxy and embrace a libertarian perspective. As libertarian socialist Cornelius Castoriadis argued, “the economic theory expounded [by Marx] in Capital is based on the postulate that capitalism has managed completely and effectively to transform the worker — who appears there only as labour power — into a commodity; therefore the use value of labour power — the use the capitalist makes of their own power and gain support by associating themselves with socialist ideals, the latter by discrediting those ideas by associating them with the horror of Stalinism). The Stalinist “leadership thus portrays itself as socialist to protect its right to wield the club, and Western ideologists adopt the same pretence in order to forestall the threat of a more free and just society.” The latter use it as “a powerful ideological weapon to enforce conformity and obedience,” to “ensure that the necessity to rent oneself to the owners and managers of these capitalist institutions will be regarded as virtually a natural law, the only alternative to the ‘socialist’ dungeon.” In reality, “if there is a relation” between Bolshevism and socialism, “it is the relation of contradiction.” [“The Soviet Union versus Socialism”, pp. 47–52, The Radical Papers, Dimitrios I. Roussopoulos (ed.), pp. 47–8]

This means that anarchists and other libertarian socialists have a major task on their hands — to reclaim the promise of socialism from the distortions inflicted upon it by both its enemies (Stalinists and capitalists) and its erstwhile and self-proclaimed supporters (Social Democracy and its offspring Bolshevism). A key aspect of this process is a critique of both the practice and ideology of Marxism and its various offshoots. Only by doing this can anarchists prove, to quote Rocker, that “Socialism will be free, or it will not be at all.” [Anarcho-Syndicalism, p. 14]

Such a critique raises the problem of which forms of “Marxism” to discuss. There is an extremely diverse range of Marxist viewpoints and groups in existence. Indeed, the different groups spend a lot of time indicating why all the others are not “real” Marxists (or Marxist-Leninists, or Trotskyists, and so on) and are just “sects” without “real” Marxist theory or ideas. This “diversity” is, of course, a major problem (and somewhat ironic, given that some Marxists like to insult anarchists by stating there are as many forms of anarchism as anarchists!). Equally, many Marxists go further than dismissing specific groups. Some even totally reject other branches of their movement as being non-Marxist (for example, some Marxists dismiss Leninism as having little, or nothing, to do with what
they consider the “real” Marxist tradition to be). This means that discussing Marxism can be difficult as Marxists can argue that our FAQ does not address the arguments of this or that Marxist thinker, group or tendency.

With this in mind, this section of the FAQ will concentrate on the works of Marx and Engels (and so the movement they generated, namely Social Democracy) as well as the Bolshevik tradition started by Lenin and continued (by and large) by Trotsky. These are the core thinkers (and the recognised authorities) of most Marxists and so latter derivations of these tendencies can be ignored (for example Maoism, Castroism and so on). It should also be noted that even this grouping will produce dissent as some Marxists argue that the Bolshevik tradition is not part of Marxism. This perspective can be seen in the “impossibilist” tradition of Marxism (e.g. the Socialist Party of Great Britain and its sister parties) as well as in the left/council communist tradition (e.g. in the work of such Marxists as Anton Pannekoek and Paul Mattick). The arguments for their positions are strong and well worth reading (indeed, any honest analysis of Marxism and Leninism cannot help but show important differences between the two). However, as the vast majority of Marxists today are also Leninists, we have to reflect this in our FAQ (and, in general, we do so by referring to “mainstream Marxists” as opposed to the small minority of libertarian Marxists).

Another problem arises when we consider the differences not only between Marxist tendencies, but also within a specific tendency before and after its representatives seize power. For example, as Chomsky pointed out, “there are ... very different strains of Leninism ... there’s the Lenin of 1917, the Lenin of the ‘April Theses’ and State and Revolution. That’s one Lenin. And then there’s the Lenin who took power and acted in ways that are unrecognisable ... compared with, say, the doctrines of ‘State and Revolution.’ ... this [is] not very hard to explain. There’s a big difference between the libertarian doctrines of a person who is trying to associate himself with a mass popular movement to acquire power and the authoritarian the Commune had such that ideal aiming at decentralisation which Marx and Engels did not have, and the leaders of the Revolution of 1871 tried, albeit with inadequate powers, to begin the realisation of that idea in the midst of revolution.” [Paths in Utopia, pp. 103–4]

Thus, while the Paris Commune and other working class revolts are praised, their obvious anarchistic elements (which were usually often predicted by anarchist thinkers) are not mentioned. This results in some strange dichotomies. For example, Bakunin’s vision of revolution is based on a federation of workers’ councils, predating Marxist support for such bodies by decades, yet Marxists argue that Bakunin’s ideas have nothing to teach us. Or, the Paris Commune being praised by Marxists as the first “dictatorship of the proletariat” when it implements federalism, delegates being subjected to mandates and recall and raises the vision of a socialism of associations while anarchism is labelled “petit-bourgeois” in spite of the fact that these ideas can be found in works of Proudhon and Bakunin which predate the 1871 revolt!

From this, we can draw two facts. Firstly, anarchism has successfully predicted certain aspects of working class revolution. Anarchist K.J. Kenafick stated the obvious when he argues that any “comparison will show that the programme set out [by the Paris Commune] is ... the system of Federalism, which Bakunin had been advocating for years, and which had first been enunciated by Proudhon. The Proudhonists ... exercised considerable influence in the Commune. This ‘political form’ was therefore not ‘at last’ discovered; it had been discovered years ago; and now it was proven to be correct by the very fact that in the crisis the Paris workers adopted it almost automatically, under the pressure of circumstance, rather than as the result of theory, as being the form most suitable to express working class aspirations.” [Michael Bakunin and Karl Marx, pp. 212–3] Rather than being somehow alien to the working class and its struggle for freedom, anarchism in fact bases itself on the class struggle. This means that it should come as no surprise when the ideas of anarchism are developed and applied by those in struggle,
people talk of ‘workers’ control’ as if a) they meant by those words what the politically unsophisticated mean (i.e. that working people should themselves decide about the fundamental matters relating to production) and b) as if they — and the Leninist doctrine to which they claim to adhere — had always supported demands of this kind, or as if Leninism had always seen in workers’ control the universally valid foundation of a new social order, rather than just a slogan to be used for manipulatory purposes in specific and very limited historical contexts.” [Maurice Brinton, *The Bolsheviks and Workers’ Control*, p. iv] This clash between the popular idea of workers’ control and the Leninist one was a key reason for the failure of the Russian Revolution precisely because, once in power, the latter was imposed.

Thus the fact that Leninists have appropriated libertarian (and working class) ideas and demands does not, in fact, mean that we aim for the same thing (as we discussed in section H.3.1, this is far from the case). The use of anarchist/popular rhetoric and slogans means little and we need to look at the content of the ideas proposed. Given the legacy of the appropriation of libertarian terminology to popularise authoritarian parties and its subsequent jettison in favour of authoritarian policies once the party is in power, anarchists have strong grounds to take Leninist claims with a large pinch of salt!

Equally with examples of actual revolutions. As Martin Buber noted, while “Lenin praises Marx for having ‘not yet, in 1852, put the concrete question as to what should be set up in place of the State machinery after it had been abolished,’” Lenin argued that “it was only the Paris Commune that taught Marx this.” However, as Buber correctly pointed out, the Paris Commune “was the realisation of the thoughts of people who had put this question very concretely indeed … the historical experience of the Commune became possible only because in the hearts of passionate revolutionaries there lived the picture of a decentralised, very much ‘de-Stated’ society, which picture they undertook to translate into reality. The spiritual fathers of power of somebody who’s taken power and is trying to consolidate it... that is true of Marx also. There are competing strains in Marx.” As such, this section of our FAQ will try and draw out the contradictions within Marxism and indicate what aspects of the doctrine aided the development of the “second” Lenin for the seeds from which authoritarianism grew post-October 1917 existed from the start. Anarchists agree with Chomsky, namely that he considered it “characteristic and unfortunate that the lesson that was drawn from Marx and Lenin for the later period was the authoritarian lesson. That is, it’s the authoritarian power of the vanguard party and destruction of all popular forums in the interests of the masses. That’s the Lenin who became know to later generations. Again, not very surprisingly, because that’s what Leninism really was in practice.” [Language and Politics, p. 152]

Ironically, given Marx’s own comments on the subject, a key hindrance to such an evaluation is the whole idea and history of Marxism itself. While, as Murray Bookchin noted “to his lasting credit,” Marx tried (to some degree) “to create a movement that looks to the future instead of to the past,” his followers have not done so. “Once again,” Bookchin argued, “the dead are walking in our midst — ironically, draped in the name of Marx, the man who tried to bury the dead of the nineteenth century. So the revolution of our own day can do nothing better than parody, in turn, the October Revolution of 1918 and the civil war of 1918–1920 … The complete, all-sided revolution of our own day … follows the partial, the incomplete, the one-sided revolutions of the past, which merely changed the form of the ‘social question,’ replacing one system of domination and hierarchy by another.” [Post-Scarcity Anarchism, p. 108 and p. 109] In Marx’s words, the “tradition of all the dead generations weighs down like a nightmare on the brain of the living.” Yet his own work, and the movements it inspired, now add to this dead-weight. In order to ensure, as Marx put it, the social revolution draws is poetry from the future rather than the past, Marxism itself must be transcended.
Which, of course, means evaluating both the theory and practice of Marxism. For anarchists, it seems strange that for a body of work whose followers stress is revolutionary and liberating, its results have been so bad. If Marxism is so obviously revolutionary and democratic, then why have so few of the people who read it drawn those conclusions? How could it be transmuted so easily into Stalinism? Why are there so few libertarian Marxists, if it were Lenin (or, following Lenin, Social Democracy) which “misinterpreted” Marx and Engels? So when Marxists argue that the problem is in the interpretation of the message not in the message itself, anarchists reply that the reason these numerous, allegedly false, interpretations exist at all simply suggests that there are limitations within Marxism as such rather than the readings it has been subjected to. When something repeatedly fails and produces such terrible results in the progress then there has to be a fundamental flaw somewhere. Thus Cornelius Castoriadis:

“Marx was, in fact, the first to stress that the significance of a theory cannot be grasped independently of the historical and social practice it inspires and initiates, to which it gives rise, in which it prolongs itself and under cover of which a given practice seeks to justify itself.

“Who, today, would dare proclaim that the only significance of Christianity for history is to be found in reading unaltered versions of the Gospels or that the historical practice of various Churches over a period of some 2,000 years can teach us nothing fundamental about the significance of this religious movement? A ‘faithfulness to Marx’ which would see the historical fate of Marxism as something unimportant would be just as laughable. It would in fact be quite ridiculous. Whereas for the Christian the revelations of the Gospels have a transcendental kernel and an intemporal validity, no theory could ever have such qualities in the eyes of a Marxist. To seek to engage in the same misrepresentation on the issue of popular control in *State and Revolution*). [Towards an Ecological Society, p. 227fn]

As such, while Marxists have appropriated certain anarchist concepts, it does not automatically mean that they mean exactly the same thing by them. Rather, as history shows, radically different concepts can be hidden behind similar sounding rhetoric. As Murray Bookchin argued, many Marxist tendencies ‘attach basically alien ideas to the withering conceptual framework of Marxism — not to say anything new but to preserve something old with ideological formaldehyde — to the detriment of any intellectual growth that the distinctions are designed to foster. This is mystification at its worst, for it not only corrupts ideas but the very capacity of the mind to deal with them. If Marx’s work can be rescued for our time, it will be by dealing with it as an invaluable part of the development of ideas, not as pastiche that is legitimated as a ‘method’ or continually ‘updated’ by concepts that come from an alien zone of ideas.” [Op. Cit., p. 242f]

This is not some academic point. The ramifications of Marxists appropriating such “alien ideas” (or, more correctly, the rhetoric associated with those ideas) has had negative impacts on actual revolutionary movements. For example, Lenin’s definition of “workers’ control” was radically different than that current in the factory committee movement during the Russian Revolution (which had more in common with anarchist and syndicalist use of the term). The similarities in rhetoric allowed the factory committee movement to put its weight behind the Bolsheviks. Once in power, Lenin’s position was implemented while that of the factory committees was ignored. Ultimately, Lenin’s position was a key factor in creating state capitalism rather than socialism in Russia (see section H.3.14 for more details).

This, of course, does not stop modern day Leninists appropriating the term workers’ control “without batting an eyelid. Seeking to capitalise on the confusion now rampant in the movement, these
lowed the anarchist ideas of a what a general strike would be like quite closely. Little wonder, then, that Kropotkin argued that the 1905 general strike “demonstrated” that the Latin workers who had been advocating the general strike “as a weapon which would irresistible in the hands of labour for imposing its will” had been “right.”

[Selected Writings on Anarchism and Revolution, p. 288]

So, contra Luxemburg, “the fatherland of Bakunin” was not “the burial-place of [anarchism’s] teachings.” [Op. Cit., p. 157] As Nicholas Walter argued, while the numbers of actual anarchists was small, “the 1905 Revolution was objectively an anarchist revolution. The military mutinies, peasant uprisings and workers’ strikes (culminating in a general strike), led to the establishment of soldiers’ and workers’ councils ... and peasants’ communes, and the beginning of agrarian and industrial expropriation — all along the lines suggested by anarchist writers since Bakunin.” [The Anarchist Past and Other Essays, p. 122] The real question must be when will Marxists realise that quoting Engels does not make it true?

Moreover, without becoming an insurrection, as anarchists had stressed, the limits of the general strike were exposed in 1905. Unlike the some of the syndicalists in the 1890s and 1900s, this limitation was understood by the earliest anarchists. Consequently, they saw the general strike as the start of a revolution and not as the revolution itself. So, for all the Leninist accounts of the 1905 revolution claiming it for their ideology, the facts suggest that it was anarchism, not Marxism, which was vindicated by it. Luxemburg was wrong. The “land of Bakunin’s birth” provided an unsurpassed example of how to make a revolution precisely because it applied (and confirmed) anarchist ideas on the general strike (and, it should be added, workers’ councils). Marxists (who had previously quoted Engels to dismiss such things) found themselves repudiating aspect upon aspect of their dogma to remain relevant. Luxemburg, as Bookchin noted, “grossly misrepresented the anarchist emphasis on the general strike after the 1905 revolution in Russia in order to make it acceptable to Social Democracy.” (he added that Lenin “was to discover the meaning of Marxism only in what Marx wrote (while keeping quiet about what the doctrine has become in history) is to pretend — in flagrant contradiction with the central ideas of that doctrine — that real history doesn’t count and that the truth of a theory is always and exclusively to be found ‘further on.’ It finally comes to replacing revolution by revelation and the understanding of events by the exegesis of texts.” [“The Fate of Marxism,” pp. 75–84 The Anarchist Papers, Dimitrios Roussopoulos (ed.), p. 77]

This does not mean forsaking the work of Marx and Engels. It means rejecting once and for all the idea that two people, writing over a period of decades over a hundred years ago have all the answers. As should be obvious! Ultimately, anarchists think we have to build upon the legacy of the past, not squeeze current events into it. We should stand on the shoulders of giants, not at their feet.

Thus this section of our FAQ will attempt to explain the various myths of Marxism and provide an anarchist critique of it and its offshoots. Of course, the ultimate myth of Marxism is what Alexander Berkman called “The Bolshevik Myth,” namely the idea that the Russian Revolution was a success. However, given the scope of this revolution, we will not discuss it fully here except when it provides useful empirical evidence for our critique (see section H.6 for more on the Russian Revolution). Our discussion here will concentrate for the most part on Marxist theory, showing its inadequacies, its problems, where it appropriated anarchist ideas and how anarchism and Marxism differ. This is a big task and this section of the FAQ can only be a small contribution to it.

As noted above, there are minority trends in Marxism which are libertarian in nature (i.e. close to anarchism). As such, it would be simplistic to say that anarchists are “anti-Marxist” and we generally do differentiate between the (minority) libertarian element and...
the authoritarian mainstream of Marxism (i.e. Social-Democracy and Leninism in its many forms). Without doubt, Marx contributed immensely to the enrichment of socialist ideas and analysis (as acknowledged by Bakunin, for example). His influence, as to be expected, was both positive and negative. For this reason he must be read and discussed critically. This FAQ is a contribution to this task of transcending the work of Marx. As with anarchist thinkers, we must take what is useful from Marx and reject the rubbish. But never forget that anarchists are anarchists precisely because we think that anarchist thinkers have got more right than wrong and we reject the idea of tying our politics to the name of a long dead thinker.

H.3.1 Do Anarchists and Marxists want the same thing?

Ultimately, the greatest myth of Marxism is the idea that anarchists and most Marxists want the same thing. Indeed, it could be argued that it is anarchist criticism of Marxism which has made them stress the similarity of long term goals with anarchism. “Our polemics against [the Marxists],” Bakunin argued, “have forced them to recognise that freedom, or anarchy — that is, the voluntary organisation of the workers from below upward — is the ultimate goal of social development.” He stressed that the means to this apparently similar end were different. The Marxists “say that [a] state yoke, [a] dictatorship, is a necessary transitional device for achieving the total liberation of the people: anarchy, or freedom, is the goal, and the state, or dictatorship, is the means ... We reply that no dictatorship can have any other objective than to perpetuate itself, and that it can engender and nurture only slavery in the people who endure it. Liberty can be created only by liberty, by an insurrection of all the people and the voluntary organisation of the workers from below upwards.” [Statism and Anarchy, p. 179]

Perhaps this is why Engels did not bother to quote a single anarchist when recounting their position on this matter? Needless to say, Leninists continue to parrot Engels assertions to this day. The facts are somewhat different. Clearly, the “anarchist” strategy of overthrowing the bourgeoisie with one big general strike set for a specific date exists only in Marxist heads, nowhere else. Once we remove the distortions promulgated by Engels and repeated by Luxemburg, we see that the 1905 revolution and “historical dialectics” did not, as Luxemburg claim, validate Engels and disprove anarchism. Quite the reverse as the general strikes in Russia fol-
at the September 1 1873 Geneva congress of the anarchist Alliance of Social Democracy, it was “universally admitted that to carry out the general strike strategy, there had to be a perfect organisation of the working class and a plentiful funds.” He noted that that was “the rub” as no government would stand by and “allow the organisation or funds of the workers to reach such a level.” Moreover, the revolution would happen long before “such an ideal organisation” was set up and if they had been “there would be no need to use the round-about way of a general strike” to achieve it. [Collected Works, vol. 23, pp. 584–5]

Rosa Luxemburg repeated Engels arguments in her essay “The Mass Strike, the Political Party and the Trade Unions” in order to show how her support for the general strike was in no way contrary to Marxism. [Rosa Luxemburg Speaks, pp. 153–218] Her “mass strike” was different from the anarchist “general strike” as mocked by Engels as it was dynamic process and could not be seen as one act, one isolated action which overthrows the bourgeoisie. Rather, the mass strike to the product of the everyday class struggle within society, leads to a direct confrontation with the capitalist state and so it was inseparable from the revolution.

The only problem with all this is that the anarchists did not actually argue along the lines Engels and Luxemburg claimed. Most obviously, as we indicated in section H.2.8, Bakunin saw the general strike as a dynamic process which would not be set for a specific date and did not need all workers to be organised before hand. As such, Bakunin’s ideas are totally at odds with Engels assertions on what anarchist ideas on the general strike were about (they, in fact, reflect what actually happened in 1905).

But what of the “Bakuninists”? Again, Engels account leaves a lot to be desired. Rather than the September 1873 Geneva congress being, as he claimed, of the (disbanded) Alliance of Social Democracy, it was in fact a meeting of the non-Marxist federations of the First International. Contra Engels, anarchists did not see the general strike as requiring all workers to be perfectly organised and

As such, it is commonly taken for granted that the ends of both Marxists and Anarchists are the same, we just disagree over the means. However, within this general agreement over the ultimate end (a classless and stateless society), the details of such a society are somewhat different. This, perhaps, is to be expected given the differences in means. As is obvious from Bakunin’s argument, anarchists stress the unity of means and goals, that the means which are used affect the goal reached. This unity between means and ends is expressed well by Martin Buber’s observation that “[a]nthing is possible only in the nature of things expect a little tree that has been turned into a club to put forth leaves.” [Paths in Utopia, p. 127] In summary, we cannot expect to reach our end destination if we take a path going in the opposite direction. As such, the agreement on ends may not be as close as often imagined.

So when it is stated that anarchists and state socialists want the same thing, the following should be borne in mind. Firstly, there are key differences on the question of current tactics. Secondly, there is the question of the immediate aims of a revolution. Thirdly, there is the long term goals of such a revolution. These three aspects form a coherent whole, with each one logically following on from the last. As we will show, the anarchist and Marxist vision of each aspect are distinctly different, so suggesting that the short, medium and long term goals of each theory are, in fact, different. We will discuss each aspect in turn.

First, there is the question of the nature of the revolutionary movement. Here anarchists and most Marxists have distinctly opposing ideas. The former argue that both the revolutionary organisation (i.e. an anarchist federation) and the wider labour movement should be organised in line with the vision of society which inspires us. This means that it should be a federation of self-managed groups based on the direct participation of its membership in the decision making process. Power, therefore, is decentralised and there is no division between those who make the decisions and those who execute them. We reject the idea
of others acting on our behalf or on behalf of the people and so urge the use of direct action and solidarity, based upon working class self-organisation, self-management and autonomy. Thus, anarchists apply their ideas in the struggle against the current system, arguing what is “efficient” from a hierarchical or class position is deeply inefficient from a revolutionary perspective.

Marxists disagree. Most Marxists are also Leninists. They argue that we must form a “vanguard” party based on the principles of “democratic centralism” complete with institutionalised and hierarchical leadership. They argue that how we organise today is independent of the kind of society we seek and that the party should aim to become the recognised leadership of the working class. Every thing they do is subordinated to this end, meaning that no struggle is seen as an end in itself but rather as a means to gaining membership and influence for the party until such time as it gathers enough support to seize power. As this is a key point of contention between anarchists and Leninists, we discuss this in some detail in section H.5 and its related sections and so not do so here.

Obviously, in the short term anarchists and Leninists cannot be said to want the same thing. While we seek a revolutionary movement based on libertarian (i.e. revolutionary) principles, the Leninists seek a party based on distinctly bourgeois principles of centralisation, delegation of power and representative over direct democracy. Both, of course, argue that only their system of organisation is effective and efficient (see section H.5.8 on a discussion why anarchists argue that the Leninist model is not effective from a revolutionary perspective). The anarchist perspective is to see the revolutionary organisation as part of the working class, encouraging and helping those in struggle to clarify the ideas they draw from their own experiences and its role is to provide a lead rather than a new set of leaders to be followed (see section J.3.6 for more on this). The Leninist perspective is to see the revolutionary party as the leadership of the working class, introducing socialist practice, the more radical Marxists, like Rosa Luxemburg, had to incorporate it into their politics.

Yet they faced a problem. The general strike was indelibly linked with such hearsays as anarchism and syndicalism. Had not Engels himself proclaimed the nonsense of the general strike in his dis- tribe “The Bakuninists at work”? Had his words not been repeated ad infinitum against anarchists (and radical socialists) who questioned the wisdom of social democratic tactics, its reformism and bureaucratic inertia? The Marxist radicals knew that Engels would again be invoked by the bureaucrats and reformists in the Social Democratic movement to throw cold water over any attempt to adjust Marxist politics to the economic power of the masses as expressed in mass strikes. The Social Democratic hierarchy would simply dismiss them as “anarchists.” This meant that Luxemburg was faced with the problem of proving Engels was right, even when he was wrong.

She did so in an ingenious way. Like Engels himself, she simply distorted what the anarchists thought about the general strike in order to make it acceptable to Social Democracy. Her argument was simple. Yes, Engels had been right to dismiss the “general strike” idea of the anarchists in the 1870s. But today, thirty years later, Social Democrats should support the general strike (or mass strike, as she called it) because the concepts were different. The anarchist “general strike” was utopian. The Marxist “mass strike” was practical.

To discover why, we need to see what Engels had argued in the 1870s. Engels, mocked the anarchists (or “Bakuninists”) for thinking that “a general strike is the lever employed by which the social revolution is started.” He accusing them of imagining that “[o]ne fine morning, all the workers in all the industries of a country, or even of the whole world, stop work, thus forcing the propertied classes either humbly to submit within four weeks at most, or to attack the workers, who would then have the right to defend themselves and use the opportunity to pull down the entire old society.” He stated that
these ideas but, of course, with a twist. While anarchists meant that working class organisations would be the basis of a free society, Lenin saw these organs as the best means of achieving Bolshevik party power.

Similarly with the libertarian idea of the “militant minority.” By this, anarchists and syndicalists meant groups of workers who gave an example by their direct action which their fellow workers could imitate (for example by leading wildcat strikes which would use flying pickets to get other workers to join in). This “militant minority” would be at the forefront of social struggle and would show, by example, practice and discussion, that their ideas and tactics were the correct ones. After the Russian Revolution of 1917, Bolsheviks argued that this idea was similar to their idea of a vanguard party. This ignored two key differences. Firstly that the libertarian “militant minority” did not aim to take power on behalf of the working class but rather to encourage it, by example, to manage its own struggles and affairs (and, ultimately, society). Secondly, that “vanguard parties” are organised in hierarchical ways alien to the spirit of anarchism. While both the “militant minority” and “vanguard party” approaches are based on an appreciation of the uneven development of ideas within the working class, vanguardism transforms this into a justification for party rule over the working class by a so-called “advanced” minority (see section H.5 for a full discussion). Other concepts, such as “workers’ control,” direct action, and so on have suffered a similar fate.

A classic example of this appropriation of anarchist ideas into Marxism is provided by the general strike. In 1905, Russia had a near revolution in which the general strike played a key role. Unsurprisingly, as anarchists had been arguing for the general strike since the 1870s, we embraced these events as a striking confirmation of our long held ideas on revolutionary change. Marxists had a harder task as such ideas were alien to mainstream Social Democracy. Yet faced with the success and power of the general strike in consciousness into a class which cannot generate itself (see section H.5.1).

Given the Leninist preference for centralisation and a leadership role by hierarchical organisation, it will come as no surprise that their ideas on the nature of post-revolutionary society are distinctly different from anarchists. While there is a tendency for Leninists to deny that anarchists have a clear idea of what will immediately be created by a revolution (see section H.1.4), we do have concrete ideas on the kind of society a revolution will immediately create. This vision is in almost every way different from that proposed by most Marxists.

Then there is the question of the state. Anarchists, unsurprisingly enough, seek to destroy it. Simply put, while anarchists want a stateless and classless society and advocate the means appropriate to those ends, most Marxists argue that in order to reach a stateless society we need a new “workers’” state, a state, moreover, in which their party will be in charge. Trotsky, writing in 1906, made this clear: “Every political party deserving of the name aims at seizing governmental power and thus putting the state at the service of the class whose interests it represents.” [quoted by Israel Getzler, Marxist Revolutionaries and the Dilemma of Power, p. 105]

This fits in with Marx’s and Engels’s repeated equation of universal suffrage with the political power or political supremacy of the working class. In other words, “political power” simply means the ability to nominate a government (see section H.3.10).

While Marxists like to portray this new government as “the dictatorship of the proletariat,” anarchist argue that, in fact, it will be the dictatorship over the proletariat. This is because if the working class is the ruling class (as Marxists claim) then, anarchists argue, how can they delegate their power to a government and remain so? Either the working class directly manages its own affairs (and so society) or the government does. Any state is simply rule by a few and so is incompatible with socialism (we discuss this issue in section H.3.7). The obvious implication of this is that Marxism
seeks party rule, not working class direct management of society (as we discuss in section H.3.8, the Leninist tradition is extremely clear on this matter).

Then there is the question of the building blocks of socialism. Yet again, there is a clear difference between anarchism and Marxism. Anarchists have always argued that the basis of socialism is working class organisations, created in the struggle against capitalism and the state. This applies to both the social and economic structure of a post-revolutionary society. For most forms of Marxism, a radically different picture has been the dominant one. As we discuss in section H.3.10, Marxists only reached a similar vision for the political structure of socialism in 1917 when Lenin supported the soviets as the framework of his workers’ state. However, as we prove in section H.3.11, he did so for instrumental purposes only, namely as the best means of assuring Bolshevik power. If the soviets clashed with the party, it was the latter which took precedence. Unsurprisingly, the Bolshevik mainstream moved from “All Power to the Soviets” to “dictatorship of the party” rather quickly. Thus, unlike anarchism, most forms of Marxism aim for party power, a “revolutionary” government above the organs of working class self-management.

Economically, there are also clear differences. Anarchists have consistently argued that the workers “ought to be the real managers of industries.” [Peter Kropotkin, Fields, Factories and Workshops Tomorrow, p. 157] To achieve this, we have pointed to various organisations over time, such as factory committees and labour unions. As we discuss in more detail in section H.3.12, Lenin, in contrast, saw socialism as being constructed on the basis of structures and techniques (including management ones) developed under capitalism. Rather than see socialism as being built around new, working class organisations, Lenin saw it being constructed on the basis of developments in capitalist organisation. “The Leninist road to socialism,” notes one expert on Lenin, “emphatically ran through the terrain of monopoly capitalism. It would,
point to Lenin’s *The State and Revolution* or the anarchists who link what they did with what they said outside of that holy text? Considering this absolutely contradictory inheritance, anarchists feel entitled to ask the question “Will the real Leninist please stand up?” What is it to be, popular democracy or party rule? If we look at Bolshevik practice, the answer is the latter anarchists argue. Ironically, the likes of Lenin and Trotsky concurred, incorporating the necessity of party power into their ideology as a key lesson of the Russian revolution. As such, anarchists do not feel they are quoting Leninism “selectively” when they argue that it is based on party power, not working class self-management. That Leninists often publicly deny this aspect of their own ideology or, at best, try to rationalise and justify it, suggests that when push comes to shove (as it does in every revolution) they will make the same decisions and act in the same way.

In addition there is the question of what could be called the “social context.” Marxists often accuse anarchists of failing to place the quotations and actions of, say, the Bolsheviks into the circumstances which generated them. By this they mean that Bolshevik authoritarianism can be explained purely in terms of the massive problems facing them (i.e. the rigours of the Civil War, the economic collapse and chaos in Russia and so on). As we discuss this question in section H.6, we will simply summarise the anarchist reply by noting that this argument has three major problems with it. Firstly, there is the problem that Bolshevik authoritarianism started before the start of the Civil War and, moreover, intensified after its end. As such, the Civil War cannot be blamed. The second problem is simply that Lenin continually stressed that civil war and economic chaos was inevitable during a revolution. If Leninist politics cannot handle the inevitable then they are to be avoided. Equally, if Leninists blame what they should know is inevitable for the degeneration of the Bolshevik revolution it would suggest their understanding of what revolution entails is deeply flawed. The last problem is simply that the Bolsheviks did not care. As Samuel Far-

according to Lenin, abolish neither its advanced technological base nor its institutionalised means for allocating resources or structuring industry… The institutionalised framework of advanced capitalism could, to put it shortly, be utilised for realisation of specifically socialist goals. They were to become, indeed, the principal (almost exclusive) instruments of socialist transformation.” [Neil Harding, *Leninism*, p.145]

The role of workers’ in this vision was basically unchanged. Rather than demand, like anarchists, workers’ self-management of production in 1917, Lenin raised the demand for “country-wide, all-embracing workers’ control over the capitalists” (and this is the “important thing”, not “confiscation of the capitalists’ property”) [The Lenin Anthology, p. 402] Once the Bolsheviks were in power, the workers’ own organs (the factory committees) were integrated into a system of state control, losing whatever power they once held at the point of production. Lenin then modified this vision by replacing capitalists with (state appointed) “one-man management” over the workers (see section H.3.14). In other words, a form of state capitalism in which workers would still be wage slaves under bosses appointed by the state. Unsurprisingly, the “control” workers exercised over their bosses (i.e. those with real power in production) proved to be as elusive in production as it was in the state. In this, Lenin undoubtedly followed the lead of the *Communist Manifesto* which stressed state ownership of the means of production without a word about workers’ self-management of production. As we discuss in section H.3.13, state “socialism” cannot help being “state capitalism” by its very nature.

Needless to say, as far as means go, few anarchists and syndicalists are complete pacifists. As syndicalist Emile Pouget argued, “[h]istory teaches that the privileged have never surrendered their privileges without having been compelled so to do and forced into it by their rebellious victims. It is unlikely that the bourgeoisie is blessed with an exceptional greatness of soul and will abdicate voluntarily” and so “[r]ecourse to force ... will be required.” [The Party
This does not mean that libertarians glorify violence or argue that all forms of violence are acceptable (quite the reverse!), it simply means that for self-defence against violent opponents violence is, unfortunately, sometimes required.

The way an anarchist revolution would defend itself also shows a key difference between anarchism and Marxism. As we discussed in section H.2.1, anarchists (regardless of Marxist claims) have always argued that a revolution needs to defend itself. This would be organised in a federal, bottom-up way as the social structure of a free society. It would be based on voluntary working class militias. This model of working class self-defence was applied successfully in both the Spanish and Ukrainian revolutions (by the CNT-FAI and the Makhnovists, respectively). In contrast, the Bolshevik method of defending a revolution was the top-down, hierarchical and centralised “Red Army”. As the example of the Makhnovists showed, the “Red Army” was not the only way the Russian Revolution could have been defended although it was the only way Bolshevik power could be.

So while Anarchists have consistently argued that socialism must be based on working class self-management of production and society based on working class organisations, the Leninist tradition has not supported this vision (although it has appropriated some of its imagery to gain popular support). Clearly, in terms of the immediate aftermath of a revolution, anarchists and Leninists do not seek the same thing. The former want a free society organised and run from below-upwards by the working class based on workers self-management of production while the latter seek party power in a new state structure which would preside over an essentially state capitalist economy.

Lastly, there is the question of the long term goal. Even in this vision of a classless and stateless society there is very little in common between anarchist communism and Marxist communism, beyond the similar terminology used to describe it. This is blurred by the differences in terminology used by both theories. Marx and
“elect them.” [Bureaucracy and Revolution in Eastern Europe, pp. 238–9] Significantly, Harman does not mention that both Lenin and Trotsky rejected this experience once in power. As we discuss in section H.3.8, Leninism came not only to practice but to argue theoretically for state power explicitly to eliminate such control from below. How can the numerous statements of leading Leninists (including Lenin and Trotsky) on the necessity of party dictatorship be reconciled with it?

The ironies do not stop there, of course. Harman correctly notes that under Stalinism, the “bureaucracy is characterised, like the private capitalist class in the West, by its control over the means of production.” [Op. Cit., p. 147] However, he fails to note that it was Lenin, in early 1918, who had raised and then implemented such “control” in the form of “one-man management.” As he put it: “Obedience, and unquestioning obedience at that, during work to the one-man decisions of Soviet directors, of the dictators elected or appointed by Soviet institutions, vested with dictatorial powers.” [Collected Works, vol. 27, p. 316] To fail to note this link between Lenin and the Stalinist bureaucracy on this issue is quoting “selectively.”

The contradictions pile up. Harman argues that “people who seriously believe that workers at the height of revolution need a police guard to stop them handing their factories over to capitalists certainly have no real faith in the possibilities of a socialist future.” [Op. Cit., p. 144] Yet this does not stop him praising the regime of Lenin and Trotsky and contrasting it with Stalinism, in spite of the fact that this was precisely what the Bolsheviks did from 1918 onwards! Indeed this tyrannical practice played a role in provoking the strikes in Petrograd which preceded the Kronstadt revolt in 1921, when “the workers wanted the special squads of armed Bolsheviks, who carried out a purely police function, withdrawn from the factories.” [Paul Avrich, Kronstadt 1921, p. 42] It seems equally strange that Harman denounces the Stalinist suppression of the Hungarian revolution for workers’ democracy and genuine socialism while he defends the Bolshevik suppression of the Kronstadt revolt for the

Engels had raised in the 1840s the (long term) goal of “an association, in which the free development of each is the condition for the free development of all” replacing “the old bourgeois society, with its classes and class antagonisms,” in the Communist Manifesto. Before this “vast association of the whole nation” was possible, the proletariat would be “raise[d] ... to the position of ruling class” and “all capital” would be “centralise[d] ... in the hands of the State, i.e. of the proletariat organised as the ruling class.” As economic classes would no longer exist, “the public power would lose its political character” as political power “is merely the organised power of one class for oppressing another.” [Selected Works, p. 53]

It was this, the means to the end, which was the focus of much debate (see section H.1.1 for details). However, it cannot be assumed that the ends desired by Marxists and anarchists are identical. The argument that the “public power” could stop being “political” (i.e. a state) is a tautology, and a particularly unconvincing one at that. After all, if “political power” is defined as being an instrument of class rule it automatically follows that a classless society would have a non-political “public power” and so be without a state! This does not imply that a “public power” would no longer exist as a structure within (or, more correctly, over) society, it just implies that its role would no longer be “political” (i.e. an instrument of class rule). Given that, according to the Manifesto, the state would centralise the means of production, credit and transportation and then organise it “in accordance with a common plan” using “industrial armies, especially for agriculture” this would suggest that the state structure would remain even after its “political” aspects had, to use Engels words, “die[d] out.” [Marx and Engels, Op. Cit., pp. 52–3 and p. 424]

From this perspective, the difference between anarchist communism and Marxist-communism is clear. “While both,” notes John Clark, “foresee the disappearance of the state, the achievement of social management of the economy, the end of class rule, and the attainment of human equality, to mention a few common goals, signif-
icant differences in ends still remain. Marxist thought has inherited a vision which looks to high development of technology with a corresponding degree of centralisation of social institutions which will continue even after the coming of the social revolution... The anarchist vision sees the human scale as essential, both in the techniques which are used for production, and for the institutions which arise from the new modes of association... In addition, the anarchist ideal has a strong hedonistic element which has seen Germanic socialism as ascetic and Puritanical." [The Anarchist Moment, p. 68] Thus Marx presents "a formulation that calls not for the ultimate abolition of the State but suggests that it will continue to exist (however differently it is reconstituted by the proletariat) as a 'nonpolitical' (i.e., administrative) source of authority." [Murray Bookchin, The Ecology of Freedom, p. 196fn]

Moreover, it is unlikely that such a centralised system could become stateless and classless in actuality. As Bakunin argued, in the Marxist state "there will be no privileged class. Everybody will be equal, not only from the judicial and political but also from the economic standpoint. This is the promise at any rate... So there will be no more class, but a government, and, please note, an extremely complicated government which, not content with governing and administering the masses politically... will also administer them economically, by taking over the production and fair sharing of wealth, agriculture, the establishment and development of factories, the organisation and control of trade, and lastly the injection of capital into production by a single banker, the State." Such a system would be, in reality, "the reign of the scientific mind, the most aristocratic, despotic, arrogant and contemptuous of all regimes" base on "a new class, a new hierarchy of real or bogus learning, and the world will be divided into a dominant, science-based minority and a vast, ignorant majority." [Michael Bakunin: Selected Writings, p. 266]

George Barrett’s words also seem appropriate:

As an example, we can point to the leading Bolshevik Grigorii Zinoviev. In 1920, as head of the Communist International he wrote a letter to the Industrial Workers of the World, a revolutionary labour union, which stated that the "Russian Soviet Republic... is the most highly centralised government that exists. It is also the most democratic government in history. For all the organs of government are in constant touch with the working masses, and constantly sensitive to their will." The same year he explained to the Second Congress of the Communist International that "[t]oday, people like Kautsky come along and say that in Russia you do not have the dictatorship of the working class but the dictatorship of the party. They think this is a reproach against us. Not in the least! We have a dictatorship of the working class and that is precisely why we also have a dictatorship of the Communist Party. The dictatorship of the Communist Party is only a function, an attribute, an expression of the dictatorship of the working class... [T]he dictatorship of the proletariat is at the same time the dictatorship of the Communist Party." [Proceedings and Documents of the Second Congress 1920, vol. 2, p. 928 and pp. 151–2]

It seems redundant to note that the second quote is the accurate one, the one which matches the reality of Bolshevik Russia. Therefore it is hardly “selective” to quote the latter and not the former, as it expresses the reality of Bolshevism rather than its rhetoric.

This duality and the divergence between practice and rhetoric comes to the fore when Trotskyists discuss Stalinism and try to counter pose the Leninist tradition to it. For example, we find the British SWP’s Chris Harman arguing that the “whole experience of the workers’ movement internationally teaches that only by regular elections, combined with the right of recall by shop-floor meetings can rank-and-file delegates be made really responsible to those who
rather those other statements which, like the May Day speeches of Labour leaders, were forever to remain in the realm of rhetoric.” [The Bolsheviks and Workers’ Control, p. xv]

Hence the need to discuss all aspects of Marxism rather than take what its adherents like to claim for it as granted. In this, we agree with Marx himself who argued that we cannot judge people by what they say about themselves but rather what they do. Unfortunately while many self-proclaimed Marxists (like Trotsky) may quote these comments, fewer apply them to their own ideology or actions (again, like Trotsky).

This can be seen from the almost ritualistic way many Marxists response to anarchist (or other) criticisms of their ideas. When they complain that anarchists “selectively” quote from the leading proponents of Marxism, they are usually at pains to point people to some document which they have selected as being more “representative” of their tradition. Leninists usually point to Lenin’s State and Revolution, for example, for a vision of what Lenin “really” wanted. To this anarchists reply by, as we discussed in section H.1.7, pointing out that much of that passes for ‘Marxism’ in State and Revolution is anarchist and, equally important, it was not applied in practice. This explains an apparent contradiction. Leninists point to the Russian Revolution as evidence for the democratic nature of their politics. Anarchists point to it as evidence of Leninism’s authoritarian nature. Both can do this because there is a substantial difference between Bolshevism before it took power and afterwards. While the Leninists ask you to judge them by their manifesto, anarchists say judge them by their record!

Simply put, Marxists quote selectively from their own tradition, ignoring those aspects of it which would be unappealing to potential recruits. While the leaders may know their tradition has skeletons in its closet, they try their best to ensure no one else gets to know. Which, of course, explains their hostility to anarchists

“The modern Socialist … have steadily worked for centralisation, and complete and perfect organisation and control by those in authority above the people. The anarchist, on the other hand, believes in the abolition of that central power, and expects the free society to grow into existence from below, starting with those organisations and free agreements among the people themselves. It is difficult to see how, by making a central power control everything, we can be making a step towards the abolition of that power.” [Objections to Anarchism, p. 348]

Indeed, by giving the state increased economic activities it ensures that this so-called “transitional” state grows with the implementation of the Marxist programme. Moreover, given the economic tasks the state now does it hardly makes much sense to assert it will “wither away” — unless you think that the centralised economic planning which this regime does also “withers away.” Marx argued that once the “abolition of classes” has “been attained” then “the power of the State… disappears, and the functions of government are transformed into simple administrative functions.” [Marx, Engels and Lenin, Anarchism and Anarcho-Syndicalism, p. 76]

In other words, the state apparatus does not “wither away” rather its function as an instrument of class rule does. This is an automatic result of classes themselves withering away as private property is nationalised. Yet as class is defined as being rooted in ownership of the means of production, this becomes a meaningless tautology. Obviously, as the state centralises the means of production into its own hands then (the existing) economic classes cease to exist and, as a result, the state “disappears.” Yet the power and size of the State is, in fact, increased by this process and so the elimination of economic classes actually increases the power and size of the state machine.
As Brain Morris notes, “Bakunin’s fears that under Marx’s kind of socialism the workers would continue to labour under a regimented, mechanised, hierarchical system of production, without direct control over their labour, has been more than confirmed by the realities of the Bolshevik system. Thus, Bakunin’s critique of Marxism has taken on an increasing relevance in the age of bureaucratic State capitalism.” [Bakunin: The Philosophy of Freedom, p. 132] Thus the “central confusions of Marxist political theorists” are found in the discussion on the state in The Communist Manifesto. If class is “an exclusively economic category, and if the old conditions of production are changed so that there is no longer any private ownership of the means of production, then classes no longer exist by definition when they are defined in terms of ... the private ownership of the means of production ... If Marx also defines ‘political power’ as ‘the organised power of one [economic] class for oppressing another’, then the ... argument is no more than a tautology, and is trivially true.” Unfortunately, as history has confirmed, “we cannot conclude ... if it is a mere tautology, that with a condition of no private ownership of the means of production there could be no ... dominant and subordinate strata.” [Alan Carter, Marx: A Radical Critique, p. 221 and pp. 221–2]

Unsurprisingly, therefore, anarchists are not convinced that a highly centralised structure (as a state is) managing the economic life of society can be part of a truly classless society. While economic class as defined in terms of ownership of the means of production may not exist, social classes (defined in terms of inequality of power, authority and control) will continue simply because the state is designed to create and protect minority rule (see section H.3.7). As Bolshevik and Stalinist Russia showed, nationalising the means of production does not end class society. As Malatesta argued:

“When F. Engels, perhaps to counter anarchist criticisms, said that once classes disappear the State as such has no section H.5, this latter position flows easily from the underlying assumptions of vanguardism which Leninism is based on.

So, Lenin, Trotsky and so on simply cannot be considered as exponents of “socialism from below.” Any one who makes such a claim is either ignorant of the actual ideas and practice of Bolshevism or they seek to deceive. For anarchists, “socialism from below” can only be another name, like libertarian socialism, for anarchism (as Lenin, ironically enough, acknowledged). This does not mean that "socialism from below," like “libertarian socialism,” is identical to anarchism, it simply means that libertarian Marxists and other socialists are far closer to anarchism than mainstream Marxism.

H.3.4 Don’t anarchists just quote Marxists selectively?

No, far from it. While it is impossible to quote everything a person or an ideology says, it is possible to summarise those aspects of a theory which influenced the way it developed in practice. As such, any account is “selective” in some sense, the question is whether this results in a critique rooted in the ideology and its practice or whether it presents a picture at odds with both. As Maurice Brinton put it in the introduction to his classic account of workers’ control in the Russian Revolution:

‘Other charges will also be made. The quotations from Lenin and Trotsky will not be denied but it will be stated that they are ‘selective’ and that ‘other things, too’ were said. Again, we plead guilty. But we would stress that there are hagiographers enough in the trade whose ‘objectivity’ ... is but a cloak for sophisticated apologetics ... It therefore seems more relevant to quote those statements of the Bolshevik leaders of 1917 which helped determine Russia’s evolution [towards Stalinism]
has to have power over its citizens and so socialism “from above” is a necessary side-effect of Leninist theory.

Ironically, Lenin’s argument in *State and Revolution* comes back to haunt him. In that work he had argued that the “dictatorship of the proletariat” meant “democracy for the people” which “imposes a series of restrictions on the freedom of the oppressors, the exploiters, the capitalists.” These must be crushed “in order to free humanity from wage-slavery; their resistance must be broken by force; it is clear that where there is suppression there is also violence, there is no freedom, no democracy.” [Essential Works of Lenin, pp. 337–8] If the working class itself is being subject to “suppression” then, clearly, there is “no freedom, no democracy” for that class — and the people “will feel no better if the stick with which they are being beaten is labelled ‘the people’s stick’.” [Bakunin, *Bakunin on Anarchism*, p. 338]

So when Leninists argue that they stand for the “principles of socialism from below” and state that this means the direct and democratic control of society by the working class then, clearly, they are being less than honest. Looking at the tradition they place themselves, the obvious conclusion which must be reached is that Leninism is not based on “socialism from below” in the sense of working class self-management of society (i.e. the only condition when the majority can “rule” and decisions truly flow from below upwards). At best, they subscribe to the distinctly bourgeois vision of “democracy” as being simply the majority designating (and trying to control) its rulers. At worse, they defend politics which have eliminated even this form of democracy in favour of party dictatorship and “one-man management” armed with “dictatorial” powers in industry (most members of such parties do not know how the Bolsheviks gerrymandered and disbanded soviets to maintain power, raised the dictatorship of the party to an ideological truism and wholeheartedly advocated “one-man management” rather than workers’ self-management of production). As we discuss in

*raison d’être* and transforms itself from a government of men into an administration of thing, he was merely playing with words. Whoever has power over things has power over men; whoever governs production also governs the producers; who determines consumption is master over the consumer.

“This is the question; either things are administered on the basis of free agreement of the interested parties, and this is anarchy; or they are administered according to laws made by administrators and this is government, it is the State, and inevitably it turns out to be tyrannical.

“It is not a question of the good intentions or the good will of this or that man, but of the inevitability of the situation, and of the tendencies which man generally develops in given circumstances.” [Errico Malatesta: *His Life and Ideas*, p. 145]

The anarchist vision of the future society, therefore, does not exactly match the state communist vision, as much as the latter would like to suggest it does. The difference between the two is authority, which cannot be anything but the largest difference possible. Anarchist economic and organisational theories are built around an anti-authoritarian core and this informs both our means and aims. For anarchists, the Leninist vision of socialism is unattractive. Lenin continually stressed that his conception of socialism and “state capitalism” were basically identical. Even in *State and Revolution*, allegedly Lenin’s most libertarian work, we discover this particularly unvisionary and uninspiring vision of “socialism”:

“All citizens are transformed into the salaried employees of the state ... All citizens become employees and workers of a single national state ‘syndicate’ ... The whole of society will have become a single office and a sin-
To which, anarchists point to Engels and his comments on the tyrannical and authoritarian character of the modern factory (as we discuss in section H.4.4). Clearly, Lenin’s idea of turning the world into one big factory takes on an extremely frightening nature given Engels’ lovely vision of the lack of freedom in the workplace.

For these reasons anarchists reject the simplistic Marxist analysis of inequality being rooted simply in economic class. Such an analysis, as the comments of Lenin and Engels prove, show that social inequality can be smuggled in by the backdoor of a proposed classless and stateless society. Thus Bookchin:

“Basic to anti-authoritarian Socialism – specifically, to Anarchist Communism — is the notion that hierarchy and domination cannot be subsumed by class rule and economic exploitation, indeed, that they are more fundamental to an understanding of the modern revolutionary project ... Power of human over human long antedates the very formation of classes and economic modes of social oppression. ... This much is clear: it will no longer do to insist that a classless society, freed from material exploitation, will necessarily be a liberated society. There is nothing in the social future to suggest that bureaucracy is incompatible with a classless society, the domination of women, the young, ethnic groups or even professional strata.” [Toward an Ecological Society, pp. 208–9]

Ultimately, anarchists see that “there is a realm of domination that is broader than the realm of material exploitation. The tragedy of the socialist movement is that, steeped in the past, it uses the methods of domination to try to ‘liberate’ us from material exploitation.”

As is obvious, Trotsky was drawing general lessons from the Russian Revolution for the international revolutionary movement. Needless to say, he still argued that the “working class, represented and led by the Communist Party, [was] in power here” in spite of it being “an amorphous, chaotic mass” which did not make any decisions on important questions affecting the revolution!

Incidentally, his and Lenin’s comments of 1920 disprove Trotsky’s later assertion that it was “[a]lone after the conquest of power, the end of the civil war, and the establishment of a stable regime” when “the Central Committee little by little begin to concentrate the leadership of Soviet activity in its hands. Then would come Stalin’s turn.” [Stalin, vol. 1, p. 328] While it was definitely the “conquest of power” by the Bolsheviks which lead to the marginalisation of the soviets, this event cannot be shunted to after the civil war as Trotsky would like (particularly as Trotsky admitted that in 1917 “[a]fter eight months of inertia and of democratic chaos, came the dictatorship of the Bolsheviks.” [Op. Cit., vol. 2, p. 242]). We must note Trotsky argued for the “objective necessity” of the “revolutionary dictatorship of a proletarian party” well into the 1930s (see section H.1.2).

Clearly, the claim that Leninism (and its various off-shoots like Trotskyism) is “socialism from below” is hard to take seriously. As proven above, the Leninist tradition is explicitly against the idea of “only from below,” with Lenin explicitly stating that it was an “anarchist stand” to be for “action only from below”, not “from below and from above” which was the position of Marxism. [Collected Works, vol. 9, p. 77] Once in power, Lenin and the Bolsheviks implemented this vision of “from below and from above,” with the highly unsurprising result that “from above” quickly repressed “from below” (which was dismissed as “wavering” by the masses). This was to be expected, for a government to enforce its laws, it
communist ... very powerful proletarian apparatus, by means of which the Party is closely linked up with the class and the masses, and by means of which, under the leadership of the Party, the class dictatorship of the class is exercised.” [Op. Cit., pp. 571–2]

This was “the general mechanism of the proletarian state power viewed ‘from above,’ from the standpoint of the practical realisation of the dictatorship” and so “all this talk about ‘from above’ or ‘from below,’ about ‘the dictatorship of leaders’ or ‘the dictatorship of the masses,’” is “ridiculous and childish nonsense.” [Op. Cit., p. 573]

Lenin, of course, did not bother to view “proletarian” state power “from below,” from the viewpoint of the proletariat. If he had, perhaps he would have recounted the numerous strikes and protests broken by the Cheka under martial law, the gerrymandering and disbanding of soviets, the imposition of “one-man management” onto the workers in production, the turning of the unions into agents of the state/party and the elimination of working class freedom by party power? Which suggests that there are fundamental differences, at least for the masses, between “from above” and “from below.”

At the Comintern congress itself, Zinoviev announced that “the dictatorship of the proletariat is at the same time the dictatorship of the Communist Party.” [Proceedings and Documents of the Second Congress 1920, vol. 1, p. 152] Trotsky also universalised Lenin’s argument when he pondered the important decisions of the revolution and who would make them in his reply to the delegate from the Spanish anarcho-syndicalist union the CNT:

“Who decides this question [and others like it]? We have the Council of People’s Commissars but it has to be subject to some supervision. Whose supervision? That of the working class as an amorphous, chaotic mass? No. The Central Committee of the party is convened to discuss ...
is extremely different to what an anarchist thinks it is). If you consider "socialism" as being a "workers’ state" presided over by a “revolutionary” government, then how can this be reconciled with the anarchist vision of a federation of self-managed communes and workers’ associations? As the Russian Revolution shows, only by the armed might of the “revolutionary” government crushing the anarchist vision.

The only thing we truly share with these groups is a mutual opposition to existing capitalism. Having a common enemy does not make someone friends. Hence anarchists, while willing to work on certain mutual struggles, are well aware there is substantial differences in both terms of means and goals. The lessons of revolution in the 20th Century is that once in power, Leninists will repress anarchists, their current allies against the capitalist system. This is does not occur by accident, it flows from the differences in vision between the two movements, both in terms of means and goals.

H.3.2 Is Marxism “socialism from below”?

Some Marxists, such as the International Socialist Tendency, like to portray their tradition as being “socialism from below.” Under “socialism from below,” they place the ideas of Marx, Engels, Lenin and Trotsky, arguing that they and they alone have continued this, the true, ideal of socialism (Hal Draper’s essay “The Two Souls of Socialism” seems to have been the first to argue along these lines). They contrast this idea of socialism “from below” with “socialism from above,” in which they place reformist socialism (social democracy, Labourism, etc.), elitist socialism (Lassalle and others who wanted educated and liberal members of the middle classes to liberate the working class) and Stalinism (bureaucratic dictatorship over the working class). Anarchism, it is argued, should be placed in the latter camp, with Proudhon and Bakunin showing that anarchist libertarianism simply a “myth”.

In Russia today, the connection between leaders, party, class and masses … are concretely as follows: the dictatorship is exercised by the proletariat organised in the Soviets and is guided by the Communist Party … The Party, which holds annual congresses …, is directed by a Central Committee of nineteen elected at the congress, while the current work in Moscow has to be carried on by [two] still smaller bodies … which are elected at the plenary sessions of the Central Committee, five members of the Central Committee to each bureau. This, it would appear, is a full-fledged ‘oligarchy.’ No important political or organisational question is decided by any state institution in our republic [sic!] without the guidance of the Party’s Central Committee.

“In its work, the Party relies directly on the trade unions, which …have a membership of over four million and are formally non-Party. Actually, all the directing bodies of the vast majority of the unions … are made up of Communists, and carry out of all the directives of the Party. Thus … we have a formally non-
Days that Shook the World, pp. 341–2] Which smacks far more of “socialism from above” than “socialism from below”!

The implications of Lenin’s position became clearer after the Bolsheviks had taken power. Now it was the concrete situation of a “revolutionary” government exercising power “from above” onto the very class it claimed to represent. As Lenin explained to his political police, the Cheka, in 1920:

> “Without revolutionary coercion directed against the avowed enemies of the workers and peasants, it is impossible to break down the resistance of these exploiters. On the other hand, revolutionary coercion is bound to be employed towards the wavering and unstable elements among the masses themselves.” [Op. Cit., vol. 42, p. 170]

It could be argued that this position was forced on Lenin by the problems facing the Bolsheviks in the Civil War, but such an argument is flawed. This is for two main reasons. Firstly, according to Lenin himself civil war was inevitable and so, unsurprisingly, Lenin considered his comments as universally applicable. Secondly, this position fits in well with the idea of pressure “from above” exercised by the “revolutionary” government against the masses (and nothing to do with any sort of “socialism from below”). Indeed, “wavering” and “unstable” elements is just another way of saying “pressure from below,” the attempts by those subject to the “revolutionary” government to influence its policies. As we noted in section H.1.2, it was in this period (1919 and 1920) that the Bolsheviks openly argued that the “dictatorship of the proletariat” was, in fact, the “dictatorship of the party” (see section H.3.8 on how the Bolsheviks modified the Marxist theory of the state in line with this). Rather than the result of the problems facing Russia at the time, Lenin’s comments simply reflect the unfolding of certain aspects of his ideology when his party held power (as we make clear for those who uphold this idea, “Socialism from below” is simply the self-emancipation of the working class by its own efforts. To anarchist ears, the claim that Marxism (and in particular Leninism) is socialism “from below” sounds paradoxical, indeed laughable. This is because anarchists from Proudhon onwards have used the imagery of socialism being created and run from below upwards. They have been doing so for far longer than Marxists have. As such, “socialism from below” simply sums up the anarchist ideal!

Thus we find Proudhon in 1848 talking about being a “revolutionary from below” and that every “serious and lasting Revolution” was “made from below, by the people.” A “Revolution from above” was “pure governmentalism,” “the negation of collective activity, of popular spontaneity” and is “the oppression of the wills of those below.” [quoted by George Woodcock, Pierre-Joseph Proudhon, p. 143] For Proudhon, the means of this revolution “from below” would be federations of working class associations for both credit (mutual banks) and production (workers’ associations or co-operatives) as well as federations of communes (democratically organised communities). The workers, “organised among themselves, without the assistance of the capitalist” would march by “[w]ork to the conquest of the world” by the “force of principle.” Thus capitalism would be reformed away by the actions of the workers themselves. The “problem of association,” Proudhon argued, “consists in organising ... the producers, and by this subjecting capital and subordinating power. Such is the war of liberty against authority, a war of the producer against the non-producer; a war of equality against privilege ... An agricultural and industrial combination must be found by means of which power, today the ruler of society, shall become its slave.” [quoted by K. Steven Vincent, Pierre-Joseph Proudhon and the Rise of French Republican Socialism, p. 148 and p. 157] Ultimately, “any revolution, to be effective, must be spontaneous and emanate, not from the heads of authorities, but from the bowels of the people ... the only connection between government and labour is that labour, in organising itself,
has the abrogation of governments as its mission.” [Proudhon, No Gods, No Masters, vol. 1, p. 52]

Similarly, Bakunin saw an anarchist revolution as coming “from below.” As he put it, “liberty can be created only by liberty, by an insurrection of all the people and the voluntary organisation of the workers from below upward.” [Statism and Anarchy, p. 179] Elsewhere he wrote that “popular revolution” would “create its own organisation from the bottom upwards and from the circumference inwards, in accordance with the principle of liberty, and not from the top downwards and from the centre outwards, as in the way of authority.” [Michael Bakunin: Selected Writings, p. 170] His vision of revolution and revolutionary self-organisation and construction from below was a core aspect of his anarchist ideas and he argued repeatedly for “the free organisation of the people’s lives in accordance with their needs — not from the top down, as we have it in the State, but from the bottom up, an organisation formed by the people themselves … a free union of associations of agricultural and factory workers, of communes, regions, and nations.” He stressed that “the politics of the Social Revolution” was “the abolition of the State” and “the economic, altogether free organisation of the people, an organisation from below upward, by means of federation.” [The Political Philosophy of Bakunin, pp. 297–8]

While Proudhon wanted to revolutionise society, he rejected revolutionary means to do so (i.e. collective struggle, strikes, insurrection, etc.). Bakunin, however, was a revolutionary in this, the popular, sense of the word. Yet he shared with Proudhon the idea of socialism being created by the working class itself. As he put it, in “a social revolution, which in everything is diametrically opposed to a political revolution, the actions of individuals hardly count at all, whereas the spontaneous action of the masses is everything. All that individuals can do is clarify, propagate and work out the ideas corresponding to the popular instinct, and, what is more, to contribute their incessant efforts to revolutionary organisation of the natural power of the masses — but nothing else beyond that; the rest can and

government of the "class-conscious workers" who would "lead" and so the party would "govern" Russia, in the "interests" of the masses. Rather than govern themselves, they would be subject to "the power of the Bolsheviks". While, eventually, the "working" masses would take part in the administration of state decisions, their role would be the same as under capitalism as, we must note, there is a difference between making policy and carrying it out, between the "work of administration" and governing, a difference Lenin obscures. In fact, the name of this essay clearly shows who would be in control under Lenin: “Can the Bolsheviks retain State Power?”

As one expert noted, the Bolsheviks made “a distinction between the execution of policy and the making of policy. The ‘broad masses’ were to be the executors of state decrees, not the formulators of legislation.” However, by “claiming to draw ‘all people’ into [the state] administration, the Bolsheviks claimed also that they were providing a greater degree of democracy than the parliamentary state.” [Frederick I. Kaplan, Bolshevik Ideology and the Ethics of Soviet Labor, p. 212] The difference is important. Ante Ciliga, once a political prisoner under Stalin, once noted how the secret police “liked to boast of the working class origin of its henchmen.” He quoted a fellow prisoner, and ex-Tsarist convict, who retorted: “You are wrong if you believe that in the days of the Tsar the gaolers were recruited from among dukes and the executioners from among the princes!” [The Russian Enigma, pp. 255–6]

All of which explains the famous leaflet addressed to the workers of Petrograd immediately after the October Revolution, informing them that “the revolution has won.” The workers were called upon to “show … the greatest firmness and endurance, in order to facilitate the execution of all the aims of the new People’s Government.” They were asked to “cease immediately all economic and political strikes, to take up your work, and do it in perfect order ... All to your places” as the “best way to support the new Government of Soviets in these days” was “by doing your job.” [quoted by John Read, Ten
take power when opportunity offers.” [Op. Cit., vol. 26, p. 19 and p. 90] Lenin’s “democracy from below” always meant representative government, not popular power or self-management. The role of the working class was that of voters and so the Bolsheviks’ first task was “to convince the majority of the people that its programme and tactics are correct.” The second task “that confronted our Party was to capture political power.” The third task was for “the Bolshevik Party” to “administer Russia,” to be the “governing party.” [Op. Cit., vol. 27, pp. 241–2] Thus Bolshevik power was equated with working class power.

Towards the end of 1917, he stressed this vision of a Bolshevik run “democracy from below” by arguing that since “the 1905 revolution Russia has been governed by 130,000 landowners … Yet we are told that the 240,000 members of the Bolshevik party will not be able to govern Russia, govern her in the interests of the poor.” He even equated rule by the party with rule by the class, noting that “proletarian revolutionary power” and Bolshevik power” are “now one the same thing.” He admitted that the proletariat could not actually govern itself for “[w]e know that an unskilled labourer or a cook cannot immediately get on with the job of state administration … We demand that training in this work … be conducted by the class-conscious workers and soldiers.” The “class-conscious workers must lead, but for the work of administration they can enlist the vast mass of the working and oppressed people.” Thus democratic sounding rhetoric, in reality, hide the fact that the party would govern (i.e., have power) and working people would simply administer the means by which its decisions would be implemented. Lenin also indicated that once in power, the Bolsheviks “shall be fully and unreservedly in favour of a strong state power and of centralism.” [Op. Cit., vol. 26, p. 111, p. 179, p. 113, p. 114 and p. 116]

Clearly, Lenin’s position had not changed. The goal of the revolution was simply a Bolshevik government, which, if it were to be effective, had to have the real power in society. Thus, socialism should be done by the people themselves ... revolution can be waged and brought to its full development only through the spontaneous and continued mass action of groups and associations of the people.” [Op. Cit., pp. 298–9]

Therefore, the idea of “socialism from below” is a distinctly anarchist notion, one found in the works of Proudhon and Bakunin and repeated by anarchists ever since. As such, to hear Marxists appropriate this obviously anarchist terminology and imagery appears to many anarchists as opportunistic and attempt to cover the authoritarian reality of mainstream Marxism with anarchist rhetoric. Moreover, the attempt to suggest that anarchism is part of the elitist “socialism from above” school rests on little more that selective quoting of Proudhon and Bakunin (including from Bakunin’s pre-anarchist days) to present a picture of their ideas distinctly at odds with reality. However, there are “libertarian” strains of Marxism which are close to anarchism. Does this mean that there are no elements of a “socialism from below” to be found in Marx and Engels?

If we look at Marx, we get contradictory impressions. On the one hand, he argued that freedom “consists in converting the state from an organ superimposed upon society into one completely subordinate to it.” Combine this with his comments on the Paris Commune (see his “The Civil War in France”), we can say that there are clearly elements of “socialism from below” in Marx’s work. On the other hand, he often stresses the need for strict centralisation of power. In 1850, for example, he argued that the workers must “not only strive for a single and indivisible German republic, but also within this republic for the most determined centralisation of power in the hands of the state authority.” This was because “the path of revolutionary activity” can “proceed only from the centre.” This meant that the workers must be opposed to the “federative republic” planned by the democrats and “must not allow themselves to be misguided by the democratic talk of freedom for the communities, of self-government, etc.” This centralisation of power was essential to overcome local autonomy, which would allow “every village, every town and ev-
“...province” to put “a new obstacle in the path” the revolution due to “local and provincial obstinacy.” Decades later, Marx dismissed Bakunin’s vision of “the free organisation of the worker masses from bottom to top” as “nonsense.” [Marx-Engels Reader, p. 537, p. 509 and p. 547]

Thus we have a contradiction. While arguing that the state must become subordinate to society, we have a central power imposing its will on “local and provincial obstinacy.” This implies a vision of revolution in which the centre (indeed, “the state authority”) forces its will on the population, which (by necessity) means that the centre power is “superimposed upon society” rather than “subordinate” to it. Given his dismissal of the idea of organisation from bottom to top, we cannot argue that by this he meant simply the co-ordination of local initiatives. Rather, we are struck by the “top-down” picture of revolution Marx presents. Indeed, his argument from 1850 suggests that Marx favoured centralism not only in order to prevent the masses from creating obstacles to the revolutionary activity of the “centre,” but also to prevent them from interfering with their own liberation.

Looking at Engels, we discover him writing that “[a]s soon as our Party is in possession of political power it has simply to expropriate the big landed proprietors just like the manufacturers in industry ... thus restored to the community [they] are to be turned over by us to the rural workers who are already cultivating them and are to be organised into co-operatives.” He even states that this expropriation may “be compensated,” depending on “the circumstances which we obtain power, and particularly by the attitude adopted by these gentry.” [Selected Writings, pp. 638–9] Thus we have the party taking power, then expropriating the means of life for the workers and, lastly, “turning over” these to them. While this fits into the general scheme of the Communist Manifesto, it cannot be said to be “socialism from below” which can only signify the direct expropriation of the means of production by the workers themselves, organising themselves into free producer associations to do so.

Lenin repeated this argument in his discussion on the right tactics to apply during the near revolution of 1905. He mocked the Mensheviks for only wanting “pressure from below” which was “pressure by the citizens on the revolutionary government.” Instead, he argued for “pressure ... from above as well as from below,” where “pressure from above” was “pressure by the revolutionary government on the citizens.” He notes that Engels “appreciated the importance of action from above” and that he saw the need for “the utilisation of the revolutionary governmental power.” Lenin summarised his position (which he considered as being in line with that of orthodox Marxism) by stating: “Limitation, in principle, of revolutionary action to pressure from below and renunciation of pressure also from above is anarchism.” [Op. Cit., vol. 8, p. 474, p. 478, p. 480 and p. 481] This seems to have been a common Bolshevik position at the time, with Stalin stressing in the same year that “action only from ‘below’” was “an anarchist principle, which does, indeed, fundamentally contradict Social-Democratic tactics.” [Collected Works, vol. 1, p. 149]

It is in this context of “above and below” in which we must place Lenin’s comments in 1917 that socialism was “democracy from below, without a police, without a standing army, voluntary social duty by a militia formed from a universally armed people.” [Op. Cit., vol. 24, p. 170] Given that Lenin had rejected the idea of “only from below” as an anarchist principle (which it is), we need to bear in mind that this “democracy from below” was always placed in the context of a Bolshevik government. Lenin always stressed that the “Bolsheviks must assume power.” The Bolsheviks “can and must take state power into their own hands.” He raised the question of “will the Bolsheviks dare take over full state power alone?” and answered it: “I have already had occasion ... to answer this question in the affirmative.” Moreover, “a political party ... would have no right to exist, would be unworthy of the name of party ... if it refused to
ments of “socialism from below” in their politics (most explicitly in Marx’s comments on the libertarian influenced Paris Commune). On the other, there are distinctly centralist and statist themes in their work.

From this legacy, Leninism took the statist themes. This explains why anarchists think the idea of Leninism being “socialism from below” is incredible. Simply put, the actual comments and actions of Lenin and his followers show that they had no commitment to a “socialism from below.” As we will indicate, Lenin disassociated himself repeatedly from the idea of politics “from below,” considering it (quite rightly) an anarchist idea. In contrast, he stressed the importance of a politics which somehow combined action “from above” and “from below.” For those Leninists who maintain that their tradition is “socialism from below” (indeed, the only “real” socialism “from below”), this is a major problem and, unsurprisingly, they generally fail to mention it.

So what was Lenin’s position on “from below”? In 1904, during the debate over the party split into Bolsheviks and Mensheviks, Lenin stated that the argument “[b]ureaucracy versus democracy is in fact centralism versus autonomism; it is the organisational principle of revolutionary Social-Democracy as opposed to the organisational principle of opportunist Social-Democracy. The latter strives to proceed from the bottom upward, and, therefore, wherever possible … upholds autonomism and ‘democracy,’ carried (by the overzealous) to the point of anarchism. The former strives to proceed from the top downward.” [Collected Works, vol. 7, pp. 396–7] Thus it is the non-Bolshevik (“opportunist”) wing of Marxism which bases itself on the “organisational principle” of “from the bottom upward,” not the Bolshevik tradition (as we note in section H.5.5, Lenin also rejected the “primitive democracy” of mass assemblies as the basis of the labour and revolutionary movements). Moreover, this vision of a party run from the top down was enshrined in the Bolshevik ideal of “democratic centralism”. How you can have “socialism from below” when your “organisational principle” is “from the top downward”?

It may be argued that Marx and Engels did not exclude such a solution to the social question. For example, we find Engels stating that “the question is not whether the proletariat when it comes to power will simply seize by force the tools of production, the raw materials and means of subsistence” or “whether it will redeem property therein by instalments spread over a long period.” To attempt to predict this “for all cases would be utopia-making.” [Collected Works, vol. 23, p. 386] However, Engels is assuming that the social revolution (the proletariat “com[ing] to power”) comes before the seizure of the means of production. In this, we can assume that it is the “revolutionary” government which does the seizing (or redeeming) rather than rebel workers.

This vision of revolution as the party coming to power can be seen from Engels’ warning that the “worse thing that can befall the leader of an extreme party is to be compelled to assume power at a time when the movement is not yet ripe for the domination of the class he represents and for the measures this domination implies.” [Op. Cit., vol. 10, p. 469] Needless to say, such a vision is hard to equate with “socialism from below” which implies the active participation of the working class in the direct management of society from the bottom-up. If the leaders “assume power” then they have the real power, not the class they claim to “represent.” Equally, it seems strange that socialism can be equated with a vision which equates “domination” of a class being achieved by the fact a leader “represents” it. Can the working class really be said to be the ruling class if its role in society is to select those who exercise power on its behalf (i.e. to elect representatives)? Bakunin quite rightly answered in the negative. While representative democracy may be acceptable to ensure bourgeois rule, it cannot be assumed that it can be utilised to create a socialist society. It was designed to defend class society and its centralised and top-down nature reflects this role.

Moreover, Marx and Engels had argued in The Holy Family that the “question is not what this or that proletarian, or even the
whole of the proletariat at the moment considers as its aim. The question is what the proletariat is, and what, consequent on that being, it will be compelled to do.” [quoted by Murray Bookchin, The Spanish Anarchists, p. 280] As Murray Bookchin argued:

“These lines and others like them in Marx’s writings were to provide the rationale for asserting the authority of Marxist parties and their armed detachments over and even against the proletariat. Claiming a deeper and more informed comprehension of the situation than ‘even the whole of the proletariat at the given moment,’ Marxist parties went on to dissolve such revolutionary forms of proletarian organisation as factory committees and ultimately to totally regiment the proletariat according to lines established by the party leadership.” [Op. Cit., p. 289]

Thus the ideological underpinning of a “socialism from above” is expounded, one which dismisses what the members of the working class actually want or desire at a given point (a position which Trotsky, for one, explicitly argued). A few years later, they argued in The Communist Manifesto that “a portion of the bourgeois goes over to the proletariat, and in particular, a portion of the bourgeois ideologists, who have raised themselves to the level of comprehending theoretically the historical movement as a whole.” They also noted that the Communists are “the most advanced and resolute section of the working-class parties” and “they have over the great mass of the proletariat the advantage of clearly understanding the line of march, the conditions, and the general results of the proletarian movement.” This gives a privileged place to the party (particularly the “bourgeois ideologists” who join it), a privileged place which their followers had no problem abusing in favour of party power and hierarchical leadership from above. As we discuss in section H.5, Lenin was just expressing orthodox Social-Democratic (i.e. Marxist) policy when he argued that socialist consciousness was created State power, and necessarily also prophets of political and social discipline and champions of order established from the top downwards, always in the name of universal suffrage and the sovereignty of the masses, for whom they save the honour and privilege of obeying leaders, elected masters.” [Michael Bakunin: Selected Writings, p. 265 and pp. 237–8]

For this reason anarchists from Bakunin onwards have argued for a bottom-up federation of workers’ councils as the basis of revolution and the means of managing society after capitalism and the state have been abolished. If these organs of workers’ self-management are co-opted into a state structure (as happened in Russia) then their power will be handed over to the real power in any state — the government and its bureaucracy. The state is the delegation of power — as such, it means that the idea of a “workers’ state” expressing “workers’ power” is a logical impossibility. If workers are running society then power rests in their hands. If a state exists then power rests in the hands of the handful of people at the top, not in the hands of all. The state was designed for minority rule. No state can be an organ of working class (i.e. majority) self-management due to its basic nature, structure and design.

So, while there are elements of “socialism from below” in the works of Marx and Engels they are placed within a distinctly centralised and authoritarian context which undermines them. As John Clark summarises, “in the context of Marx’s consistent advocacy of centralist programmes, and the part these programmes play in his theory of social development, the attempt to construct a libertarian Marxism by citing Marx’s own proposals for social change would seem to present insuperable difficulties.” [Op. Cit., p. 93]

H.3.3 Is Leninism “socialism from below”?

As discussed in the last section, Marx and Engels left their followers with an ambiguous legacy. On the one hand, there are ele-
ing party power was not alien to the mainstream social-democracy Leninism split from. The leading left-wing Menshevik Martov argued as follows:

“In a class struggle which has entered the phase of civil war, there are bound to be times when the advance guard of the revolutionary class, representing the interests of the broad masses but ahead of them in political consciousness, is obliged to exercise state power by means of a dictatorship of the revolutionary minority. Only a short-sighted and doctrinaire viewpoint would reject this prospect as such. The real question at stake is whether this dictatorship, which is unavoidable at a certain stage of any revolution, is exercised in such a way as to consolidate itself and create a system of institutions enabling it to become a permanent feature, or whether, on the contrary, it is replaced as soon as possible by the organised initiative and autonomy of the revolutionary class or classes as a whole. The second of these methods is that of the revolutionary Marxists who, for this reason, style themselves Social Democrats; the first is that of the Communists.” [The Mensheviks in the Russian Revolution, Abraham Ascher (ed.), p. 119]

All this is to be expected, given the weakness of the Marxist theory of the state. As we discuss in section H.3.7, Marxists have always had an ahistoric perspective on the state, considering it as purely an instrument of class rule rather than what it is, an instrument of minority class rule. For anarchists, the “State is the minority government, from the top downward, of a vast quantity of men.” This automatically means that a socialism, like Marx’s, which aims for a socialist government and a workers’ state automatically becomes, against the wishes of its best activists, “socialism from above.” As Bakunin argued, Marxists are “worshippers of by bourgeois intellectuals and introduced into the working class from outside. Against this, we have to note that the Manifesto states that the proletarian movement was “the self-conscious, independent movement of the immense majority, in the interests of the immense majority” (although, as discussed in section H.1.1, when they wrote this the proletariat was a minority in all countries bar Britain). [Selected Works, p. 44, p. 46 and p. 45]

Looking at the tactics advocated by Marx and Engels, we see a strong support for “political action” in the sense of participating in elections. This support undoubtedly flows from Engels’s comments that universal suffrage “in an England two-thirds of whose inhabitants are industrial proletarians means the exclusive political rule of the working class with all the revolutionary changes in social conditions which are inseparable from it.” [Collected Works, vol. 10, p. 298] Marx, likewise, repeatedly argued along identical lines. For example, in 1855, he stated that “universal suffrage … implies the assumption of political power as means of satisfying [the workers’] social means” and, in Britain, “revolution is the direct content of universal suffrage.” [Op. Cit., vol. 11, pp. 335–6] Yet how could an entire class, the proletariat organised as a “movement” exercise its power under such a system? While the atomised voting to nominate representatives (who, in reality, held the real power in society) may be more than adequate to ensure bourgeois, i.e. minority, power, could it be used for working class, i.e. majority, power?

This seems highly unlikely because such institutions are designed to place policy-making in the hands of representatives and were created explicitly to exclude mass participation in order to ensure bourgeois control (see section B.2.5). They do not (indeed, cannot) constitute a “proletariat organised as a ruling class.” If public policy, as distinguished from administrative activities, is not made by the people themselves, in federations of self-managed assemblies, then a movement of the vast majority does not, cannot, exist. For people to acquire real power over their lives and society, they must establish institutions organised and run, as Bakunin
constantly stressed, from below. This would necessitate that they themselves directly manage their own affairs, communities and workplaces and, for co-ordination, mandate federal assemblies of revocable and strictly controllable delegates, who will execute their decisions. Only in this sense can a majority class, especially one committed to the abolition of all classes, organise as a class to manage society.

As such, Marx and Engels tactics are at odds with any idea of “socialism from below.” While, correctly, supporting strikes and other forms of working class direct action (although, significantly, Engels dismissed the general strike) they placed that support within a general political strategy which emphasised electioneering and representative forms. This, however, is a form of struggle which can only really be carried out by means of leaders. The role of the masses is minor, that of voters. The focus of the struggle is at the top, in parliament, where the duly elected leaders are. As Luigi Galleani argued, this form of action involved the “ceding of power by all to someone, the delegate, the representative, individual or group.” This meant that rather than the anarchist tactic of “direct pressure put against the ruling classes by the masses,” the Socialist Party “substituted representation and the rigid discipline of the parliamentary socialists,” which inevitably resulted in it “adopt[ing] class collaboration in the legislative arena, without which all reforms would remain a vain hope.” It also resulted in the socialists needing “authoritarian organisations”, i.e. ones which are centralised and disciplined from above down. [The End of Anarchism?, p. 14, p. 12 and p. 14] The end result was the encouragement of a viewpoint that reforms (indeed, the revolution) would be the work of leaders acting on behalf of the masses whose role would be that of voters and followers, not active participants in the struggle (see section J.2 for a discussion on direct action and why anarchists reject electioneering).

By the 1890s, the top-down and essentially reformist nature of these tactics had made their mark in both Engels’ politics and the practical activities of the Social-Democratic parties. Engels “introduction” to Marx’s The Class Struggles in France indicated how far Marxism had progressed and undoubtedly influenced by the rise of Social-Democracy as an electoral power, it stressed the use of the ballot box as the ideal way, if not the only way, for the party to take power. He noted that “[w]e, the ‘revolutionists’, the ‘overthrowers’” were “thriving far better on legal methods than on illegal methods and overthrow” and the bourgeoisie “cry despairingly … legality is the death of us” and were “much more afraid of the legal than of the illegal action of the workers’ party, of the results of elections than of those of rebellion.” He argued that it was essential “not to fitter away this daily increasing shock force [of party voters] in vanguard skirmishes, but to keep it intact until the decisive day.” [Selected Writings, p. 656, p. 650 and p. 655]

The net effect of this would simply be keeping the class struggle within the bounds decided upon by the party leaders, so placing the emphasis on the activities and decisions of those at the top rather than the struggle and decisions of the mass of working class people themselves. As we noted in section H.1.1, when the party was racked by the “revisionism” controversy after Engels death, it was fundamentally a conflict between those who wanted the party’s rhetoric to reflect its reformist tactics and those who sought the illusion of radical words to cover the reformist practice. The decision of the Party leadership to support their state in the First World War simply proved that radical words cannot defeat reformist tactics.

Needless to say, from this contradictory inheritance Marxists had two ways of proceeding. Either they become explicitly anti-state (and so approach anarchism) or become explicitly in favour of party and state power and so, by necessity, “revolution from above.” The council communists and other libertarian Marxists followed the first path, the Bolsheviks and their followers the second. As we discuss in the next section, Lenin explicitly dismissed the idea that Marxism proceeded “only from below,” stating that this was an anarchist principle. Nor was he shy in equating party power with working class power. Indeed, this vision of socialism as invol-
The essence of the Bolsheviks’ strategy was the taking of power by the Bolshevik party itself. He explicitly argued for Bolshevik power during 1917, considering the soviets as the best means of achieving this. He constantly equated Bolshevik rule with working class rule. Once in power, this identification did not change. As such, rather than argue for power to be placed into “the hands of popular organs of working class power” Lenin argued this only insofar as he was sure that these organs would then immediately pass that power into the hands of a Bolshevik government.

This explains his turn against the soviets after July 1917 when he considered it impossible for the Bolsheviks to gain a majority in them. It can be seen when the Bolshevik party’s Central Committee opposed the idea of a coalition government immediately after the overthrow of the Provisional Government in October 1917. As it explained, “a purely Bolshevik government” was “impossible to refuse” since “a majority at the Second All-Russian Congress of Soviets ... handed power over to this government.” [quoted by Robert V. Daniels, A Documentary History of Communism, pp. 127–8] A mere ten days after the October Revolution the Left Social Revolutionaries charged that the Bolshevik government was ignoring the Central Executive Committee of the Soviets, established by the second Congress of Soviets as the supreme organ in society. Lenin dismissed their charges, stating that “the new power could not take into account, in its activity, all the rigmarole which would set it on the road of the meticulous observation of all the formalities.” [quoted by Frederick I. Kaplan, Bolshevik Ideology and the Ethics of Soviet Labour, p. 124] Clearly, the soviets did not have “All Power,” they promptly handed it over to a Bolshevik government (and Lenin implies that he was not bound in any way to the supreme organ of the soviets in whose name he ruled). All of which places Rees’ assertions into the proper context and shows that the slogan “All Power to the Soviets” is used by Leninists in a radically different way than most people would understand by it! It also explains why soviets were disbanded if the opposition won.

The state has two distinguishing features, firstly (and least importantly) it “divides its subjects according to territory.” The second “is the establishment of a public power which no longer directly coincides with the population organising itself as an armed force. This special public power is necessary because a self-acting armed organisation of the population has become impossible since the split into classes ... This public power exists in every state; it consists not merely of armed men but also of material adjuncts, prisons and institutions of coercion of all kinds.” Thus “an essential feature of the state is a public power distinct from the mass of the people.” [Op. Cit., pp. 576–7 and pp. 535–6]

In this, the Marxist position concurs with the anarchist. Engels discussed the development of numerous ancient societies to prove his point. Talking of Greek society, he argued that it was based on a popular assembly which was “sovereign” plus a council. This social system was not a state because “when every adult male member of the tribe was a warrior, there was as yet no public authority separated from the people that could have been set up against it. Primitive democracy was still in full bloom, and this must remain the point of departure in judging power and the status of the council.” Discussing the descent of this society into classes, he argued that this required “an institution that would perpetuate, not only the newly-rising class division of society, but the right of the possessing class to exploit the non-possessing class and the rule of the former over the latter.” Unsurprisingly, “this institution arrived. The state was invented.” The original communal organs of society were “superseded by real governmental authorities” and the defence of society (“the actual ‘people in arms’”) was “taken by an armed ‘public power’ at the service of society in fruitless struggle, it became necessary to have power seemingly standing above society that would alleviate the conflict ... this power, arisen out of society but placing itself above it, and alienating itself more and more from it, is the state.” [Selected Writings, p. 576]
of these authorities and, therefore, also available against the people.” With the rise of the state, the communal council was “transformed into a senate.” [Op. Cit., pp. 525–6, p. 528 and p. 525]

Thus the state arises specifically to exclude popular self-government, replacing it with minority rule conducted via a centralised, hierarchical top-down structure (“government ... is the natural protector of capitalism and other exploiters of popular labour.” [Bakunin, Michael Bakunin: Selected Writings, p. 239]).

This account of the rise of the state is at direct odds with Engels argument that the state is simply an instrument of class rule. For the “dictatorship of the proletariat” to be a state, it would have to constitute a power above society, be different from the people armed, and so be “a public power distinct from the mass of the people.” However, Marx and Engels are at pains to stress that the “dictatorship of the proletariat” will not be such a regime. However, how can you have something (namely “a public power distinct from the mass of the people”) you consider as “an essential feature” of a state missing in an institution you call the same name? It is a bit like calling a mammal a “new kind of reptile” in spite of the former not being cold-blooded, something you consider as “an essential feature” of the latter!

This contradiction helps explains Engels comments that “[w]e would therefore propose to replace state everywhere by Gemeinweisen, a good old German word which can very well convey the meaning of the French word ‘commune’” He even states that the Paris Commune “was no longer a state in the proper sense of the word.” However, this comment does not mean that Engels sought to remove any possible confusion on the matter, for he still talked of “the state” as “only a transitional institution which is used in the struggle, in the revolution, to hold down one’s adversaries by force ... so long as the proletariat still uses the state, it does not use it the interests of freedom but in order to hold down its adversaries, and as soon as it becomes possible to speak of freedom the state as such

“Left-wing” Communism (i.e. those Marxists close to anarchism) as we noted in section H.3.3. The Bolsheviks had, by this stage, explicitly argued for party dictatorship and considered it a truism that the whole proletariat could not rule nor could the proletarian dictatorship be exercised by a mass working class organisation. Therefore, rather than seeing revolution being based upon the empowerment of working class organisation and the socialist society being based on this, Leninists see workers organisations in purely instrumental terms as the means of achieving a Leninist government:

“So the state [is] not a new kind of society? Not at all. It is simply the concentration of the power of the proletariat, the instrument of the dictatorship of the proletariat.”

This contradiction helps explains Engels comments that “[w]e would therefore propose to replace state everywhere by Gemeinweisen, a good old German word which can very well convey the meaning of the French word ‘commune’” He even states that the Paris Commune “was no longer a state in the proper sense of the word.” However, this comment does not mean that Engels sought to remove any possible confusion on the matter, for he still talked of “the state” as “only a transitional institution which is used in the struggle, in the revolution, to hold down one’s adversaries by force ... so long as the proletariat still uses the state, it does not use it the interests of freedom but in order to hold down its adversaries, and as soon as it becomes possible to speak of freedom the state as such

Simply out, Leninism confuses the party power and workers’ power. An example of this “confusion” can be found in most Leninist works. For example, John Rees argues that “the essence of the Bolsheviks’ strategy ... was to take power from the Provisional government and put it in the hands of popular organs of working class power — a point later made explicit by Trotsky in his Lessons of October.” [“In Defence of October”, pp. 3–82, International Socialism, no. 52, p. 73] However, in reality Lenin had always been clear that the
Leninists, in contrast, have a different perspective on such bodies. Rather than placing them at the heart of the revolution, Leninism views them purely in instrumental terms — namely, as a means of achieving party power. Writing in 1907, Lenin argued that “Social-Democratic Party organisations may, in case of necessity, participate in inter-party Soviets of Workers’ Delegates ... and in congresses ... of these organisations, and may organise such institutions, provided this is done on strict Party lines for the purpose of developing and strengthening the Social-Democratic Labour Party”, that is “utilise” such organs “for the purpose of developing the Social-Democratic movement.” Significantly, given the fate of the soviets post-1917, Lenin noted that the party “must bear in mind that if Social-Democratic activities among the proletarian masses are properly, effectively and widely organised, such institutions may actually become superfluous.” [Collected Works, vol. 12, pp. 143–4] Thus the means by which working class can manage their own affairs would become “superfluous” once the party was in power. How the working class could be considered the “ruling class” in such a society is hard to understand.

As Oscar Anweiler summarises in his account of the soviets during the two Russian Revolutions:

“The drawback of the new ‘soviet democracy’ hailed by Lenin in 1906 is that he could envisage the soviets only as controlled organisations: for him they were instruments by which the party controlled the working masses, rather than true forms of a workers democracy. The basic contradiction of the Bolshevik soviet system — which purports to be a democracy of all working people but in reality recognises only the rule of one party — is already contained in Lenin’s interpretation of the soviets during the first Russian revolution.” [The Soviets, p. 85]

Thirteen years later, Lenin repeated this same vision of party power as the goal of revolution in his infamous diatribe against...
the state as being defined as an institution above society. Thus, if the post revolutionary society is marked by "the state" being dissolved into society, placed under its control, then it is not a state. To call it a "new and truly democratic" form of "state power" makes as little sense as calling a motorcar a "new" form of bicycle. As such, when Engels argues that the Paris Commune "was no longer a state in the proper sense of the word" or that when the proletariat seizes political power it "abolishes the state as state" we may be entitled to ask what it is, a state or not a state. [Op. Cit., p. 335 and p. 424] It cannot be both, it cannot be a "public power distinct from the mass of the people" and "a self-acting armed organisation of the population." If it is the latter, then it does not have what Engels considered as "an essential feature of the state" and cannot be considered one. If it is the former, then any claim that such a regime is the rule of the working class is automatically invalidated. That Engels mocked the anarchists for seeking a revolution "without a provisional government and in the total absence of any state or state-like institution, which are to be destroyed" we can safely say that it is the former. [Marx, Engels and Lenin, Anarchism and Anarcho-Syndicalism, p. 156]

Given that "primitive democracy," as Engels noted, defended itself against its adversaries without such an institution shows that to equate the defence of working class freedom with the state is not only unnecessary, it simply leads to confusion. For this reason anarchists do not confuse the necessary task of defending and organising a social revolution with creating a state. Thus, the problem for Marxism is that the empirical definition of the state collides with the metaphysical, the actual state with its Marxist essence. As Italian Anarchist Camillo Berneri argued: "The Proletariat which seizes the state, bestowing on it the complete ownership of the means of production and destroying itself as proletariat and the state 'as the state' is a metaphysical fantasy, a political hypostasis of social abstractions." ["The Abolition and Extinction of the State," pp. 50–1, Cienfuegos Press Anarchist Review, no. 4, p. 50]
councils as the framework of a socialist revolution. We discuss this issue in the next section.

H.3.11 Does Marxism aim to give power to workers organisations?

The short answer depends on which branch of Marxism you mean. If you are talking about libertarian Marxists such as council communists, Situationists and so on, then the answer is a resounding "yes." Like anarchists, these Marxists see a social revolution as being based on working class self-management and, indeed, criticised (and broke with) Bolshevism precisely on this question. Some Marxists, like the Socialist Party of Great Britain, stay true to Marx and Engels and argue for using the ballot box (see last section) although this not exclude utilising such organs once political power is seized by those means. However, if we look at the mainstream Marxist tradition (namely Leninism), the answer has to be an empathic "no."

As we noted in section H.1.4, anarchists have long argued that the organisations created by the working class in struggle would be the initial framework of a free society. These organs, created to resist capitalism and the state, would be the means to overthrow both as well as extending and defending the revolution (such bodies have included the “soviets” and “factory committees” of the Russian Revolution, the collectives in the Spanish revolution, popular assemblies of the 2001 Argentine revolt against neo-liberalism and the French Revolution, revolutionary unions and so on). Thus working class self-management is at the core of the anarchist vision and so we stress the importance (and autonomy) of working class organisations in the revolutionary movement and the revolution itself. Anarchists work within such bodies at the base, in the mass assemblies, and do not seek to replace their power with that of their own organisation (see section J.3.6).
This perspective can be traced back to the lack of interest Marx and Engels expressed in the forms which a proletarian revolution would take, as exemplified by Engels comments on having to “lop off” aspects of the state “inherited” by the working class. The idea that the organisations people create in their struggle for freedom may help determine the outcome of the revolution is missing. Rather, the idea that any structure can be appropriated and (after suitable modification) used to rebuild society is clear. This cannot but flow from the flawed Marxist theory of the state we discussed in section H.3.7. If, as Marx and Engels argued, the state is simply an instrument of class rule then it becomes unproblematic to utilise the existing republican state or create a new form of state complete with representative structures. The Marxist perspective, moreover, cannot help take emphasis away from the mass working class organisations required to rebuild society in a socialist manner and place it on the group who will “inherit” the state and “lop off” its negative aspects, namely the party and the leaders in charge of both it and the new “workers’ state.”

This focus towards the party became, under Lenin (and the Bolsheviks in general) a purely instrumental perspective on workers' councils and other organisations. They were of use purely in so far as they allowed the Bolshevik party to take power (indeed Lenin constantly identified workers’ power and soviet power with Bolshevik power and as Martin Buber noted, for Lenin “All power to the Soviets!” meant, at bottom, “All power to the Party through the Soviets!”). It can, therefore, be argued that his book State and Revolution was a means to use Marx and Engels to support his new found idea of the soviets as being the basis of creating a Bolshevik government rather than a principled defence of workers’

This is no academic point, as we explain in the next section this confusion has been exploited to justify party power over the proletariat. Thus, as Berneri argued, Marxists “do not propose the armed conquest of the commune by the whole proletariat, but they propose the conquest of the State by the party which imagines it represents the proletariat. The Anarchists allow the use of direct power by the proletariat, but they understand the organ of this power to be formed by the entire corpus of systems of communist administration — corporate organisations [i.e. industrial unions], communal institutions, both regional and national — freely constituted outside and in opposition to all political monopoly by parties and endeavouring to a minimum administrative centralisation.” Thus “the Anarchists desire the destruction of the classes by means of a social revolution which eliminates, with the classes, the State.” ["Dictatorship of the Proletariat and State Socialism", pp 51–2, Op. Cit., p. 52] Anarchists are opposed to the state because it is not neutral, it cannot be made to serve our interests. The structures of the state are only necessary when a minority seeks to rule over the majority. We argue that the working class can create our own structures, organised and run from below upwards, to ensure the efficient running of everyday life.

By confusing two radically different things, Marxism ensures that popular power is consumed and destroyed by the state, by a new ruling elite. In the words of Murray Bookchin:

“Marx, in his analysis of the Paris Commune of 1871, has done radical social theory a considerable disservice. The Commune’s combination of delegated policy-making with the execution of policy by its own administrators, a feature of the Commune which Marx celebrated, is a major failing of that body. Rousseau quite rightly emphasised that popular power cannot be delegated without being destroyed. One either has a fully empowered popular assembly or power belongs to the State.”
If power belongs to the state, then the state is a public body distinct from the population and, therefore, not an instrument of working class power. Rather, as an institution designed to ensure minority rule, it would ensure its position within society and become either the ruling class itself or create a new class which instrument it would be. As we discuss in section H.3.9 the state cannot be considered as a neutral instrument of economic class rule, it has specific interests in itself which can and does mean it can play an oppressive and exploitative role in society independently of an economically dominant class.

Which brings us to the crux of the issue whether this “new” state will, in fact, be unlike any other state that has ever existed. Insofar as this “new” state is based on popular self-management and self-organisation, anarchists argue that such an organisation cannot be called a state as it is not based on delegated power. "As long as," as Bookchin stressed, “the institutions of power consisted of armed workers and peasants as distinguished from a professional bureaucracy, police force, army, and cabal of politicians and judges, they were not[a] State ... These institutions, in fact comprised a revolutionary people in arms ... not a professional apparatus that could be regarded as a State in any meaningful sense of the term." ["Looking Back at Spain," pp. 53–96, The Radical Papers, Dimitrios I. Roussopoulos (ed.), p. 86] This was why Bakunin was at pains to emphasis that a “federal organisation, from below upward, of workers’ associations, groups, communes, districts, and ultimately, regions and nations” could not be considered as the same as “centralised states” and were “contrary to their essence.” [Statism and Anarchy, p. 13]

So when Lenin argued in State and Revolution that in the “dictatorship of the proletariat” the “organ of suppression is now the ma-

viks used Marx’s 1850s arguments to support their activities in the soviets in 1905 (while the Bolshevik’s expressed hostility to both the policy and the soviets) and, of course, there is nothing in them to exclude such a position. What is important is that the idea that Marxists have always subscribed to the idea that a social revolution would be based on the workers’ own combat organisations (be they unions, soviets or whatever) is a relatively new one to the ideology. If, as John Rees asserts, “the socialist revolution must counterpose the soviet to parliament ... precisely because it needs an organ which combines economic power — the power to strike and take control of the workplaces — with an insurrectionary bid for political power” and “breaking the old state” then the ironic thing is that it was Bakunin, not Marx, who advocated such a position. [Op. Cit., p. 25] Given this, the shock which met Lenin’s arguments in 1917 can be easily understood.

Rather than being rooted in the Marxist vision of revolution, as it has been in anarchism since at least the 1860s, workers council have played, rhetoric aside, the role of fig-leaf for party power (libertarian Marxism being a notable exception). They have been embraced by its Leninist wing purely as a means of ensuring party power. Rather than being seen as the most important gain of a revolution as they allow mass participation, workers’ councils have been seen, and used, simply as a means by which the party can seize power. Once this is achieved, the soviets can be marginalised and ignored without affecting the “proletarian” nature of the revolution in the eyes of the party:

“while it is true that Lenin recognised the different functions and democratic raison d’être for both the soviets and his party, in the last analysis it was the party that was more important than the soviets. In other words, the party was the final repository of working-class sovereignty. Thus, Lenin did not seem to have been reflected on or have been particularly perturbed by
to take political power within a democratic state. The closest that Marx or Engels came to advocating workers councils was in 1850 when Marx suggested that the German workers "establish their own revolutionary workers' governments" alongside of the "new official governments". These could be of two forms, either of "municipal committees and municipal councils" or "workers' clubs or workers' committees." There is no mention of how these would be organised but their aim would be to supervise and threaten the official governments "by authorities backed by the whole mass of the workers." These clubs would be "centralised". In addition, "workers candidates are [to be] put up alongside of the bourgeois-democratic candidates" to "preserve their independence". (although this "independence" meant taking part in bourgeois institutions so that "the demands of the workers must everywhere be governed by the concessions and measures of the democrats."

The Marx-Engels Reader, p. 507, p. 508 and p. 510) So while these "workers' committees" could, in theory, be elected from the workplace Marx made no mention of this possibility (talk of "municipal councils" suggests that such a possibility was alien to him). It also should be noted that Marx was echoing Proudhon who, the year before, had argued that the clubs "had to be organised. The organisation of popular societies was the fulcrum of democracy, the corner-stone of the republican order." [No Gods, No Masters, vol. 1, p. 48] So, as with the soviets, even the idea of workers' clubs as a means of ensuring mass participation was first raised by anarchists (although, of course, inspired by working class self-organisation during the 1848 French revolution).

All this may seem a bit academic to many. Does it matter? After all, most Marxists today subscribe to some variation of Lenin's position and so, in some aspects, what Marx and Engels really thought is irrelevant. Indeed, it is possible that Marx faced with workers' councils, as he was with the Commune, would have embraced them (perhaps not, as he was dismissive of similar ideas expressed in the libertarian wing of the First International). After all, the Menshe-

jority of the population, and not the minority" and that "since the majority of the people itself suppresses its oppressors, a 'special force' for the suppression [of the bourgeoisie] is no longer necessary" he is confusing two fundamentally different things. As Engels made clear, such a social system of "primitive democracy" is not a state. However, when Lenin argued that "the more the functions of state power devolve upon the people generally, the less need is there for the existence of this power," he was implicitly arguing that there would be, in fact, a "public power distinct from mass of the people" and so a state in the normal sense of the word based on delegated power, "special forces" separate from the armed people and so on.

[Essential Works of Lenin, p. 301]

That such a regime would not "wither away" has been proven by history. The state machine does not (indeed, cannot) represent the interests of the working classes due to its centralised, hierarchical and elitist nature — all it can do is represent the interests of the party in power, its own bureaucratic needs and privileges and slowly, but surely, remove itself from popular control. This, as anarchists have constantly stressed, is why the state is based on the delegation of power, on hierarchy and centralisation. The state is organised in this way to facilitate minority rule by excluding the mass of people from taking part in the decision making processes within society. If the masses actually did manage society directly, it would be impossible for a minority class to dominate it. Hence the need for a state. Which shows the central fallacy of the Marxist theory of the state, namely it argues that the rule of the proletariat will be conducted by a structure, the state, which is designed to exclude the popular participation such a concept demands!

Considered another way, "political power" (the state) is simply the power of minorities to enforce their wills. This means that a social revolution which aims to create socialism cannot use it to further its aims. After all, if the state (i.e. "political power") has been created to further minority class rule (as Marxists and anarchists agree) then, surely, this function has determined how the
organ which exercises it has developed. Therefore, we would ex-
pect organ and function to be related and impossible to separate.
So when Marx argued that the conquest of political power had be-
come the great duty of the working class because landlords and
capitalists always make use of their political privileges to defend
depth their economic monopolies and enslave labour, he drew the wrong conclusion.
Building on a historically based (and so evolutionary) under-
standing of the state, anarchists concluded that it was necessary
not to seize political power (which could only be exercised by a mi-
nority within any state) but rather to destroy it, to dissipate power
into the hands of the working class, the majority. By ending the
regime of the powerful by destroying their instrument of rule, the
power which was concentrated into their hands automatically falls
back into the hands of society. Thus, working class power can
only be concrete once “political power” is shattered and replaced
by the social power of the working class based on its own class or-
ganisations (such as factory committees, workers’ councils, unions,
neighbourhood assemblies and so on). As Murray Bookchin put it:

“the slogan ‘Power to the people’ can only be put into
practice when the power exercised by social elites is dis-
solved into the people. Each individual can then take
control of his [or her] daily life. If ‘Power to the people’
means nothing more than power to the ‘leaders’ of the
people, then the people remain an undifferentiated, ma-
nipulated mass, as powerless after the revolution as they
were before.” [Post-Scarcity Anarchism, p. xif]

In practice, this means that any valid social revolution needs to
break the state and not replace it with another one. This is be-
cause, in order to be a state, any state structure must be based on
delegated power, hierarchy and centralisation (“every State, even
the most Republican and the most democratic … . are in essence only
universal suffrage, intelligently used by the workers, will drive the rulers
to overthrow legality, that is, to put us in the most favourable posi-
tion to make revolution.” “The big mistake”, Engels argued, was “to
think that the revolution is something that can be made overnight.
As a matter of fact it is a process of development of the masses that
takes several years even under conditions accelerating this process.”
Thus it was a case of, “as a revolutionary, any means which leads to
the goal is suitable, including the most violent and the most pacific.”
[Marx and Engels, The Socialist Revolution, p. 283, p. 189, p. 265 and p. 274] However, over time and as social democratic par-
ties and universal suffrage spread, the emphasis did change from
insurrection (the Communist Manifesto’s “violent overthrow of
the bourgeoisie”) to Engels last pronouncement that “the conditions
of struggle had essentially changed. Rebellion in the old style, street
fighting with barricades … , was to a considerable extent obsolete.”
[Selected Works, p. 45 and pp. 653–4]

Obviously, neither Marx nor Engels (unlike Bakunin, signifi-
cantly) saw the rise of reformism which usually made this need
for the ruling class to “overthrow legality” redundant. Nor, for that
matter, did they see the effect of economic power in controlling
workers parties once in office. Sure, armed coups have taken place
to overthrow even slightly reformist governments but, thanks to
the use of “political action”, the working class was in no position
to “make revolution” in response. Not, of course, that these have
been required in most republics as utilising Marxist methods
have made many radical parties so reformist that the capitalists
can easily tolerate their taking office or can utilise economic and
bureaucratic pressures to control them.

So far from arguing, as Lenin suggested, for the destruction of
the capitalist state, Marx and Engels consistently advocated the use
of universal suffrage to gain control over the state, control which
then would be used to smash or shatter the “state machine.” Revo-
lution would be required to create a republic and to defend it
against reaction, but the key was the utilisation of political action
It is for these reasons that orthodox Marxism up until 1917 held the position that the socialist revolution would be commenced by seizing the existing state (usually by the ballot box, or by insurrection if that was impossible). Martov in his discussion of Lenin’s “discovery” of the “real” Marxist theory on the state (in *State and Revolution*) stressed that the idea that the state should be smashed by the workers who would then “transplant into the structure of society the forms of their own combat organisations” was a libertarian idea, alien to Marx and Engels. While acknowledging that “in our time, working people take to the idea of the soviets after knowing them as combat organisations formed in the process of the class struggle at a sharp revolutionary stage,” he distanced Marx and Engels quite successfully from such a position. [Op. Cit., p. 42] As such, he makes a valid contribution to Marxism and presents a necessary counter-argument to Lenin’s claims (at which point, we are sure, nine out of ten Leninists will dismiss our argument regardless of how well it explains apparent contradictions in Marx and Engels or how much evidence can be presented in support of it!).

This position should not be confused with a totally reformist position, as social-democracy became. Marx and Engels were well aware that a revolution would be needed to create and defend a republic. Engels, for example, noted “how totally mistaken is the belief that a republic, and not only a republic, but also a communist society, can be established in a cozy, peaceful way.” Thus violent revolution was required to create a republic — Marx and Engels were revolutionaries, after all. Within a republic, both recognised that insurrection would be required to defend democratic government against attempts by the capitalist class to maintain its economic position. Universal suffrage was, to quote Engels, “a splendid weapon” which, while “slower and more boring than the call to revolution”, was “ten times more sure and what is even better, it indicates with the most perfect accuracy the day when a call to armed revolution has to be made.” This was because it was “even ten to one that uni-

machines governing the masses from above” and “[i]f there is a State, there must necessarily be domination, and therefore slavery; a State without slavery, overt or concealed, is unthinkable — and that is why we are enemies of the State.” [Bakunin, *The Political Philosophy of Bakunin*, p. 211 and p. 287]). If power is devolved to the working class then the state no longer exists as its “essential feature” (of delegated power) is absent. What you have is a new form of the “primitive democracy” which existed before the rise of the state. While this new, modern, form of self-management will have to defend itself against those seeking to recreate minority power, this does not mean that it becomes a state. After all, the tribes with “primitive democracy” had to defend themselves against their adversaries and so that, in itself, does not mean that these communities had a state (see section H.2.1). Thus defence of a revolution, as anarchists have constantly stressed, does not equate to a state as it fails to address the key issue, namely who has power in the system — the masses or their leaders.

This issue is judged by Marx. When Bakunin, in “Statism and Anarchy”, asked the question “Will the entire proletariat head the government?”, Marx argued in response:

“Does in a trade union, for instance, the whole union constitute the executive committee? Will all division of labour in a factory disappear and also the various functions arising from it? And will everybody be at the top in Bakunin’s construction built from the bottom upwards? There will in fact be no below then. Will all members of the commune also administer the common affairs of the region? In that case there will be no difference between commune and region. ‘The Germans [says Bakunin] number nearly 40 million. Will, for example, all 40 million be members of the government?’ Certainly, for the thing begins with the self-government of the commune.” [Marx, Engels and
Lenin, *Anarchism and Anarcho-Syndicalism*, pp. 150–1

As Alan Carter argues, “this might have seemed to Marx [over] a century ago to be satisfactory rejoinder, but it can hardly do today. In the infancy of the trade unions, which is all Marx knew, the possibility of the executives of a trade union becoming divorced from the ordinary members may not have seemed to him to be a likely outcome. We, however, have behind us a long history of union leaders ‘selling out’ and being out of touch with their members. Time has ably demonstrated that to reject Bakunin’s fears on the basis of the practice of trade union officials constitutes a woeful complacency with regard to power and privilege — a complacency that was born ample fruit in the form of present Marxist parties and ‘communist’ societies ... [His] dispute with Bakunin shows quite clearly that Marx did not stress the continued control of the revolution by the mass of the people as a prerequisite for the transcendence of all significant social antagonisms.” [Marx: A Radical Critique, pp. 217–8] Non-anarchists have also noticed the poverty of Marx’s response. For example, as David W. Lovell puts it, “[t]aken as a whole, Marx’s comments have dodged the issue. Bakunin is clearly grappling with the problems of Marx’s transition period, in particular the problem of leadership, while Marx refuses to discuss the political form of what must be (at least in part) class rule by the proletariat.” [From Marx to Lenin, p. 64]

As we discussed in section H.3.1, Marx’s “Address to the Communist League,” with its stress on “the most determined centralisation of power in the hands of the state authority” and that “the path of revolutionary activity ... can only proceed with full force from the centre,” suggests that Bakunin’s fears were valid and Marx’s answer simply inadequate. [Marx-Engels Reader, p. 509] Simply put, if, as Engels argued, “an essential feature of the state is a public power distinct from the mass of the people,” then, clearly Marx’s argument of 1850 (and others like it) signifies a state in the usual sense of the

This, significantly, repeats Marx’s comments in an unpublished article from 1878 on the Reichstag debates on the anti-socialist laws where, in part, he suggested that “[i]f in England ... or the United States, the working class were to gain a majority in Parliament or Congress, they could by lawful means, rid themselves of such laws and institutions as impeded their development ... However, the ‘peaceful’ movement might be transformed into a ‘forcible’ one by resistance on the part of those interested in restoring the former state of affairs; if ... they are put down by force, it is as rebels against ‘lawful’ force.” [Op. Cit., vol. 24, p. 248] Sadly, he never finished and published it but it is in line with many of his public pronouncements on this subject.

Marx also excluded countries on the European mainland (with the possible exception of Holland) from his suggestions of peaceful reform. In those countries, presumably, the first stage of the revolution would be, as stressed in the Communist Manifesto, creating a fully democratic republic (“to win the battle for democracy” — see section H.1.1). As Engels put it, “the first and direct result of the revolution with regard to the form can and must be nothing but the bourgeois republic. But this will be here only a brief transitional period ... The bourgeois republic ... will enable us to win over the great masses of the workers to revolutionary socialism ... Only then can we successfully take over.” The “proletariat can only use the form of the one and indivisible republic” for it is “the sole political form in which the struggle between the proletariat and the bourgeoisie can be fought to a finish.” [Marx and Engels, *The Socialist Revolution*, p. 265, p. 283 and p. 294] As he summarised:

“Marx and I, for forty years, repeated ad nauseam that for us the democratic republic is the only political form in which the struggle between the working class and the capitalist class can first be universalised and then culminate in the decisive victory of the proletariat.” [Collected Works, vol. 27, p. 271]
The fact that Marx did not mention anything about abolishing the existing state and replacing it with a new one in his contribution to the "Program of the French Workers Party" in 1880 is significant. It said that the "collective appropriation" of the means of production "can only proceed from a revolutionary action of the class of producers — the proletariat — organised in an independent political party." This would be "pursued by all the means the proletariat has at its disposal including universal suffrage which will thus be transformed from the instrument of deception that it has been until now into an instrument of emancipation." [Op. Cit., vol. 24, p. 340] There is nothing about overthrowing the existing state and replacing it with a new state, rather the obvious conclusion which is to be drawn is that universal suffrage was the tool by which the workers would achieve socialism. It does fit in, however, with Marx's repeated comments that universal suffrage was the equivalent of political power for the working class where the proletariat was the majority of the population. Or, indeed, Engels numerous similar comments. It explains the repeated suggestion by Marx that there were countries like America and Britain "where the workers can achieve their aims by peaceful means." There is Engels:

"One can imagine that the old society could peacefully grow into the new in countries where all power is concentrated in the people’s representatives, where one can constitutionally do as one pleases as soon as a majority of the people give their support; in democratic republics like France and America, in monarchies such as England, where the dynasty is powerless against the popular will. But in Germany, where the government is virtually all-powerful and the Reichstag and other representative bodies are without real power, to proclaim likewise in Germany ... is to accept the fig leaf of absolutism and to bind oneself to it." [Op. Cit., vol. 27, p. 226]

"To give full scope to socialism entails rebuilding from top to bottom a society dominated by the narrow individualism of the shopkeeper. It is not as has sometimes been said by those indulging in metaphysical wooliness just a question of giving the worker 'the total product of his labour'; it is a question of completely reshaping all relationships ... In every street, in every hamlet, in every group of men gathered around a factory or along a section of the railway line, the creative, constructive and organisational spirit must be awakened in order to rebuild life — in the factory, in the village, in the store, in production and in distribution of supplies. All relations between individuals and great centres of popula-
tion have to be made all over again, from the very day, from the very moment one alters the existing commercial or administrative organisation.

“And they expect this immense task, requiring the free expression of popular genius, to be carried out within the framework of the State and the pyramidal organisation which is the essence of the State! They expect the State ... to become the lever for the accomplishment of this immense transformation. They want to direct the renewal of a society by means of decrees and electoral majorities... How ridiculous!” [Kropotkin, Op. Cit., pp. 58–9]

Ultimately, the question, of course, is one of power. Does the “executive committee” have the fundamental decision making power in society, or does that power lie in the mass assemblies upon which a federal socialist society is built? If the former, we have rule by a few party leaders and the inevitable bureaucratisation of the society and a state in the accepted sense of the word. If the latter, we have a basic structure of a free and equal society and a new organisation of popular self-management which eliminates the existence of a public power above society. This is not playing with words. It signifies the key issue of social transformation, an issue which Marxism tends to ignore or confuse matters about when discussing. Bookchin clarified what is at stake:

“To some neo-Marxists who see centralisation and decentralisation merely as difference of degree, the word ‘centralisation’ may merely be an awkward way of denoting means for co-ordinating the decisions made by decentralised bodies. Marx, it is worth noting, greatly confused this distinction when he praised the Paris Commune as a ‘working, not a parliamentary body, executive and legislative at the same time.’ In point of fact, Marx would have been keen to gain maximum benefit from it for both the International and his own ideology and influence. This would also have ensured that Marx kept his criticisms quiet, particularly as he was writing on behalf of an organisation which was not Marxist and included various different socialist tendencies.

This means that to fully understand Marx and Engels, we need to look at all their writings, before and after the Paris Commune. It is, therefore, significant that immediately after the Commune Marx stated that workers could achieve socialism by utilising existing democratic states and that the labour movement should take part in political action and send workers to Parliament. There is no mention of a federation of communes in these proposals and they reflect ideas both he and Engels had expressed since the 1840s. Ten years after the Commune, Marx stated that it was “merely an uprising of one city in exceptional circumstances. [Collected Works, vol. 46, p. 66] Similarly, a mere 3 years after the Commune, Engels argued that the key thing in Britain was “to form anew a strong workers’ party with a definite programme, and the best political programme they could wish for was the People’s Charter.” [Op. Cit., vol. 23, p. 614] The Commune was not mentioned and, significantly, Marx had previously defined this programme in 1855 as being “to increase and extend the omnipotence of Parliament by elevating it to people’s power. They [the Chartists] are not breaking up parliamentaryism but are raising it to a higher power.” [Op. Cit., vol. 14, p. 243]

As such, Marx’s defence of the Commune should not mean ignoring the whole body of his and Engels work, nor should Marx’s conclusion that the “state machinery” must be smashed in a successful revolution be considered to be in contradiction with his comments on utilising the existing democratic republic. It does, however, suggest that Marx’s reporting of the Proudhon-influenced ideas of the Communards cannot be taken as a definitive account of his ideas on social transformation.
by a follower of Proudhon. [Selected Works, p. 288] It expounded a clearly federalist and “bottom-up” organisational structure. It clearly implied “the destruction of the State power” rather than seeking to “inherit” it. Based on this libertarian revolt, it is unsurprising that Marx’s defence of it took on a libertarian twist. As noted by Bakunin, who argued that its “general effect was so striking that the Marxists themselves, who saw their ideas upset by the uprising, found themselves compelled to take their hats off to it. They went further, and proclaimed that its programme and purpose where their own, in face of the simplest logic .. . This was a truly farcical change of costume, but they were bound to make it, for fear of being overtaken and left behind in the wave of feeling which the rising produced throughout the world.” [Michael Bakunin: Selected Writings, p. 261]

The nature of The Civil War in France and the circumstances in which it was written explains why. Marx, while publicly opposing any kind of revolt before hand, did support the Commune once it began. His essay is primarily a propaganda piece in defence of it and is, fundamentally, reporting on what the Commune actually did and advocated. Thus, as well as reporting the Communal Constitution’s vision of a federation of communes, we find Marx noting, also without comment, that Commune decreed “the surrender to associations of workmen, under reserve of compensation, of all closed workshops and factories” [Op. Cit., p. 294] While Engels, at times, suggested that this could be a possible policy for a socialist government, it is fair to say that few Marxists consider Marx’s reporting of this particular aspect of the Commune as being a key aspect of his ideology. As Marx’s account reports on the facts of the Commune it could hardly not reflect the libertarian ideas which were so strong in both it and the French sections of the International — ideas he had spent much time and energy opposing. Moreover, given the frenzy of abuse the Communards were subject to it by the bourgeoisie, it was unlikely that Marx would have aided the reaction by being overly critical. Equally, given how positively the Commune had been received in working class and radical cir-

the consolidation of ‘executive and legislative’ functions in a single body was regressive. It simply identified the process of policy-making, a function that rightly should belong to the people in assembly, with the technical execution of these policies, a function that should be left to strictly administrative bodies subject to rotation, recall, limitations of tenure ... Accordingly, the melding of policy formation with administration placed the institutional emphasis of classical [Marxist] socialism on centralised bodies, indeed, by an ironical twist of historical events, bestowing the privilege of formulating policy on the ‘higher bodies’ of socialist hierarchies and their execution precisely on the more popular ‘revolutionary committees’ below.” [Toward an Ecological Society, pp. 215–6]

By confusing co-ordination with the state (i.e. with delegation of power), Marxism opens the door wide open to the “dictatorship of the proletariat” being a state “in the proper sense.” In fact, not only does Marxism open that door, it even invites the state “in the proper sense” in! This can be seen from Engels comment that just as “each political party sets out to establish its rule in the state, so the German Social-Democratic Workers’ Party is striving to establish its rule, the rule of the working class.” [Collected Works, vol. 23, p. 372] By confusing rule by the party “in the state” with “rule of the working class,” Engels is confusing party power and popular power. For the party to “establish its rule,” the state in the normal sense (i.e. a structure based on the delegation of power) has to be maintained. As such, the “dictatorship of the proletariat” signifies the delegation of power by the proletariat into the hands of the party and that implies a “public power distinct from the mass of the people” and so minority rule. This aspect of Marxism, as we argue in the next section, was developed under the Bolsheviks and became “the dictatorship of the party” (i.e. the dictatorship over the proletariat):
“since Marx vigorously opposed Bakunin’s efforts to ensure that only libertarian and decentralist means were employed by revolutionaries so as to facilitate the revolution remaining in the hands of the mass of workers, he must accept a fair measure of culpability for the authoritarian outcome of the Russian Revolution …

“Bakunin was not satisfied with trusting revolutionary leaders to liberate the oppressed … The oppressed people had to made aware that the only security against replacing one repressive structure with another was the deliberate retaining of control of the revolution by the whole of the working classes, and not naively trusting it to some vanguard.” [Alan Carter, Marx: A Radical Critique pp. 218–9]

It is for this reason why anarchists are extremely critical of Marxist ideas of social revolution. As Alan Carter argues:

“It is to argue not against revolution, but against ‘revolutionary’ praxis employing central authority. It is to argue that any revolution must remain in the hands of the mass of people and that they must be aware of the dangers of allowing power to fall into the hands of a minority in the course of the revolution. Latent within Marxist theory … is the tacit condoning of political inequality in the course and aftermath of revolutionary praxis. Only when such inequality is openly and widely rejected can there be any hope of a libertarian communist revolution. The lesson to learn is that we must oppose not revolutionary practice, but authoritarian ‘revolutionary’ practice. Such authoritarian practice will continue to prevail in revolutionary circles as long as the Marxist theory of the state and the corresponding theory of

“We know that the institutions, customs and traditions in the different countries must be taken into account; and we do not deny the existence of countries like America, England, and if I knew your institutions better I might add Holland, where the workers may achieve their aims by peaceful means. That being the true, we must admit that in most countries on the continent it is force which must be the lever of our revolution; it is force which will have to be resorted to for a time in order to establish the rule of the workers.” [Op. Cit., vol. 23, p. 255]

Interestingly, in 1886, Engels expanded on Marx’s speculation as regards Holland and confirmed it. Holland, he argued, as well as “a residue of local and provincial self-government” also had “an absence of any real bureaucracy in the French or Prussian sense” because, alone in Western Europe, it did not have an “absolute monarchy” between the 16th and 18th century. This meant that “only a few changes will have to be made to establish that free self-government by the working [people] which will necessarily be our best tool in the organisation of the mode of production.” [Op. Cit., vol. 47, pp. 397–8] Few would argue that smashing the state and its replacement with a new workers’ one would really constitute a “few changes”! However, Engels position does fit in with the notion that the “state machine” to be smashed is a legacy of absolute monarchy rather than the state structure of a bourgeois democratic republic. It also shows the nature of a Marxist revolution in a republic, in a “genuine capitalist state” of the type Marx and Engels expected to be the result of the first stage of any revolt.

The source of Lenin’s restatement of the Marxist theory of the state which came as such a shock to so many Marxists can be found in the nature of the Paris Commune. After all, the major influence in terms of “political vision” of the Commune was anarchism. The “rough sketch of national organisation which the Commune had no time to develop” which Marx praises but does not quote was written
The theoretic possibility [of peaceful reform] has not revealed itself in reality. But the sole fact that he admitted such a possibility shows us clearly Marx’s opinion, leaving no room for arbitrary interpretation. What Marx designated as the ‘destruction of the State machine’... was the destruction of the military and bureaucratic apparatus that the bourgeois democracy had inherited from the monarchy and perfected in the process of consolidating the rule of the bourgeois class. There is nothing in Marx’s reasoning that even suggests the destruction of the State organisation as such and the replacement of the State during the revolutionary period, that is during the dictatorship of the proletariat, with a social bond formed on a principle opposed to that of the State. Marx and Engels foresaw such a substitution only at the end of a process of ‘a progressive withering away’ of the State and all the functions of social coercion. They foresaw this atrophy of the State and the functions of social coercion to be the result of the prolonged existence of the socialist regime.” [Op. Cit., p. 31]

It should also be remembered that Marx’s comments on smashing the state machine were made in response to developments in France, a regime that Marx and Engels viewed as not being purely bourgeois. Marx notes in his account of the Commune how, in France, “peculiar historical circumstances” had “prevented the classical development... of the bourgeois form of government.” [Selected Works, p. 289] For Engels, Proudhon “confuses the French Bureaucratic government with the normal state of a bourgeoisie that rules both itself and the proletariat.” [Collected Works, vol. 11, p. 548] In the 1870s, Marx considered Holland, Britain and the USA to have “the genuine capitalist state.” [Op. Cit., vol. 24, p. 499] Significantly, it was precisely these states in which Marx had previously stated a peaceful revolution could occur:

In summary, the Marxist theory of the state is simply a-historic and postulates some kind of state “essence” which exists independently of actual states and their role in society. To confuse the organ required by a minority class to execute and maintain its rule and that required by a majority class to manage society is to make a theoretical error of great magnitude. It opens the door to the idea of party power and even party dictatorship. As such, the Marxism of Marx and Engels is confused on the issue of the state. Their comments fluctuate between the anarchist definition of the state (based, as it is, on generalisations from historical examples) and the a-historic definition (based not on historical example but rather derived from a supra-historical analysis). Trying to combine the metaphysical with the scientific, the authoritarian with the libertarian, could only leave their followers with a confused legacy and that is what we find.

Since the death of the founding fathers of Marxism, their followers have diverged into two camps. The majority have embraced the metaphysical and authoritarian concept of the state and proclaimed their support for a “workers’ state.” This is represented by social-democracy and it radical offshoot, Leninism. As we discuss in the next section, this school has used the Marxist conception of the state to allow for rule over the working class by the “revolutionary” party. The minority has become increasingly and explicitly anti-state, recognising that the Marxist legacy is contradictory and that for the proletarian to directly manage society then there can be no power above them. To this camp belongs the libertarian Marxists of the council communist, Situationist and other schools of thought which are close to anarchism.

power remain above criticism within them.” [Op. Cit., p. 231]
H.3.8 What is wrong with the Leninist theory of the state?

As discussed in the last section, there is a contradiction at the heart of the Marxist theory of the state. On the one hand, it acknowledges that the state, historically, has always been an instrument of minority rule and is structured to ensure this. On the other, it argues that you can have a state (the “dictatorship of the proletariat”) which transcends this historical reality to express an abstract essence of the state as an “instrument of class rule.” This means that Marxism usually confuses two very different concepts, namely the state (a structure based on centralisation and delegated power) and the popular self-management and self-organisation required to create and defend a socialist society.

This confusion between two fundamentally different concepts proved to be disastrous when the Russian Revolution broke out. Confusing party power with working class power, the Bolsheviks aimed to create a “workers’ state” in which their party would be in power (see section H.3.3). As the state was an instrument of class rule, it did not matter if the new “workers’ state” was centralised, hierarchical and top-down like the old state as the structure of the state was considered irrelevant in evaluating its role in society. Thus, while Lenin seemed to promise a radical democracy in which the working class would directly manage its own affairs in his *State and Revolution*, in practice he implemented a “dictatorship of the proletariat” which was, in fact, “the organisation of the vanguard of the oppressed as the ruling class.” [*Essential Works of Lenin*, p. 337] In other words, the vanguard party in the position of head of the state, governing on behalf of the working class which, in turn, meant that the new “workers’ state” was fundamentally a state in the usual sense of the word. This quickly lead to a dictatorship over, not of, the proletariat (as Bakunin had predicted). This development did not come as a surprise to anarchists, 1871, Marx had written to his friend Ludwig Kugelman “[i]f you look at the last chapter of my *Eighteenth Brumaire* you will find that I say that the next attempt of the French revolution will be no longer, as before, to transfer the bureaucratic military machine from one hand to another, but to break it, and that is essential for every real people’s revolution on the Continent. And this is what our heroic Party [sic!] comrades in Paris are attempting.” [*Op. Cit.*, vol. 44, p. 131] As noted above, Marx explicitly noted that the bureaucratic military machine predated the republic and was, in effect, inherited by it.

Lenin did note that Marx “restricts his conclusion to the Continent” on the issue of smashing the state machine, but does not list an obvious factor, that the UK approximated universal suffrage, in why this was the case (thus Lenin did not note that Engels, in 1891, added “democratic republics like France” to the list of states where “the old society may peacefully evolve into the new.” [*Op. Cit.*, vol. 27, p. 226]). In 1917, Lenin argued, “this restriction” was “no longer valid” as both Britain and America had “completely sunk into the all-European filthy, bloody morass of bureaucratic-military institutions.” [*Op. Cit.*, pp. 336–7] Subsequently, he repeated this claim in his polemic against Karl Kautsky, stating that notions that reforming the state were now out of date because of “the existence of militarism and a bureaucracy” which “were non-existent in Britain and America” in the 1870s. He pointed to how “the most democratic and republican bourgeoisie in America … deal with workers on strike” as further proof of his position. [*Collected Works*, vol. 28, p. 238 and p. 244] However, this does not impact on the question of whether universal suffrage could be utilised in order to be in a position to smash this state machine or not. Equally, Lenin failed to acknowledge the violent repression of strikes in the 1870s and 1880s in America (such as the Great Upheaval of 1877 or the crushing of the 8 hour day movement after the Haymarket police riot of 1886). As Martov argued correctly:
clergy, and so on. The Commune’s “very existence presupposed the non-existence of monarchy, which, in Europe at least, is the normal encumbrance and indispensable cloak of class rule. It supplied the republic with the basis of really democratic institutions.” [Op. Cit. p. 285, p. 286, p. 288 and p. 290]

Obviously, then, what the socialist revolution had to smash existed before the republican state was created and was an inheritance of pre-bourgeois rule (even if the bourgeoisie utilised it for its own ends). How this machine was to be smashed was left unspecified but given that it was not identical to the “parliamentary republic” Marx’s arguments cannot be taken as evidence that the democratic state needed to be smashed or destroyed rather than seized by means of universal suffrage (and reformed appropriately, by “smashing” the “state machinery” as well as including recall of representatives and the combining of administrative and legislative tasks into their hands). Clearly, Lenin’s attempt to equate the “parliamentary republic” with the “state machinery” cannot be supported in Marx’s account. At best, it could be argued that it is the spirit of Marx’s analysis, perhaps bringing it up to date. However, this was not Lenin’s position (he maintained that social democracy had hidden Marx’s clear call to smash the bourgeois democratic state).

Unsurprisingly, Lenin does not discuss the numerous quotes by Marx and Engels on this matter which clearly contradict his thesis. Nor mention that in 1871, a few months after the Commune, Marx argued that in Britain, “the way to show [i.e., manifest] political power lies open to the working class. Insurrection would be madness where peaceful agitation would more swiftly and surely do the work.” [Collected Works, vol. 22, p. 602] The following year, saw him suggest that America could join it as “the workers can achieve their aims by peaceful means” there as well [Op. Cit., vol. 23, p. 255] How if Marx had concluded that the capitalist state had to be destroyed rather than captured and refashioned then he quickly changed his mind! In fact, during the Commune itself, in April who had long argued that a state is an instrument of minority rule and cannot change its nature. To use the state to affect socialist change is impossible, simply because it is not designed for such a task. As we argued in section B.2, the state is based on centralisation of power explicitly to ensure minority rule and for this reason has to be abolished during a social revolution.

As Voline summarised, there is “an explicit, irreconcilable contradiction between the very essence of State Socialist power (if it triumphs) and that of the true Social Revolutionary process.” This was because “the basis of State Socialism and delegated power is the explicit non-recognition of [the] principles of the Social Revolution. The characteristic traits of Socialist ideology and practice ... do not belong to the future, but are wholly a part of the bourgeois past ... Once this model has been applied, the true principles of the Revolution are fatally abandoned. Then follows, inevitably, the rebirth, under another name, of the exploitation of the labouring masses, with all its consequences.” Thus “the forward march of the revolutionary masses towards real emancipation, towards the creation of new forms of social life, is incompatible with the very principle of State power ... the authoritarian principle and the revolutionary principle are diametrically opposed and mutually exclusive.” [The Unknown Revolution, p. 247 and p. 248]

Ironically, the theoretical lessons Leninists gained from the experience of the Russian Revolution confirm the anarchist analysis that the state structure exists to facilitate minority rule and marginalise and disempower the majority to achieve that rule. This can be seen from the significant revision of the Marxist position which occurred once the Bolshevik party become the ruling party. Simply put, after 1917 leading representatives of Leninism stressed that state power was not required to repress resistance by the ex-ruling class as such, but, in fact, was also necessitated by the divisions within the working class. In other words, state power was required because the working class was not able to govern itself and so required a grouping (the party) above it to ensure the success
of the revolution and overcome any “wavering” within the masses themselves.

While we have discussed this position in section H.1.2 and so will be repeating ourselves to some degree, it is worth summarising again the arguments put forward to justify this revision. This is because they confirm what anarchists have always argued, namely that the state is an instrument of minority rule and not one by which working class people can manage their own affairs directly. As the quotations from leading Leninists make clear, it is precisely this feature of the state which recommends it for party (i.e., minority) power. The contradiction at the heart of the Marxist theory of the state we pointed out in the section H.3.7 has been resolved in Leninism. It supports the state precisely because it is “a public power distinct from the mass of the people,” rather than an instrument of working class self-management of society.

Needless to say, his latter day followers point to Lenin’s apparently democratic, even libertarian, sounding 1917 work, The State and Revolution when asked about the Leninist theory of the state. As our discussion in section H.1.7 proved, the ideas expounded in his pamphlet were rarely, if at all, applied in practice by the Bolsheviks. Moreover, it was written before the seizure of power. In order to see the validity of his argument we must compare it to his and his fellow Bolshevik leaders opinions once the revolution had “succeeded.” What lessons did they generalise from their experiences and how did these lessons relate to State and Revolution?

The change can be seen from Trotsky, who argued quite explicitly that “the proletariat can take power only through its vanguard” and that “the necessity for state power arises from an insufficient cultural level of the masses and their heterogeneity.” Only with “support of the vanguard by the class” can there be the “conquest of power” and it was in “this sense the proletarian revolution and dictatorship are the work of the whole class, but only under the leadership of the vanguard.” Thus, rather than the working class as a whole seizing power, it is the “vanguard” which takes power — “a revolu-
arguments about removing aspects from the state inherited by the proletariat and signifies the “destruction” of the state machinery (its bureaucratic-military aspects) rather than the republic itself.

In other words, Lenin was right to state that “Marx’s idea is that the working class must break up, smash the ‘ready-made state machinery,’ and not confine itself to merely laying hold of it.” This was never denied by thinkers like Karl Kautsky, rather they stressed that for Marx and Engels universal suffrage was the means by which political power would be seized (at least in a republic) while violent revolution would be the means to create a republic and to defend it against attempts to restore the old order. As Engels put it in 1886, Marx had drawn “the conclusion that, at least in Europe, England is the only country where the inevitable social revolution might be effected entirely by peaceful and legal means. He certainly never forgot to add that he hardly expected the English ruling classes to submit, without a ‘pro-slavery rebellion,’ to this peaceful and legal revolution.” [“Preface to the English edition” in Marx, Capital, vol. 1, p. 113] Thus Kautsky stressed that the abolition of the standing army was “absolutely necessary if the state is to be able to carry out significant social reforms” once the party of the proletariat was in a position to “control legislation.” This would mean “the most complete democracy, a militia system” after, echoing the Communist Manifesto, “the conquest of democracy” had been achieved. [The Road to Power, p. 69, p. 70 and p. 72]

Essentially, then, Lenin was utilising a confusion between smashing the state and smashing the state machine once the workers’ party had achieved a majority within a democratic republic. In other words, Lenin was wrong to assert that “this lesson ... had not only been completely ignored, but positively distorted by the prevailing, Kautskyite, ‘interpretation’ of Marxism.” As we have proved “the false notion that universal suffrage ‘in the present-day state’ is really capable of revealing the will of the majority of the working people and of securing its realisation” was not invented by the “petty-bourgeois democrats” nor “the social-chauvinists and

...
the proletariat as a whole we are left with one obvious conclusion, namely party dictatorship rather than working class democracy. How Trotsky’s position is compatible with the idea of the working class as the “ruling class” is not explained. However, it fits in well with the anarchist analysis of the state as an instrument designed to ensure minority rule.

Thus the possibility of party dictatorship exists if popular support fades. Which is, significantly, precisely what had happened when Lenin and Trotsky were in power. In fact, these arguments built upon other, equally elitist statement which had been expressed by Trotsky when he held the reins of power. In 1920, for example, he argued that while the Bolsheviks have “more than once been accused of having substituted for the dictatorship of the Soviets the dictatorship of the party,” in fact “it can be said with complete justice that the dictatorship of the Soviets became possible only by means of the dictatorship of the party.” This, just to state the obvious, was his argument seventeen years later. “In this ‘substitution’ of the power of the party for the power of the working class,” Trotsky added, “there is nothing accidental, and in reality there is no substitution at all. The Communists express the fundamental interests of the working class.” [Terrorism and Communism, p. 109] In early 1921, he argued again for Party dictatorship at the Tenth Party Congress:

“The Workers’ Opposition has come out with dangerous slogans, making a fetish of democratic principles! They place the workers’ right to elect representatives above the Party, as if the party were not entitled to assert its dictatorship even if that dictatorship temporarily clashed with the passing moods of the workers’ democracy. It is necessary to create amongst us the awareness of the revolutionary birthright of the party, which is obliged to maintain its dictatorship, regardless of temporary wa-
vering even in the working classes. This awareness is for

off one of the “ubiquitous organs” associated with the “centralised State power” once it had inherited the state via elections. [Selected Works, p. 287, p. 285, p. 287 and p. 285] Indeed, this is precisely what was meant, as confirmed by Engels in a letter written in 1884 clarifying what Marx meant:

“It is simply a question of showing that the victorious proletariat must first refashion the old bureaucratic, administrative centralised state power before it can use it for its own purposes: whereas all bourgeois republicans since 1848 inveighed against this machinery so long as they were in the opposition, but once they were in the government they took it over without altering it and used it partly against the reaction but still more against the proletariat.” [Collected Works, vol. 47, p. 74]

Interestingly, in the second outline of the Civil War in France, Marx used words almost identical to Engels latter explanation:

“But the proletariat cannot, as the ruling classes and their different rival fractions have done in the successive hours of their triumph, simply lay hold on the existent State body and wield this ready-made agency for their own purpose. The first condition for the holding of po-
itical power, is to transform its working machinery and destroy it as an instrument of class rule.” [our em-
phasis, Collected Works, vol. 22, p. 533]

It is, of course, true that Marx expressed in his defence of the Commune the opinion that new “Communal Constitution” was to become a “reality by the destruction of the State power” yet he im-
imediately argues that “the merely repressive organs of the old gov-
ernment power were to be amputated” and “its legitimate functions were to be wrestles from” it and “restored to the responsible agents of society.” [Selected Works, pp. 288–9] This corresponds to Engels
saw the workers give a “taste of their power, hitherto unexerted.” [Op. Cit., vol. 27, p. 395] This, significantly, is in line with his 1870 comment that in Britain “the bourgeoisie could only get its real representative … into government only by extension of the franchise, whose consequences are bound to put an end to all bourgeois rule.” [Selected Works, p. 238]

Marx seems to see voting for a government as being the same as political power as the “fundamental contradiction” of a democracy under capitalism is that the classes “whose social slavery the constitution is to perpetuate” it “puts in possession of political power through universal suffrage.” [Collected Works, vol. 10, p. 79]

For Engels in 1847, “democracy has as its necessary consequence the political rule of the proletariat.” Universal suffrage would “make political power pass from the middle class to the working class” and so “the democratic movement” is “striving for the political domination of the proletariat.” [Op. Cit., vol. 7, p. 299, p. 440 and p. 368]

As noted in section H.3.9, Marx concluded that Bonaparte’s coup ended the political power of the bourgeoisie and, for Engels, “the whole bourgeoisie ruled, but for three years only” during the Second French Republic of 1848–51. Significantly, during the previous regime of Louis-Philippe (1830–48) “a very small portion of the bourgeoisie ruled the kingdom” as “by far the larger part were excluded from the suffrage by high [property] qualifications.” [Op. Cit., vol. 27, p. 297]

All of which, of course, fits into Marx’s account of the Paris Commune where, as noted above, the Commune “was formed of the municipal councillors” who had been “chosen by universal suffrage in the various wards of the town” in the municipal elections held on March 26th, 1871. Once voted into office, the Commune then smashed the state machine inherited by it, recognising that “the working class cannot simply lay hold of the ready-made state machinery, and wield it for its own purposes.” The “first decree of the Commune … was the suppression of the standing army, and the substitution for it of the armed people.” Thus the Commune lops

us the indispensable element. The dictatorship does not base itself at every given moment on the formal principle of a workers’ democracy.” [quoted by Samuel Farber, Before Stalinism, p. 209]

The similarities with his arguments of 1939 are obvious. Unsurprisingly, he maintained this position in the intervening years. He stated in 1922 that “we maintain the dictatorship of our party!” [The First Five Years of the Communist International, vol. 2, p. 255] The next year saw him arguing that “[i]f there is one question which basically not only does not require revision but does not so much as admit the thought of revision, it is the question of the dictatorship of the Party.” He stressed that “[o]ur party is the ruling party” and that “[w]e maintain the dictatorship of our party!” [Leon Trotsky Speaks, p. 158 and p. 160]

By 1927, when Trotsky was in the process of being “dumped” on the “other side of the barricade” by the ruling bureaucracy, he still argued for “the Leninist principle, inviolable for every Bolshevik, that the dictatorship of the proletariat is and can be realised only through the dictatorship of the party.” It was stressed that the “dictatorship of the proletariat [sic!] demands as its very core a single proletarian party.” [The Challenge of the Left Opposition (1926–7), p. 395 and p. 441] As we noted in section H.1.2, ten years later, he was still explicitly arguing for the “revolutionary dictatorship of a proletarian party”.

Thus, for Trotsky over a twenty year period, the “dictatorship of the proletariat” was fundamentally a “dictatorship of the party.” While the working class may be allowed some level of democracy, the rule of the party was repeatedly given precedence. While the party may be placed into power by a mass revolution, once there
the party would maintain its position of power and dismiss attempts by the working class to replace it as “wavering” or “vacillation” due to the “insufficient cultural level of the masses and their heterogeneity.” In other words, the party dictatorship was required to protect working class people from themselves, their tendency to change their minds based on changing circumstances, evaluating the results of past decisions, debates between different political ideas and positions, make their own decisions, reject what is in their best interests (as determined by the party), and so on. Thus the underlying rationale for democracy (namely that it reflects the changing will of the voters, their “passing moods” so to speak) is used to justify party dictatorship!

The importance of party power over the working class was not limited to Trotsky. It was considered of general validity by all leading Bolsheviks and, moreover, quickly became mainstream Bolshevik ideology. In March 1923, for example, the Central Committee of the Communist Party in a statement issued to mark the 25th anniversary of the founding of the Bolshevik Party. This statement summarised the lessons gained from the Russian revolution. It stated that “the party of the Bolsheviks proved able to stand out fearlessly against the vacillations within its own class, vacillations which, with the slightest weakness in the vanguard, could turn into an unprecedented defeat for the proletariat.” Vacillations, of course, are expressed by workers’ democracy. Little wonder the statement rejects it: “The dictatorship of the working class finds its expression in the dictatorship of the party.”

Trotsky and other leading Bolsheviks were simply following Lenin’s lead, who had admitted at the end of 1920 that while “the dictatorship of the proletariat” was “inevitable” in the “transition of socialism,” it is “not exercised by an organisation which takes in all industrial workers.” The reason “is given in the theses of the Second Congress of the Communist International on the role of political parties” (more on which later). This means that “the Party, shall significant, particularly as these identical arguments come before and after the Paris Commune of 1871.

This was no isolated statement. Engels had argued along the same lines (and, likewise, echoed early statements) as regards Britain in 1881, “where the industrial and agricultural working class forms the immense majority of the people, democracy means the dominion of the working class, neither more nor less. Let, then, that working class prepare itself for the task in store for it — the ruling of this great Empire . . . And the best way to do this is to use the power already in their hands, the actual majority they possess . . . to send to Parliament men of their own order.” In case this was not clear enough, he lamented that “[e]verywhere the labourer struggles for political power, for direct representation of his class in the legislature — everywhere but in Great Britain.” [Op. Cit., vol. 24, p. 405] For Engels:

“In every struggle of class against class, the next end fought for is political power; the ruling class defends its political supremacy, that is to say its safe majority in the Legislature; the inferior class fights for, first a share, then the whole of that power, in order to become enabled to change existing laws in conformity with their own interests and requirements. Thus the working class of Great Britain for years fought ardently and even violently for the People’s Charter [which demanded universal suffrage and yearly general elections], which was to give it that political power.” [Op. Cit., p. 386]
fore Draper made his assertion. Julius Martov (for example) after quoting Marx on this issue summarised that, for Marx and Engels, the "Reign of Terror in France was the momentary domination of the democratic petty bourgeoisie and the proletariat over all the possessing classes, including the authentic bourgeoisie." [The State and Socialist Revolution, p. 51]

Similarly, Lenin quoted Engels on the proletariat seizing “state power” and nationalising the means of production, an act by which it “abolishes itself as proletariat” and “abolishes the state as state.” Significantly, it is Lenin who has to write that “Engels speaks here of the proletarian revolution ‘abolishing’ the bourgeois state, while the words about the state withering away refer to the remnants of the proletariat state after the socialist revolution.” Yet Engels himself makes no such differentiation and talks purely of “the state” and it “becom[ing] the real representative of the whole of society” by “taking possession of the means of production in the name of society.” Perhaps Lenin was right and Engels really meant two different states but, sadly, he failed to make that point explicitly, so allowing Marxism, to use Lenin’s words, to be subjected to “the cruelest distortion” by its followers, “prune[d]” and “reduc[ed] ... to opportunism.” [Op. Cit., pp. 320–2]

Then there are Engels 1887 comments that in the USA the workers “next step towards their deliverance” was “the formation of a political workingmen’s party, with a platform of its own, and the conquest of the Capitol and the White House for its goal.” This new party “like all political parties everywhere ... aspires to the conquest of political power.” Engels then discusses the “electoral battle” going on in America. [Marx and Engels, Collected Works, vol. 26, p. 435 and p. 437] Significantly, 40 years previously in 1847, Engels had argued that the revolution “will establish a democratic constitution, and through this, the direct ... dominance of the proletariat” where “the proletarians are already a majority of the people.” He noted that “a democratic constitution has been introduced” in America. [Op. Cit., vol. 6, p. 350 and p. 356] The continuity is we say, absorbs the vanguard of the proletariat, and this vanguard exercises the dictatorship of the proletariat.” This was required because “in all capitalist countries ... the proletariat is still so divided, so degraded, and so corrupted in parts” that it “can be exercised only by a vanguard ... the dictatorship of the proletariat cannot be exercised by a mass proletarian organisation.” [Collected Works, vol. 32, p. 20 and p. 21] For Lenin, “revolutionary coercion is bound to be employed towards the wavering and unstable elements among the masses themselves.” [Op. Cit., vol. 42, p. 170] Needless to say, Lenin failed to mention this aspect of his system in The State and Revolution (a failure usually repeated by his followers). It is, however, a striking confirmation of Bakunin’s comments “the State cannot be sure of its own self-preservation without an armed force to defend it against its own internal enemies, against the discontent of its own people.” [Michael Bakunin: Selected Writings, p. 265]

Looking at the lessons leading leaders of Leninism gained from the experience of the Russian Revolution, we have to admit that the Leninist “workers’ state” will not be, in fact, a “new” kind of state, a “semi-state,” or, to quote Lenin, a “new state” which “is no longer a state in the proper sense of the word.” If, as Lenin argued in early 1917, the state “in the proper sense of the term is domination over the people by contingents of armed men divorced from the people,” then Bolshevism in power quickly saw the need for a state “in the proper sense.” [Op. Cit., vol. 24, p. 85] While this state “in the proper sense” had existed from the start of Bolshevik rule, it was only from early 1919 onwards (at the latest) that the leaders of Bolshevism had openly brought what they said into line with what they did. It was only by being a “state in the proper sense” could the Bolshevik party rule and exercise “the dictatorship of the party” over the “wavering” working class.

So when Lenin stated that “Marxism differs from anarchism in that it recognises the need for a state for the purpose of the transition to socialism,” anarchists agree. [Op. Cit., vol. 24, p. 85]
Insofar as “Marxism” aims for, to quote Lenin, the party to “take state power into [its] own hands,” to become “the governing party” and considers one of its key tasks for “our Party to capture political power” and to “administer” a country, then we can safely say that the state needed is a state “in the proper sense,” based on the centralisation and delegation of power into the hands of a few (see our discussion of Leninism as “socialism from above” in section H.3.3 for details).

This recreation of the state “in the proper sense” did not come about by chance or simply because of the “will to power” of the leaders of Bolshevism. Rather, there are strong institutional pressures at work within any state structure (even a so-called “semi-state”) to turn it back into a “proper” state. We discuss this in more detail in section H.3.9. However, we should not ignore that many of the roots of Bolshevik tyranny can be found in the contradictions of the Marxist theory of the state. As noted in the last section, for Engels, the seizure of power by the party meant that the working class was in power. The Leninist tradition builds on this confusion between party and class power. It is clear that the “dictatorship of the proletariat” is, in fact, rule by the party. In Lenin’s words:

“Engels speaks of a government that is required for the domination of a class ... Applied to the proletariat, it consequently means a government that is required for the domination of the proletariat, i.e. the dictatorship of the proletariat for the effectuation of the socialist revolution.” [Op. Cit., vol. 8, p. 279]

The role of the working class in this state was also indicated, as “only a revolutionary dictatorship supported by the vast majority of the people can be at all durable.” [Op. Cit., p. 291] In other words the “revolutionary government” has the power, not the working class in whose name it governs. In 1921 he made this explicit: “To govern you need an army of steeled revolutionary Communists.

1792 to 1799 each French department, each commune, enjoyed complete self-government on the American model, and this is what we too must have. How self-government is to be organised and how we can manage without a bureaucracy has been shown to us by America and the first French Republic.” Significantly, Engels was explicitly discussing the need for a “republican party programme”, commenting that it would be impossible for “our best people to become ministers” under an Emperor and arguing that, in Germany at the time, they could not call for a republic and had to raise the “demand for the concentration of all political power in the hands of the people’s representatives.” Engels stressed that “the proletariat can only use the form of the one and indivisible republic” with “self-government” meaning “officials elected by universal suffrage.” [Op. Cit., pp. 227–9]

Clearly, the “assumption” Draper denounced makes more sense than his own or Lenin’s. This is particularly the case when it is clear that both Marx and Engels viewed the French Republic under the Jacobins as a situation where the proletariat held political power (although, like Marx with the Paris Commune, they do not use the term “dictatorship of the proletariat” to describe it). Engels wrote of “the rule of the Mountain party” as being “the short time when the proletariat was at the helm of the state in the French Revolution” and “from May 31, 1793 to July 26, 1794 ... not a single bourgeois dared show his face in the whole of France.” Marx, similarly, wrote of this period as one in which “the proletariat overthrows the political rule of the bourgeoisie” but due to the “material conditions” its acts were “in service” of the bourgeois revolution. The “bloody action of the people” only “prepared the way for” the bourgeoisie by destroying feudalism, something which the bourgeoisie was not capable of. [Op. Cit., vol. 6, p. 373, p. 5 and p. 319]

Apparently Engels did not consider it “too absurd to entertain” that the French Republic of 1793 was “a ‘dictatorship of the proletariat’” and, ironically, Draper’s “anyone else” turned out to be Marx! Moreover, this was well known in Marxist circles long be-
dictatorship of the proletariat, as the Great French Revolution has already shown.” [Collected Works, vol. 27, p. 227]

Clearly Engels does not speak of a “commune-republic” or anything close to a soviet republic, as expressed in Bakunin’s work or the libertarian wing of the First International with their ideas of a “trade-union republic” or a free federation of workers’ associations. Clearly and explicitly he speaks of the democratic republic, the current state (“an evil inherited by the proletariat”) which is to be seized and transformed.

Unsurprisingly, when Lenin came to quote this passage in State and Revolution he immediately tried to obscure its meaning. “Engels,” he wrote, “repeated here in a particularly striking form the fundamental idea which runs through all of Marx’s work, namely, that the democratic republic is the nearest approach to the dictatorship of the proletariat.” [The Lenin Anthology, p. 360] However, obviously Engels did nothing of the kind. He did not speak of the political form which “is the nearest approach” to the dictatorship, rather he wrote only of “the specific form” of the dictatorship, the “only” form in which “our Party” can come to power. Hal Draper, likewise, denied that Engels meant what he clearly wrote, arguing that he really meant the Paris Commune. “Because of the expression ‘great French revolution,” Draper asserted, “the assumption has often been made that Engels meant the French Revolution of 1789; but the idea that he, or anyone else, could view 1789 (or 1793) as a ‘dictatorship of the proletariat’ is too absurd to entertain.” [The ‘dictatorship of the proletariat’ from Marx to Lenin, p. 37fn]

Yet, contextually, no evidence exists to support such a claim and what does disputes it — Engels discusses French history and makes no mention of the Commune but does mention the republic of 1792 to 1799 (significantly, Lenin makes no attempt to suggest that Engels meant the Paris Commune or anything else bar a democratic republic). In fact, Engels goes on to argue that “We have it, and it is called the Party.” The “Party is the leader, the vanguard of the proletariat, which rules directly.” For Lenin, as “long as we, the Party’s Central Committee and the whole Party, continue to run things, that is govern we shall never — we cannot — dispense with ... removals, transfers, appointments, dismissals, etc.” of workers, officials and party members from above. [Op. Cit., vol. 32, p. 62, p. 98 and p. 99] Unsurprisingly, these powers were used by Lenin, and then Stalin, to destroy opposition (although the latter applied coercive measures within the party which Lenin only applied to non-party opponents).

So much for “workers’ power,” “socialism from below” and other such rhetoric.

This vision of “socialism” being rooted in party power over the working class was the basis of the Communist International’s resolution of the role of the party. This resolution is, therefore, important and worth discussing. It argues that the Communist Party “is part of the working class,” namely its “most advanced, most class-conscious, and therefore most revolutionary part.” It is “distinguished from the working class as a whole in that it grasps the whole historic path of the working class in its entirety and at every bend in that road endeavours to defend not the interests of individual groups or occupations but the interests of the working class as a whole.” [Proceedings and Documents of the Second Congress 1920, vol. 1, p. 191] However, in response it can be argued that this simply means the “interests of the party” as only it can understand what “the interests of the working class as a whole” actually are. Thus we have the possibility of the party substituting its will for that of the working class simply because of what Leninists term the “uneven development” of the working class. As Alan Carter argues, these “conceptions of revolutionary organisation maintain political and ideological domination by retaining supervisory roles and notions of privileged access to knowledge ... the term ‘class consciousness’ is employed to facilitate such domination over the workers. It is not what the workers think, but what the party leaders think they ought to think that con-
stitutes the revolutionary consciousness imputed to the workers.” The ideological basis for a new class structure is created as the “Leninist revolutionary praxis ... is carried forward to post-revolutionary institutions.” [Marx: A Radical Critique, p. 175]

The resolution stresses that before the revolution, the party “will encompass ... only a minority of the workers.” Even after the “seizure of power,” it will still “not be able to unite them all into its ranks organisationally.” It is only after the “final defeat of the bourgeois order” will “all or almost all workers begin to join” it. Thus the party is a minority of the working class. The resolution then goes on to state that “[e]very class struggle is a political struggle. This struggle, which inevitably becomes transformed into civil war, has as its goal the conquest of political power. Political power cannot be seized, organised, and directed other than by some kind of political party.” [Op. Cit., p. 192, p. 193] And as the party is a “part” of the working class which cannot “unite” all workers “into its ranks,” this means that political power can only be “seized, organised, and directed” by a minority.

Thus we have minority rule, with the party (or more correctly its leaders) exercising political power. The idea that the party “must dissolve into the councils, that the councils can replace the Communist Party” is “fundamentally wrong and reactionary.” This is because, to “enable the soviets to fulfil their historic tasks, there must ... be a strong Communist Party, one that does not simply ‘adapt’ to the soviets but is able to make them renounce ‘adaptation’ to the bourgeoisie.” [Op. Cit., p. 196] Thus rather than the workers’ councils exercising power, their role is simply that of allowing the Communist Party to seize political power.

As we indicated in section H.3.4, the underlying assumption behind this resolution was made clear by Zinoviev during his introductory speech to the congress meeting which finally agreed the resolution: the dictatorship of the party was the dictatorship of the proletariat. Little wonder that Bertrand Russell, on his return from Lenin’s Russia in 1920, wrote that:

“[If one thing is certain it is that our Party and the working class can only come to power under the form of a democratic republic. This is even the specific form for the
councils but broke with the Bolsheviks over the issue of whether the councils or the party had power, Lenin’s analysis, while flawed in parts, is in the general spirit of Marx and they stress the need to smash the state and replace it with workers’ councils. In this, they express the best in Marx. When faced with the Paris Commune and its libertarian influences he embraced it, distancing himself (for a while at least) with many of his previous ideas.

So what was the original (orthodox) Marxist position? It can be seen from Lenin who, as late December 1916 argued that “Socialists are in favour of utilising the present state and its institutions in the struggle for the emancipation of the working class, maintaining also that the state should be used for a specific form of transition from capitalism to socialism.” Lenin attacked Bukharin for “erroneously ascribing this [the anarchist] view to the socialist” when he had stated socialists wanted to “abolish” the state or “blow it up.” He called this “transitional form” the dictatorship of the proletariat, “which is also a state.” [Collected Works, vol. 23, p. 165] In other words, the socialist party would aim to seize power within the existing republican state and, after making suitable modifications to it, use it to create socialism.

That this position was the orthodox one is hardly surprising, given the actual comments of both Marx and Engels. For example Engels argued in April 1883 while he and Marx saw “the gradual dissolution and ultimate disappearance of that political organisation called the State” as “one of the final results of the future revolution,” they “at the same time … have always held that … the proletarian class will first have to possess itself of the organised political force of the State and with its aid stamp out the resistance of the Capitalist class and re-organise society.” The idea that the proletariat needs to “possess” the existing state is made clear when he notes that the anarchists “reverse the matter” by advocating that the revolution “has to begin by abolishing the political organisation of the State.” For Marxists “the only organisation the victorious working class finds ready-made for use, is that of the State. It may require adaptation

“Friends of Russia here [in Britain] think of the dictatorship of the proletariat as merely a new form of representative government, in which only working men and women have votes, and the constituencies are partly occupational, not geographical. They think that ‘proletariat’ means ‘proletariat,’ but ‘dictatorship’ does not quite mean ‘dictatorship.’ This is the opposite of the truth. When a Russian Communist speak of a dictatorship, he means the word literally, but when he speaks of the proletariat, he means the word in a Pickwickian sense. He means the ‘class-conscious’ part of the proletariat, i.e. the Communist Party. He includes people by no means proletarian (such as Lenin and Tchicherin) who have the right opinions, and he excludes such wage-earners as have not the right opinions, whom he classifies as lackeys of the bourgeoisie.” [The Practice and Theory of Bolshevism, pp. 26–27]

Significantly, Russell pointed, like Lenin, to the Comintern resolution on the role of the Communist Party. In addition, he noted the reason why this party dictatorship was required: “No conceivable system of free elections would give majorities to the Communists, either in the town or country.” [Op. Cit., pp. 40–1]

Nor are followers of Bolshevism shy in repeating its elitist conclusions. Founder and leader of the British SWP, Tony Cliff, for example, showed his lack of commitment to working class democracy when he opined that the “actual level of democracy, as well as centralism, [during a revolution] depends on three basic factors: 1. the strength of the proletariat; 2. the material and cultural legacy left to it by the old regime; and 3. the strength of capitalist resistance. The level of democracy feasible must be in direct proportion to the first two factors, and in reverse proportion to the third. The captain of an ocean liner can allow football to be played on his vessel; on a tiny raft in a stormy sea the level of tolerance is far lower.” [Lenin, vol.
3, p. 179] That Cliff compares working class democracy to football says it all. Rather than seeing it as the core gain of a revolution, he relegates it to the level of a game, which may or may not be “tolerated”! And need we speculate who the paternalistic “captain” in charge of the ship of the state would be?

Replacing Cliff’s revealing analogies we get the following: “The party in charge of a workers’ state can allow democracy when the capitalist class is not resisting; when it is resisting strongly, the level of tolerance is far lower.” So, democracy will be “tolerated” in the extremely unlikely situation that the capitalist class will not resist a revolution! That the party has no right to “tolerate” democracy or not is even entertained by Cliff, its right to negate the basic rights of the working class is taken as a given. Clearly the key factor is that the party is in power. It may “tolerate” democracy, but ultimately his analogy shows that Bolshevism considers it as an added extra whose (lack of) existence in no way determines the nature of the “workers’ state” (unless, of course, he is analysing Stalin’s regime rather than Lenin’s then it becomes of critical importance!). Perhaps, therefore, we may add another “basic factor” to Cliff’s three; namely “4. the strength of working class support for the party.” The level of democracy feasible must be in direct proportion to this factor, as the Bolsheviks made clear. As long as the workers vote for the party, then democracy is wonderful. If they do not, then their “wavering” and “passing moods” cannot be “tolerated” and democracy is replaced by the dictatorship of the party. Which is no democracy at all.

Obviously, then, if, as Engels argued, “an essential feature of the state is a public power distinct from the mass of the people” then the regime advocated by Bolshevism is not a “semi-state” but, in fact, a normal state. Trotsky and Lenin are equally clear that said state exists to ensure that the “mass of the people” do not participate in public power, which is exercised by a minority, the party (or, more correctly, the leaders of the party). One of the key aims of this new state is to repress the “backward” or “wavering” sections of

revolution. For example, the syndicalists “regarded the soviets ... as admirable versions of the bourses du travail, but with a revolutionary function added to suit Russian conditions. Open to all leftist workers regardless of specific political affiliation, the soviets were to act as nonpartisan labour councils improvised ‘from below’ ... with the aim of bringing down the old regime.” The anarchists of Khleb i Volia “also likened the 1905 Petersburg Soviet — as a non-party mass organisation — to the central committee of the Paris Commune of 1871.” [Paul Avrich, The Russian Anarchists, pp. 80–1] In 1907, it was concluded that the revolution required “the proclamation in villages and towns of workers’ communes with soviets of workers’ deputies ... at their head.” [quoted by Alexandre Skirda, Facing the Enemy, p. 77] These ideas can be traced back to Bakunin, so, ironically, the idea of the superiority of workers’ councils has existed from around the time of the Paris Commune, but only in anarchist theory.

So, if Marxists did not support workers’ councils until 1917, what did Marxists argue should be the framework of a socialist society before this date? To discover this, we must look to Marx and Engels. Once we do, we discover that their works suggest that their vision of socialist transformation was fundamentally based on the bourgeois state, suitably modified and democratized to achieve this task. As such, rather than present the true account of the Marxist theory of the state Lenin interpreted various inexact and ambiguous statements by Marx and Engels (particularly from Marx’s defence of the Paris Commune) to justify his own actions in 1917. Whether his 1917 revision of Marxism in favour of workers’ councils as the means to socialism is in keeping with the spirit of Marx is another matter of course. For the Socialist Party of Great Britain and its sister parties, Lenin violated both the letter and the spirit of Marx and they stress his arguments in favour of utilising universal suffrage to introduce socialism (indeed, their analysis of Marx and critique of Lenin is substantially the same as the one presented here). For the council communists, who embraced the idea of workers’
democratic republic “was the particular form of government in which alone socialism can be realised.” He added, after the Russian Revolution, that “not a single Marxist revolutionary repudiated me, neither Rosa Luxemburg nor Klara Zetkin, neither Lenin nor Trotsky.” [The Road to Power, p. 34 and p. xlviii]

Lenin himself, even after Social Democracy supported their respective states in the First World War and before his return to Russia, still argued that Kautsky’s work contained “a most complete exposition of the tasks of our times” and “it was most advantageous to the German Social-Democrats (in the sense of the promise they held out), and moreover came from the pen of the most eminent writer of the Second International … Social-Democracy … wants conquest of political power by the proletariat, the dictatorship of the proletariat.” [Collected Works, vol. 21, p. 94] There was no hint that Marxism stood for anything other than seizing power in a republic, as expounded by the likes of Kautsky.

Before continuing it should be stressed that Harman’s summary is correct only if we are talking about the Marxist movement. Looking at the wider revolutionary movement, two groups definitely recognised the importance of the soviets as a form of working class power and as the framework of a socialist society. These were the anarchists and the Social-Revolutionary Maximalists, both of whom “espoused views that corresponded almost word for word with Lenin’s April 1917 program of ‘All power to the soviets.’” The “aims of the revolutionary far left in 1905” Lenin “combined in his call for soviet power [in 1917], when he apparently assimilated the anarchist program to secure the support of the masses for the Bolsheviks.” [Oskar Anweiler, The Soviets, p. 94 and p. 96]

So before 1917, when Lenin claimed to have discovered what had eluded all the previous followers of Marx and Engels (including himself!), it was only anarchists (or those close to them such as the SR-Maximalists) who argued that the future socialist society would be structurally based around the organs working class people themselves created in the process of the class struggle and the working class (although, by definition, all sections of the working class are “backward” in relation to the “vanguard”). Hence the need for a “public power distinct from the people” (as the suppression of the strike wave and Kronstadt in 1921 shows, elite troops are always needed to stop the army siding with their fellow workers). And as proven by Trotsky’s comments after he was squeezed out of power, this perspective was not considered as a product of “exceptional circumstances.” Rather it was considered a basic lesson of the revolution, a position which was applicable to all future revolutions. In this, Lenin and other leading Bolsheviks concurred.

The irony (and tragedy) of all this should not be lost. In his 1905 diatribe against anarchism, Stalin had denied that Marxists aimed for party dictatorship. He stressed that there was “a dictatorship of the minority, the dictatorship of a small group … which is directed against the people … Marxists are the enemies of such a dictatorship, and they fight such a dictatorship far more stubbornly and self-sacrificingly than do our noisy Anarchists.” The practice of Bolshevism and the ideological revisions it generated easily refutes Stalin’s claims. The practice of Bolshevism showed that his claim that “[a]t the head” of the “dictatorship of the proletarian majority … stand the masses” is in sharp contradiction with Bolshevik support for “revolutionary” governments. Either you have (to use Stalin’s expression) “the dictatorship of the streets, of the masses, a dictatorship directed against all oppressors” or you have party power in the name of the street, of the masses. [Collected Works, vol. 1, p. 371–2] The fundamental flaw in Leninism is that it confuses the two and so lays the ground for the very result anarchists predicted and Stalin denied.

While anarchists are well aware of the need to defend a revolution (see section H.2.1), we do not make the mistake of equating this with a state. Ultimately, the state cannot be used as an instrument of liberation — it is not designed for it. Which, incidentally, is why we have not discussed the impact of the Russian Civil War on the development of Bolshevik ideology. Simply put, the “workers’
state” is proposed, by Leninists, as the means to defend a revolution. As such, you cannot blame what it is meant to be designed to withstand (counter-revolution and civil war) for its “degeneration.” If the “workers’ state” cannot handle what its advocates claim it exists for, then its time to look for an alternative and dump the concept in the dustbin of history.

In summary, Bolshevism is based on a substantial revision of the Marxist theory of the state. While Marx and Engels were at pains to stress the accountability of their new state to the population under it, Leninism has made a virtue of the fact that the state has evolved to exclude that mass participation in order to ensure minority rule. Leninism has done so explicitly to allow the party to overcome the “wavering” of the working class, the very class it claims is the “ruling class” under socialism! In doing this, the Leninist tradition exploited the confused nature of the state theory of traditional Marxism. The Leninist theory of the state is flawed simply because it is based on creating a “state in the proper sense of the word,” with a public power distinct from the mass of the people. This was the major lesson gained by the leading Bolsheviks (including Lenin and Trotsky) from the Russian Revolution and has its roots in the common Marxist error of confusing party power with working class power. So when Leninists point to Lenin’s State and Revolution as the definitive Leninist theory of the state, anarchists simply point to the lessons Lenin himself gained from actually conducting a revolution. Once we do, the slippery slope to the Leninist solution to the contradictions inherent in the Marxist theory of the state can be seen, understood and combated.

H.3.9 Is the state simply an agent of economic power?

As we discussed in section H.3.7, the Marxist theory of the state confuses an empirical analysis of the state with a metaphysical one.
Thus “the state certainly has interests of its own . .. [.] acts to protect [them] ... and protects the interests of the bourgeoisie when these interests happen to coincide with its own, as, indeed, they usually do.” [Carter, Op. Cit., p. 226]

As Mark Leier quips, Marxism “has usually — save when battling anarchists — argued that the state has some ‘relative autonomy’ and is not a direct, simple reflex of a given economic system.” [Bakunin: The Constructive Passion, p. 275] The reason why the more sophisticated Marxist analysis of the state is forgotten when it comes to attacking anarchism should be obvious — it undermines the both the Marxist critique of anarchism and its own theory of the state. Ironically, arguments and warnings about the “independence” of the state by Marxists imply that the state has interests of its own and cannot be considered simply as an instrument of class rule. They suggest that the anarchist analysis of the state is correct, namely that any structure based on delegated power, centralisation and hierarchy must, inevitably, have a privileged class in charge of it, a class whose position enables it to not only exploit and oppress the rest of society but also to effectively escape from popular control and accountability. This is no accident. The state is structured to enforce minority rule and exclude the majority.

H.3.10 Has Marxism always supported the idea of workers’ councils?

One of the most widespread myths associated with Marxism is the idea that Marxism has consistently aimed to smash the current (bourgeois) state and replace it by a “workers’ state” based on working class organisations created during a revolution.

This myth is sometimes expressed by those who should know better (i.e. Marxists). According to John Rees (of the British Socialist Workers Party) it has been a “cornerstone of revolutionary theory” that “the soviet is a superior form of democracy because it...” While Engels is aware that the state developed to ensure minority class rule and, as befits its task, evolved specific characteristics to execute that role, he also raised the idea that the state (“as a rule”) is “the state of the most powerful, economically dominant class” and “through the medium of the state, becomes also the politically dominant class.” Thus the state can be considered, in essence, as “nothing but a machine for the oppression of one class by another.” “At a certain stage of economic development”, Engels stressed, “which was necessarily bound up with the split in society into classes, the state became a necessity owing to this split.” [Selected Works, pp. 577–8, p. 579 and p. 258] For Lenin, this was “the basic idea of Marxism on the question of the historical role and meaning of the state,” namely that “the state is an organ of class rule, the organ for the oppression of one class by another.” [Essential Works of Lenin, p. 273 and p. 274]

The clear implication is that the state is simply an instrument, without special interests of its own. If this is the case, the use of a state by the proletariat is unproblematic (and so the confusion between working class self-organisation and the state we have discussed in various sections above is irrelevant). This argument can lead to simplistic conclusions, such as once a “revolutionary” government is in power in a “workers state” we need not worry about abuses of power or even civil liberties (this position was commonplace in Bolshevik ranks during the Russian Civil War, for example). It also is at the heart of Trotsky’s contortions with regards to Stalinism, refusing to see the state bureaucracy as a new ruling class simply because the state, by definition, could not play such a role.

For anarchists, this position is a fundamental weakness of Marxism, a sign that the mainstream Marxist position significantly misunderstands the nature of the state and the needs of social revolution. However, we must stress that anarchists would agree that the state generally does serve the interests of the economically dominant classes. Bakunin, for example, argued that the State “is au-
thority, domination, and forced, organised by the property-owning and so-called enlightened classes against the masses.” He saw the social revolution as destroying capitalism and the state at the same time, that is “to overturn the State’s domination, and that of the privileged classes whom it solely represents.” [The Basic Bakunin, p. 140] However, anarchists do not reduce our analysis and understanding of the state to this simplistic Marxist level. While being well aware that the state is the means of ensuring the domination of an economic elite, as we discussed in section B.2.5, anarchists recognise that the state machine also has interests of its own. The state, for anarchists, is the delegation of power into the hands of a few. This creates, by its very nature, a privileged position for those at the top of the hierarchy:

“A government [or state], that is a group of people entrusted with making the laws and empowered to use the collective force to oblige each individual to obey them, is already a privileged class and cut off from the people. As any constituted body would do, it will instinctively seek to extend its powers, to be beyond public control, to impose its own policies and to give priority to its special interests. Having been put in a privileged position, the government is already at odds with the people whose strength it disposes of.” [Malatesta, Anarchy, p. 36]

The Bolshevik regime during the Russia revolution proved the validity of this analysis. The Bolsheviks seized power in the name of the soviets yet soon marginalised, gerrymandered and disbanded them to remain in power while imposing a vision of socialism (more correctly, state capitalism) at odds with popular aspirations.

Why this would be the case is not hard to discover. Given that the state is a highly centralised, top-down structure it is unsurprising that it develops around itself a privileged class, a bureaucracy, can act “in the same direction” and then it is “more rapid” or it can “oppose” it and “can do great damage to the economic development.” Finally, it can “prevent the economic development proceeding along certain lines, and prescribe other lines.” Finally he stated “why do we fight for the political dictatorship of the proletariat if political power is economically impotent? Force (that is, state power) is also an economic power!” [Op. Cit., p. 686 and p. 689]

Conversely, anarchists reply, why fight for “the political dictatorship of the proletariat” when you yourself admit that the state can become “independent” of the classes you claim it represents? Particularly when you increase its potential for becoming independent by centralising it even more and giving it economic powers to complement its political ones!

So the Marxist theory of the state is that is an instrument of class rule — except when it is not. Its origins lie in the rise of class antagonisms — except when it does not. It arises after the break up of society into classes — except when it does not. Which means, of course, the state is not just an instrument of class rule and, correspondingly, the anarchist critique is confirmed. This explains why the analysis of the “Asiatic Mode of Production” is so woefully underdeveloped in Marx and Engels as well as the confused and contradictory attempt to understand Bonapartism.

To summarise, if the state can become “independent” of economic classes or even exist without an economically dominant class, then that implies that it is no mere machine, no mere “instrument” of class rule. It implies the anarchist argument that the state has interests of its own, generated by its essential features and so, therefore, cannot be used by a majority class as part of its struggle for liberation is correct. Simply put, Anarchists have long “realised — feared — that any State structure, whether or not socialist or based on universal suffrage, has a certain independence from society, and so may serve the interests of those within State institutions rather than the people as a whole or the proletariat.” [Brian Morris, Bakunin: The Philosophy of Freedom, p. 134]
obvious conclusion haunts those, like the British SWP, who main-
tain that Stalinism was State Capitalist but not Bolshevism — see 
section H.3.13). Suffice to say, if the state itself can be the “econom-
ically dominant class” then the state cannot be a mere instrument 
of an economic class.

Moreover, Engels also presented another analysis of the state 
which suggested that it arose before economic classes appeared. 
In 1886 he wrote of how society “creates for itself an organ for the 
safeguarding of its common interests against internal and external 
attacks. This organ is the state power. Hardly come into being, this 
organ makes itself independent vis-à-vis society: and, indeed, the 
more so, the more it becomes the organ of a particular class, the more 
it directly enforces the supremacy of that class.” “Society”, he argued 
four years later, “gives rise to certain common function which it can-
not dispense with. The persons appointed for this purpose form a new 
branch of the division of labour within society. This gives them par-
ticular interests, distinct, too, from the interests of those who empow-
ered them; they make themselves independent of the latter and — the 
state is in being.” [Op. Cit., p. 617 and pp. 685–6] In this schema, 
the independence of the state comes first and is then captured by 
rising economically powerful class.

Regardless of when and how the state arises, the key thing is 
that Engels recognised that the state was “endowed with relative in-
dependence.” Rather than being a simple expression of economic 
classes and their interests, this “new independent power, while hav-
ing in the main to follow the movement of production, reacts in its 
turn, by virtue of its inherent relative independence — that is, the 
relative independence once transferred to it and gradually further devel-
oped — upon the conditions and course of production. It is the interac-
tion of two unequal forces: on the one hand, the economic movement, 
on the other, the new political power, which strives for as much in-
dependence as possible, and which, having once been established, is 
endowed with a movement of its own.” There were three types of 
“reaction of the state power upon economic development.” The state 
around it. The inequality in power implied by the state is a source 
of privilege and oppression independent of property and economic 
class. Those in charge of the state’s institutions would aim to pro-
tect (and expand) their area of operation, ensuring that they select 
individuals who share their perspectives and who they can pass 
on their positions. By controlling the flow of information, of per-
sonnel and resources, the members of the state’s higher circles can 
ensure its, and their own, survival and prosperity. As such, politi-
cians who are elected are at a disadvantage. The state is the perma-
nent collection of institutions that have entrenched power struc-
tures and interests. The politicians come and go while the power 
in the state lies in its institutions due to their permanence. It is to 
be expected that such institutions would have their own interests 
and would pursue them whenever they can.

This would not fundamentally change in a new “workers’ state” 
as it is, like all states, based on the delegation and centralisation of 
power into a few hands. Any “workers’ government” would need a 
new apparatus to enforce its laws and decrees. It would need effect-
ive means of gathering and collating information. It would thus 
create “an entirely new ladder of administration to extend it rule and 
make itself obeyed.” While a social revolution needs mass participa-
tion, the state limits initiative to the few who are in power and “it 
will be impossible for one or even a number of individuals to elaborate 
the social forms” required, which “can only be the collective work of 
the masses ... Any kind of external authority will merely be an obsta-
cle, a hindrance to the organic work that has to be accomplished; it 
will be no better than a source of discord and of hatreds.” [Kropotkin, 
Words of a Rebel, p. 169 and pp. 176–7]

Rather than “withering away,” any “workers’ state” would tend 
to grow in terms of administration and so the government creates 
around itself a class of bureaucrats whose position is different from 
the rest of society. This would apply to production as well. Being 
unable to manage everything, the state would have to re-introduce 
hierarchical management in order to ensure its orders are met and
that a suitable surplus is extracted from the workers to feed the
needs of the state machine. By creating an economically power-
ful class which it can rely on to discipline the workforce, it would
simply recreate capitalism anew in the form of "state capitalism"
(this is precisely what happened during the Russian Revolution).
To enforce its will onto the people it claims to represent, specialised
bodies of armed people (police, army) would be required and soon
created. All of which is to be expected, as state socialism "entrusts
to a few the management of social life and [so] leads to the exploita-
tion and oppression of the masses by the few." [Malatesta, Op. Cit.,
p. 47]

This process takes time. However, the tendency for government
to escape from popular control and to generate privileged and pow-
erful institutions around it can be seen in all revolutions, including
the Paris Commune and the Russian Revolution. In the former, the
Communal Council was "largely ignored ... after it was installed. The
insurrection, the actual management of the city's affairs and finally
the fighting against the Versaillese, were undertaken mainly by pop-
ular clubs, the neighbourhood vigilance committees, and the battal-
ions of the National Guard. Had the Paris Commune (the Municipal
Council) survived, it is extremely doubtful that it could have avoided
conflict with these loosely formed street and militia formations. In-
deed, by the end of April, some six weeks after the insurrection, the
Commune constituted an 'all-powerful' Committee of Public Safety,
a body redolent with memories of the Jacobin dictatorship and the
Terror, which suppressed not only the right in the Great [French]
Revolution of a century earlier, but also the left." [Murray Bookchin,
Post-Scarcity Anarchism, p. 90] A minority of council members
(essentially those active in the International) stated that "the Paris
Commune has surrendered its authority to a dictatorship" and it was
"hiding behind a dictatorship that the electorate have not authorised
us to accept or to recognise." [The Paris Commune of 1871: The
was crushed before this process could fully unfold, but the

character"! This nonsense is understandable, given the unwilling-
ness to draw the obvious conclusion from the fact that the bureau-
cracy was "compelled to defend State property as the source of its
power and its income. In this aspect of its activity it still remains
a weapon of proletarian dictatorship." [Op. Cit., p. 112, p. 107,
p. 238 and p. 236] By commanding nationalised property, the bu-
reaucracy, like private capitalists, could exploit the labour of the
working class and did. That the state owned the means of produc-
did not stop this being a form of class system.

It is simply nonsense to claim, as Trotsky did, that the "anatomy
of society is determined by its economic relations. So long as the forms
of property that have been created by the October Revolution are not
overthrown, the proletariat remains the ruling class." [Writings of
Leon Trotsky 1933–34, p. 125] How could the proletariat be the
"ruling class" if it were under the heel of a totalitarian dictatorship?
State ownership of property was precisely the means by which the
bureaucracy enforced its control over production and so the source
of its economic power and privileges. To state the obvious, if the
working class does not control the property it is claimed to own
then someone else does. The economic relationship thus generated
is a hierarchical one, in which the working class is an oppressed
class.

Significantly, Trotsky combated those of his followers who drew
the same conclusions as had anarchists and libertarian Marxists
while he and Lenin held the reigns of power. Perhaps this ideolog-
ical blindness is understandable, given Trotsky's key role in creat-
ing the bureaucracy in the first place. So Trotsky did criticise, if
in a confused manner, the Stalinist regime for its "injustice, oppres-
sion, differential consumption, and so on, even if he had supported
them when he himself was in the elite." [Neil C. Fernandez, Cap-
talism and Class Struggle in the USSR, p. 180]). Then there
is the awkward conclusion that if the bureaucracy were a ruling
class under Stalin then Russia was also state capitalist under Lenin
and Trotsky for the economic relations were identical in both (this
The confusions of the Marxist theory of the state ensured that Trotsky, for example, failed to recognise the obvious, namely that the Stalinist state bureaucracy was a ruling class. Rather, it was the “new ruling caste”, or “the ruling stratum”. While admitting, at one stage, that the “transfer of the factories to the State changed the situation of the workers only juridically” Trotsky then ignored the obvious conclusion that this has left the working class as an exploited class under a (new) form of capitalism to assert that the “nature” of Stalinist Russia was “a proletarian State” because of its “nationalisation” of the means of life (which “constitute the basis of the Soviet social structure”). He admitted that the “Soviet Bureaucracy has expropriated the proletariat politically” but has done so “in order by methods of its own to defend the social conquests” of the October Revolution. He did not ponder too deeply the implications of admitting that the “means of production belong to the State. But the State, so to speak, ‘belongs’ to the bureaucracy.” [The Revolution Betrayed, p. 93, p. 136, p. 228, p. 235 and p. 236] If that is so, only ideology can stop the obvious confusion being drawn, namely that the state bureaucracy was the ruling class. But that is precisely what happened with Trotsky’s confusion expressing itself thusly:

“In no other regime has a bureaucracy ever achieved such a degree of independence from the dominating class ... it is something more than a bureaucracy. It is in the full sense of the word the sole privileged and commanding stratum in the Soviet society.” [Op. Cit., p. 235]

By this, Trotsky suggested that the working class was the “dominating class” under Stalinism! In fact, the bureaucracy “continues to preserve State property only to the extent it fears the proletariat” while, at the same time, the bureaucracy has “become [society’s] lord” and “the Soviet state has acquired a totalitarian-bureaucratic

omens were there (although it would have undoubtedly been hindered by the local scale of the institutions involved). As we discuss in section H.6, a similar process of a “revolutionary” government escaping from popular control occurred right from the start of the Russian Revolution. The fact the Bolshevik regime lasted longer and was more centralised (and covered a larger area) ensured that this process developed fully, with the “revolutionary” government creating around itself the institutions (the bureaucracy) which finally subjected the politicians and party leaders to its influence and then domination.

Simply put, the vision of the state as merely an instrument of class rule blinds its supporters to the dangers of political inequality in terms of power, the dangers inherent in giving a small group of people power over everyone else. The state has certain properties because it is a state and one of these is that it creates a bureaucratic class around it due to its centralised, hierarchical nature. Within capitalism, the state bureaucracy is (generally) under the control of the capitalist class. However, to generalise from this specific case is wrong as the state bureaucracy is a class in itself — and so trying to abolish classes without abolishing the state is doomed to failure:

“The State has always been the patrimony of some privileged class: the sacerdotal class, the nobility, the bourgeoisie — and finally, when all the other classes have exhausted themselves, the class of the bureaucracy enters upon the stage and then the State falls, or rises, if you please to the position of a machine.” [Bakunin, The Political Philosophy of Bakunin, p. 208]

Thus the state cannot simply be considered as an instrument of rule by economic classes. It can be quite an effective parasitical force in its own right, as both anthropological and historical evidence suggest. The former raises the possibility that the state
arose before economic classes and that its roots are in inequalities in power (i.e. hierarchy) within society, not inequalities of wealth. The latter points to examples of societies in which the state was not, in fact, an instrument of (economic) class rule but rather pursued an interest of its own.

As regards anthropology, Michael Taylor summarises that the "evidence does not give [the Marxist] proposition [that the rise of economic classes caused the creation of the state] a great deal of support. Much of the evidence which has been offered in support of it shows only that the primary states, not long after their emergence, were economically stratified. But this is of course consistent also with the simultaneous rise ... of political and economic stratification, or with the prior development of the state — i.e. of political stratification — and the creation of economic stratification by the ruling class." [Community, Anarchy and Liberty, p. 132] He quotes Elman Service on this:

"In all of the archaic civilisations and historically known chiefdoms and primitive states the 'stratification' was ... mainly of two classes, the governors and the governed — political strata, not strata of ownership groups." [quoted by Taylor, Op. Cit., p. 133]

Taylor argues that it the "weakening of community and the development of gross inequalities are the concomitants and consequences of state formation." He points to the "germ of state formation" being in the informal social hierarchies which exist in tribal societies. [Op. Cit., p. 133 and p. 134] Thus the state is not, initially, a product of economic classes but rather an independent development based on inequalities of social power. Harold Barclay, an anarchist who has studied anthropological evidence on this matter, concurs:

"In Marxist theory power derives primarily, if not exclusively, from control of the means of production and dis-

there is no "balance" between classes under Bonapartism even if the political regime is not subject to electoral control by the bourgeoisie and has more independence to pursue its own agenda.

This is not the only confirmation of the anarchist critique of the Marxist theory of the state which can be found in Marxism itself. Marx, at times, also admitted the possibility of the state not being an instrument of (economic) class rule. For example, he mentioned the so-called "Asiatic Mode of Production" in which "there are no private landowners" but rather "the state ... which confronts" the peasants "directly as simultaneously landowner and sovereign, rent and tax coincide ... Here the state is the supreme landlord. Sovereignty here is landed property concentrated on a national scale." [Capital, vol. 3, p. 927] Thus "the State [is] the real landlord" in the "Asiatic system" [Collected Works, vol. 12, p. 215] In other words, the ruling class could be a state bureaucracy and so be independent of economic classes. Unfortunately this analysis remained woefully undeveloped and no conclusions were drawn from these few comments, perhaps unsurprisingly as it undermines the claim that the state is merely the instrument of the economically dominant class. It also, of course, has applicability to state socialism and certain conclusions could be reached that suggested it, as Bakunin warned, would be a new form of class rule.

The state bureaucracy as the ruling class can be seen in Soviet Russia (and the other so-called "socialist" regimes such as China and Cuba). As libertarian socialist Ante Ciliga put it, "the manner in which Lenin organised industry had handed it over entirely into the hands of the bureaucracy," and so the workers "became once more the wage-earning manpower in other people's factories. Of socialism there remained in Russia no more than the word." [The Russian Enigma, p. 280 and p. 286] Capitalism became state capitalism under Lenin and Trotsky and so the state, as Bakunin predicted and feared, became the new ruling class under Marxism (see section H.3.14 for more discussion of this).
of the government, was, for him, the end of the political rule of the bourgeoisie as he argued that "the industrial bourgeoisie applauds the coup d'état of December 2, the annihilation of parliament, the downfall of its own rule, the dictatorship of Bonaparte." He repeated this identification: "Passing of the parliamentary regime and of bourgeois rule. Victory of Bonaparte." [Selected Writings, pp. 164–5 and p. 166] Political rule was equated to which party held power and so, logically, universal suffrage was "the equivalent of political power for the working class . . . where the proletariat forms the large majority of the population." Its "inevitable result would be "the political supremacy of the working class." [Collected Works, vol. 11, pp. 335–6] This was, of course, simply wrong (on both counts) as he, himself, seemed to became aware of two decades later.

In 1871 he argued that "the State power assumed more and more the character of the national power of capital over labour, of a public force organised for social enslavement, of an engine of class despotism." This meant that "in view of the threatened upheaval of the proletariat, [the bourgeoisie] now used that State power mercilessly and ostentatiously as the national war-engine of capital against labour" and so were "bound not only to invest the executive with continually increased powers of repression, but at the same time to divest their own parliamentary stronghold ... of all its own means of defence against the Executive. The Executive, in the person of Louis Bonaparte, turned them out." Marx now admitted that this regime only "professed to rest upon the peasantry" while, "[i]n reality, it was the only form of government possible at a time when the bourgeoisie had already lost, and the working class had not yet acquired, the faculty of ruling the nation." However, "[u]nder its sway, bourgeois society, freed from political cares, attained a development unexpected even by itself." [Selected Works, p. 285, p. 286, pp. 286–7 and p. 287]

Yet capitalists often do well under regimes which suppress the basic liberties of the working class and so the bourgeoisie remained the ruling class and the state remained its organ. In other words, tribulation of wealth, that is, from economic factors. Yet, it is evident that power derived from knowledge — and usually 'religious' style knowledge — is often highly significant, at least in the social dynamics of small societies... Economic factors are hardly the only source of power. Indeed, we see this in modern society as well, where the capitalist owner does not wield total power. Rather technicians and other specialists command it as well, not because of their economic wealth, but because of their knowledge." [quoted by Alan Carter, Marx: A Radical Critique, p. 191]

If, as Bookchin summarises, "hierarchies precede classes" then trying to use a hierarchical structure like the state to abolish them is simply wishful thinking.

As regards more recent human history, there have been numerous examples of the state existing without being an instrument of (economic) class rule. Rather, the state was the ruling class. While the most obvious example is the Stalinist regimes where the state bureaucracy ruled over a state capitalist economy, there have been plenty of others, as Murray Bookchin pointed out:

"Each State is not necessarily an institutionalised system of violence in the interests of a specific ruling class, as Marxism would have us believe. There are many examples of States that were the 'ruling class' and whose own interests existed quite apart from — even in antagonism to — privileged, presumably 'ruling' classes in a given society. The ancient world bears witness to distinctly capitalistic classes, often highly privileged and exploitative, that were bilked by the State, circumscribed by it, and ultimately devoured by it — which is in part why a capitalist society never emerged out of the ancient world. Nor did the State 'represent' other class interests, such as
landed nobles, merchants, craftsmen, and the like. The Ptolemaic State in Hellenistic Egypt was an interest in its own right and ‘represented’ no other interest than its own. The same is true of the Aztec and the Inca States until they were replaced by Spanish invaders. Under the Emperor Domitian, the Roman State became the principal ‘interest’ in the empire, superseding the interests of even the landed aristocracy which held such primacy in Mediterranean society...

“Near-Eastern State, like the Egyptian, Babylonian, and Persian, were virtually extended households of individual monarchs ... Pharaohs, kings, and emperors nominally held the land (often co-jointly with the priesthood) in the trust of the deities, who were either embodied in the monarch or were represented by him. The empires of Asian and North African kings were ‘households’ and the population was seen as ‘servants of the palace’ ...

“These ‘states,’ in effect, were not simply engines of exploitation or control in the interests of a privileged ‘class.’ ... The Egyptian State was very real but it ‘represented’ nothing other than itself.” [Remaking Society, pp. 67–8]

Bakunin pointed to Turkish Serbia, where economically dominant classes “do not even exist — there is only a bureaucratic class. Thus, the Serbian state will crush the Serbian people for the sole purpose of enabling Serbian bureaucrats to live a fatter life.” [Statism and Anarchy, p. 54] Leninist Tony Cliff, in his attempt to prove that Stalinist Russia was state capitalist and its bureaucracy a ruling class, pointed to various societies which “had deep class differentiation, based not on private property but on state property. Such systems existed in Pharaonic Egypt, Moslem Egypt, Iraq, Persia and India.” He discusses the example of Arab feudalism in more detail, in any way. Bonaparte’s power did not, in other words, rest on the peasantry. Rather, like fascism, it was a means by which the bourgeoisie could break the power of the working class and secure its own class position against possible social revolution. As Bakunin argued, it was a “despotic imperial system” which the bourgeois “themselves founded out of fear of the Social Revolution.” [The Basic Bakunin, p. 63] Thus the abolition of bourgeois rule was more apparent than real:

“As soon as the people took equality and liberty seriously, the bourgeoisie ... retreated into reaction ... They began by suppressing universal suffrage ... The fear of Social Revolution ... hurled this downfallen class ... into the arms of the dictatorship of Napoleon III ... We should not think that the Bourgeois Gentlemen were too inconvenienced ... [Those who] applied themselves earnestly and exclusively to the great concern of the bourgeoisie, the exploitation of the people ... were well protected and powerfully supported ... All went well, according to the desires of the bourgeoisie.” [Op. Cit., pp. 62–3]

Somewhat ironically, then, a key example used by Marxists for the “independence” of the state is no such thing. Bonapartism did not represent a “balance” between the proletariat and bourgeoisie but rather the most naked form of state rule required in the fact of working class revolt. It was a counter-revolutionary regime which reflected a defeat for the working class, not a “balance” between it and the capitalist class.

Marx’s confusions arose from his belief that, for the bourgeoisie, the parliamentary republic “was the unavoidable condition of their common rule, the sole form of state in which their general class interest subjected itself at the same time both the claims of their particular factions and all the remaining classes of society.” [Selected Works, pp. 152–3] The abolition of the republic, the replacement
tion of the population can achieve dominance over the others.” [Op. Cit., vol. 5, p. 90] For Engels, “[f]rom the moment the state administration and legislature fall under the control of the bourgeoisie, the independence of the bureaucracy ceases to exist.” [Op. Cit., vol. 6, p. 88] It must, therefore, have come as a surprise for Marx and Engels when the state and its bureaucracy appeared to become independent in France under Napoleon III.

Talking of which, it should be noted that, initially for Marx, under Bonapartism “the state power is not suspended in mid air. Bonaparte represents a class, and the most numerous class of French society at that, the small-holding [Parzellen] peasants.” The Bonaparte “who dispersed the bourgeois parliament is the chosen of the peasantry.” However, this class is “incapable of enforcing their class interests in their own name ... They cannot represent themselves, they must be represented. Their representative must at the same time appear as their master, as an authority over them, as an unlimited governmental power.” ... The political influence of the small-holding peasants, therefore, finds its final expression in the executive power subordinating society to itself.” Yet Marx himself admits that this regime experienced “peasant risings in half of France”, organised “raids on the peasants by the army” and the “mass incarceration and transportation of peasants.” A strange form of class rule, when the class represented is oppressed by the regime! Rest assured, though, the “Bonaparte dynasty represents not the revolutionary, but the conservative peasant.” Then Marx, without comment, pronounced Bonaparte to be “the representative of the lumpenproletariat to which he himself, his entourage, his government and his army belong.” [Selected Works, p. 170, p. 171 and p. 176]

It would be fair to say that Marx’s analysis is somewhat confused and seems an ad hoc explanation to the fact that in a modern society the state appeared to become independent of the economically dominant class. Yet if a regime is systematically oppressing a class then it is fair to conclude that is not representing that class where “the feudal lord had no permanent domain of his own, but a member of a class which collectively controlled the land and had the right to appropriate rent.” This was “ownership of the land by the state” rather than by individuals. [State Capitalism in Russia, pp. 316–8] As such, the idea that the state is simply an instrument of class rule seems unsupportable. As Gaston Leval argued, “the State, by its nature, tends to have a life of its own.” [quoted by Sam Dolgoff, A Critique of Marxism, p. 10]

Marx’s “implicit theory of the state — a theory which, in reducing political power to the realisation of the interests of the dominant economic classes, precludes any concern with the potentially authoritarian and oppressive outcome of authoritarian and centralised revolutionary methods ... This danger (namely, the dismissal of warranted fears concerning political power) is latent in the central features of Marx’s approach to politics.” [Alan Carter, Op. Cit., p. 219] To summarise the obvious conclusion:

“By focusing too much attention on the economic structure of society and insufficient attention on the problems of political power, Marx has left a legacy we would done better not to inherit. The perceived need for authoritarian and centralised revolutionary organisation is sanctioned by Marx’s theory because his theoretical subordination of political power to economic classes apparently renders post-revolutionary political power unproblematic.” [Op. Cit., p. 231]

Many factors contributed to Stalinism, including Marxism’s defective theory of the state. In stressing that socialism meant nationalising property, it lead to state management which, in turn, expropriated the working class as a vast managerial bureaucracy was required to run it. Moreover, Marxism disguised this new ruling class as it argues that the state ‘represents’ a class and had no interests of itself. Thus we have Trotsky’s utter inability to understand Stalinism and his insane formula that the proletariat remained the ruling
class under Stalin (or, for that matter, under himself and Lenin)!

Simply put, by arguing that the state was an instrument of class rule, Marxism ensured it presented a false theory of social change and could not analyze its resulting class rule when the inevitable consequences of this approach was implemented.

However, there is more to Marxism than its dominant theory of the state. Given this blindness of orthodox Marxism to this issue, it seems ironic that one of the people responsible for it also provides anarchists with evidence to back up our argument that the state is not simply an instrument of class rule but rather has interests of its own. Thus we find Engels arguing that proletariat, “in order not to lose again its only just conquered supremacy,” would have “to safeguard itself against its own deputies and officials, by declaring them all, without exception, subject to recall at any moment.” [Selected Works, p. 257] Yet, if the state was simply an instrument of class rule such precautions would not be necessary. Engels comments show an awareness that the state can have interests of its own, that it is not simply a machine of class rule.

Aware of the obvious contradiction, Engels argued that the state “is, as a rule, the state of the most powerful, economically dominant class which, through the medium of the state, becomes the politically dominant class … By way of exception, however, periods occur in which the warring classes balance each other, so nearly that the state power, as ostensible mediator, acquires, for the moment, a certain degree of independence of both.” He pointed to the “absolute monarchy of the seventeenth and eighteenth centuries”, which held the balance between the nobility and the bourgeoisie against one another as well as “the Bonapartism of the First, and still more of the Second French Empire.” It should be noted that, elsewhere, Engels was more precise on how long the state was, in fact, controlled by the bourgeoisie, namely two years: “In France, where the bourgeoisie as such, as a class in its entirety, held power for only two years, 1849 and 1850, under the republic, it was able to continue its social existence only by abdicating its political power to Louis Bonaparte and the army.” [Op. Cit., pp. 577–8 and p. 238] So, in terms of French history, Engels argued that “by way of exception” accounted for over 250 hundred years, the 17th and 18th centuries and most of the 19th, bar a two year period! Even if we are generous and argue that the 1830 revolution placed one section of the bourgeoisie (finance capital) into political power, we are still left with over 200 hundred years of state “independence” from classes! Given this, it would be fair to suggest that the “exception” should be when it is an instrument of class rule, not when it is not!

This was no isolated case. In Prussia “members of the bourgeoisie have a majority in the Chamber … But where is their power over the state? … the mass of the bourgeoisie … does not want to rule.” [Op. Cit., pp. 236–7] And so, in Germany, there exists “alongside the basic condition of the old absolute monarchy — an equilibrium between the landowner aristocracy and the bourgeoisie — the basic condition of modern Bonapartism — an equilibrium between the bourgeoisie and the proletariat.” This meant that “both in the old absolute monarchy and in the modern Bonapartist monarchy the real government power lies in the hands of a special caste of army officers and state officials” and so the “independence of this case, which appears to occupy a position outside and, so to speak, above society, gives the state the semblance of independence in relation to society.” However, this did not stop Engels asserting that the “state is nothing but the organised collective power of the exploiting classes, the landlords and the capitalists as against the exploited classes, the peasants and the workers. What the individual capitalists … do not want, their state also does not want.” [Collected Works, vol. 23, p. 363 and p. 362]

So, according to Engels, the executive of the state, like the state itself, can become independent from classes if the opposing classes were balanced. This analysis, it must be pointed out, was an improvement on the earliest assertions of Marx and Engels on the state. In the 1840s, it was a case of the “independence of the state is only found nowadays in those countries where the estates have not yet completely developed into classes … where consequently no sec-
requires ‘imperious obedience,’ in which factory hands lack all ‘autonomy’. Class society or classless, the realm of necessity is also a realm of command and obedience, of ruler and ruled. In a fashion totally congruent with all class ideologists from the inception of class society, Engels wed Socialism to command and rule as a natural fact. Domination is reworked from a social attribute into a precondition for self-preservation in a technically advanced society.” [Towards an Ecological Society, p. 206]

Given this, it can be argued that Engels’ “On Authority” had a significant impact in the degeneration of the Russian Revolution into state capitalism. By deliberately obscuring the differences between self-managed and authoritarian organisation, he helped provide Bolshevism with ideological justification for eliminating workers self-management in production. After all, if self-management and hierarchical management both involve the same “principle of authority,” then it does not really matter how production is organised and whether industry is managed by the workers or by appointed managers (as Engels stressed, authority in industry was independent of the social system and all forms of organisation meant subordination). Murray Bookchin draws the obvious conclusion from Engels’ (and Marx’s) position: “Obviously, the factory conceived of as a ‘realm of necessity’ [as opposed to a ‘realm of freedom’] requires no need for self-management.” [Op. Cit., p. 126] Thus it is no great leap from the arguments of Engels in “On Authority” to Lenin’s arguments justifying the imposition of capitalist organisational forms during the Russian Revolution:

“But the events have proved that without a party capable of directing the proletarian revolution, the revolution itself is rendered impossible. The proletariat cannot seize power by a spontaneous uprising … there is nothing else that can serve the proletariat as a substitute for its own party.” [Op. Cit., p. 117]

Hence soviets were not considered as the “essence” of Bolshevism, rather the “fundamental instrument of proletarian revolution
is the party.” Popular organs are seen purely in instrumental terms, with such organs of “workers’ power” discussed in terms of the strategy and program of the party not in terms of the value that such organs have as forms of working class self-management of society. Why should he, when “the task of the Communist party is the conquest of power for the purpose of reconstructing society”? [Op. Cit., p. 118 and p. 174]

This can be clearly seen from Trotsky’s discussion of the “October Revolution” of 1917 in Lessons of October. Commenting on the Bolshevik Party conference of April 1917, he stated that the “whole of... [the] Conference was devoted to the following fundamental question: Are we heading toward the conquest of power in the name of the socialist revolution or are we helping (anybody and everybody) to complete the democratic revolution? ... Lenin’s position was this: .. . the capture of the soviet majority; the overthrow of the Provisional Government; the seizure of power through the soviets.” [Op. Cit., p. 134] Note, through the soviets not by the soviets, thus showing that the Party would hold the real power, not the soviets of workers’ delegates. This is confirmed when Trotsky stated that “to prepare the insurrection and to carry it out under cover of preparing for the Second Soviet Congress and under the slogan of defending it, was of inestimable advantage to us” and that it was “one thing to prepare an armed insurrection under the naked slogan of the seizure of power by the party, and quite another thing to prepare and then carry out an insurrection under the slogan of defending the rights of the Congress of Soviets.” The Soviet Congress just provided “the legal cover” for the Bolshevik plans. [Op. Cit., p. 134, p. 158 and p. 161]

Thus we have the “seizure of power through the soviets” with “an armed insurrection” for “the seizure of power by the party” being hidden by “the slogan” (“the legal cover”) of defending the Soviets! Hardly a case of placing power in the hands of working class organisations. Trotsky did note that in 1917 the “soviet had to either disappear entirely or take real power into their hands.” However, he argument can be best seen simply because he thinks that the “automatic machinery of a big factory is much more despotic than the small capitalist who employ workers ever have been.” [Op. Cit., p. 731] Authority and liberty become detached from human beings, as if authoritarian social relationships can exist independently of individuals! It is a social relationship anarchists oppose, not an abstraction.

Engels’ argument is applicable to any society and to any task which requires joint effort. If, for example, a table needs four people to move it then those four people are subject to the “despotism” of gravity! Under such “despotism” can we say its irrelevant whether these four people are slaves to a master who wants the table moved or whether they agree between themselves to move the table and on the best way to do it? In both cases the table movers are subject to the same “despotism” of gravity, yet in the latter example they are not subject to the despotism of other human beings as they clearly are in the former. Engels is simply playing with words!

The fallacy of Engels’ basic argument can be seen from this simple example. He essentially uses a liberal concept of freedom (i.e. freedom exists prior to society and is reduced within it) when attacking anarchism. Rather than see freedom as a product of interaction, as Bakunin did, Engels sees it as a product of isolation. Collective activity is seen as a realm of necessity (to use Marx’s phrase) and not one of freedom. Indeed, machines and the forces of nature are considered by Engels’ as “despots”! As if despotism were not a specific set of relationships between humans. As Bookchin argued:

“To Engels, the factory is a natural fact of technics, not a specifically bourgeois mode of rationalising labour; hence it will exist under communism as well as capitalism. It will persist ‘independently of all social organisation.’ To co-ordinate a factory’s operations...
cording to classic military rules. I believe that discipline, co-ordination, and planning are indispensable, but we shouldn’t define them in terms taken from the world that we’re destroying. We have to build on new foundations. My comrades and I are convinced that solidarity is the best incentive for arousing an individual’s sense of responsibility and a willingness to accept discipline as an act of self-discipline.

“War has been imposed upon us … but our goal is revolutionary victory. This means defeating the enemy, but also a radical change in men. For that change to occur, man must learn to live and conduct himself as a free man, an apprenticeship that develops his personality and sense of responsibility, his capacity to be master of his own acts. The workers on the job not only transforms the material on which he works, but also transforms himself through that work. The combatant is nothing more than a worker whose tool is a rifle — and he should strive toward the same objective as a worker. One can’t behave like an obedient soldier but rather as a conscious man who understands the importance of what he’s doing. I know that it’s not easy to achieve this, but I also know that what can’t be accomplished with reason will not be obtained by force. If we have to sustain our military apparatus by fear, then we won’t have changed anything except the colour of the fear. It’s only by freeing itself from free that society can build itself in freedom.”

[quoted by Abel Paz, Durruti: In The Spanish Revolution, p. 474]

Is it really convincing to argue that the individuals who made up the militia are subject to the same social relationships as those in a capitalist or Leninist army? The same, surely, goes for workers associations and wage labour. Ultimately, the flaw in Engels’ immediately added that “they could take power … only as the dictatorship of the proletariat directed by a single party.” [Op. Cit., p. 126] Clearly, the “single party” has the real power, not the soviets an unsurprisingly the rule of “a single party” also amounted to the soviets effectively disappearing as they quickly became mere ciphers it. Soon the “direction” by “a single party” became the dictatorship of that party over the soviets, which (it should be noted) Trotsky defended wholeheartedly when he wrote Lessons of October (and, indeed, into the 1930s).

This cannot be considered as a one-off. Trotsky repeated this analysis in his History of the Russian Revolution, when he stated that the “question, what mass organisations were to serve the party for leadership in the insurrection, did not permit an a priori, much less a categorical, answer.” Thus the “mass organisations” serve the party, not vice versa. This instrumentalist perspective can be seen when Trotsky noted that when “the Bolsheviks got a majority in the Petrograd Soviet, and afterward a number of others,” the “phrase ‘Power to the Soviets’ was not, therefore, again removed from the order of the day, but received a new meaning: All power to the Bolshevik soviets.” This meant that the “party was launched on the road of armed insurrection through the soviets and in the name of the soviets.” As he put it in his discussion of the July days in 1917, the army “was far from ready to raise an insurrection in order to give power to the Bolshevik Party” and so “the state of popular consciousness … made impossible the seizure of power by the Bolsheviks in July.” [vol. 2, p. 303, p. 307, p. 78 and p. 81] So much for “all power to the Soviets”! He even quotes Lenin: “The Bolsheviks have no right to await the Congress of Soviets. They ought to seize the power right now.” Ultimately, the “Central Committee adopted the motion of Lenin as the only thinkable one: to form a government of the Bolsheviks only.” [vol. 3, pp. 131–2 and p. 299]

So where does this leave the assertion that the Bolsheviks aimed to put power into the hands of working class organisations? Clearly, Rees’ summary of both Trotsky’s essay and the “essence”
of Bolshevism leave a lot to be desired. As can be seen, the “essence” of Trotsky’s essay and of Bolshevism is the importance of party power, not workers’ power (as recognised by another member of the SWP: “The masses needed to be profoundly convinced that there was no alternative to Bolshevik power.” [Tony Cliff, *Lenin*, vol. 2, p. 265]). Trotsky even provided us with an analogy which effectively and simply refutes Rees’ claims. “Just as the blacksmith cannot seize the red hot iron in his naked hand,” Trotsky asserted, “so the proletariat cannot directly seize power; it has to have an organisation accommodated to this task.” While paying lip service to the soviets as the organisation “by means of which the proletariat can both overthrow the old power and replace it,” he added that “the soviets by themselves do not settle the question” as they may “serve different goals according to the programme and leadership. The soviets receive their programme from the party … the revolutionary party represents the brain of the class. The problem of conquering the power can be solved only by a definite combination of party with soviets.” [*The History of the Russian Revolution*, vol. 3, pp. 160–1 and p. 163]

Thus the key organisation was the party, not the mass organisations of the working class. Indeed, Trotsky was quite explicit that such organisations could only become the state form of the proletariat under the party dictatorship. Significantly, Trotsky fails to indicate what would happen when these two powers clash. Certainly Trotsky’s role in the Russian revolution tells us that the power of the party was more important to him than democratic control by workers through mass bodies and as we have shown in section H.3.8, Trotsky explicitly argued that such organisations could only become the state form of the proletariat under the party dictatorship. Significantly, Trotsky fails to indicate what would happen when these two powers clash. Certainly Trotsky’s role in the Russian revolution tells us that the power of the party was more important to him than democratic control by workers through mass bodies and as we have shown in section H.3.8, Trotsky explicitly argued that such organisations could only become the state form of the proletariat under the party dictatorship.

Given this legacy of viewing workers’ organisations in purely instrumental terms, the opinion of Martov (the leading left-Menshevik during the Russian Revolution) seems appropriate. He argued that “[a]t the moment when the revolutionary masses dictate to the worker. No, of course not, it is the despotism of the machine, of nature, of the market, of the customer, anyone and anything but the person with authority who is actually giving the orders and punishing those who do not obey!

Needless to say, like Engels, von Mises is fundamentally flawed simply because the boss is not just repeating the instructions of the market (assuming that it is a “consumers’ democracy,” which it is not). Rather, they give their own instructions based on their own sovereignty over the workers. The workers could, of course, manage their own affairs and meet the demands of consumers directly. The “sovereignty” of the market (just like the “despotism” of machines and joint action) is independent of the social relationships which exist within the workplace, but the social relationships themselves are not predetermined by it. Thus the same workshop can be organised in different ways and so the way industry operates is dependent on social organisation. The workers can manage their own affairs or be subjected to the rule of a boss. To say that “authority” still exists simply means to confuse agreement with obedience.

The importance of differentiating between types of organisation and ways of making decisions can be seen from the experience of the class struggle. During the Spanish Revolution anarchists organised militias to fight the fascists. One was lead by anarchist militant Durrutti. His military adviser, Pérez Farras, a professional soldier, was concerned about the application of libertarian principles to military organisation. Durruti replied:

“I’ve said it once and I’ll say it again: I’ve been an anarchist my entire life and the fact that I’m responsible for this human collectivity won’t change my convictions. It was as an anarchist that I agreed to carry out the task that the Central Committee of the Anti-Fascist Militias entrusted me.

“I don’t believe — and everything happening around us confirms this — that you can run a workers’ militia ac-
ample, it may be a fact of nature that ten people may be required to operate a machine, but that machine is not such a fact, it is a human invention and so can be changed. Nor is it a fact of nature that work organisation should be based on a manager dictating to the workers what to do — rather it could be organised by the workers themselves, using collective self-discipline to co-ordinate their joint effort.

David Noble quotes one shop steward who stated the obvious, namely that workers are "not automatons. We have eyes to see with, ears to hear with, and mouths to talk." As Noble comments, "[f]or management ... that was precisely the problem. Workers controlled the machines, and through their unions had real authority over the division of labour and job content." [Forces of Production, p. 37] This autonomy was what managers constantly struggled against and introduced technology to combat. So Engels’ notion that machinery was "despotic" hides the nature of class society and the fact that authority is a social relationship, a relationship between people and not people and things. And, equally, that different kinds of organisation meant different social relationships to do collective tasks. It was precisely to draw attention to this that anarchists called themselves anti-authoritarians.

Clearly, Engels is simply ignoring the actual relations of authority within capitalist industry and, like the capitalism he claims to oppose, is raising the needs of the bosses to the plane of "natural fact." Indeed, is this not the refrain of every boss or supporter of capitalism? Right-wing "libertarian" guru Ludwig von Mises spouted this kind of nonsense when he argued that "[t]he root of the syndicalist idea is to be seen in the belief that entrepreneurs and capitalists are irresponsible autocrats who are free to conduct their affairs arbitrarily.... The fundamental error of this argument is obvious [sic!]. The entrepreneurs and capitalists are not irresponsible autocrats. They are unconditionally subject to the sovereignty of the consumers. The market is a consumers’ democracy." [Human Action, p. 814] In other words, it is not the bosses fault that they

expressed their emancipation from the centuries old yoke of the old State by forming 'autonomous republics of Kronstadt' and trying Anarchist experiments such as 'workers' control,' etc. — at that moment, the 'dictatorship of the proletariat and the poorest peasantry' (said to be incarnated in the real dictatorship of the opposed 'true' interpreters of the proletariat and the poorest peasantry: the chosen of Bolshevist Communism) could only consolidate itself by first dressing itself in such Anarchist and anti-State ideology.” [The State and Socialist Revolution, p. 47] As can be seen, Martov had a point. As the text used as evidence that the Bolsheviks aimed to give power to workers organisations shows, this was not an aim of the Bolshevik party. Rather, such workers organs were seen purely as a means to the end of party power.

In contrast, anarchists argue for direct working class self-management of society. When we argue that working class organisations must be the framework of a free society we mean it. We do not equate party power with working class power or think that “All power to the Soviets” is possible if they immediately delegate that power to the leaders of the party. This is for obvious reasons:

“If the revolutionary means are out of their hands, if they are in the hands of a techno-bureaucratic elite, then such an elite will be in a position to direct to their own benefit not only the course of the revolution, but the future society as well. If the proletariat are to ensure that an elite will not control the future society, they must prevent them from controlling the course of the revolution.”

[Alan Carter, Marx: A Radical Critique, p. 165]

Thus the slogan “All power to the Soviets” for anarchists means exactly that — organs for the working class to run society directly, based on mandated, recallable delegates. This slogan fitted perfectly with our ideas, as anarchists had been arguing since the
1860’s that such workers’ councils were both a weapon of class struggle against capitalism and the framework of the future libertarian society. For the Bolshevik tradition, that slogan simply means that a Bolshevik government will be formed over and above the soviets. The difference is important, “for the Anarchists declared, if ‘power’ really should belong to the soviets, it could not belong to the Bolshevik party, and if it should belong to that Party, as the Bolsheviks envisaged, it could not belong to the soviets.” [Voline, *The Unknown Revolution*, p. 213] Reducing the soviets to simply executing the decrees of the central (Bolshevik) government and having their All-Russian Congress be able to recall the government (i.e. those with real power) does not equal “all power,” quite the reverse — the soviets will simply be a fig-leaf for party power.

In summary, rather than aim to place power into the hands of workers’ organisations, most Marxists do not. Their aim is to place power into the hands of the party. Workers’ organisations are simply means to this end and, as the Bolshevik regime showed, if they clash with that goal, they will be simply be disbanded. However, we must stress that not all Marxist tendencies subscribe to this. The council communists, for example, broke with the Bolsheviks precisely over this issue, the difference between party and class power.

**H.3.12 Is big business the precondition for socialism?**

A key idea in most forms of Marxism is that the evolution of capitalism itself will create the preconditions for socialism. This is because capitalism tends to result in big business and, correspondingly, increased numbers of workers subject to the “socialised” production process within the workplace. The conflict between the socialised means of production and their private ownership is at the heart of the Marxist case for socialism:

> “Management organises production with a view of achieving ‘maximum efficiency.’ But the first result of this sort of organisation is to stir up the workers’ revolt against production itself ... To combat the resistance of the workers, the management institutes an ever more minute division of labour and tasks ... Machines are invented, or selected, according to one fundamental criterion: Do they assist in the struggle of management against workers, do they reduce yet further the worker’s margin of autonomy, do they assist in eventually replacing him [or her] altogether? In this sense, the organisation of production today ... is class organisation. Technology is predominantly class technology. No ... manager would ever introduce into his plant a machine which would increase the freedom of a particular worker or of a group of workers to run the job themselves, even if such a machine increased production.

> “The workers are by no means helpless in this struggle. They constantly invent methods of self-defence. They break the rules, while ‘officially’ keeping them. They organise informally, maintain a collective solidarity and discipline.” [The Meaning of Socialism, pp. 9–10]

So one of the key aspects of the class struggle is the conflict of workers against attempts by management to eliminate their autonomy within the production process. This struggle generates the machines which Engels claims produce a “veritable despotism independent of all social organisation.” Regardless of what Engels implies, the way industry has developed is not independent of class society and its “despotism” has been engineered that way. For ex-
work in the winter of 1920–1.” [Jonathan Aves, *Workers against Lenin*, p. 102] There can be no better way to cripple an economy than to impose Lenin’s demand that the task of workers was that of “unquestioningly obeying the will of the Soviet leader, of the dictator, during the work.” [Collected Works, vol. 27, p. 270]

As the experience of workers’ in struggle shows, it is the abolition of autonomy which ensures the abolition of large-scale industry, not its exercise. The conscious decision by workers to not exercise their autonomy brings industry grinding to a halt and are effective tools in the class struggle. As any worker know, it is only our ability to make decisions autonomously that keeps industry going.

Rather than abolishing authority making large-scale industry impossible, it is the abolishing of autonomy which quickly achieves this. The issue is how do we organise industry so that this essential autonomy is respected and co-operation between workers achieved based on it. For anarchists, this is done by self-managed workers associations in which hierarchical authority is replaced by collective self-discipline.

H.4.5 Is the way industry operates “independent of all social organisation”?

As noted in the last section, Engels argued that applying the "forces of nature" meant "a veritable despotism independent of all social organisation." This meant that "[w]anting to abolish authority in large-scale industry is tantamount to wanting to abolish industry itself." [Op. Cit., p. 731]

For anarchists, Engels’ comments ignore the reality of class society in an important way. Modern ("large-scale") industry has not developed neutrally or naturally, independently of all social organisation as Engels claimed. Rather it has been shaped by the class

“Then came the concentration of the means of production and of the producers in large workshops and manufactories, their transformation into actual socialised means of production and socialised producers. But the socialised producers and means of production and their products were still treated, after this change, just as they had been before ... the owner of the instruments of labour ... appropriated to himself ... exclusively the product of the labour of others. Thus, the products now produced socially were not appropriated by those who actually set in motion the means of production and actually produced the commodities, but by the capitalists ... The mode of production is subjected to this [individual or private] form of appropriation, although it abolishes the conditions upon which the latter rests.

“This contradiction, which gives to the new mode of production its capitalistic character, contains the germ of the whole of the social antagonisms of today.” [Engels, *Marx-Engels Reader*, pp. 703–4]
and trusts, or into state ownership.” The later does not change the “capitalist relation” although it does have “concealed within it” the “technical conditions that form the elements of that solution.” This “shows itself the way to accomplishing this revolution. The proletariat seizes political power and turns the means of production into state property.” [Op. Cit., p. 709, p. 710, p. 711, p. 712 and p. 713]

Thus the centralisation and concentration of production into bigger and bigger units, into big business, is seen as the evidence of the need for socialism. It provides the objective grounding for socialism, and, in fact, this analysis is what makes Marxism “scientific socialism.” This process explains how human society develops through time:

“In the social production of their life, men enter into definite relations that are indispensable and independent of their will, relations of production which correspond to a definite stage of development of their material productive forces. The sum total of these relations of production constitutes the economic structure of society, the real foundation, on which rises a legal and political superstructure and to which correspond definite forms of social consciousness … At a certain stage of their development, the material productive forces come in conflict with the existing relations of production or — what is but a legal expression for the same thing — with the property relations within which they have been at work hitherto. From forms of development of the productive forces these relations turn into their fetters. Then begins an epoch of social revolution. With the change of the economic foundation the entire immense superstructure is more or less rapidly transformed.” [Marx, Op. Cit., pp. 4–5]

The obvious conclusion to be drawn from this is that socialism will come about due to tendencies inherent within the development of production, these tendencies are observable in the capitalist method of production. The monopoly of production and distribution of the means of production within the capitalist method creates tendencies towards centralisation and concentration in an attempt to ensure profits. This centralisation and concentration is seen as evidence of the need for socialism, as it provides the objective basis for it. This is the process through which human society develops:

Needless to say, co-operation and co-ordination are required in any collective activity. Anarchists do not deny this fact of nature, but the example Engels considered as irrefutable simply shows the fallacy of his argument. If large-scale industry were run along the lines argued by Engels, it would quickly grind to halt. So trying to eliminate workers’ autonomy is difficult as “[i]ndustrial history shows” that “such management attempts to control the freedom of the work force invariably run up against the contradiction that the freedom is necessary for quality production.” [David Noble, Forces of Production, p. 277]

Ironically, the example of Russia under Lenin and Trotsky reinforces this fact. “Administrative centralisation” was enforced on the railway workers which, in turn, “led more to ignorance of distance and the inability to respond properly to local circumstances … I have no instructions’ became all the more effective as a defensive and self-protective rationalisation as party officials vested with unilateral power insisted all their orders be strictly obeyed. Cheka ruthlessness instilled fear, but repression … only impaired the exercise of initiative that daily operations required.” [William G. Rosenberg, “The Social Background to Tsektran”, pp. 349–373, Party, State, and Society in the Russian Civil War, Diane P. Koenker, William G. Rosenberg and Ronald Grigor Suny (eds.), p. 369] Without the autonomy required to manage local problems, the operation of the railways was seriously harmed and, unsurprisingly, a few months after Trotsky subjected to railway workers to the “militarisation of labour” in September 1920, there was a “disastrous collapse of the railway net-
the realities of shop floor life. These forms of direct action are extremely effective because the workers refuse to act autonomously in industry, to work out the problems they face during the working day themselves, and instead place all the decisions on the authority required, according to Engels, to run the factory. The factory itself quickly grinds to a halt. What keeps it going is not the “imperious” will of authority, but rather the autonomous activity of workers thinking and acting for themselves to solve the numerous problems they face during the working day. In contrast, the hierarchical perspective “ignores essential features of any real, functioning social order. This truth is best illustrated in a work-to-rule strike, which turns on the fact that any production process depends on a host of informal practices and improvisations that could never be codified. By merely following the rules meticulously, the workforce can virtually halt production.” [James C. Scott, Seeing like a State, p. 6] As Cornelius Castoriadis argued:

“Resistance to exploitation expresses itself in a drop in productivity as well as exertion on the workers’ part ... At the same time it is expressed in the disappearance of the minimum collective and spontaneous management and organisation of work that the workers normally and of necessity puts out. No modern factory could function for twenty-four hours without this spontaneous organisation of work that groups of workers, independent of the official business management, carry out by filling in the gaps of official production directives, by preparing for the unforeseen and for regular breakdowns of equipment, by compensating for management’s mistakes, etc.

“Under ‘normal’ conditions of exploitation, workers are torn between the need to organise themselves in this way in order to carry out their work — otherwise there are repercussions for them — and their natural desire to do
economy was guaranteed once property was nationalised. This perspective tends to dismiss as irrelevant the way production is managed. The anarchist critique that this simply replaced a multitude of bosses with one, the state, was (and is) ignored. Rather than seeing socialism as being dependent on workers’ management of production, this position ends up seeing socialism as being dependent on organisational links between workplaces, as exemplified by big business under capitalism. Thus the “relations of production” which matter are not those associated with wage labour but rather those associated with the market. This can be seen from the famous comment in *The Manifesto of the Communist Party* that the bourgeoisie “cannot exist without constantly revolutionising the instruments of production, and thereby the relations of production, and with them the whole relations of society.” [Marx and Engels, Op. Cit., p. 476] But the one relation of production it cannot revolutionise is the one generated by the wage labour at the heart of capitalism, the hierarchical relations at the point of production. As such, it is clear that by “relations of production” Marx and Engels meant something else than wage slavery, namely, the internal organisation of what they term “socialised production.”

Capitalism is, in general, as dynamic as Marx and Engels stressed. It transforms the means of production, the structure of industry and the links between workplaces constantly. Yet it only modifies the form of the organisation of labour, not its content. No matter how it transforms machinery and the internal structure of companies, the workers are still wage slaves. At best, it simply transforms much of the hierarchy which governs the workforce into hired managers. This does not transform the fundamental social relationship of capitalism, however and so the “relations of production” which prefigure socialism are, precisely, those associated with the “socialisation of the labour process” which occurs within capitalism and are no way antagonistic to it.

This mirrors Marx’s famous prediction that the capitalist mode of production produces “the centralisation of capitals” as one capi-...
H.4.4 How does the class struggle refute
Engels’ arguments?

Engels argued that large-scale industry (or, indeed, any form of organisation) meant that “authority” was required. He stated that factories should have “Lasciate ogni autonomia, voi che entrate” (“Leave, ye that enter in, all autonomy behind”) written above their doors. That is the basis of capitalism, with the wage worker being paid to obey. This obedience, Engels argued, was necessary even under socialism, as applying the “forces of nature” meant “a veritable despotism independent of all social organisation.” This meant that “[w]anting to abolish authority in large-scale industry is tantamount to wanting to abolish industry itself.” [Op. Cit., p. 731]

The best answer to Engels claims can be found in the class struggle. Given that Engels was a capitalist (an actual owner of a factory), he may have not been aware of the effectiveness of “working to rule” when practised by workers. This basically involves doing exactly what the boss tells you to do, regardless of the consequences as regards efficiency, production and so on. Quite simply, workers refusing to practice autonomy can be an extremely effective and powerful weapon in the class struggle.

This weapon has long been used by workers and advocated by anarchists, syndicalists and wobblies. For example, the IWW booklet How to fire your boss argues that “[w]orkers often violate orders, resort to their own techniques of doing things, and disregard lines of authority simply to meet the goals of the company. There is often a tacit understanding, even by the managers whose job it is to enforce the rules, that these shortcuts must be taken in order to meet production quotas on time.” It argues, correctly, that “if each of these rules and regulations were followed to the letter” then “[c]onfusion would result — production and morale would plummet. And best of all, the workers can’t get in trouble with the tactic because they are, after all, ‘just following the rules.’” The British anarcho-syndicalists

talist “always strikes down many others.” This leads to “the further socialisation of labour and the further transformation of the soil and other means of production into socially exploited and therefore communal means of production takes on a new form.” Thus capitalist progress itself objectively produces the necessity for socialism as it socialises the production process and produces a working class “constantly increasing in numbers, and trained, united and organised by the very mechanism of the capitalist process of production. The monopolisation of capital becomes a fetter upon the mode of production … The centralisation of the means of production and the socialisation of labour reach a point at which they become incompatible with their capitalist integument. This integument is burst asunder. The knell of capitalist private property sounds. The expropriators are expropriated.” [Capital, vol. 1, pp. 928–9] Note, it is not the workers who organise themselves but rather they are “organised by the very mechanism of the capitalist process of production.” Even in his most libertarian work, “The Civil War in France”, this perspective can be found. He, rightly, praised attempts by the Communards to set up co-operatives (although distinctly failed to mention Proudhon’s obvious influence) but then went on to argue that the working class had “no ready-made utopias to introduce” and that “to work out their own emancipation, and along with it that higher form to which present society is irresistibly tending by its own economical agencies” they simply had “to set free the elements of the new society with which old collapsing bourgeois society itself is pregnant.” [Marx-Engels Reader, pp. 635–6]

Then we have Marx, in his polemic against Proudhon, arguing that social relations “are closely bound up with productive forces. In acquiring new productive forces men change their mode of production; and in changing their mode of production, in changing the way of earning their living, they change their social relations. The hand-mill gives you society with the feudal lord; the steam-mill, society with the industrial capitalist.” [Collected Works, vol. 6, p. 166] On the face of it, this had better not be true. After all, the aim
of socialism is to expropriate the property of the industrial capitalist. If the social relationships are dependent on the productive forces then, clearly, socialism is impossible as it will have to be based, initially, on the legacy of capitalism. Fortunately, the way a workplace is managed is not predetermined by the technological base of society. As is obvious, a steam-mill can be operated by a co-operative, so making the industrial capitalist redundant. That a given technological basis (or productive forces) can produces many different social and political systems can easily be seen from history. Murray Bookchin gives one example:

“Technics… does not fully or even adequately account for the institutional differences between a fairly democratic federation such as the Iroquois and a highly despotic empire such as the Inca. From a strictly instrumental viewpoint, the two structures were supported by almost identical ‘tool kits.’ Both engaged in horticultural practices that were organised around primitive implements and wooden hoes. Their weaving and metalworking techniques were very similar … At the community level, Iroquois and Inca populations were immensely similar …

“Yet at the political level of social life, a democratic confederal structure of five woodland tribes obviously differs decisively from a centralised, despotic structure of mountain Indian chiefdoms. The former, a highly libertarian confederation … The latter, a massively authoritarian state … Communal management of resources and produce among the Iroquois tribes occurred at the clan level. By contrast, Inca resources were largely state-owned, and much of the empire’s produce was simply confiscation … and their redistribution from central and local storehouses. The Iroquois worked together freely … the Inca peasantry provided corvee labour to

are often confused, it is only because of economic and political privilege.” [Op. Cit., pp. 41–2]

For a given task, co-operation and joint activity may be required by its very nature. Take, for example, a train network. The joint activity of numerous workers are required to ensure that it operates successfully. The driver depends on the work of signal operators, for example, and guards to inform them of necessary information essential for the smooth running of the network. The passengers are dependent on the driver and the other workers to ensure their journey is safe and quick. As such, there is an objective need to co-operate but this need is understood and agreed to by the people involved.

If a specific activity needs the co-operation of a number of people and can only be achieved if these people work together as a team and, therefore, need to make and stick by agreements, then this is undoubtedly a natural fact which the individual can only rebel against by leaving the association. Similarly, if an association considers it wise to elect a delegate whose tasks have been allocated by that group then, again, this is a natural fact which the individuals in question have agreed to and so has not been imposed upon them by any external will — the individual has been convinced of the need to co-operate and does so.

If an activity requires the co-operation of numerous individuals then, clearly, that is a natural fact and there is not much the individuals involved can do about it. Anarchists are not in the habit of denying common sense. The question is simply how do these individuals co-ordinate their activities. Is it by means of self-management or by hierarchy (authority)? So anarchists have always been clear on how industry would be run — by the workers’ themselves in their own free associations. In this way the domination of the boss would be replaced by agreements between equals.
Malatesta argued, “the advantages which association and the consequent division of labour offer” meant that humanity “developed towards solidarity.” However, under class society “the advantages of association, the good that Man could drive from the support of his fellows” was distorted and a few gained “the advantages of co-operation by subjecting other men to [their] will instead of joining with them.” This oppression “was still association and co-operation, outside of which there is no possible human life; but it was a way of co-operation, imposed and controlled by a few for their personal interest.” [Anarchy, pp. 30–1] Anarchists seek to organise association to eliminate domination. This would be done by workers organising themselves collectively to make their own decisions about their work (workers’ self-management, to use modern terminology). This did not necessitate the same authoritarian social relationships as exist under capitalism:

“Of course in every large collective undertaking, a division of labour, technical management, administration, etc., is necessary. But authoritarians clumsily play on words to produce a raison d’être for government out of the very real need for the organisation of work. Government … is the concourse of individuals who have had, or have seized, the right and the means to make laws and to oblige people to obey; the administrator, the engineer, etc., instead are people who are appointed or assume the responsibility to carry out a particular job and do so. Government means the delegation of power, that is the abdication of initiative and sovereignty of all into the hands of a few; administration means the delegation of work, that is tasks given and received, free exchange of services based on free agreement… Let one not confuse the function of government with that of administration, for they are essentially different, and if today the two

a patently exploitative priesthood and state apparatus under a nearly industrial system of management.” [The Ecology of Freedom, pp. 331–2]

Marx’s claim that a given technological level implies a specific social structure is wrong. However, it does suggest that our comments that, for Marx and Engels, the new “social relationships” which develop under capitalism which imply socialism are relations between workplaces, not those between individuals and so classes are correct. The implications of this position became clear during the Russian revolution.

Later Marxists built upon this “scientific” groundwork. Lenin, for example, argued that “the difference between a socialist revolution and a bourgeois revolution is that in the latter case there are ready made forms of capitalist relationships; Soviet power [in Russia] does not inherit such ready made relationships, if we leave out of account the most developed forms of capitalism, which, strictly speaking, extended to a small top layer of industry and hardly touched agriculture.” [Collected Works, vol. 27, p. 90] Thus, for Lenin, “socialist” relationships are generated within big business, relationships “socialism” would “inherit” and universalise. As such, his comments fit in with the analysis of Marx and Engels we have presented above. However, his comments also reveal that Lenin had no idea that socialism meant the transformation of the relations of production, i.e. workers managing their own activity. This, undoubtedly, explains the systematic undermining of the factory committee movement by the Bolsheviks in favour of state control (see Maurice Brinton’s classic account of this process, The Bolsheviks and Workers’ Control).

The idea that socialism involved simply taking over the state and nationalising the “objectively socialised” means of production can be seen in both mainstream social-democracy and its Leninist child. Rudolf Hilferding argued that capitalism was evolving into a highly
centralised economy, run by big banks and big firms. All what was required to turn this into socialism would be its nationalisation:

“Once finance capital has brought the most important branches of production under its control, it is enough for society, through its conscious executive organ — the state conquered by the working class — to seize finance capital in order to gain immediate control of these branches of production ... taking possession of six large Berlin banks would ... greatly facilitate the initial phases of socialist policy during the transition period, when capitalist accounting might still prove useful.” [Finance Capital, pp. 367–8]

Lenin basically disagreed with this only in-so-far as the party of the proletariat would take power via revolution rather than by election (“the state conquered by the working class” equals the election of a socialist party). Lenin took it for granted that the difference between Marxists and anarchists is that “the former stand for centralised, large-scale communist production, while the latter stand for disconnected small production.” [Collected Works, vol. 23, p. 325]

The obvious implication of this is that anarchist views “express, not the future of bourgeois society, which is striving with irresistible force towards the socialisation of labour, but the present and even the past of that society, the domination of blind chance over the scattered and isolated small producer.” [Op. Cit., vol. 10, p. 73]

Lenin applied this perspective during the Russian Revolution. For example, he argued in 1917 that his immediate aim was for a “state capitalist” economy, this being a necessary stage to socialism. As he put it, “socialism is merely the next step forward from state-capitalist monopoly ... socialism is merely state-capitalist monopoly which is made to serve the interests of the whole people and has to that extent ceased to be capitalist monopoly.” [Op. Cit., vol. 25, p. 358] The Bolshevik road to “socialism” ran through the terrain

will, without a single management”? [The Marx-Engels Reader, p. 729]

This could only be asked if Engels was totally ignorant of Bakunin’s ideas and his many comments supporting co-operatives as the means by which workers would “organise and themselves conduct the economy without guardian angels, the state or their former employers.” Bakunin was “convinced that the co-operative movement will flourish and reach its full potential only in a society where the land, the instruments of production, and hereditary property will be owned and operated by the workers themselves: by their freely organised federations of industrial and agricultural workers.” [Bakunin on Anarchism, p. 399 and p. 400] Which meant that Bakunin, like all anarchists, was well aware of how a factory or other workplace would be organised:

“Only associated labour, that is, labour organised upon the principles of reciprocity and co-operation, is adequate to the task of maintaining ... civilised society.” [The Political Philosophy of Bakunin, p. 341]

By October of that year, Engels had finally “submitted arguments like these to the most rabid anti-authoritarians” who replied to run a factory, railway or ship did require organisation “but here it was not a case of authority which we confer on our delegates, but of a commission entrusted!” Engels commented that the anarchists “think that when they have changed the names of things they have changed the things themselves.” He, therefore, thought that authority will “only have changed its form” rather than being abolished under anarchism as “whoever mentions combined action speaks of organisation” and it is not possible “to have organisation without authority.” [Op. Cit., p. 732 and p. 731]

However, Engels is simply confusing two different things, authority and agreement. To make an agreement with another person is an exercise of your freedom, not its restriction. As
able to do. It may produce a monastery where all implicitly obey the orders of their superior, and it may produce an absolutely free organisation, leaving his full freedom to the individual, existing only as long as the associates wish to remain together, imposing nothing on anybody, being anxious rather to defend, enlarge, extend in all directions the liberty of the individual. Communism may be authoritarian (in which case the community will soon decay) or it may be Anarchist. The State, on the contrary, cannot be this. It is authoritarian or it ceases to be the State.” [Small Communal Experiments and Why They Fail, pp. 12–3]

Therefore, the example of free love indicates that, for anarchists, Engels arguments are simply pedantic sophistry. It goes without saying that organisation involves co-operation and that, by necessity, means that individuals come to agreements between themselves to work together. The question is how do they do that, not whether they do so or not. As such, Engels’ arguments confuse agreement with hierarchy, co-operation with coercion. Simply put, the way people conduct joint activity determines whether an organisation is libertarian or authoritarian. That was why anarchists called themselves anti-authoritarians, to draw attention to the different ways of organising collective life.

H.4.3 How do anarchists propose to run a factory?

In his campaign against anti-authoritarian ideas within the First International, Engels asks in a letter written in January 1872 “how do these people [the anarchists] propose to run a factory, operate a railway or steer a ship without having in the last resort one deciding

of state capitalism and, in fact, simply built upon its institutionalised means of allocating resources and structuring industry. As Lenin put it, “the modern state possesses an apparatus which has extremely close connections with the banks and syndicates [i.e., trusts], an apparatus which performs an enormous amount of accounting and registration work... This apparatus must not, and should not, be smashed. It must be wrestled from the control of the capitalists,” it “must be subordinated to the proletarian Soviets” and “it must be expanded, made more comprehensive, and nation-wide.” This meant that the Bolsheviks would “not invent the organisational form of work, but take it ready-made from capitalism” and “borrow the best models furnished by the advanced countries.” [Op. Cit., vol. 26, pp. 105–6 and p. 110]

The institutional framework of capitalism would be utilised as the principal (almost exclusive) instruments of “socialist” transformation. “Without big banks Socialism would be impossible,” argued Lenin, as they “are the ‘state apparatus’ which we need to bring about socialism, and which we take ready-made from capitalism; our task here is merely to lop off what capitalistically mutilates this excellent apparatus, to make it even bigger, even more democratic, even more comprehensive. A single State Bank, the biggest of the big... will constitute as much as nine-tenths of the socialist apparatus. This will be country-wide book-keeping, country-wide accounting of the production and distribution of goods.” While this is “not fully a state apparatus under capitalism,” it “will be so with us, under socialism.” For Lenin, building socialism was easy. This “nine-tenths of the socialist apparatus” would be created “at one stroke, by a single decree.” [Op. Cit., p. 106] Once in power, the Bolsheviks implemented this vision of socialism being built upon the institutions created by monopoly capitalism. Moreover, Lenin quickly started to advocate and implement the most sophisticated capitalist methods of organising labour, including “one-man management” of production, piece-rates and Taylorism (“scientific management”). This was not done accidentally or because no alterna-
tive existed (as we discuss in section H.6.2, workers were organis-
ing federations of factory committees which could have been, as
anarchists argued at the time, the basis of a genuine socialist econ-
omy).

As Gustav Landuer commented, when mainstream Marxists “call the capitalist factory system a social production ... we know the real implications of their socialist forms of labour.” [For So-
cialism, p. 70] As can be seen, this glorification of large-scale, state-capitalist structures can be traced back to Marx and Engels, while Lenin’s support for capitalist production techniques can be explained by mainstream Marxism’s lack of focus on the social relationships at the point of production.

For anarchists, the idea that socialism can be built on the framework provided to us by capitalism is simply ridiculous. Capitalism has developed industry and technology to further the ends of those with power, namely capitalists and managers. Why should they use that power to develop technology and industrial structures which lead to workers’ self-management and power rather than technologies and structures which enhance their own position vis-à-vis their workers and society as a whole? As such, technological and industrial development is not “neutral” or just the “application of science.” They are shaped by class struggle and class interest and cannot be used for different ends. Simply put, socialism will need to develop new forms of economic organisation based on socialist principles. The concept that monopoly capitalism paves the way for socialist society is rooted in the false assumption that the forms of social organisation accompanying capital concentration are identical with the socialisation of production, that the structures associated with collective labour under capitalism are the same as those required under socialism is achieve genuine socialisation. This false assumption, as can be seen, goes back to Engels and was shared by both Social Democracy and Leninism despite their other differences.

Engels is confusing two radically different means of decision making by arguing both involve subordination and authority. The difference is clear: the first involves the domination of an individual over another while the second involves the “subordination” of individuals to the decisions and agreements they make. The first is authority, the second is liberty. As Kropotkin put it:

“This applies to all forms of association. Cohabitation of two individuals under the same roof may lead to the enslavement of one by the will of the other, as it may also lead to liberty for both. The same applies to the family or ... to large or small associations, to each social institution ...

“Communism is capable of assuming all forms of freedom or of oppression — which other institutions are un-
Traditionally, the marriage vow is based on the wife promising to obey the husband. Her role is simply that of obedience (in theory, at least). As Carole Pateman argues, “Until late into the nineteenth century the legal and civil position of a wife resembled that of a slave” and, in theory, she “became the property of her husband and stood to him as a slave/servant to a master.” [The Sexual Contract, p. 119 and pp. 130–1] As such, an obvious social relationship exists—a authoritarian one in which the man has power over the woman. We have a relationship based on domination and subordination.

In free love, the couple are equals. They decide their own affairs, together. The decisions they reach are agreed between them and no domination takes place (unless you think making an agreement equals domination or subordination). They both agree to the decisions they reach, based on mutual respect and give and take. Subordination to individuals does not meaningfully exist (at best, it could be argued that both parties are “dominated” by their decisions, hardly a meaningful use of the word). Instead of subordination, there is free agreement.

Both types of organisation apply to the same activities—a couple living together. Has “authority” just changed its form as Engels argued? Of course not. There is a substantial difference between the two. The former is authoritarian. One part of the organisation dictates to the other. The latter is libertarian as neither dominates (or they, as a couple, “dominate” each other as individuals—surely an abuse of the language, we hope you agree!). Each part of the organisation agrees to the decision. Do all these differences mean that we have changed name of “authority” or has authority been abolished and liberty created? This was the aim of Bakunin’s terminology, namely to draw attention to the qualitative change that has occurred in the social relationships generated by the association of individuals when organised in an anarchist way. A few Marxists have also seen this difference. For example, Rosa Luxemburg repeated (probably unknowingly) Bakunin’s dis-

While anarchists are inspired by a vision of a non-capitalist, decentralised, diverse society based on appropriate technology and appropriate scale, mainstream Marxism is not. Rather, it sees the problem with capitalism is that its institutions are not centralised and big enough. As Alexander Berkman correctly argues:

“The role of industrial decentralisation in the revolution is unfortunately too little appreciated... Most people are still in the thrall of the Marxian dogma that centralisation is ‘more efficient and economical.’ They close their eyes to the fact that the alleged ‘economy’ is achieved at the cost of the workers’ limb and life, that the ‘efficiency’ degrades him to a mere industrial cog, deadens his soul, kills his body. Furthermore, in a system of centralisation the administration of industry becomes constantly merged in fewer hands, producing a powerful bureaucracy of industrial overlords. It would indeed be the sheerest irony if the revolution were to aim at such a result. It would mean the creation of a new master class.” [What Is Anarchism?, p. 229]

That mainstream Marxism is soaked in capitalist ideology can be seen from Lenin’s comments that when “the separate establishments are amalgamated into a single syndicate, this economy [of production] can attain tremendous proportions, as economic science teaches us.” [Op. Cit., vol. 25, p. 344] Yes, capitalist economic science, based on capitalist definitions of efficiency and economy and on capitalist criteria! That Bolshevism bases itself on centralised, large scale industry because it is more “efficient” and “economic” suggests nothing less than that its “socialism” will be based on the same priorities of capitalism. This can be seen from Lenin’s idea that Russia had to learn from the advanced capitalist countries, that there was only one way to develop production and that was by adopting capitalist methods of “rationalisation” and management.
Thus, for Lenin in early 1918 “our task is to study the state capitalism of the Germans, to spare no effort in copying it and not to shrink from adopting dictorial methods to hasten the copying of it.” [Op. Cit., vol. 27, p. 340] In the words of Luigi Fabbri:

“Marxist communists, especially Russian ones, are beguiled by the distant mirage of big industry in the West or America and mistake for a system of production what is only a typically capitalist means of speculation, a means of exercising oppression all the more securely; and they do not appreciate that that sort of centralisation, far from fulfilling the real needs of production, is, on the contrary, precisely what restricts it, obstructs it and applies a brake to it in the interests of capital.

“Whenever [they] talk about ‘necessity of production’ they make no distinction between those necessities upon which hinge the procurement of a greater quantity and higher quality of products — this being all that matters from the social and communist point of view — and the necessities inherent in the bourgeois regime, the capitalists’ necessity to make more profit even should it mean producing less to do so. If capitalism tends to centralise its operations, it does so not for the sake of production, but only for the sake of making and accumulating more money.” [‘Anarchy and ‘Scientific’ Communism”, pp. 13–49, The Poverty of Statism, Albert Meltzer (ed.), pp. 21–22]

Efficiency, in other words, does not exist independently of a given society or economy. What is considered “efficient” under capitalism may be the worse form of inefficiency in a free society. The idea that socialism may have different priorities, need different methods of organising production, have different visions of how an economy was structured than capitalism, is absent in main-

H.4.2 Does free love show the weakness of Engels’ argument?

Yes! Engels, let us not forget, argued, in effect, that any activities which “replace isolated action by combined action of individuals” meant “the imposition of the will of another upon ours” and so “the will of the single individual will have to subordinate itself, which means that questions are settled in an authoritarian manner.” This, for Engels, means that “authority” has not “disappeared” under anarchism but rather it has only “changed its form.” [Op. Cit., pp. 730–1]

However, to say that authority just changes its form misses the qualitative differences between authoritarian and libertarian organisation. Precisely the differences which Bakunin and other anarchists tried to stress by calling themselves anti-authoritarians and being against the “principle of authority.” By arguing that all forms of association are necessarily “authoritarian,” Engels is impoverishing the liberatory potential of socialism. He ensures that the key question of liberty within our associations is hidden behind a mass of sophistry.

As an example, look at the difference between marriage and free love. Both forms necessitate two individuals living together, sharing the same home, organising their lives together. The same situation and the same commitments. But do both imply the same social relationships? Are they both “authoritarian”? 

2578
So, unlike the essentially (classical) liberal position of Engels, anarchists recognise that freedom is a product of how we associate. This need not imply continual agreement nor an unrealistic assumption that conflict and uncooperative behaviour will disappear. For those within an organisation who refuse to co-operate, anarchists argue that this problem is easily solved. Freedom of association implies the freedom not to associate and so those who ignore the decisions reached collectively and disrupt the organisation’s workings would simply be “compelled to leave” the association. In this way, a free association “could protect itself without the authoritarian organisation we have nowadays.” [Kropotkin, The Conquest of Bread, p. 152]

Clearly, Engels “critique” hides more than it explains. Yes, co-operation and coercion both involve people working jointly together, but they are not to be equated. While Bakunin recognised this fundamental difference and tried, perhaps incompletely, to differentiate them (by arguing against “the principle of authority”) and to base his politics on the difference, Engels obscures the differences and muddies the water by confusing the two radically different concepts within the word “authority.” Any organisation or group is based on co-operation and co-ordination (Engels’ “principle of authority”). How that co-operation is achieved is dependent on the type of organisation in question and that, in turn, specifies the social relationships within it. It is these social relationships which determine whether an organisation is authoritarian or libertarian, not the universal need to make and stick by agreements.

Ultimately, Engels is simply confusing obedience with agreement, coercion with co-operation, organisation with authority, objective reality with despotism.

Rather than seeing organisation as restricting freedom, anarchists argue that the kind of organisation we create is what stream Marxism. Lenin thought that the institutions of bourgeois economic power, industrial structure and capitalist technology and techniques could be “captured” and used for other ends. Ultimately, though, capitalist means and organisations can only generate capitalist ends. It is significant that the “one-man management,” piece-work, Taylorism, etc. advocated and implemented under Lenin are usually listed by his followers as evils of Stalinism and as proof of its anti-socialist nature.

Equally, it can be argued that part of the reason why large capitalist firms can “plan” production on a large scale is because they reduce the decision making criteria to a few variables, the most significant being profit and loss. That such simplification of input data may result in decisions which harm people and the environment goes without a saying. “The lack of context and particularity,” James C. Scott correctly notes, “is not an oversight; it is the necessary first premise of any large-scale planning exercise. To the degree that the subjects can be treated as standardised units, the power of resolution in the planning exercise is enhanced. Questions posed within these strict confines can have definitive, quantitative answers. The same logic applies to the transformation of the natural world. Questions about the volume of commercial wood or the yield of wheat in bushels permit more precise calculations than questions about, say, the quality of the soil, the versatility and taste of the grain, or the well-being of the community. The discipline of economics achieves its formidable resolving power by transforming what might otherwise be considered qualitative matters into quantitative issues with a single metric and, as it were, a bottom line: profit or loss.” [Seeing like a State, p. 346] Whether a socialist society could factor in all the important inputs which capitalism ignores within an even more centralised planning structure is an important question. It is extremely doubtful that there could be a positive answer to it. This does not mean, we just stress, that anarchists argue exclusively for “small-scale” production as many Marxists, like Lenin, assert (as we prove in section I.3.8, anarchists have always argued for appropr
ate levels of production and scale). It is simply to raise the possibility of what works under capitalism may be undesirable from a perspective which values people and planet instead of power and profit.

As should be obvious, anarchism is based on critical evaluation of technology and industrial structure, rejecting the whole capitalist notion of “progress” which has always been part of justifying the inhumanities of the status quo. Just because something is rewarded by capitalism it does not mean that it makes sense from a human or ecological perspective. This informs our vision of a free society and the current struggle. We have long argued that that capitalist methods cannot be used for socialist ends. In our battle to democratise and socialise the workplace, in our awareness of the importance of collective initiatives by the direct producers in transforming their work situation, we show that factories are not merely sites of production, but also of reproduction — the reproduction of a certain structure of social relations based on the division between those who give orders and those who take them, between those who direct and those who execute.

It goes without saying that anarchists recognise that a social revolution will have to start with the industry and technology which is left to it by capitalism and that this will have to be expropriated by the working class (this expropriation will, of course, involve transforming it and, in all likelihood, rejecting of numerous technologies, techniques and practices considered as “efficient” under capitalism). This is not the issue. The issue is who expropriates it and what happens to it next. For anarchists, the means of life are expropriated directly by society, for most Marxists they are expropriated by the state. For anarchists, such expropriation is based workers’ self-management and so the fundamental capitalist “relation of production” (wage labour) is abolished. For most Marxists, state ownership of production is considered sufficient to ensure the end of capitalism (with, if we are lucky, some form of “workers’ con-
cept of “autonomy” would restrict freedom to such a degree that it would be so self-defeating as to make a mockery of the concept of autonomy and no sane person would seek it. To requote Malatesta, freedom we want “is not an absolute metaphysical, abstract freedom” but “a real freedom, possible freedom, which is the conscious community of interests, voluntary solidarity.” [Anarchy, p. 43]

To state the obvious, anarchists are well aware that “anyone who associates and co-operates with others for a common purpose must feel the need to co-ordinate his [or her] actions with those of his [or her] fellow members and do nothing that harms the work of others and, thus, the common cause; and respect the agreements that have been made — except when wishing sincerely to leave the association when emerging differences of opinion or changed circumstances or conflict over preferred methods make co-operation impossible or inappropriate.” [Malatesta, The Anarchist Revolution, pp. 107–8]

For anarchists, collective organisation and co-operation does not mean the end of individuality. Bakunin expressed it well:

“You will think, you will exist, you will act collectively, which nevertheless will not prevent in the least the full development of the intellectual and moral faculties of each individual. Each of you will bring to you his own talents, and in all joining together you will multiply your value a hundred fold. Such is the law of collective action ... in giving your hands to each other for this action in common, you will promise to each other a mutual fraternity which will be ... a sort of free contract ... Then proceed collectively to action you will necessarily commence by practising this fraternity between yourselves ... by means of regional and local organisations ... you will find in yourselves strength that you had never imagined, if each of you acted individually, according to his own inclination and not as a consequence of a unanimous resolution, discussed and accepted beforehand.” [quoted by
least extend my own power beyond myself, because to do so I must co-operate with someone else, and co-operation implies an agreement, and that is against Liberty. It will be seen at once that this argument is absurd. I do not limit my liberty, but simply exercise it, when I agree with my friend to go for a walk.

“If, on the other hand, I decide from my superior knowledge that it is good for my friend to take exercise, and therefore I attempt to compel him to go for a walk, then I begin to limit freedom. This is the difference between free agreement and government.” [Objections to Anarchism, pp. 348–9]

If we took Engels’ argument seriously then we would have to conclude that living makes freedom impossible! After all by doing any joint activity you “subordinate” yourself to others and so, ironically, exercising your liberty by making decisions and associating with others would become a denial of liberty. Clearly Engels argument is lacking something!

Perhaps this paradox can be explained once we recognise that Engels is using a distinctly liberal view of freedom — i.e. freedom from. Anarchists reject this. We see freedom as holistic — freedom from and freedom to. This means that freedom is maintained by the kind of relationships we form with others, not by isolation. As Bakunin argued, “man in isolation can have no awareness of his liberty. Being free for man means being acknowledged, considered and treated as such by another man. Liberty is therefore a feature not of isolation but of interaction, not of exclusion but rather of connection”. [Michael Bakunin: Selected Writings, p. 147] Liberty is denied when we form hierarchical relationships with others not necessarily when we associate with others. To combine with other individuals is an expression of individual liberty, not its denial! We are aware that freedom is impossible outside of association. Within an association absolute “autonomy” cannot exist, but such a control” over those state officials who do management production — see section H.3.14).

In contrast to the mainstream Marxist vision of socialism being based around the institutions inherited from capitalism, anarchists have raised the idea that the “free commune” would be the “medium in which the ideas of modern Socialism may come to realisation.” These “communes would federate” into wider groupings. Labour unions (or other working class organs created in the class struggle such as factory committees) were “not only an instrument for the improvement of the conditions of labour, but also ... an organisation which might ... take into its hands the management of production.” Large labour associations would “come into existence for the inter-communal service[s].” Such communes and workers’ organisations as the basis of “Socialist forms of life could find a much easier realisation” than the “seizure of all industrial property by the State, and the State organisation of agriculture and industry.” Thus railway networks “could be much better handled by a Federated Union of railway employees, than by a State organisation.” Combined with cooperation “both for production and for distribution, both in industry and agriculture,” workers’ self-management of production would create “samples of the bricks” of the future society (“even samples of some of its rooms”). [Kropotkin, The Conquest of Bread, pp. 21–23]

This means that anarchists also root our arguments for socialism in a scientific analysis of tendencies within capitalism. However, in opposition to the analysis of mainstream Marxism which focuses on the objective tendencies within capitalist development, anarchists emphasise the oppositional nature of socialism to capitalism. Both the “law of value” and the “law of planning” are tendencies within capitalism, that is aspects of capitalism. Anarchists encourage class struggle, the direct conflict of working class people against the workings of all capitalism’s “laws”. This struggle produces mutual aid and the awareness that we can care best for our own welfare if we unite with others — what we can loosely
term the “law of co-operation” or “law of mutual aid”. This law, in contrast to the Marxian “law of planning” is based on working class subjectively and develops within society only in opposition to capitalism. As such, it provides the necessary understanding of where socialism will come from, from below, in the spontaneous self-activity of the oppressed fighting for their freedom. This means that the basic structures of socialism will be the organs created by working class people in their struggles against exploitation and oppress (see section I.2.3 for more details). Gustav Landauer’s basic insight is correct (if his means were not totally so) when he wrote that “Socialism will not grow out of capitalism but away from it” [Op. Cit., p. 140] In other words, tendencies opposed to capitalism rather than ones which are part and parcel of it.

Anarchism’s recognition of the importance of these tendencies towards mutual aid within capitalism is a key to understanding what anarchists do in the here and now, as will be discussed in section J. In addition, it also laid the foundation of understanding the nature of an anarchist society and what creates the framework of such a society in the here and now. Anarchists do not abstractly place a better society (anarchy) against the current, oppressive one. Instead, we analysis what tendencies exist within current society and encourage those which empower and liberate people. Based on these tendencies, anarchists propose a society which develops them to their logical conclusion. Therefore an anarchist society is created not through the developments within capitalism, but in social struggle against it.

H.3.13 Why is state socialism just state capitalism?

For anarchists, the idea that socialism can be achieved via state ownership is simply ridiculous. For reasons which will become abundantly clear, anarchists argue that any such “socialist” system others), Bakunin (like any anarchist) would have agreed. The question was how are these decisions to be made, not whether they should be or not. Ultimately, Engels confused agreement with hierarchy. Anarchists do not.

H.4.1 Does organisation imply the end of liberty?

Engels argument in “On Authority” can be summed up as any form of collective activity means co-operating with others and that this means the individual subordinates themselves to others, specifically the group. As such, authority cannot be abolished as organisation means that “the will of a single individual will always have to subordinate itself, which means that questions are settled in an authoritarian way.” [Op. Cit., p. 731]

Engels argument proves too much. As every form of joint activity involves agreement and “subordination,” then life itself becomes “authoritarian.” The only free person, according to Engels’ logic, would be the hermit. Anarchists reject such nonsense. As George Barrett argued:

“To get the full meaning out of life we must co-operate, and to co-operate we must make agreements with our fellow-men. But to suppose that such agreements mean a limitation of freedom is surely an absurdity; on the contrary, they are the exercise of our freedom.

“If we are going to invent a dogma that to make agreements is to damage freedom, then at once freedom becomes tyrannical, for it forbids men [and women] to take the most ordinary everyday pleasures. For example, I cannot go for a walk with my friend because it is against the principle of Liberty that I should agree to be at a certain place at a certain time to meet him. I cannot in the
of socialism (the voluntary self-discipline Bakunin talked about). As Kropotkin memorably put it:

“Having been brought up in a serf-owner’s family, I entered active life, like all young men of my time, with a great deal of confidence in the necessity of commanding, ordering, scolding, punishing, and the like. But when, at an early stage, I had to manage serious enterprises and to deal with men, and when each mistake would lead at once to heavy consequences, I began to appreciate the difference between acting on the principle of command and discipline and acting on the principle of common understanding. The former works admirably in a military parade, but it is worth nothing where real life is concerned, and the aim can be achieved only through the severe effort of many converging wills.” [Memoirs of a Revolutionist, p. 202]

Clearly, then, Engels did not refute anarchism by his essay. Rather, he refuted a straw man of his own creation. The question was never one of whether certain tasks need co-operation, co-ordination, joint activity and agreement. It was, in fact, a question of how that is achieved. As such, Engels diatribe misses the point. Instead of addressing the actual politics of anarchism or their actual use of the word “authority,” he rather addressed a series of logical deductions he draws from a false assumption regarding those politics. Engels essay shows, to paraphrase Keynes cutting remarks against von Hayek, the bedlam that can be created when a remorseless logician deduces away from an incorrect starting assumption.

For collective activity anarchists recognise the need to make and stick by agreements. Collective activity of course needs collective decision making and organisation. In so far as Engels had a point to his diatribe (namely that group efforts meant co-operating with
ical supremacy to wrest, by degrees, all capital from the bourgeoisie, to centralise all instruments of production into the hands of the State.” This meant the “[c]entralisation of credit in the hands of the State, by means of a national bank with State capital and an exclusive monopoly,” the “[c]entralisation of the means of communication and transport in the hands of the State,” “[e]xtension of factories and instruments of production owned by the State” and the “[e]stablishment of industrial armies, especially for agriculture.” [Marx and Engels, Selected Works, pp. 52–3] Thus “feudal estates … mines, pits, and so forth, would become property of the state” as well as “[a]ll means of transport,” with “the running of large-scale industry and the railways by the state.” [Collected Works, vol. 7, p. 3, p. 4 and p. 299]

Engels repeats this formula thirty-two years later in Socialism: Utopian and Scientific by asserting that capitalism itself “forces on more and more the transformation of the vast means of production, already socialised, into state property. The proletariat seizes political power and turns the means of production into state property.” Socialism is not equated with state ownership of productive forces by a capitalist state, “but concealed within it are the technical conditions that form the elements of that solution” to the social problem. It simply “shows itself the way to accomplishing this revolution. The proletariat seizes political power and turns the means of production into state property.” Thus state ownership after the proletariat seizes power is the basis of socialism, when by this “first act” of the revolution the state “really constitutes itself as the representative of the whole of society.” [Marx-Engels Reader, p. 713, p. 712 and p. 713]

What is significant from these programmatic statements on the first steps of socialism is the total non-discussion of what is happening at the point of production, the non-discussion of the social relations in the workplace. Rather we are subjected to discussion of “the contradiction between socialised production and capitalist appropriation” and claims that while there is “socialised organisation of

the former simply confuses co-operation with coercion. It also indicates a distinctly liberal conception of liberty, seeing it restricted by association with others rather than seeing association as an expression of liberty. As Malatesta argued:

“The basic error … is in believing that organisation is not possible without authority.

“Now, it seems to us that organisation, that is to say, association for a specific purpose and with the structure and means required to attain it, is a necessary aspect of social life. A man in isolation cannot even live the life of a beast … Having therefore to join with other humans … he must submit to the will of others (be enslaved) or subject others to his will (be in authority) or live with others in fraternal agreement in the interests of the greatest good of all (be an associate). Nobody can escape from this necessity.” [Errico Malatesta: His Life and Ideas, pp. 84–5]

Therefore, organisation is “only the practice of co-operation and solidarity” and is a “natural and necessary condition of social life.” [Malatesta, Op. Cit., p. 83] Clearly, the question is not whether we organise, but how do we do so. This means that, for anarchists, Engels confused vastly different concepts: “Co-ordination is dutifully confused with command, organisation with hierarchy, agreement with domination — indeed, ‘imperious’ domination.” [Murray Bookchin, Towards an Ecological Society, pp. 126–7]

Socialism will only exist when the discipline currently enforced by the stick in the hand of the boss is replaced by the conscious self-discipline of free individuals. It is not by changing who holds the stick (from a capitalist to a “socialist” boss) that socialism will be created. It is only by the breaking up and uprooting of this slavish spirit of discipline, and its replacement by self-management, that working people will create a new discipline what will be the basis
Clearly Engels misunderstood the anarchist conception of liberty. Rather than seeing it as essentially negative, anarchists argue that liberty is expressed in two different, but integrated, ways. Firstly, there is rebellion, the expression of autonomy in the face of authority. This is the negative aspect of it. Secondly, there is association, the expression of autonomy by working with your equals. This is the positive aspect of it. As such, Engels concentrates on the negative aspect of anarchist ideas, ignoring the positive, and so paints a false picture of anarchism. Freedom, as Bakunin argued, is a product of connection, not of isolation. How a group organises itself determines whether it is authoritarian or libertarian. If the individuals who take part in a group manage the affairs of that group (including what kinds of decisions can be delegated) then that group is based on liberty. If that power is left to a few individuals (whether elected or not) then that group is structured in an authoritarian manner. This can be seen from Bakunin’s argument that power must be “diffused” into the collective in an anarchist society. Clearly, anarchists do not reject the need for organisation nor the need to make and abide by collective decisions. Rather, the question is how these decisions are to be made — are they to be made from below, by those affected by them, or from above, imposed by a few people in authority.

Only a sophist would confuse hierarchical power with the power of people managing their own affairs. It is an improper use of words to denote equally as “authority” two such opposed concepts as individuals subjected to the autocratic power of a boss and the voluntary co-operation of conscious individuals working together as equals. The lifeless obedience of a governed mass cannot be compared to the organised co-operation of free individuals, yet this is what Engels did. The former is marked by hierarchical power and the turning of the subjected into automations performing mechanical movements without will and thought. The latter is marked by participation, discussion and agreement. Both are, of course, based on co-operation but to argue that latter restricts liberty as much as production within the factory,” this has become “incompatible with the anarchy of production in society.” The obvious conclusion to be drawn is that “socialism” will inherit, without change, the “socialised” workplace of capitalism and that the fundamental change is that of ownership: “The proletariat seized the public power, and by means of this transforms the socialised means of production … into public property. By this act, the proletariat frees the means of production from the character of capital they have thus far borne.” [Engels, Op. Cit., p. 709 and p. 717]

That the Marxist movement came to see state ownership rather than workers’ management of production as the key issue is hardly surprising. Thus we find leading Social-Democrats arguing that socialism basically meant the state, under Social-Democratic control of course, acquiring the means of production and nationalising them. Rudolf Hilferding presented what was Marxist orthodoxy at the time when he argued that in “a communist society” production “is consciously determined by the social central organ,” which would decide “what is to be produced and how much, where and by whom.” While this information is determined by the market forces under capitalism, in socialism it “is given to the members of the socialist society by their authorities … we must derive the undisturbed progress of the socialist economy from the laws, ordinances and regulations of socialist authorities.” [quoted by Nikolai Bukharin, Economy Theory of the Leisure Class, p. 157] The Bolsheviks inherited this concept of “socialism” and implemented it, with terrible results. This vision of society in which the lives of the population are controlled by “authorities” in a “social central organ” which tells the workers what to do, while in line with the Communist Manifesto, seems less than appealing. It also shows why state socialism is not socialism at all. Thus George Barrett:

“If instead of the present capitalist class there were a set of officials appointed by the Government and set in a position to control our factories, it would bring about
The Anarchist Revolution, pp. 8–9

The key to seeing why state socialism is simply state capitalism can be found in the lack of change in the social relationships at the point of production. The workers are still wage slaves, employed by the state and subject to its orders. As Lenin stressed in State and Revolution, under Marxist Socialism "[a]ll citizens are transformed into hired employees of the state ... All citizens become employees and workers of a single country-wide state 'syndicate' ... The whole of society will have become a single office and a single factory, with equality of labour and pay." [Collected Works, vol. 25, pp. 473–4] Given that Engels had argued, against anarchism, that a factory required subordination, authority, lack of freedom and "a veritable despotism independent of all social organisation," Lenin’s idea of turning the world into one big factory takes on an extremely frightening nature. [Marx-Engels Reader, p. 731] A discipline almost always signifies despotism on the one hand and blind automatic submission to authority on the other. ..

"Hostile as I am to [this,] the authoritarian conception of discipline, I nevertheless recognise that a certain kind of discipline, not automatic but voluntary and intelligently understood is, and will ever be, necessary whenever a greater number of individuals undertake any kind of collective work or action. Under these circumstances, discipline is simply the voluntary and considered co-ordination of all individual efforts for a common purpose. At the moment of revolution, in the midst of the struggle, there is a natural division of functions according to the aptitude of each, assessed and judged by the collective whole: Some direct and others carry out orders. But no function remains fixed and it will not remain permanently and irrevocably attached to any one person. Hierarchical order and promotion do not exist, so that the executive of yesterday can become the subordinate of tomorrow. No one rises above the others, and if he does rise, it is only to fall back again a moment later, like the waves of the sea forever returning to the salutary level of equality.

"In such a system, power, properly speaking, no longer exists. Power is diffused to the collectivity and becomes the true expression of the liberty of everyone, the faithful and sincere realisation of the will of all ... this is the only true discipline, the discipline necessary for the organisation of freedom. This is not the kind of discipline preached by the State ... which wants the old, routine-like, automatic blind discipline. Passive discipline is the foundation of every despotism." [Bakunin on Anarchism, pp. 414–5]
of authority, Bakunin proposed a “natural authority” based on the masses “governing themselves.” He did not object to the need for individuals associating themselves into groups and managing their own affairs, rather he opposed the idea that co-operation necessitated hierarchy:

“Hence there results, for science as well as for industry, the necessity of division and association of labour. I take and I give — such is human life. Each is an authoritative leader and in turn is led by others. Accordingly there is no fixed and constant authority, but continual exchange of mutual, temporary, and, above all, voluntary authority and subordination.” [Op. Cit., pp. 353–4]

This kind of free association would be the expression of liberty rather than (as in hierarchical structures) its denial. Anarchists reject the idea of giving a minority (a government) the power to make our decisions for us. Rather, power should rest in the hands of all, not concentrated in the hands of a few. We are well aware of the need to organise together and, therefore, the need to stick by decisions reached. The importance of solidarity in anarchist theory is an expression of this awareness. However, there are different kinds of organisation. There can be no denying that in a capitalist workplace or army there is “organisation” and “discipline” yet few, if any, sane persons would argue that this distinctly top-down and hierarchical form of working together is something to aspire to, particularly if you seek a free society. This cannot be compared to making and sticking by a collective decision reached by free discussion and debate within a self-governing associations. As Bakunin argued:

“Discipline, mutual trust as well as unity are all excellent qualities when properly understood and practised, but disastrous when abused ... [one use of the word]

reality which one anarchist described in 1923 as being the case in Lenin’s Russia:

“The nationalisation of industry, removing the workers from the hands of individual capitalists, delivered them to the yet more rapacious hands of a single, ever-present capitalist boss, the State. The relations between the workers and this new boss are the same as earlier relations between labour and capital, with the sole difference that the Communist boss, the State, not only exploits the workers, but also punishes them himself ... Wage labour has remained what it was before, except that it has taken on the character of an obligation to the State ... It is clear that in all this we are dealing with a simple substitution of State capitalism for private capitalism.” [Peter Arshinov, History of the Makhnovist Movement, p. 71]

All of which makes Bakunin’s comments seem justified (as well as stunningly accurate):

“Labour financed by the State — such is the fundamental principle of authoritarian Communism, of State Socialism. The State, having become the sole proprietor ... will have become sole capitalist, banker, money-lender, organiser, director of all national work, and the distributor of its profits.” [The Political Philosophy of Bakunin, p. 293]

Such a system, based on those countries “where modern capitalist development has reached its highest point of development” would see “the gradual or violent expropriation of the present landlords and capitalists, or of the appropriation of all land and capital by the State. In order to be able to carry out its great economic and social mission, this State will have to be very far-reaching, very powerful and highly
centralised. It will administer and supervise agriculture by means of its appointed mangers, who will command armies of rural workers organised and disciplined for that purpose. At the same time, it will set up a single bank on the ruins of all existing banks.” Such a system, Bakunin correctly predicted, would be “a barracks regime for the proletariat, in which a standardised mass of men and women workers would wake, sleep, work and live by rote; a regime of privilege for the able and the clever.” [Michael Bakunin: Selected Writings, p. 258 and p. 259]

Proudhon, likewise was well aware that state ownership did not mean the end of private property, rather it meant a change in who ordered the working class about. “We do not want,” he stated, “to see the State confiscate the mines, canals and railways; that would be to add to monarchy, and more wage slavery. We want the mines, canals, railways handed over to democratically organised workers’ associations” which would be the start of a “vast federation of companies and societies woven into the common cloth of the democratic social Republic.” He contrasted workers’ associations run by and for their members to those “subsidised, commanded and directed by the State,” which would crush “all liberty and all wealth, precisely as the great limited companies are doing.” [No Gods, No Masters, vol. 1, p. 62 and p. 105]

Simply put, if workers did not directly manage their own work then it matters little who formally owns the workplaces in which they toil. As Maurice Brinton argued, libertarian socialists “hold that the ‘relations of production’ — the relations which individuals or groups enter into with one another in the process of producing wealth — are the essential foundations of any society. A certain pattern of relations of production is the common denominator of all class societies. This pattern is one in which the producer does not dominate the means of production but on the contrary both is ‘separated from them’ and from the products of his [or her] own labour. In all class societies the producer is in a position of subordination to those who manage the productive process. Workers’ management of production — implying structures, especially those of the state. Nevertheless, their practical proposals and some of their theoretical discussions present a different picture.” [The Problem of Political Obligation, p. 141] This can be seen when Bakunin noted that “the principle of authority” was the “eminently theological, metaphysical and political idea that the masses, always incapable of governing themselves, must submit at all times to the benevolent yoke of a wisdom and a justice, which in one way or another, is imposed from above.” [Marxism, Freedom and the State, p. 33] Clearly, by the term “principle of authority” Bakunin meant hierarchy rather than organisation and the need to make agreements (what is now called self-management).

Bakunin, clearly, did not oppose all authority but rather a specific kind of authority, namely hierarchical authority. This kind of authority placed power into the hands of a few. For example, wage labour produced this kind of authority, with a “meeting ... between master and slave ... the worker sells his person and his liberty for a given time.” The state is also based hierarchical authority, with “those who govern” (i.e. “those who frame the laws of the country as well as those who exercise the executive power”) being in an “exceptional position diametrically opposed to ... popular aspirations” towards liberty. They end up “viewing society from the high position in which they find themselves” and so “[w]hoever says political power says domination” over “a more or less considerable section of the population.” [The Political Philosophy of Bakunin, p. 187 and p. 218]

Thus hierarchical authority is top-down, centralised and imposed. It is this kind of authority Bakunin had in mind when he argued that anarchists “are in fact enemies of all authority” and it will “corrupt those who exercise [it] as much as those who are compelled to submit to [it].” [Op. Cit., p. 249] In other words, “authority” was used as shorthand for “hierarchy” (or “hierarchical authority”), the imposition of decisions rather than agreement to abide by the collective decisions you make with others when you freely associate with them. In place of this kind
was extremely clear on this issue and differentiated between types of authority, of which he opposed only certain kinds. For example, he asked the question “[d]oes it follow that I reject all authority?” and answered quite clearly: “No, far be it from me to entertain such a thought.” He acknowledged the difference between being an authority — an expert — and being in authority. This meant that “[i]f I bow before the authority of the specialists and declare myself ready to follow, to a certain extent and so long as it may seem to me to be necessary, their general indications and even their directions, it is because their authority is imposed upon me by no one . . . I bow before the authority of specialists because it is imposed upon me by my own reason.” Similarly, he argued that anarchists “recognise all natural authority, and all influence of fact upon us, but none of right; for all authority and all influence of right, officially imposed upon us, immediately becomes a falsehood and an oppression.”

He stressed that the “only great and omnipotent authority, at once natural and rational, the only one we respect, will be that of the collective and public spirit of a society founded on equality and solidarity and the mutual respect of all its members.” [The Political Philosophy of Bakunin, p. 253, p. 241 and p. 255]

Bakunin contrasted this position with the Marxist one, whom he argued were “champions of the social order built from the top down, always in the name of universal suffrage and the sovereignty of the masses upon whom they bestow the honour of obeying their leaders, their elected masters.” In other words, a system based on delegated power and so hierarchical authority. This excludes the masses from governing themselves (as in the state) and this, in turn, “means domination, and any domination presupposes the subjugation of the masses and, consequently, their exploitation for the benefit of some ruling minority.” [Bakunin on Anarchism, p. 277]

So while Bakunin and other anarchists, on occasion, did argue that anarchists reject “all authority” they, as Carole Pateman correctly notes, “tended to treat ‘authority’ as a synonym for ‘authoritarian,’ and so have identified ‘authority’ with hierarchical power as it does the total domination of the producer over the productive process — is not for us a marginal matter. It is the core of our politics. It is the only means whereby authoritarian (order-giving, order-taking) relations in production can be transcended and a free, communist or anarchist, society introduced.” He went on to note that “the means of production may change hands (passing for instance from private hands into those of a bureaucracy, collectively owning them) without this revolutionising the relations of production. Under such circumstances — and whatever the formal status of property — the society is still a class society for production is still managed by an agency other than the producers themselves. Property relations, in other words, do not necessarily reflect the relations of production. They may serve to mask them — and in fact they often have.” [The Bolsheviks and Workers’ Control, pp. vii-vii]

As such, for anarchists (and libertarian Marxists) the idea that state ownership of the means of life (the land, workplaces, factories, etc.) is the basis of socialism is simply wrong. Therefore, “Anarchism cannot look upon the coming revolution as a mere substitution . . . of the State as the universal capitalist for the present capitalists.” [Kropotkin, Evolution and Environment, p. 106] Given that the “State organisation having always been . . . the instrument for establishing monopolies in favour of the ruling minorities, [it] cannot be made to work for the destruction of these monopolies. The anarchists consider, therefore, that to hand over to the State all the main sources of economic life — the land, the mines, the railways, banking, insurance, and so on — as also the management of all the main branches of industry . . . would mean to create a new instrument of tyranny. State capitalism would only increase the powers of bureaucracy and capitalism.” [Kropotkin, Anarchism, p. 286] Needless to say, a society which was not democratic in the workplace would not remain democratic politically either. Either democracy would become as formal as it is within any capitalist republic or it would be replaced by dictatorship. So, without a firm base in the direct management of production, any “socialist” society would see working class so-
cial power ("political power") and liberty wither and die, just like a flower ripped out of the soil.

Unsurprisingly, given all this, we discover throughout history the co-existence of private and state property. Indeed, the nationalisation of key services and industries has been implemented under all kinds of capitalist governments and within all kinds of capitalist states (which proves the non-socialist nature of state ownership). Moreover, anarchists can point to specific events where the capitalist class has used nationalisation to undermine revolutionary gains by the working class. The best example by far is in the Spanish Revolution, when the Catalan government used nationalisation against the wave of spontaneous, anarchist inspired, collectivisation which had placed most of industry into the direct hands of the workers. The government, under the guise of legalising the gains of the workers, placed them under state ownership to stop their development, ensure hierarchical control and so class society. A similar process occurred during the Russian Revolution under the Bolsheviks. Significantly, “many managers, at least those who remained, appear to have preferred nationalisation (state control) to workers’ control and co-operated with Bolshevik commissars to introduce it. Their motives are not too difficult to understand ... The issue of who runs the plants — who makes decisions — is, and probably always will be, the crucial question for managers in any industrial relations system.” [Jay B. Sorenson, The Life and Death of Soviet Trade Unionism, pp. 67–8] As we discuss in the next section, the managers and capitalists were not the only ones who disliked “workers’ control,” the Bolsheviks did so as well, and they ensured that it was marginalised within a centralised system of state control based on nationalisation.

As such, anarchists think that a utterly false dichotomy has been built up in discussions of socialism, one which has served the interests of both capitalists and state bureaucrats. This dichotomy is simply that the economic choices available to humanity are “private” ownership of productive means (capitalism), or state owner-

H.4 Didn’t Engels refute anarchism in “On Authority”? 

No, far from it. Engels (in)famous essay “On Authority” is often pointed to by Marxists of various schools as refuting anarchism. Indeed, it is often considered the essential Marxist work for this and is often trotted out (pun intended) when anarchist influence is on the rise. However this is not the case. In fact, his essay is both politically flawed and misrepresentative. As such, anarchists do not think that Engels refuted anarchism in his essay but rather just showed his ignorance of the ideas he was critiquing. This ignorance essentially rests on the fact that the whole concept of authority was defined and understood differently by Bakunin and Engels, meaning that the latter’s critique was flawed. While Engels may have thought that they both were speaking of the same thing, in fact they were not.

For Engels, all forms of group activity meant the subjection of the individuals that make it up. As he put it, “whoever mentions combined action speaks of organisation” and so it is not possible “to have organisation without authority,” as authority means “the imposition of the will of another upon ours ... authority presupposes subordination.” [Marx-Engels Reader, p. 731 and p. 730] Given that, Engels considered the ideas of Bakunin to fly in the face of common sense and so show that he, Bakunin, did not know what he was talking about. However, in reality, it was Engels who did this.

The first fallacy in Engels account is that anarchists, as we indicated in section B.1, do not oppose all forms of authority. Bakunin
Commune saw their birth, i.e. their application. Rather than the Parisian workers becoming Marxists without knowing it, Marx had become a follower of Proudhon! The idea of socialism being based on a federation of workers’ associations was not buried with the Paris Commune. It was integrated into all forms of social anarchism (including communist-anarchism and anarcho-syndicalism) and recreated every time there is a social revolution.

In ending we must note that anarchists are well aware that individual workplaces could pursue aims at odds with the rest of society (to use Engels expression, their “particular interests”). This is often termed “localism.” Anarchists, however, argue that the mainstream Marxist solution is worse than the problem. By placing self-managed workplaces under state control (or ownership) they become subject to even worse “particular interests,” namely those of the state bureaucracy who will use their power to further their own interests. In contrast, anarchists advocate federations of self-managed workplaces to solve this problem. This is because the problem of “localism” and any other problems faced by a social revolution will be solved in the interests of the working class only if working class people solve them themselves. For this to happen it requires working class people to manage their own affairs directly and that implies self-managed organising from the bottom up (i.e. anarchism) rather than delegating power to a minority at the top, to a “revolutionary” party or state. This applies economically, socially and politically. As Bakunin argued, the “revolution should not only be made for the people’s sake; it should also be made by the people.” [No Gods, No Masters, vol. 1, p. 141]

Anarchists see little distinction between “private” ownership of the means of life and “state” ownership. This is because the state is a highly centralised structure specifically designed to exclude mass participation and so, therefore, necessarily composed of a ruling administrative body. As such, the “public” cannot actually “own” the property the state claims to hold in its name. The ownership and thus control of the productive means is then in the hands of a ruling elite, the state administration (i.e. bureaucracy). The “means of wealth production” are “owned by the state which represents, as always, a privileged class — the bureaucracy.” The workers “do not
either individually or collectively own anything, and so, as elsewhere, are compelled to sell their labour power to the employer, in this case the state.” [“USSR — The Anarchist Position”, pp. 21–24, Op. Cit., p. 23] Thus, the means of production and land of a state “socialist” regime are not publicly owned — rather, they are owned by a bureaucratic elite, in the name of the people, a subtle but important distinction. As one Chinese anarchist put it:

“Marxian socialism advocates the centralisation not only of political power but also of capital. The centralisation of political power is dangerous enough in itself; add to that the placing of all sources of wealth in the hands of the government, and the so-called state socialism becomes merely state capitalism, with the state as the owner of the means of production and the workers as its labourers, who hand over the value produced by their labour. The bureaucrats are the masters, the workers their slaves. Even though they advocate a state of the dictatorship of workers, the rulers are bureaucrats who do not labour, while workers are the sole producers. Therefore, the suffering of workers under state socialism is no different from that under private capitalism.” [Ou Shengbai, quoted by Arif Dirlik, Anarchism in the Chinese Revolution, p. 224]

In this fashion, decisions about the allocation and use of the productive assets are not made by the people themselves, but by the administration, by economic planners. Similarly, in “private” capitalist economies, economic decisions are made by a coterie of managers. In both cases the managers make decisions which reflect their own interests and the interests of the owners (be it shareholders or the state bureaucracy) and not the workers involved or society as a whole. In both cases, economic decision-making is top-down in nature, made by an elite of administrators — bureaucrats in the state socialist economy, capitalists or managers in of workers’ associations and their federation was a key aspect of Proudhon’s ideas and so the Communards were obviously acting in his spirit. Given that the Communist Manifesto stressed state ownership and failed to mention co-operatives at all, the claim that the Commune acted in its spirit seems a tad optimistic. He also argued that the “economic measures” of the Commune were driven not by “principles” but by “simple, practical needs.” This meant that “the confiscation of shut-down factories and workshops and handing them over to workers’ associations” were “not at all in accordance with the spirit of Proudhonism but certainly in accordance with the spirit of German scientific socialism”! This seems unlikely, given Proudhon’s well known and long-standing advocacy of co-operatives as well as Marx’s comment in 1866 that in France the workers (“particularly those of Paris”) “are strongly attached, without knowing it [!], to the old rubbish” and that the “Parisian gentlemen had their heads full of the emptiest Proudhonist phrases.” [Marx, Engels, Lenin, Anarchism and Anarcho-Syndicalism, p. 92, p. 46 and p. 45]

What did this “old rubbish” consist of? Well, in 1869 the delegate of the Parisian Construction Workers’ Trade Union argued that “[a]ssociation of the different corporations [labour unions/associations] on the basis of town or country ... leads to the commune of the future ... Government is replaced by the assembled councils of the trade bodies, and by a committee of their respective delegates.” In addition, “a local grouping which allows the workers in the same area to liaise on a day to day basis” and “a linking up of the various localities, fields, regions, etc.” (i.e. international trade or industrial union federations) would ensure that “labour organises for present and future by doing away with wage slavery.” This “mode of organisation leads to the labour representation of the future.” [No Gods, No Masters, vol. 1, p. 184]

To state the obvious, this had clear links with both Proudhon’s ideas and what the Commune did in practice. Rather than being the “grave” of Proudhon’s ideas on workers’ associations, the
eties,” Engels talks of “the State.” The former implies a free federation of co-operatives, the latter a centralised structure which the co-operatives are squeezed into and under. The former is socialist, the latter is state capitalist. From Engels argument, it is obvious that the stress is on state ownership and management rather than self-management. This confusion became a source of tragedy during the Russian Revolution when the workers, like their comrades during the Commune, started to form a federation of factory committees while the Bolsheviks squeezed these bodies into a system of state control which was designed to marginalise them.

Moreover, the aims of the Paris workers were at odds with the vision of the Communist Manifesto and in line with anarchism — most obviously Proudhon’s demands for workers associations to replace wage labour and what he called, in his Principle of Federation, an “agro-industrial federation.” Thus the Commune’s idea of co-operative production was a clear expression of what Proudhon explicitly called “industrial democracy,” a “reorganisation of industry, under the jurisdiction of all those who compose it.” [quoted by K. Steven Vincent, Pierre-Joseph Proudhon and the Rise of French Republican Socialism, p. 225] Thus, while Engels (in part) echoes Proudhon’s ideas, he does not go fully towards a self-managed system of co-operation and co-ordination based on the workers’ own organisations. Significantly, Bakunin and later anarchists simply developed these ideas to their logical conclusion.

Marx, to his credit, supported these libertarian visions when applied in practice by the Paris workers during the Commune and promptly revised his ideas. This fact has been obscured somewhat by Engels historical revisionism in this matter. In his 1891 introduction to Marx’s “The Civil War in France”, Engels painted a picture of Proudhon being opposed to association (except for large-scale industry) and stressed that “to combine all these associations in one great union” was “the direct opposite of the Proudhon doctrine” and so “the Commune was the grave of the Proudhon doctrine.” [Selected Works, p. 256] However, as noted, this is nonsense. The forming of the “private” capitalist economy. The much-lauded distinction of capitalism is that unlike the monolithic, centralised state socialist bureaucracy it has a choice of bosses (and choosing a master is not freedom). And given the similarities in the relations of production between capitalism and state “socialism,” the obvious inequalities in wealth in so-called “socialist” states are easily explained. The relations of production and the relations of distribution are interlinked and so inequality in terms of power in production means inequality in control of the social product, which will be reflected in inequality in terms of wealth. The mode of distributing the social product is inseparable from the mode of production and its social relationships. Which shows the fundamentally confused nature of Trotsky’s attempts to denounce the Stalinist regime’s privileges as “bourgeois” while defending its “socialist” economic base (see Cornelius Castoriadis, “The Relations of Production in Russia”, pp. 107–158, Political and Social Writings, vol. 1).

In other words, private property exists if some individuals (or groups) control/own things which are used by other people. This means, unsurprising, that state ownership is just a form of property rather than the negation of it. If you have a highly centralised structure (as the state is) which plans and decides about all things within production, then this central administrative would be the real owner because it has the exclusive right to decide how things are used, not those using them. The existence of this central administrative strata excludes the abolition of property, replacing socialism or communism with state owned “property,” i.e. state capitalism. As such, state ownership does not end wage labour and, therefore, social inequalities in terms of wealth and access to resources. Workers are still order-takers under state ownership (whose bureaucrats control the product of their labour and determine who gets what). The only difference between workers under private property and state property is the person telling them what to do. Simply put, the capitalist or company appointed manager is replaced by a state appointed one.
As anarcho-syndicalist Tom Brown stressed, when “the many control the means whereby they live, they will do so by abolishing private ownership and establishing common ownership of the means of production, with workers’ control of industry.” However, this is “not to be confused with nationalisation and state control” as “ownership is, in theory, said to be vested in the people” but, in fact, “control is in the hands of a small class of bureaucrats.” Then “common ownership does not exist, but the labour market and wage labour go on, the worker remaining a wage slave to State capitalism.” Simply put, common ownership “demands common control. This is possible only in a condition of industrial democracy by workers’ control.” [Syndicalism, p. 94] In summary:

“Nationalisation is not Socialisation, but State Capitalism ... Socialisation ... is not State ownership, but the common, social ownership of the means of production, and social ownership implies control by the producers, not by new bosses. It implies Workers’ Control of Industry — and that is Syndicalism.” [Op. Cit., p. 111]

However, many Marxists (in particular Leninists) state they are in favour of both state ownership and “workers’ control.” As we discuss in more depth in next section, while they mean the same thing as anarchists do by the first term, they have a radically different meaning for the second (it is for this reason modern-day anarchists generally use the term “workers’ self-management”). To anarchist ears, the combination of nationalisation (state ownership) and “workers’ control” (and even more so, self-management) simply expresses political confusion, a mishmash of contradictory ideas which simply hides the reality that state ownership, by its very nature, precludes workers’ control. As such, anarchists reject such contradictory rhetoric in favour of “socialisation” and “workers’ self-management of production.” History shows that nationalisation will always undermine workers’ control at the point of production and such rhetoric always paves the way for state capitalism.

so “transforming the means of production, land and capital ... into mere instruments of free and associated labour.” He argued that “[i]f co-operative production is not to remain a shame and a snare; if it is to supersede the Capitalist system; if united co-operative societies are to regulate national production upon a common plan, thus taking it under their own control, and putting an end to the constant anarchy and periodical convulsions which are the fatality of Capitalist production — what else ... would it be but Communism, ‘possible’ Communism?” [Selected Works, pp. 290–1] In the 1880s, Engels suggested as a reform the putting of public works and state-owned land into the hands of workers’ co-operatives rather than capitalists. [Collected Works, vol. 47, p. 239]

These comments should not be taken as being totally without aspects of nationalisation. Engels argued for “the transfer — initially on lease — of large estates to autonomous co-operatives under state management and effected in such a way that the State retains ownership of the land.” He stated that neither he nor Marx “ever doubted that, in the course of transition to a wholly communist economy, widespread use would have to be made of co-operative management as an intermediate stage. Only it will mean so organising things that society, i.e. initially the State, retains ownership of the means of production and thus prevents the particular interests of the co-operatives from taking precedence over those of society as a whole.” [Op. Cit., p. 389] However, Engels comments simply bring home the impossibilities of trying to reconcile state ownership and workers’ self-management. While the advocacy of co-operatives is a positive step forward from the statist arguments of the Communist Manifesto, Engels squeezes these libertarian forms of organising production into typically statist structures. How “autonomous co-operatives” can co-exist with (and under!) “state management” and “ownership” is not explained, not to mention the fatal confusion of socialisation with nationalisation.

In addition, the differences between the comments of Marx and Engels are obvious. While Marx talks of “united co-operative soci
workers’ who thrust them into power. For obvious reasons, we feel. Given the opportunity for latter day Leninists to exercise power, we wonder if a similar process would occur again? Who would be willing to take that chance?

As such, any claim that mainstream Marxism considers “workers’ control” as an essential feature of its politics is simply nonsense. For a comprehensive discussion of “workers’ control” during the Russian Revolution Maurice Brinton’s account cannot be bettered. As he stressed, “only the ignorant or those willing to be deceived can still kid themselves into believing that proletarian power at the point of production was ever a fundamental tenet or objective of Bolshevism.” [The Bolsheviks and Workers’ Control, p. 14]

All this is not some academic point. As Brinton noted, faced “with the bureaucratic monstrosity of Stalinist and post-Stalinist Russia, yet wishing to retain some credibility among their working class supporters, various strands of Bolshevism have sought posthumously to rehabilitate the concept of ‘workers’ control.’” The facts show that between 1917 and 1921 “all attempts by the working class to assert real power over production — or to transcend the narrow role allocated by to it by the Party — were smashed by the Bolsheviks, after first having been denounced as anarchist or anarcho-syndicalist deviations. Today workers’ control is presented as a sort of sugar coating to the pill of nationalisation of every Trotskyist or Leninist micro-bureaucrat on the make. Those who strangled the viable infant are now hawking the corpse around.” [For Workers’ Power, p. 165] Little has changes since Brinton wrote those words in the 1960s, with Leninists today proclaiming with a straight face that they stand for “self-management”!

The roots of this confusion can be found in Marx and Engels. In the struggle between authentic socialism (i.e. workers’ self-management) and state capitalism (i.e. state ownership) there are elements of the correct solution to be found in their ideas, namely their support for co-operatives. For example, Marx praised the efforts made within the Paris Commune to create co-operatives.

Therefore, anarchists are against both nationalisation and privatisation, recognising both as forms of capitalism, of wage slavery. We believe in genuine public ownership of productive assets, rather than corporate/private or state/bureaucratic control. Only in this manner can the public address their own economic needs. Thus, we see a third way that is distinct from the popular “either/or” options forwarded by capitalists and state socialists, a way that is entirely more democratic. This is workers’ self-management of production, based on social ownership of the means of life by federations of self-managed syndicates and communes.

Finally, it should be mentioned that some Leninists do have an analysis of Stalinism as “state capitalist,” most noticeably the British SWP. According to the creator of this theory, Tony Cliff, Stalinism had to be considered a class system because “[i]f the state is the repository of the means of production and the workers do not control it, they do not own the means of production, i.e., they are not the ruling class.” Which is fine, as far as it goes (anarchists would stress the social relations within production as part of our criteria for what counts as socialism). The problems start to accumulate when Cliff tries to explain why Stalinism was (state) capitalist.

For Cliff, internally the USSR could be viewed as one big factory and the division of labour driven by bureaucratic decree. Only when Stalinism was “viewed within the international economy the basic features of capitalism can be discerned.” Thus it is international competition which makes the USSR subject to “the law of value” and, consequently, capitalist. However, as international trade was tiny under Stalinism “competition with other countries is mainly military.” It is this indirect competition in military matters which made Stalinist Russia capitalist rather than any internal factor. [State capitalism in Russia, pp. 311–2, p. 221 and p. 223]

The weakness of this argument should be obvious. From an anarchist position, it fails to discuss the social relations within production and the obvious fact that workers could, and did, move workplaces (i.e., there was a market for labour). Cliff only men-
tions the fact that the Stalinist regime’s plans were never fulfilled when he shows up the inefficiencies of Stalinist mismanagement. With regards to labour, that appears to be divided according to the plan. Similarly, to explain Stalinism’s “capitalist” nature as being a product of military competition with other, more obviously, capitalist states is a joke. It is like arguing that Ford is a capitalist company because BMW is! As one libertarian Marxist put it: “One can only wonder as to the type of contortions Cliff might have got into if Soviet military competition had been with China alone!” [Neil C. Fernandez, Capitalism and Class Struggle in the USSR, p. 65] Significantly, Cliff raised the possibility of single world-wide Stalinist regime and concluded it would not be state capitalist, it would “be a system of exploitation not subject to the law of value and all its implications.” [Op. Cit., p. 225] As Fernandez correctly summarises:

“Cliff’s position appears untenable when it is remembered that whatever capitalism may or may not entail, what it is a mode of production, defined by a certain type of social production relations. If the USSR is capitalist simply because it produces weaponry to compete with those countries that themselves would have been capitalist even without such competition, then one might as well say the same about tribes whose production is directed to the provision of tomahawks in the fight against colonialism.” [Op. Cit., p. 65]

Strangely, as Marxist, Cliff seemed unaware that, for Marx, “competition” did not define capitalism. As far as trade goes, the “character of the production process from which [goods] derive is immaterial” and so on the market commodities come “from all modes of production” (for example, they could be “the produce of production based on slavery, the product of peasants ..., of a community ..., of state production (such as existed in earlier epochs of Russian history, based place the interests of production above their own needs and demands.” He even argued that “the only solution to economic difficulties from the point of view of both principle and of practice is to treat the population of the whole country as the reservoir of the necessary labour power ... and to introduce strict order into the work of its registration, mobilisation and utilisation.” [Terrorism and Communism, pp. 162, 109, p. 143 and p. 135]

Trotsky did not consider this a result of the Civil War. Again, the opposite was the case: “I consider if the civil war had not plundered our economic organs of all that was strongest, most independent, most endowed with initiative, we should undoubtedly have entered the path of one-man management in the sphere of economic administration much sooner and much less painfully.” [Op. Cit., pp. 162–3] Significantly, discussing developments in Russia since the N.E.P, Trotsky a few years later argued that it was “necessary for each state-owned factory, with its technical director and with its commercial director, to be subjected not only to control from the top — by the state organs — but also from below, by the market which will remain the regulator of the state economy for a long time to come.” Workers’ control, as can be seen, was not even mentioned, nor considered as an essential aspect of control “from below.” As Trotsky also stated that “[u]nder socialism economic life will be directed in a centralised manner,” our discussion of the state capitalist nature of mainstream Marxism we presented in the last section is confirmed. [The First Five Years of the Communist International, vol. 2, pp. 237 and p. 229]

The contrast between what Trotsky did when he was in power and what he argued for after he had been expelled is obvious. Indeed, the arguments of 1938 and 1920 are in direct contradiction to each other. Needless to say, Leninists and Trotskyists today are fonder of quoting Trotsky and Lenin when they did not have state power rather than when they did. Rather than compare what they said to what they did, they simply repeat ambiguous slogans which meant radically different things to Lenin and Trotsky than to the
Rather it included representatives of the employees, employers, engineers, trade unions, the local soviets, co-operatives, the local economic councils and peasants. This composition “weakened the impact of the factory workers on decision-making... The workers’ control organs [the factory committees] remained in a subordinate position with respect to the council.” Once the Civil War broke out in May 1918, this process was accelerated. By 1920, most workplaces were under one-man management and the Communist Party at its Ninth Congress had “promoted one-man management as the most suitable form of management.” [Malle, Op. Cit., p. 111, p. 112, p. 141 and p. 128] In other words, the manner in which Lenin organised industry had handed it over entirely into the hands of the bureaucracy.

Trotsky did not disagree with all this, quite the reverse — he wholeheartedly defended the imposing of “one-man management”. As he put it in 1920, “our Party Congress ... expressed itself in favour of the principle of one-man management in the administration of industry... It would be the greatest possible mistake, however, to consider this decision as a blow to the independence of the working class. The independence of the workers is determined and measured not by whether three workers or one are placed at the head of a factory.” As such, it “would consequently be a most crying error to confuse the question as to the supremacy of the proletariat with the question of boards of workers at the head of factories. The dictatorship of the proletariat is expressed in the abolition of private property in the means of production, in the supremacy over the whole Soviet mechanism of the collective will of the workers, and not at all in the form in which individual economic enterprises are administered.” The term “collective will of the workers” is simply a euphemism for the Party which Trotsky had admitted had “substituted” its dictatorship for that of the Soviets (indeed, “there is nothing accidental” in this “substitution of the power of the party for the power of the working class” and “in reality there is no substitution at all.” The “dictatorship of the Soviets became possible only by means of the dictatorship of the party”). The unions “should discipline the workers and teach them to on serfdom) or half-savage hunting peoples”). [Capital, vol. 2, pp. 189–90] This means that trade “exploits a given mode of production but does not create it” and so relates “to the mode of production from outside.” [Capital, vol. 3, p. 745] Much the same can be said of military competition — it does not define the mode of production.

There are other problems with Cliff’s argument, namely that it implies that Lenin’s regime was also state capitalist (as anarchists stress, but Leninists deny). If, as Cliff suggests, a “workers’ state” is one in which “the proletariat has direct or indirect control, no matter how restricted, over the state power” then Lenin’s regime was not one within six months. Similarly, workers’ self-management was replaced by one-man management under Lenin, meaning that Stalin inherited the (capitalistic) relations of production rather than created them. Moreover, if it were military competition which made Stalinism “state capitalist” then, surely, so was Bolshevik Russia when it was fighting the White and Imperialist armies during the Civil War. Nor does Cliff prove that a proletariat actually existed under Stalinism, raising the clear contradiction that “[i]f there is only one employer, a ‘change of masters’ is impossible ... a mere formality” while also attacking those who argued that Stalinism was “bureaucratic collectivism” because Russian workers were not proletarians but rather slaves. So this “mere formality” is used to explain that the Russian worker is a proletarian, not a slave, and so Russia was state capitalist in nature! [Cliff, Op. Cit., p. 310, p. 219, p. 350 and p. 348]

All in all, attempts to draw a clear line between Leninism and Stalinism as regards its state capitalist nature are doomed to failure. The similarities are far too obvious and simply support the anarchist critique of state socialism as nothing more than state capitalism. Ultimately, “Trotskyism merely promises socialism by adopting the same methods, and mistakes, which have produced Stalinism.” [J.H., “The Fourth International”, pp. 37–43, The Left and World War II, Vernon Richards (ed.), p. 43]
H.3.14 Don’t Marxists believe in workers’ control?

As we discussed in the last section, anarchists consider the usual association of state ownership with socialism to be false. We argue that it is just another form of the wages system, of capitalism, albeit with the state replacing the capitalist and so state ownership, for anarchists, is simply state capitalism. Instead we urge socialisation based on workers’ self-management of production. Libertarian Marxists concur.

Some mainstream Marxists, however, say they seek to combine state ownership with “workers’ control.” This can be seen from Trotsky, for example, who argued in 1938 for “workers’ control ... the penetration of the workers’ eye into all open and concealed springs of capitalist economy ... workers’ control becomes a school for planned economy. On the basis of the experience of control, the proletariat will prepare itself for direct management of nationalised industry when the hour for that eventuality strikes.” This, it is argued, proves that nationalisation (state ownership and control) is not “state capitalism” but rather “control is the first step along the road to the socialist guidance of economy.” [The Death Agony of Capitalism and the Tasks of the Fourth International, p. 73 and p. 74] This explains why many modern day Leninists are often heard voicing support for what anarchists consider an obvious oxymoron, namely “nationalisation under workers’ control.”

Anarchists are not convinced. This is because of two reasons. Firstly, because by the term “workers’ control” anarchists and Leninists mean two radically different things. Secondly, when in power Trotsky advocated radically different ideas. Based on these reasons, anarchists view Leninist calls for “workers’ control” simply as a means of gaining popular support, calls which will be ignored once the real aim, party power, has been achieved: it is an example of Trotsky’s comment that “[s]logans as well as organisational (the Supreme Council of the National Economy) on 1 December 1917, with precise tasks in the economic field, was a significant indication of fact that decentralised management was not among the projects of the party, and that the Bolsheviks intended to counterpoise central direction of the economy to the possible evolution of workers’ control toward self-management.” [Silviana Malle, The Economic Organisation of War Communism, 1918–1921, p. 47]

Once in power, the Bolsheviks soon turned away from even this limited vision of workers’ control and in favour of “one-man management.” Lenin raised this idea in late April 1918 and it involved granting state appointed “individual executives dictatorial powers (or ‘unlimited’ powers).” Large-scale industry required “thousands subordinating their will to the will of one,” and so the revolution “demands” that “the people unquestioningly obey the single will of the leaders of labour.” Lenin’s “superior forms of labour discipline” were simply hyper-developed capitalist forms. The role of workers in production was the same, but with a novel twist, namely “unquestioning obedience to the orders of individual representatives of the Soviet government during the work.” This support for wage slavery was combined with support for capitalist management techniques. “We must raise the question of piece-work and apply and test it in practice,” argued Lenin, “we must raise the question of applying much of what is scientific and progressive in the Taylor system; we must make wages correspond to the total amount of goods turned out.” [Lenin, Op. Cit., vol. 27, p. 267, p. 269, p. 271 and p. 258]

This vision had already been applied in practice, with the “first decree on the management of nationalised enterprises in March 1918” which had “established two directors at the head of each enterprise ... Both directors were appointed by the central administrators.” An “economic and administrative council” was also created in the workplace, but this “did not reflect a syndicalist concept of management.”
Thus the Bolshevik vision of “workers’ control” was always placed in a statist context and it would be exercised not by workers’ organisations but rather by state capitalist institutions. This has nothing in common with control by the workers themselves and their own class organisations as advocated by anarchists. In May 1917, Lenin was arguing for the “establishment of state control over all banks, and their amalgamation into a single central bank; also control over the insurance agencies and big capitalist syndicates.” [Collected Works, vol. 24, p. 311] He reiterated this framework later that year, arguing that “the new means of control have been created not by us, but by capitalism in its military-imperialist stage” and so “the proletariat takes its weapons from capitalism and does not ‘invent’ or ‘create them out of nothing.’” The aim was “compulsory amalgamation in associations under state control,” “by workers’ control of the workers’ state.” [Op. Cit., vol. 26, p. 108, p. 109 and p. 108] The factory committees were added to this “state capitalist” system but they played only a very minor role in it. Indeed, this system of state control was designed to limit the power of the factory committees:

“One of the first decrees issues by the Bolshevik Government was the Decree on Workers’ Control of 27 November 1917. By this decree workers’ control was institutionalised ... Workers’ control implied the persistence of private ownership of the means of production, though with a ‘diminished’ right of disposal. The organs of workers’ control, the factory committees, were not supposed to evolve into workers’ management organs after the nationalisation of the factories. The hierarchical structure of factory work was not questioned by Lenin ... To the Bolshevik leadership the transfer of power to the working class meant power to its leadership, i.e. to the party. Central control was the main goal of the Bolshevik leadership. The hasty creation of the VSNKh forms should be subordinated to the indices of the movement.” [Op. Cit., p. 72] In other words, rather than express a commitment to the ideas of worker’s control of production, mainstream Marxist use of the term “workers’ control” is simply an opportunistic technique aiming at securing support for the party’s seizure of power and once this is achieved it will be cast aside in favour of the first part of the demands, namely state ownership and so control. In making this claim anarchists feel they have more than enough evidence, evidence which many members of Leninist parties simply know nothing about.

We will look first at the question of terminology. Anarchists traditionally used the term “workers’ control” to mean workers’ full and direct control over their workplaces, and their work. However, after the Russian Revolution a certain ambiguity arose in using that term. This is because specific demands which were raised during that revolution were translated into English as “workers’ control” when, in fact, the Russian meaning of the word (kontrolia) was far closer to “supervision” or “steering.” Thus the term “workers’ control” is used to describe two radically different concepts.

This can be seen from Trotsky when he argued that the workers should “demand resumption, as public utilities, of work in private businesses closed as a result of the crisis. Workers’ control in such case would be replaced by direct workers’ management.” [Op. Cit., p. 73] Why workers’ employed in open capitalist firms were not considered suitable for “direct workers’ management” is not explained, but the fact remains Trotsky clearly differentiated between management and control. For him, “workers’ control” meant “workers supervision” over the capitalist who retained power. Thus the “slogan of workers’ control of production” was not equated to actual workers’ control over production. Rather, it was “a sort of economic dual power” which meant that “ownership and right of disposition remain in the hands of the capitalists.” This was because it was “obvious that the power is not yet in the hands of the proletariat, otherwise we would have not workers’ control of production but the con-
control of production by the workers’ state as an introduction to a regime of state production on the foundations of nationalisation.” [Trotsky, The Struggle Against Fascism in Germany, p. 91 and p. 92]

This vision of “workers' control” as simply supervision of the capitalist managers and a prelude to state control and, ultimately, nationalisation can be found in Lenin. Rather than seeing “workers' control” as workers managing production directly, he always saw it in terms of workers' “controlling” those who did. It simply meant “the country-wide, all-embracing, omnipresent, most precise and most conscientious accounting of the production and distribution of goods.” He clarified what he meant, arguing for “country-wide, all-embracing workers' control over the capitalists” who would still manage production. Significantly, he considered that “as much as nine-tenths of the socialist apparatus” required for this “country-wide book-keeping, country-wide accounting of the production and distribution of goods” would be achieved by nationalising the “big banks,” which “are the ‘state apparatus’ which we need to bring about socialism” (indeed, this was considered “something in the nature of the skeleton of socialist society”). This structure would be taken intact from capitalism for “the modern state possesses an apparatus which has extremely close connection with the banks and [business] syndicates ... this apparatus must not, and should not, be smashed.” [Collected Works, vol. 26, p. 105, p. 107, p. 106 and pp. 105–6] Over time, this system would move towards full socialism.

Thus, what Leninists mean by “workers' control” is radically different than what anarchists traditionally meant by that term (indeed, it was radically different from the workers' definition, as can be seen from a resolution of the Bolshevik dominated First Trade Union Congress which complained that “the workers misunderstand and falsely interpret workers' control.” [quoted by M. Brinton, The Bolsheviks and Workers’ Control, p. 32]). It is for this reason that from the 1960s English speaking anarchists and other libertarian socialists have been explicit and have used the term “workers' self-management” rather than “workers' control” to describe their aims. Mainstream Marxists, however have continued to use the latter slogan, undoubtedly, as we note in section H.3.5, to gain members from the confusion in meanings.

Secondly, there is the example of the Russian Revolution itself. As historian S.A. Smith correctly summarises, the Bolshevik party “had no position on the question of workers' control prior to 1917.” The “factory committees launched the slogan of workers' control of production quite independently of the Bolshevik party. It was not until May that the party began to take it up.” However, Lenin used “the term ['workers' control'] in a very different sense from that of the factory committees.” In fact Lenin’s proposals were “thoroughly statist and centralist in character, whereas the practice of the factory committees was essentially local and autonomous.” While those Bolsheviks “connected with the factory committees assigned responsibility for workers' control of production chiefly to the committees” this “never became official Bolshevik party policy.” In fact, “the Bolsheviks never deviated before or after October from a commitment to a statist, centralised solution to economic disorder. The disagreement between the two wings of the socialist movement [i.e., the Mensheviks and Bolsheviks] was not about state control in the abstract, but what kind of state should co-ordinate control of the economy: a bourgeois state or a workers' state?” They “did not disagree radically in the specific measures which they advocated for control of the economy.” Lenin “never developed a conception of workers' self-management. Even after October, workers' control remained for him fundamentally a matter of 'inspection' and 'accounting' ... rather than as being necessary to the transformation of the process of production by the direct producers. For Lenin, the transformation of capitalist relations of production was achieved at central-state level, rather than at enterprise level. Progress to socialism was guaranteed by the character of the state and achieved through policies by the central state — not by the degree of power exercised by workers on the shop floor.” [Red Petrograd, p. 153, p. 154, p. 159, p. 153, p. 154 and p. 228]
Bolsheviks played a negative role with regards the soviets which, combined with “democratic centralism” ensured that it was spread far and wide. Only by ignoring their own party’s principles and staying in the Soviet did rank and file Bolsheviks play a positive role in the revolution. This divergence of top and bottom would be repeated in 1917.

Given this, perhaps it is unsurprising that Leninists started to rewrite the history of the 1905 revolution. Victor Serge, an anti-Stalinist Leninist, asserted in the late 1920s that in 1905 the Petrograd Soviet was “led by Trotsky and inspired by the Bolsheviks.” [Year One of the Russian Revolution, p. 36]. While the former claim is partially correct, the latter is not. As noted, the Bolsheviks were initially opposed the soviets and systematically worked to undermine them. Unsurprisingly, Trotsky at that time was a Menshevik, not a Bolshevik. After all, how could the most revolutionary party that ever existed have messed up so badly? How could democratic centralism fared so badly in practice? Best, then, to suggest that it did not and give the Bolsheviks a role better suited to the rhetoric of Bolshevism than its reality.

Trotsky was no different. He, needless to say, denied the obvious implications of these events in 1905. While admitting that the Bolsheviks “adjusted themselves more slowly to the sweep of the movement” and that the Mensheviks “were preponderant in the Soviet,” he tries to save vanguardism by asserting that “the general direction of the Soviet’s policy proceeded in the main along Bolshevik lines.” So, in spite of the lack of Bolshevik influence, in spite of the slowness in adjusting to the revolution, Bolshevism was, in fact, the leading set of ideas in the revolution! Ironically, a few pages later, he mocks the claims of Stalinists that Stalin had “isolated the Mensheviks from the masses” by noting that the “figures hardly bear [the claims] out.” [Op. Cit., p. 112 and p. 117] Shame he did not apply this criteria to his own assertions.

Of course, every party makes mistakes. The question is, how did the “most revolutionary party of all time” fare in 1917. Surely that

Hence the Bolsheviks need not have to consider whether replacing factory committees with appointed managers armed with “dictatorial powers” would have any effect on the position of workers in socialism (after all, the were subject to subordination either way). Nor did they have to worry about putting economic power into the hands of a state-appointed bureaucracy as “authority” and subordination were required to run industry no matter what. Engels had used the modern factory system of mass production as a direct analogy to argue against the anarchist call for workers’ councils, for autonomy, for participation, for self-management. Authority, hierarchy, and the need for submission and domination is inevitable given the current mode of production, both Engels and Lenin argued. Little wonder, then, the worker become the serf of the state under the Bolsheviks. In his own way, Engels contributed to the degeneration of the Russian Revolution by providing the rationale
for the Bolsheviks disregard for workers’ self-management of production.

Simply put, Engels was wrong. The need to co-operate and co-ordinate activity may be independent of social development, but the nature of a society does impact on how this co-operation is achieved. If it is achieved by hierarchical means, then it is a class society. If it is achieved by agreements between equals, then it is a socialist one. As such, how industry operates is dependent on the society it is part of. An anarchist society would run industry based on the free agreement of workers united in free associations. This would necessitate making and sticking to joint decisions but this co-ordination would be between equals, not master and servant. By not recognising this fact, Engels fatally undermined the cause of socialism.

H.4.6 Why does Engels’ “On Authority” harm Marxism?

Ironically, Engels’ essay “On Authority” also strikes at the heart of Marxism and its critique of anarchism. Forgetting what he had written in 1873, Engels argued in 1894 that for him and Marx the “ultimate political aim is to overcome the whole state and therefore democracy as well.” [quoted by Lenin, “State and Revolution”, Essential Works of Lenin, p. 331] Lenin argued that “the abolition of the state means also the abolition of democracy.” [Op. Cit., p. 332]

The problems arise from the awkward fact that Engels’ “On Authority” had stated that any form of collective activity meant “authority” and so the subjection of the minority to the major-ity (“if possible”) and “the imposition of the will of another upon ours.” [Marx-Engels Reader, p. 731 and p. 730] Aware of the contradiction, Lenin stresses that “someone may even begin to fear we are expecting the advent of an order of society in which the
verse (assuming that your desired goal is a socialist society, rather than party power). Needless to say, Trotsky blames the failure of the Russian Revolution on “objective” factors rather than Bolshevik policies and practice, an argument we address in section H.6 and will not do so here.

So while Leninists make great claims for the effectiveness of their chosen kind of party, the hard facts of history are against their positive evaluation of vanguard parties. Ironically, even the Russian Revolution disproves the claims of Leninists. The fact is that the Bolshevik party in 1917 was very far from the “democratic centralist” organisation which supporters of vanguardism like to claim it is. As such, its success in 1917 lies more in its divergence from the principles of “democratic centralism” than in their application. The subsequent degeneration of the revolution and the party is marked by the increasing application of those principles in the life of the party.

Thus, to refute the claims of the “effectiveness” and “efficiency” of vanguardism, we need to look at its one and only success, namely the Russian Revolution. As the Cohen-Bendit brothers argued, “far from leading the Russian Revolution forwards, the Bolsheviks were responsible for holding back the struggle of the masses between February and October 1917, and later for turning the revolution into a bureaucratic counter-revolution — in both cases because of the party’s very nature, structure and ideology.” Indeed, “[f]rom April to October, Lenin had to fight a constant battle to keep the Party leadership in tune with the masses.” [Obsolete Communism, p. 183 and p. 187] It was only by continually violating its own “nature, structure and ideology” that the Bolshevik party played an important role in the revolution. Whenever the principles of “democratic centralism” were applied, the Bolshevik party played the role the Cohen-Bendit brothers subscribed to it (and once in power, the party’s negative features came to the fore).

Even Leninists acknowledge that, to quote Tony Cliff, throughout the history of Bolshevism, “a certain conservatism arose.” In-subordination of the minority to the majority will not be respected.” That was not the case, however. He simply rejected the idea that democracy was “the recognition of this principle” arguing that “democracy is a state which recognises the subordination of the minority to the majority, i.e. an organisation for the systematic use of violence by one class against the other, by one section of the population against another.” He argued that “the need for violence against people in general, the need for the subjection of one man to another, will vanish, since people will become accustomed to observing the elementary conditions of social life without force and without subordination.” [Op. Cit., pp. 332–3]

Talk about playing with words! Earlier in his work Lenin summarised Engels “On Authority” by stating that “is it not clear that … complex technical units, based on the employment of machinery and the ordered co-operation of many people, could function without a certain amount of subordination, without some authority or power.” [Op. Cit., p. 316] Now, however, he argued that communism would involve no “subordination” while, at the same time, be based on the “the principle of the subordination of the minority to the majority”! A contradiction? Perhaps no, as he argued that the minority would “become accustomed” to the conditions of “social life” — in other words the recognition that sticking to your agreements you make with others does not involve “subordination.” This, ironically, would confirm anarchist ideas as we argue that making agreements with others, as equals, does not involve domination or subordination but rather is an expression of autonomy, of liberty.

Similarly, we find Engels arguing in Anti-Duhring that socialism “puts an end to the former subjection of men to their own means of production” and that “productive labour, instead of being a means of subjugating men, will become a means of their emancipation.” This work was written in 1878, six years after “On Authority” where he stressed that “the automatic machinery of a big factory is much more despotic than the small capitalists who employ workers ever have been” and “subdue[ing] the forces of nature... avenge themselves
H.5.12 Surely the Russian Revolution proves that vanguard parties work?

No, far from it. Looking at the history of vanguardism we are struck by its failures, not its successes. Indeed, the proponents of “democratic centralism” can point to only one apparent success of their model, namely the Russian Revolution. Strangely, though, we are warned by Leninists that failure to use the vanguard party will inevitably condemn future revolutions to failure:

“The proletariat can take power only through its vanguard... Without the confidence of the class in the vanguard, without support of the vanguard by the class, there can be no talk of the conquest of power... The Soviets are the only organised form of the tie between the vanguard and the class. A revolutionary content can be given to this form only by the party. This is proved by the positive experience of the October Revolution and by the negative experience of other countries (Germany, Austria, finally, Spain). No one has either shown in practice or tried to explain articulately on paper how the proletariat can seize power without the political leadership of a party that knows what it wants.” [Trotsky, Writings 1936–37, p. 490]

To anarchist ears, such claims seem out of place. After all, did the Russian Revolution actually result in socialism or even a viable form of soviet democracy? Far from it. Unless you picture revolution as simply the changing of the party in power, you have to acknowledge that while the Bolshevik party did take power in Russian in November 1917, the net effect of this was not the stated goals that justified that action. Thus, if we take the term “effective” to mean “an efficient means to achieve the desired goals” then vanguardism has not been proven to be effective, quite the re-
Centralism Or Democratic Centralism? This is a common refrain with Leninists — when reality says one thing and the theory another, it must be reality that is at fault. Yes, every Leninist organisation may be bureaucratic and authoritarian but it is not the theory’s fault that those who apply it are not capable of actually doing so successfully. Such an application of scientific principles by the followers of “scientific socialism” is worthy of note — obviously the usual scientific method of generalising from facts to produce a theory is inapplicable when evaluating “scientific socialism” itself. However, rather than ponder the possibility that “democratic centralism” does not actually work and automatically generates the “bureaucratic centralism,” they point to the example of the Russian revolution and the original Bolshevik party as proof of the validity of their hopes.

Indeed, it would be no exaggeration to argue that the only reason people take the vanguard party organisational structure seriously is the apparent success of the Bolsheviks in the Russian revolution. However, as noted above, even the Bolshevik party was subject to bureaucratic tendencies and as we discuss in the next section, the experience of the 1917 Russian Revolutions disprove the effectiveness of “vanguard” style parties. The Bolshevik party of 1917 was a totally different form of organisation than the ideal “democratic centralist” type argued for by Lenin in 1902 and 1920. As a model of revolutionary organisation, the “vanguardist” one has been proven false rather than confirmed by the experience of the Russian revolution. Insofar as the Bolshevik party was effective, it operated in a non-vanguardist way and insofar as it did operate in such a manner, it held back the struggle.

 день. [Op. Cit., p. 732, p. 731 and p. 723] If machinery and industry means despotism, as Engels claimed against Bakunin, then what does that mean for Lenin’s aim to ensure “the transformation of the whole state economic mechanism into a single huge machine... as to enable hundreds of millions of people to be guided by a single plan?” [Collected Works, vol. 27, pp. 90–1] Surely such an economy would be, to use Engels’ words, a “a veritable despotism”?

The only possible solution is reducing the working day to a minimum and so the time spent as a slave to the machine (and plan) is reduced. The idea that work should be transformed into creative, empowering and liberating experience is automatically destroyed by Engels’ argument. Like capitalism, Marxist-Socialism is based on “work is hell” and the domination of the producer. Hardly an inspiring vision of the future.

H.4.7 Is revolution “the most authoritarian thing there is”?

As well as the argument that “authority” is essential for every collective activity, Engels raises another argument against anarchism. This second argument is that revolutions are by nature authoritarian. In his words, a “revolution is certainly the most authoritarian thing there is; it is the act whereby one part of the population imposes its will upon the other part by means of rifles, bayonets and cannon — authoritarian means, if such there be at all; and if the victorious party does not want to have fought in vain, it must maintain this rule by means of the terror its arms inspire in the reactionaries.” [Marx-Engels Reader, p. 733]

Yet such an analysis is without class analysis and so will, by necessity, mislead the writer and the reader. Engels argues that revolution is the imposition by “one part of the population” on another. Very true — but Engels fails to indicate the nature of class society and, therefore, of a social revolution. In a class society “one part
of the population” constantly “imposes its will upon the other part” — those with power impose their decisions to those beneath them in the social hierarchy. In other words, the ruling class imposes its will on the working class everyday in work by the hierarchical structure of the workplace and in society by the state. Discussing the “population” as if it were not divided by classes and so subject to specific forms of authoritarian social relationships is liberal nonsense.

Once we recognise that the “population” in question is divided into classes we can easily see the fallacy of Engels argument. In a social revolution, the act of revolution is the overthrow of the power and authority of an oppressing and exploiting class by those subject to that oppression and exploitation. In other words, it is an act of liberation in which the hierarchical power of the few over the many is eliminated and replaced by the freedom of the many to control their own lives. It is hardly authoritarian to destroy authority! Thus a social revolution is, fundamentally, an act of liberation for the oppressed who act in their own interests to end the system in which “one part of population imposes its will upon the other” everyday.

Malatesta stated the obvious:

“To fight our enemies effectively, we do not need to deny the principle of freedom, not even for one moment: it is sufficient for us to want real freedom and to want it for all, for ourselves as well as for others.

“We want to expropriate the property-owning class, and with violence, since it is with violence that they hold on to social wealth and use it to exploit the working class. Not because freedom is a good thing for the future, but because it is a good thing for the future, and the property owners, be denying us the means of exercising our freedom, in effect, take it away from us.

The dissidents argue that a “democratic” party would involve the “[r]egular election of all party full-timers, branch and district leadership, conference delegates, etc. with the right of recall,” which means that in the SWP appointment of full-timers, leaders and so on is the norm. They argue for the “right of branches to propose motions to the party conference” and for the “right for members to communicate horizontally in the party, to produce and distribute their own documents.” They stress the need for “an independent Control Commission to review all disciplinary cases (independent of the leadership bodies that exercise discipline), and the right of any disciplined comrades to appeal directly to party conference.” They argue that in a democratic party “no section of the party would have a monopoly of information” which indicates that the SWP’s leadership is essentially secretive, withholding information from the party membership. Even more significantly, given our discussion on the influence of the party structure on post-revolutionary society in section H.5.7, they argue that “[w]orst of all, the SWP are training a layer of revolutionaries to believe that the organisational norms of the SWP are a shining example of proletarian democracy, applicable to a future socialist society. Not surprisingly, many people are instinctively repelled by this idea.”

Some of these critics of specific Leninist parties do not give up hope and still look for a truly democratic centralist party rather than the bureaucratic centralist ones which seem so common. For example, our group of ex-SWP dissidents argue that “[a]nybody who has spent time involved in ‘Leninist’ organisations will have come across workers who agree with Marxist politics but refuse to join the party because they believe it to be undemocratic and authoritarian. Many draw the conclusion that Leninism itself is at fault, as every organisation that proclaims itself Leninist appears to follow the same pattern.” [ISG, Lenin vs. the SWP: Bureaucratic
even set out from their branches. At every level of the party, strategy and tactics are presented from the top down, as pre-digested instructions for action. At every level, the comrades ‘below’ are seen only as a passive mass to be shifted into action, rather than as a source of new initiatives ...

“The only exception is when a branch thinks up a new tactic to carry out the CC’s perspective. In this case, the CC may take up this tactic and apply it across the party. In no way do rank and file members play an active role in determining the strategy and theory of the party — except in the negative sense that if they refuse to implement a perspective eventually even the CC notice, and will modify the line to suit. A political culture has been created in which the leadership outside of the CC consists almost solely of comrades loyal to the CC, willing to follow every turn of the perspective without criticism ...

Increasingly, the bureaucratic methods used by the CC to enforce their control over the political direction of the party have been extended to other areas of party life. In debates over questions of philosophy, culture and even anthropology an informal party ‘line’ emerged (i.e. concerning matters in which there can be no question of the party taking a ‘line’). Often behind these positions lay nothing more substantial than the opinions of this or that CC member, but adherence to the line quickly became a badge of party loyalty, disagreement became a stigma, and the effect was to close down the democracy of the party yet further by placing even questions of theory beyond debate. Many militants, especially working class militants with some experience of trade union democracy, etc., are often repelled by the undemocratic norms in the party and refuse to join, or keep their dist-

“We want to overthrow the government, all governments — and overthrow them with violence since it is by the use of violence that they force us into obeying — and once again, not because we sneer at freedom when it does not serve our interests but because governments are the negation of freedom and it is not possible to be free without getting rid of them. . ..

“The freedom to oppress, to exploit ... is the denial of freedom: and the fact that our enemies make irrelevant and hypocritical use of the word freedom is not enough to make us deny the principle of freedom which is the outstanding characteristic of our movement and a permanent, constant and necessary factor in the life and progress of humanity.” [Errico Malatesta: His Life and Ideas, p. 51]

It seems strange that Engels, in effect, is arguing that the abolition of tyranny is tyranny against the tyrants! As Malatesta so clearly argued, anarchists “recognise violence only as a means of legitimate self-defence; and if today they are in favour of violence it is because they maintain that slaves are always in a state of legitimate defence.” [Op. Cit., p. 59] As such, Engels fails to understand the revolution from a working class perspective (perhaps unsurprisingly, as he was a capitalist). The “authority” of the “armed workers” over the bourgeois is, simply, the defence of the workers’ freedom against those who seek to end it by exercising/recreating the very authoritarian social relationships the revolution sought to end in the first place. This explains why, as we discussed in section H.2.1 anarchists have always argued that a revolution would need to defend itself against those seeking to return the masses to their position at the bottom of the social hierarchy.

To equate the defence of freedom with “authority” is, in anarchist eyes, an expression of confused politics. Ultimately, Engels
is like the liberal who equates the violence of the oppressed to end oppression with that the oppressors!

Needless to say, this applies to the class struggle as well. Is, for example, a picket line really authoritarian because it tries to impose its will on the boss, police or scabs? Rather, is it not defending the workers’ freedom against the authoritarian power of the boss and their lackeys (the police and scabs)? Is it “authoritarian” to resist authority and create a structure – a strike assembly and picket line – which allows the formally subordinated workers to manage their own affairs directly and without bosses? Is it “authoritarian” to combat the authority of the boss, to proclaim your freedom and exercise it? Of course not.

Structurally, a strikers’ assembly and picket line – which are forms of self-managed association – cannot be compared to an “authority” (such as a state). To try and do so fails to recognise the fundamental difference. In the strikers’ assembly and picket line the strikers themselves decide policy and do not delegate power away into the hands of an authority (any strike committee executes the strikers decisions or is replaced). In a state, power is delegated into the hands of a few who then use that power as they see fit. This by necessity disempowers those at the base, who are turned into mere electors and order takers (i.e. an authoritarian relationship is created). Such a situation can only spell death of a social revolution, which requires the active participation of all if it is to succeed. It also, incidentally, exposes a central fallacy of Marxism, namely that it claims to desire a society based on the participation of everyone yet favours a form of organisation — centralisation — that excludes that participation.

Georges Fontenis summarises anarchist ideas on this subject when he wrote:

“And so against the idea of State, where power is exercised by a specialised group isolated from the masses, we put the idea of direct workers power, where accountable
sadly lacking (unless, of course, the person is a member of such a party and then their organisation is the exception to the rule!).

H.5.11 Can you provide an example of the negative nature of vanguard parties?

Yes. Our theoretical critique of vanguardism we have presented in the last few sections is more than proved by the empirical evidence of such parties in operation today. Rarely do “vanguard” parties reach in practice the high hopes their supporters like to claim for them. Such parties are usually small, prone to splitting as well as leadership cults, and usually play a negative role in social struggle. A long line of ex-members complain that such parties are elitist, hierarchical and bureaucratic.

Obviously we cannot hope to discuss all such parties. As such, we will take just one example, namely the arguments of one group of dissidents of the biggest British Leninist party, the Socialist Workers Party. It is worth quoting their account of the internal workings of the SWP at length:

“The SWP is not democratic centralist but bureaucratic centralist. The leadership’s control of the party is unchecked by the members. New perspectives are initiated exclusively by the central committee (CC), who then implement their perspective against all party opposition, implicit or explicit, legitimate or otherwise.

“Once a new perspective is declared, a new cadre is selected from the top down. The CC select the organisers, who select the district and branch committees — any elections that take place are carried out on the basis of ‘slates’ so that it is virtually impossible for members to vote against the slate proposed by the leadership. Any members who have doubts or disagreements are written

Anarchists, therefore, are no more impressed with this aspect of Engels critique than his “organisation equals authority” argument. In summary, his argument is simply a liberal analysis of revolution, totally without a class basis or analysis and so fails to understand the anarchist case nor answer it. To argue that a revolution is made up of two groups of people, one of which “imposes its will upon the other” fails to indicate the social relations that exist between these groups (classes) and the relations of authority between them which the revolution is seeking to overthrow. As such, Engels critique totally misses the point.
Many socialists follow the ideas of Lenin and, in particular, his ideas on vanguard parties. These ideas were expounded by Lenin in his (in)famous work *What is to be Done?* which is considered as one of the important books in the development of Bolshevism.

The core of these ideas is the concept of “vanguardism,” or the “vanguard party.” According to this perspective, socialists need to organise together in a party, based on the principles of “democratic centralism,” which aims to gain a decisive influence in the class struggle. The ultimate aim of such a party is revolution and its seizure of power. Its short term aim is to gather into it all “class conscious” workers into a “efficient” and “effective” party, alongside members of other classes who consider themselves as revolutionary Marxists. The party would be strictly centralised, with all members expected to submit to party decisions, speak in one voice and act in one way. Without this “vanguard,” injecting its politics into the working class (who, it is asserted, can only reach trade union consciousness by its own efforts), a revolution is impossible.

Lenin laid the foundation of this kind of party in his book *What is to be Done?* and the vision of the “vanguard” party was explicitly formalised in the Communist International. As Lenin put it, “Bolshevism has created the ideological and tactical foundations of a Third International ... Bolshevism can serve as a model of tactics for all.” [Collected Works, vol. 28, pp. 292–3] Using the Russian Communist Party as its model, Bolshevik ideas on party organisation were raised as a model for revolutionaries across the early 1921 when “the voting [was] rigged for Lenin’s and Zinoviev’s ‘majority’” in one of the districts of Petrograd. [Op. Cit., p.123]

All too often, such parties have “elected” bodies which have, in practice, usurped the normal democratic rights of members and become increasingly removed from formal controls. All practical accountability of the leaders to the membership for their actions is eliminated. Usually this authoritarian structure is combined with militaristic sounding rhetoric and the argument that the “revolutionary” movement needs to be organised in a more centralised way than the current class system, with references to the state’s forces of repression (notably the army). As Murray Bookchin argued, the Leninist “has always had a grudging admiration and respect for that most inhuman of all hierarchical institutions, the military.” [Toward an Ecological Society, p. 254f]

The modern day effectiveness of the vanguard party can be seen by the strange fact that many Leninists fail to join any of the existing parties due to their bureaucratic internal organisation and that many members are expelled (or leave in disgust) as a result of their failed attempts to make them more democratic. If vanguard parties are such positive organisations to be a member of, why do they have such big problems with member retention? Why are there so many vocal ex-members? Why are so many Leninists ex-members of vanguard parties, desperately trying to find an actual party which matches their own vision of democratic centralism rather than the bureaucratic centralism which seems the norm?

Our account of the workings of vanguard parties explains, in part, why many anarchists and other libertarians voice concern about them and their underlying ideology. We do so because their practices are disruptive and alienate new activists, hindering the very goal (socialism/revolution) they claim to be aiming for. As anyone familiar with the numerous groupings and parties in the Leninist left will attest, the anarchist critique of vanguardism seems to be confirmed in reality while the Leninist defence seems
and its leadership. Dissenters will rarely find their contribution valued and advancement is limited, which produces a strong tendency not to make waves. As Miasnikov, a working class Bolshevik dissident, argued in 1921, “the regime within the party” meant that “if someone dares to have the courage of his convictions,” they are called either a self-seeker or, worse, a counter-revolutionary, a Menshevik or an SR. Moreover, within the party, favouritism and corruption were rife. In Miasnikov’s eyes a new type of Communist was emerging, the toadying careerist who “knows how to please his superiors.” [quoted by Paul Avrich, Bolshevik Opposition to Lenin, p. 8 and p. 7] At the last party congress Lenin attended, Miasnikov was expelled. Only one delegate, V. V. Kosior, “argued that Lenin had taken the wrong approach to the question of dissent. If someone … had the courage to point out deficiencies in party work, he was marked down as an oppositionist, relieved of authority, placed under surveillance, and — a reference to Miasnikov — even expelled from the party.” [Paul Avrich, Op. Cit., p. 15] Serge noted about the same period that Lenin “proclaimed a purge of the Party, aimed at those revolutionaries who had come in from other parties — i.e. those who were not saturated with the Bolshevik mentality. This meant the establishment within the Party of a dictatorship of the old Bolsheviks, and the direction of disciplinary measures, not against the unprincipled careerists and conformist late-comers, but against those sections with a critical outlook.” [Op. Cit., p. 135]

This, of course, also applies to the party congress, on paper the sovereign body of the organisation. All too often resolutions at party conferences will either come from the leadership or be completely supportive of its position. If branches or members submit resolutions which are critical of the leadership, enormous pressure is exerted to ensure that they are withdrawn. Moreover, often delegates to the congress are not mandated by their branches, so ensuring that rank and file opinions are not raised, never mind discussed. Other, more drastic measures have been known to occur. Victor Serge saw what he termed the “Party steamroller” at work in world. Since then, the various followers of Leninism and its offshoots like Trotskyism have organised themselves in this manner (with varying success).

The wisdom of applying an organisational model that had been developed in the semi-feudal conditions of Tsarist Russia to every country, regardless of its level of development, has been questioned by anarchists from the start. After all, could it not be wiser to build upon the revolutionary tendencies which had developed in specific countries rather than import a new model which had been created for, and shaped by, radically different social, political and economic conditions? The wisdom of applying the vanguard model is not questioned on these (essentially materialist) points by those who subscribe to it. While revolutionary workers in the advanced capitalist nations subscribed to anarchist and syndicalist ideas, this tradition is rejected in favour of one developed by, in the main, bourgeois intellectuals in a nation which was still primarily feudal and absolutist. The lessons learned from years of struggle in actual capitalist societies were simply rejected in favour of those from a party operating under Tsarism. While most supporters of vanguardism will admit that conditions now are different than in Tsarist Russia, they still subscribe to organisational method developed in that context and justify it, ironically enough, because of its “success” in the totally different conditions that prevailed in Russia in the early 20th Century! And Leninists claim to be materialists!

Perhaps the reason why Bolshevism rejected the materialist approach was because most of the revolutionary movements in advanced capitalist countries were explicitly anti-parliamentarian, direct actionist, decentralist, federalist and influenced by libertarian ideas? This materialist analysis was a key aspect of the council communist critique of Lenin’s Left-Wing Communism, for example (see Herman Gorter’s Open Letter to Comrade Lenin for one excellent reply to Bolshevik arguments, tactics and assumptions). This attempt to squeeze every working class movement into one “officially approved” model dates back to Marx and Engels. Faced
with any working class movement which did not subscribe to their vision of what they should be doing (namely organising in political parties to take part in “political action,” i.e. standing in bourgeois elections) they simply labelled it as the product of non-proletarian “sects.” They went so far as to gerrymander the 1872 conference of the First International to make acceptance of “political action” mandatory on all sections in an attempt to destroy anarchist influence in it.

So this section of our FAQ will explain why anarchists reject this model. In our view, the whole concept of a “vanguard party” is fundamentally anti-socialist. Rather than present an effective and efficient means of achieving revolution, the Leninist model is elitist, hierarchical and highly inefficient in achieving a socialist society. At best, these parties play a harmful role in the class struggle by alienating activists and militants with their organisational principles and manipulative tactics within popular structures and groups. At worse, these parties can seize power and create a new form of class society (a state capitalist one) in which the working class is oppressed by new bosses (namely, the party hierarchy and its appointees).

However, before discussing why anarchists reject “vanguardism” we need to stress a few points. Firstly, anarchists recognise the obvious fact that the working class is divided in terms of political consciousness. Secondly, from this fact most anarchists recognise the need to organise together to spread our ideas as well as taking part in, influencing and learning from the class struggle. As such, anarchists have long been aware of the need for revolutionaries to organise as revolutionaries. Thirdly, anarchists are well aware of the importance of revolutionary minorities playing an inspiring and “leading” role in the class struggle. We do not reject the need for revolutionaries to “give a lead” in struggles, we reject the idea of institutionalised leadership and the creation of a leader/led hierarchy implicit (and sometimes no so implicit) in vanguardism.

As in any hierarchical structure, the tendency is for those in power to encourage and promote those who agree with them. This means that members usually find their influence and position in the party dependent on their willingness to conform to the hierarchy
ing “its dictatorship” (see section H.3.8 for more on this aspect of Leninism). This provides a justification of whatever measures are required to restore the illusion of unanimity, including the trampling underfoot of whatever rights the membership may have on paper and the imposition of any decisions the leadership considers as essential between conferences.

Fourthly, and more subtly, it is well known that when people take a public position in defence of a proposition, there is a strong tendency for their private attitudes to shift so that they harmonise with their public behaviour. It is difficult to say one thing in public and hold to a set of private beliefs at variance with what is publicly expressed. In short, if people tell others that they support X (for whatever reason), they will slowly begin to change their own opinions and, indeed, internally come to support X. The more public such declarations have been, the more likely it is that such a shift will take place. This has been confirmed by empirical research (see R. Cialdini’s Influence: Science and Practice). This suggests that if, in the name of democratic centralism, party members publicly uphold the party line, it becomes increasingly difficult to hold a private belief at variance with publicly expressed opinions. The evidence suggests that it is not possible to have a group of people presenting a conformist image to society at large while maintaining an inner party regime characterised by frank and full discussion. Conformity in public tends to produce conformity in private. So given what is now known of social influence, “democratic centralism” is almost certainly destined to prevent genuine internal discussion.

It has already been noted (in section H.5.5) that the organisational norms of democratic centralism imply a concentration of power at the top. There is abundant evidence that such a concentration has been a vital feature of every vanguard party and that such

As such, we do not oppose “vanguardism” for these reasons. So when Leninists like Tony Cliff argue that it is “unevenness in the class [which] makes the party necessary,” anarchists reply that “unevenness in the class” makes it essential that revolutionaries organise together to influence the class but that organisation does not and need not take the form of a vanguard party. [Tony Cliff, Lenin, vol. 2, p. 149] This is because we reject the concept and practice for three reasons.

Firstly, and most importantly, anarchists reject the underlying assumption of vanguardism. It is based on the argument that “socialist consciousness” has to be introduced into the working class from outside. We argue that not only is this position empirically false, it is fundamentally anti-socialist in nature. This is because it logically denies that the emancipation of the working class is the task of the working class itself. Moreover, it serves to justify elite rule. Some Leninists, embarrassed by the obvious anti-socialist nature of this concept, try and argue that Lenin (and so Leninism) does not hold this position. We show that such claims are false.

Secondly, there is the question of organisational structure. Vanguard parties are based on the principle of “democratic centralism.” Anarchists argue that such parties, while centralised, are not, in fact, democratic nor can they be. As such, the “revolutionary” or “socialist” party is no such thing as it reflects the structure of the capitalist system it claims to oppose.

Lastly, anarchists argue that such parties are, despite the claims of their supporters, not actually very efficient or effective in the revolutionary sense of the word. At best, they hinder the class struggle by being slow to respond to rapidly changing situations. At worse, they are “efficient” in shaping both the revolution and the post-revolutionary society in a hierarchical fashion, so re-creating class rule.

So these are key aspects of the anarchist critique of vanguardism, which we discuss in more depth in the following sections. It is a bit artificial to divide these issues into different sections because
they are all related. The role of the party implies a specific form of organisation (as Lenin himself stressed), the form of the party influences its effectiveness. It is for ease of presentation we divide up our discussion so.

H.5.1 Why are vanguard parties anti-socialist?

The reason why vanguard parties are anti-socialist is simply because of the role assigned to them by Lenin, which he thought was vital. Simply put, without the party, no revolution would be possible. As Lenin put it in 1900, "isolated from Social-Democracy, the working class movement becomes petty and inevitably becomes bourgeois." [Collected Works, vol. 4, p. 368] In What is to be Done?, he expands on this position:

"Class political consciousness can be brought to the workers only from without, that is, only outside of the economic struggle, outside the sphere of relations between workers and employers. The sphere from which alone it is possible to obtain this knowledge is the sphere of relationships between all the various classes and strata and the state and the government — the sphere of the inter-relations between all the various classes." [Essential Works of Lenin, p. 112]

Thus the role of the party is to inject socialist politics into a class incapable of developing them itself.

Lenin is at pains to stress the Marxist orthodoxy of his claims and quotes the "profoundly true and important" comments of Karl Kautsky on the subject. [Op. Cit., p. 81] Kautsky, considered the "pope" of Social-Democracy, stated that it was "absolutely untrue" that "socialist consciousness" was a "necessary and direct result of the proletarian class struggle." Rather, "socialism and the class struggle closer they are to the party’s own ideological position the more likely they are to be the targets of abuse)."

Thirdly, the practice of "democratic centralism" also aids this process towards conformity. Based on the idea that the party must be a highly disciplined fighting force, the party is endowed with a powerful central committee and a rule that all members must publicly defend the agreed-upon positions of the party and the decisions of the central committee, whatever opinions they might hold to the contrary in private. Between conferences, the party’s leading bodies usually have extensive authority to govern the party’s affairs, including updating party doctrine and deciding the party’s response to current political events.

As unity is the key, there is a tendency to view any opposition as a potential threat. It is not at all clear when "full freedom to criticise" policy internally can be said to disturb the unity of a defined action. The norms of democratic centralism confer all power between conferences onto a central committee, allowing it to become the arbiter of when a dissident viewpoint is in danger of weakening unity. The evidence from numerous vanguard parties suggest that their leaders usually view any dissent as precisely such a disruption and demand that dissidents cease their action or face expulsion from the party.

It should also be borne in mind that Leninist parties also view themselves as vitally important to the success of any future revolution. This cannot help but reinforce the tendency to view dissent as something which automatically imperils the future of the planet and, therefore, something which must be combated at all costs. As Lenin stressed in a polemic directed to the international communist movement in 1920, "whenever brings about even the slightest weakening of the iron discipline of the party of the proletariat, especially during its dictatorship, is actually aiding the bourgeoisie against the proletariat." [Collected Works, vol. 31, p. 45] As can be seen, Lenin stresses the importance of "iron discipline" at all times, not only during the revolution when "the party" is apply-
Secondly, given that vanguard parties are based on the belief that they are the guardians of "scientific socialism," this means that there is a tendency to squeeze all of social life into the confines of the party’s ideology. Moreover, as the party’s ideology is a “science” it is expected to explain everything (hence the tendency of Leninists to expound on every subject imaginable, regardless of whether the author knows enough about the subject to discuss it in an informed way). The view that the party’s ideology explains everything eliminates the need for fresh or independent thought, precludes the possibility of critically appraising past practice or acknowledging mistakes, and removes the need to seek meaningful intellectual input outside the party’s own ideological fortress. As Victor Serge, anarchist turned Bolshevik, admitted in his memoirs: "Bolshevik thinking is grounded in the possession of the truth. The Party is the repository of truth, and any form of thinking which differs from it is a dangerous or reactionary error. Here lies the spiritual source of its intolerance. The absolute conviction of its lofty mission assures it of a moral energy quite astonishing in its intensity — and, at the same time, a clerical mentality which is quick to become Inquisitorial." [Memoirs of a Revolutionary, p. 134]

The intense level of activism means that members are bombarded with party propaganda, are in endless party meetings, or spend time reading party literature and so, by virtue of the fact that there is not enough time to read anything, members end up reading nothing but party publications. Most points of contact with the external world are eliminated or drastically curtailed. Indeed, such alternative sources of information and such thinking is regularly dismissed as being contaminated by bourgeois influences. This often goes so far as to label those who question any aspect of the party’s analysis revisionists or deviationists, bending to the “pressures of capitalism,” and are usually driven from the ranks as heretics. All this is almost always combined with contempt for all other organisations on the Left (indeed, the vehicles of science are not the proletariat, but the bourgeois intelligentsia: it was in the minds of some members of this stratum that modern socialism originated, and it was they who communicated it to the more intellectually developed proletarians who, in their turn, introduced it into the proletarian class struggle.” Kautsky stressed that “socialist consciousness is something introduced into the proletarian class struggle from without.” [quoted by Lenin, Op. Cit., pp. 81–2]

So Lenin, it must be stressed, was not inventing anything new here. He was simply repeating the orthodox Marxist position and, as is obvious, wholeheartedly agreed with Kautsky’s pronouncements (any attempt to claim that he did not or later rejected it is nonsense, as we prove in section H.5.4). Lenin, with his usual modesty, claimed to speak on behalf of the workers when he wrote that “intellectuals must talk to us, and tell us more about what we do not know and what we can never learn from our factory and ‘economic’ experience, that is, you must give us political knowledge.” [Op. Cit., p. 108] Thus we have Lenin painting a picture of a working class incapable of developing “political knowledge” or “socialist consciousness” by its own efforts and so is reliant on members of the party, themselves either radical elements of the bourgeoisie and petty-bourgeoisie or educated by them, to provide it with such knowledge.

The obvious implication of this argument is that the working class cannot liberate itself by its own efforts. Without the radical bourgeois to provide the working class with “socialist” ideas, a socialist movement, let alone society, is impossible. If the working class cannot develop its own political theory by its own efforts then it cannot conceive of transforming society and, at best, can see only the need to work within capitalism for reforms to improve its position in society. A class whose members cannot develop political knowledge by its own actions cannot emancipate itself. It is, by
necessity, dependent on others to shape and form its movements. To quote Trotsky’s telling analogy on the respective roles of party and class, leaders and led:

“Without a guiding organisation, the energy of the masses would dissipate like steam not enclosed in a piston. But nevertheless, what moves things is not the piston or the box, but the steam.” [History of the Russian Revolution, vol. 1, p. 17]

While Trotsky’s mechanistic analogy may be considered as somewhat crude, it does expose the underlying assumptions of Bolshevism. After all, did not Lenin argue that the working class could not develop “socialist consciousness” by themselves and that it had to be introduced from without? How can you expect steam to create a piston? You cannot. Thus we have a blind, elemental force incapable of conscious thought being guided by a creation of science, the piston (which, of course, is a product of the work of the “vehicles of science,” namely the bourgeois intelligentsia). In the Leninist perspective, if revolutions are the locomotives of history (to use Marx’s words) then the masses are the steam, the party the locomotive and the leaders the train driver. The idea of a future society being constructed democratically from below by the workers themselves rather than through periodically elected leaders seems to have passed Bolshevism past. This is unsurprising, given that the Bolsheviks saw the workers in terms of blindly moving steam in a box, something incapable of being creative unless an outside force gave them direction (instructions).

Libertarian socialist Cornelius Castoriadis provides a good critique of the implications of the Leninist position:

“No positive content, nothing new capable of providing the foundation for the reconstruction of society could arise out of a mere awareness of poverty. From the centralist.” Within the party, in other words, a bureaucratic clique controls it from the top-down with little democratic control, never mind participation. For anarchists, this is hardly surprising. The reasons why this continually happens are rooted in the nature of “democratic centralism” itself.

Firstly, the assumption of “democratic centralism” is that the membership elect a leadership and give them the power to decide policy between conferences and congresses. This has a subtle impact on the membership, as it is assumed that the leadership has a special insight into social problems above and beyond that of anyone else, otherwise they would not have been elected to such an important position. Thus many in the membership come to believe that disagreements with the leadership’s analysis, even before they had been clearly articulated, are liable to be wrong. Doubt dares not speak its name. Unquestioning belief in the party leadership has been an all to common recurring theme in many accounts of vanguard parties. The hierarchical structure of the party promotes a hierarchical mentality in its members.

Conformity within such parties is also reinforced by the intense activism expected by members, particularly leading activists and full-time members. Paradoxically, the more deeply people participate in activism, the harder it becomes to reflect on what they are doing. The unrelenting pace often induces exhaustion and depression, while making it harder to “think your way out” — too many commitments have been made and too little time is left over from party activity for reflection. Moreover, high levels of activism prevent many, particularly the most committed, from having a personal life outside their role as party members. This high-speed political existence means that rival social networks atrophy through neglect, so ensuring that the party line is the only perspective which members get exposed to. Members tend to leave, typically, because of exhaustion, crisis, even despair rather than as the result of rational reflection and conscious decision.
more than necessity demanded and were far more intransigent and severe with the revolutionary working-men than with themselves, preferring to domineer even on occasions that called for lending an attentive ear to the voice of the masses.” [Op. Cit., p. 101]

He quoted Krupskaya, a party member, on these party bureaucrats, the “committeemen.” Krupskaya stated that “as a rule” they “did not recognise any party democracy” and “did not want any innovations. The ‘committeemen’ did not desire, and did not know how to, adapt himself to rapidly changing conditions.” [quoted by Trotsky, Op. Cit., p. 101] This conservatism played havoc in the party during 1917, incidentally. It would be no exaggeration to argue that the Russian revolution occurred in spite of, rather than because of, Bolshevik organisational principles (see section H.5.12). These principles, however, came into their own once the party had seized power, ensuring the consolidation of bureaucratic rule by an elite.

That a vanguard party helps to produces a bureaucratic regime once in power should not come as a surprise. If the party, to use Trotsky’s expression, exhibits a “caste tendency of the committeemen” can we be surprised if once in power it reproduces such a tendency in the state it is now the master of? [Op. Cit., p. 102] And this “tendency” can be seen today in the multitude of Leninist sects that exist.

H.5.10 Why does “democratic centralism” produce “bureaucratic centralism”?

In spite of the almost ritualistic assertions that vanguard parties are “the most democratic the world has seen,” an army of ex-members, expelled dissidents and disgruntled members testify that they do not live up to the hype. They argue that most, if not all, “vanguard” parties are not “democratic centralist” but are, in fact, “bureaucratic

experience of life under capitalism the proletariat could derive no new principles either for organising this new society or for orientating it in another direction. Under such conditions, the proletarian revolution becomes ...

a simple reflex revolt against hunger. It is impossible to see how socialist society could ever be the result of such a reflex ... Their situation forces them to suffer the consequences of capitalism’s contradictions, but in no way does it lead them to discover its causes. An acquaintance with these causes comes not from experiencing the production process but from theoretical knowledge ... This knowledge may be accessible to individual workers, but not to the proletariat qua proletariat. Driven by its revolt against poverty, but incapable of self-direction since its experiences does not give it a privileged viewpoint on reality, the proletariat according to this outlook, can only be an infantry in the service of a general staff of specialists. These specialists know (from considerations that the proletariat as such does not have access to) what is going wrong with present-day society and how it must be modified. The traditional view of the economy and its revolutionary perspective can only found, and actually throughout history has only founded, a bureaucratic politics ...

What we have outlined are the consequences that follow objectively from this theory. And they have been affirmed in an ever clearer fashion within the actual historical movement of Marxism, culminating in Stalinism.” [Social and Political Writings, vol. 2, pp. 257–8]

Thus we have a privileged position for the party and a perspective which can (and did) justify party dictatorship over the proletariat. Given the perspective that the working class cannot formu-
late its own “ideology” by its own efforts, of its incapacity to move beyond “trade union consciousness” independently of the party, the clear implication is that the party could in no way be bound by the predominant views of the working class. As the party embodies “socialist consciousness” (and this arises outside the working class and its struggles) then opposition of the working class to the party signifies a failure of the class to resist alien influences. As Lenin put it:

“Since there can be no talk of an independent ideology being developed by the masses of the workers in the process of their movement, the only choice is: either bourgeois or socialist ideology. There is no middle course ... Hence, to belittle socialist ideology in any way, to deviate from it in the slightest degree means strengthening bourgeois ideology. There is a lot of talk about spontaneity, but the spontaneous development of the labour movement leads to its becoming subordinated to bourgeois ideology ... Hence our task, the task of Social-Democracy, is to combat spontaneity, to divert the labour movement from its spontaneous, trade unionist striving to go under the wing of the bourgeoisie, and to bring it under the wing of revolutionary Social-Democracy.” [Op. Cit., pp. 82–3]

The implications of this argument became clear once the Bolsheviks seized power. As a justification for party dictatorship, you would be hard pressed to find any better. If the working class revolts against the ruling party, then we have a “spontaneous” development which, inevitably, is an expression of bourgeois ideology. As the party represents socialist consciousness, any deviation in working class support for it simply meant that the working class was being “subordinated” to the bourgeoisie. This meant, state controlled by the ‘glorious party’ preserves the very conditions which ‘necessitate’ the existence of a state — and a party to ‘guard’ it.” [Post-Scarcity Anarchism, pp. 125–6]

By being structured along hierarchical lines that reflect the very system that it professes to oppose, the vanguard party very “effectively” reproduces that system within both the current radical social movements and any revolutionary society that may be created. This means that once in power, it shapes society in its own image. Ironically, this tendency towards conservatism and bureaucracy was noted by Trotsky:

“As often happens, a sharp cleavage developed between the classes in motion and the interests of the party machines. Even the Bolshevik Party cadres, who enjoyed the benefit of exceptional revolutionary training, were definitely inclined to disregard the masses and to identify their own special interests and the interests of the machine on the very day after the monarchy was overthrown. What, then, could be expected of these cadres when they became an all-powerful state bureaucracy?” [Stalin, vol. 1, p. 298]

In such circumstances, it is unsurprising that urging party power and identifying it with working class power would have less than revolutionary results. Discussing the Bolsheviks in 1905 Trotsky points out this tendency existed from the start:

“The habits peculiar to a political machine were already forming in the underground. The young revolutionary bureaucrat was already emerging as a type. The conditions of conspiracy, true enough, offered rather merge scope for such formalities of democracy as electiveness, accountability and control. Yet, undoubtedly the committeemen narrowed these limitations considerably
had to fight throughout 1917 — first in his efforts to reorient the Central Committee against the provisional government (the famous conflict over the “April Theses”), later in driving the Central Committee toward insurrection in October. In both cases he threatened to resign from the Central Committee and bring his views to “the lower ranks of the party.” Once in power, however, “the Bolsheviks tended to centralise their party to the degree that they became isolated from the working class.” [Op. Cit., pp. 126 and p. 127]

The “vanguard” model of organising is not only inefficient and ineffective from a revolutionary perspective, it generates bureaucratic and elitist tendencies which undermine any revolution unfortunate enough to be dominated by such a party. For these extremely practical and sensible reasons anarchists reject it wholeheartedly. As we discuss in the next section, the only thing vanguard parties are effective at is to supplant the diversity produced and required by revolutionary movements with the drab conformity produced by centralisation and to replace popular power and freedom with party power and tyranny.

H.5.9 What are vanguard parties effective at?

As we discussed the last section, vanguard parties are not efficient as agents of revolutionary change. So, it may be asked, what are vanguard parties effective at? If they are harmful to revolutionary struggle, what are they good at? The answer to this is simple. No anarchist would deny that vanguard parties are extremely efficient and effective at certain things, most notably reproducing hierarchy and bourgeois values into so-called “revolutionary” organisations and movements. As Murray Bookchin put it, the party “is efficient in only one respect — in moulding society in its own hierarchical image if the revolution is successful. It recreates bureaucracy, centralisation and the state. It fosters the very social conditions which justify this kind of society. Hence, instead of ‘withering away,’ the obviously, that to “belittle” the “role” of the party by questioning its rule meant to “strengthen bourgeois ideology” and when workers spontaneously went on strike or protested against the party’s rule, the party had to “combat” these strivings in order to maintain working class rule! As the “masses of the workers” cannot develop an “independent ideology,” the workers are rejecting socialist ideology in favour of bourgeois ideology. The party, in order to defend the “the revolution” (even the “rule of the workers”!) has to impose its will onto the class, to “combat spontaneity.”

As we saw in section H.1.2, none of the leading Bolsheviks were shy about drawing these conclusions once in power and faced with working class revolt against their rule. Indeed, they raised the idea that the “dictatorship of the proletariat” was also, in fact, the “dictatorship of the party” and, as we discussed in section H.3.8 integrated this into their theory of the state. Thus, Leninist ideology implies that “workers’ power” exists independently of the workers. This means that the sight of the “dictatorship of the proletariat” (i.e. the Bolshevik government) repressing the proletariat is to be expected.

This elitist perspective of the party, the idea that it and it alone possesses knowledge can be seen from the resolution of the Communist International on the role of the party. It stated that “the working class without an independent political party is a body without a head.” [Proceedings and Documents of the Second Congress 1920, vol. 1, p. 194] This use of biological analogies says more about Bolshevism that its authors intended. After all, it suggests a division of labour which is unchangeable. Can the hands evolve to do their own thinking? Of course not. Yet again, we have an image of the class as unthinking brute force. As the Cohen-Bendit brothers argued, the “Leninist belief that the workers cannot spontaneously go beyond the level of trade union consciousness is tantamount to beheading the proletariat, and then insinuating the Party as the head ... Lenin was wrong, and in fact, in Russia the Party was forced to decapitate the workers’ movement with the help of the political police and the Red Army.
under the brilliant leadership of Trotsky and Lenin.” [Obsolete Communism, pp. 194–5]

As well as explaining the subsequent embrace of party dictatorship over the working class, vanguardism also explains the notorious inefficiency of Leninist parties faced with revolutionary situations we discuss in section H.5.8. Basing themselves on the perspective that all spontaneous movements are inherently bourgeois they could not help but be opposed to autonomous class struggle and the organisations and tactics it generates. James C. Scott, in his excellent discussion of the roots and flaws in Lenin’s ideas on the party, makes the obvious point that since, for Lenin, “authentic, revolutionary class consciousness could never develop autonomously within the working class, it followed that that the actual political outlook of workers was always a threat to the vanguard party.” [Seeing like a State, p. 155] As Maurice Brinton argued, the “Bolshevik cadres saw their role as the leadership of the revolution. Any movement not initiated by them or independent of their control could only evoke their suspicion.” These developments, of course, did not occur by chance or accidentally for “a given ideological premise (the preordained hegemony of the Party) led necessarily to certain conclusions in practice.” [The Bolsheviks and Workers’ Control, p. xi and p. xii]

Bakunin expressed the implications of the vanguardist perspective extremely well. It is worthwhile quoting him at length:

“Idealists of all sorts, metaphysicians, positivists, those who uphold the priority of science over life, the doctrinaire revolutionists — all of them champion with equal zeal although differing in their argumentation, the idea of the State and State power, seeing in them, quite logically from their point of view, the only salvation of society. Quite logically, I say, having taken as their basis the tenet — a fallacious tenet in our opinion — that thought is prior to life, and abstract theory is prior to so-

“For the state centralisation is the appropriate form of organisation, since it aims at the greatest possible uniformity in social life for the maintenance of political and social equilibrium. But for a movement whose very existence depends on prompt action at any favourable moment and on the independent thought and action of its supporters, centralism could but be a curse by weakening its power of decision and systematically repressing all immediate action. If, for example, as was the case in Germany, every local strike had first to be approved by the Central, which was often hundreds of miles away and was not usually in a position to pass a correct judgement on the local conditions, one cannot wonder that the inertia of the apparatus of organisation renders a quick attack quite impossible, and there thus arises a state of affairs where the energetic and intellectually alert groups no longer serve as patterns for the less active, but are condemned by these to inactivity, inevitably bringing the whole movement to stagnation. Organisation is, after all, only a means to an end. When it becomes an end in itself, it kills the spirit and the vital initiative of its members and sets up that domination by mediocrity which is the characteristic of all bureaucracies.” [Rudolf Rocker, Anarcho-Syndicalism, p. 61]

As we discuss in section H.5.12, the example of the Bolshevik party during the Russian Revolution amply proves Rocker’s point. Rather than being a highly centralised, disciplined vanguard party, the Bolshevik party was marked by extensive autonomy throughout its ranks. Party discipline was regularly ignored, including by Lenin in his attempts to get the central party bureaucracy to catch up with the spontaneous revolutionary actions and ideas of the Russian working class. As Bookchin summarised, the “Bolshevik leadership was ordinarily extremely conservative, a trait that Lenin
“The party becomes less efficient from a revolutionary point of view the more it seeks efficiency by means of hierarchy, cadres and centralisation. Although everyone marches in step, the orders are usually wrong, especially when events begin to move rapidly and take unexpected turns — as they do in all revolutions…

“On the other hand, this kind of party is extremely vulnerable in periods of repression. The bourgeoisie has only to grab its leadership to destroy virtually the entire movement. With its leaders in prison or in hiding, the party becomes paralysed; the obedient membership has no one to obey and tends to flounder. Demoralisation sets in rapidly. The party decomposes not only because of the repressive atmosphere but also because of its poverty of inner resources.

“The foregoing account is not a series of hypothetical inferences, it is a composite sketch of all the mass Marxian parties of the past century — the Social Democrats, the Communists and the Trotskyist party of Ceylon (the only mass party of its kind). To claim that these parties failed to take their Marxian principles seriously merely conceals another question: why did this failure happen in the first place? The fact is, these parties failed to take their Marxian principles seriously merely conceals another question: why did this failure happen in the first place? The fact is, these parties were co-opted into bourgeois society because they were structured along bourgeois lines. The germ of treachery existed in them from birth.” [Post-Scarcity Anarchism, pp. 123–6]

The evidence Bookchin summarises suggests that vanguard parties are less than efficient in promoting revolutionary change. Slugghish, unresponsive, undemocratic, they simply cannot adjust to the dynamic nature of social struggle, never mind revolution. This is to be expected:

The idea that “socialist consciousness” can exist independently of the working class and its struggle suggests exactly the perspective Bakunin was critiquing. For vanguardism, the abstract theory of socialism exists prior to the class struggle and exists waiting to be brought to the masses by the educated few. The net effect is, as we have argued, to lay the ground for party dictatorship. The concept is fundamentally anti-socialist, a justification for elite rule and the continuation of class society in new, party approved, ways.

H.5.2 Have vanguardist assumptions been validated?

Lenin claimed that workers can only reach a “trade union consciousness” by their own efforts. Anarchists argue that such an assertion is empirically false. The history of the labour movement is marked by revolts and struggles which went far further than just seeking reforms as well as revolutionary theories derived from such experiences.
The category of “economic struggle” corresponds to no known social reality. Every “economic” struggle is “political” in some sense and those involved can, and do, learn political lessons from them. As Kropotkin noted in the 1880s, there “is almost no serious strike which occurs together with the appearance of troops, the exchange of blows and some acts of revolt. Here they fight with the troops; there they march on the factories ... Thanks to government intervention the rebel against the factory becomes the rebel against the State.” [quoted by Caroline Cahm, *Kropotkin and the Rise of Revolutionary Anarchism*, p. 256] If history shows anything, it shows that workers are more than capable of going beyond “trade union consciousness.” The Paris Commune, the 1848 revolts and, ironically enough, the 1905 and 1917 Russian Revolutions show that the masses are capable of revolutionary struggles in which the self-proclaimed “vanguard” of socialists spend most of their time trying to catch up with them!

The history of Bolshevism also helps discredit Lenin’s argument that the workers cannot develop socialist consciousness alone due to the power of bourgeois ideology. Simply put, if the working class is subjected to bourgeois influences, then so are the “professional” revolutionaries within the party. Indeed, the strength of such influences on the “professionals” of revolution must be higher as they are not part of proletarian life. If social being influences consciousness then if a revolutionary is no longer part of the working class then they no longer are rooted in the social conditions which generate socialist theory and action. No longer connected with collective labour and working class life, the “professional” revolutionary is more likely to be influenced by the social milieu he or she now is part of (i.e. a bourgeois, or at best petit-bourgeois, environment).

This tendency for the “professional” revolutionary to be subject to bourgeois influences can continually be seen from the history of the Bolshevik party. As Trotsky himself noted:

**fesses to oppose.** Despite its theoretical pretensions, it is a bourgeois organism, a miniature state, with an apparatus and a cadre whose function it is to seize power, not dissolve power. Rooted in the pre-revolutionary period, it assimilates all the forms, techniques and mentality of bureaucracy. Its membership is schooled in obedience and in the preconceptions of a rigid dogma and is taught to revere the leadership. The party’s leadership, in turn, is schooled in habits born of command, authority, manipulation and egomania. This situation is worsened when the party participates in parliamentary elections. In election campaigns, the vanguard party models itself completely on existing bourgeois forms and even acquires the paraphernalia of the electoral party...

“As the party expands, the distance between the leadership and the ranks inevitably increases. Its leaders not only become ‘personages,’ they lose contact with the living situation below. The local groups, which know their own immediate situation better than any remote leaders, are obliged to subordinate their insights to directives from above. The leadership, lacking any direct knowledge of local problems, responds sluggishly and prudently. Although it stakes out a claim to the ‘larger view,’ to greater ‘theoretical competence,’ the competence of the leadership tends to diminish as one ascends the hierarchy of command. The more one approaches the level where the real decisions are made, the more conservative is the nature of the decision-making process, the more bureaucratic and extraneous are the factors which come into play, the more considerations of prestige and retrenchment supplant creativity, imagination, and a disinterested dedication to revolutionary goals.
of new party members, to be used in order to advance the party rather than the autonomy and combativeness of the working class. This process was seen in the “anti-globalisation” or “anti-capitalist” movement at the end of the 20th century. This started without the help of these self-appointed vanguards, who once it appeared spent a lot of time trying to catch up with the movement while criticising its proven organisational principles and tactics.

The reasons for such behaviour are not too difficult to find. They lie in the organisational structure favoured by these parties and the mentality lying behind them. As anarchists have long argued, a centralised, top-down structure will simply be unresponsive to the needs of those in struggle. The inertia associated with the party hierarchy will ensure that it responds slowly to new developments and its centralised structure means that the leadership is isolated from what is happening on the ground and cannot respond appropriately. The underlying assumption of the vanguard party, namely that the party represents the interests of the working class, makes it unresponsive to new developments within the class struggle. As Lenin argued that spontaneous working class struggle tends to reformism, the leaders of a vanguard party automatically are suspicious of new developments which, by their very nature, rarely fit into previously agreed models of “proletarian” struggle. The example of Bolshevik hostility to the soviets spontaneously formed by workers during the 1905 Russian revolution is one of the best known examples of this tendency.

Murray Bookchin is worth quoting at length on this subject:

“The ‘glorious party,’ when there is one, almost invariably lags behind the events ... In the beginning ... it tends to have an inhibitory function, not a ‘vanguard’ role. Where it exercises influence, it tends to slow down the flow of events, not ‘co-ordinate’ the revolutionary forces. This is not accidental. The party is structured along hierarchical lines that reflect the very society it pro-

“It should not be forgotten that the political machine of the Bolshevik Party was predominantly made up of the intelligentsia, which was petty bourgeois in its origin and conditions of life and Marxist in its ideas and in its relations with the proletariat. Workers who turned professional revolutionists joined this set with great eagerness and lost their identity in it. The peculiar social structure of the Party machine and its authority over the proletariat (neither of which is accidental but dictated by strict historical necessity) were more than once the cause of the Party’s vacillation and finally became the source of its degeneration ... In most cases they lacked independent daily contact with the labouring masses as well as a comprehensive understanding of the historical process. They thus left themselves exposed to the influence of alien classes.” [Stalin, vol. 1, pp. 297–8]

He pointed to the example of the First World War, when, “even the Bolshevik party did not at once find its way in the labyrinth of war. As a general rule, the confusion was most pervasive and lasted longest amongst the Party’s higher-ups, who came in direct contact with bourgeois public opinion.” Thus the professional revolutionaries “were largely affected by compromisist tendencies, which emanated from bourgeois circles, while the rank and file Bolshevik workingmen displayed far greater stability resisting the patriotic hysteria that had swept the country.” [Op. Cit., p. 248 and p. 298] It should be noted that he was repeating earlier comments on the “immense intellectual backsliding of the upper stratum of the Bolsheviks during the war” was caused by “isolation from the masses and isolation from those abroad — that is primarily from Lenin.” [History of the Russian Revolution, vol. 3, p. 134] As we discuss in section H.5.12, even Trotsky had to admit that during 1917 the working class was far more revolutionary than the party and the party more revolutionary than the “party machine” of “professional revolutionaries.”
Ironically enough, Lenin himself recognised this aspect of intellectuals after he had praised their role in bringing "revolutionary" consciousness to the working class. In his 1904 work *One Step Forward, Two Steps Back*, he argued that it was now the presence of "large numbers of radical intellectuals in the ranks" which has ensured that "the opportunism which their mentality produces had been, and is, bound to exist." *Collected Works*, vol. 7, pp. 403–4]

According to Lenin’s new philosophy, the working class simply needs to have been through the "schooling of the factory" in order to give the intelligentsia lessons in political discipline, the very same intelligentsia which up until then had played the leading role in the Party and had given political consciousness to the working class. In his words:

“For the factory, which seems only a bogey to some, represents that highest form of capitalist co-operation which has united and disciplined the proletariat, taught it to organise ... And it is Marxism, the ideology of the proletariat trained by capitalism, has been and is teaching ... unstable intellectuals to distinguish between the factory as a means of exploitation (discipline based on fear of starvation) and the factory as a means of organisation (discipline based on collective work ...). The discipline and organisation which come so hard to the bourgeois intellectual are very easily acquired by the proletariat just because of this factory ‘schooling.’”

Lenin’s analogy is, of course, flawed. The factory is a "means of exploitation" because its "means of organisation" is top-down and hierarchical. The "collective work" which the workers are subjected to is organised by the boss and the "discipline" is that of the barracks, not that of free individuals. In fact, the "schooling" for revolutionaries is not the factory, but the class struggle — healthy and

As we argue elsewhere (see section J.3) anarchists argue for revolutionary groups based on self-management, federalism and decision making from below. In other words, we apply within our organisations the same principles as those which the working class has evolved in the course of its own struggles. Autonomy is combined with federalism, so ensuring co-ordination of decisions and activities is achieved from below upwards by means of mandated and recallable delegates. Effective co-operation is achieved as it is informed by and reflects the needs on the ground. Simply put, working class organisation and discipline — as exemplified by the workers’ council or strike committee — represents a completely different thing from capitalist organisation and discipline, of which Leninists are constantly asking for more (albeit draped with the Red Flag and labelled "revolutionary"). And as we discuss in the next section, the Leninist model of top-down centralised parties is marked more by its failures than its successes, suggesting that not only is the vanguard model undesirable, it is also unnecessary.

H.5.8 Are vanguard parties effective?

In a word, no. Vanguard parties have rarely been proven to be effective organs for fermenting revolutionary change which is, let us not forget, their stated purpose. Indeed, rather than being in the vanguard of social struggle, the Leninist parties are often the last to recognise, let alone understand, the initial stirrings of important social movements and events. It is only once these movements have exploded in the streets that the self-proclaimed “vanguards” notice them and decide they require the party’s leadership.

Part of this process are constant attempts to install their political program onto movements that they do not understand, movements that have proven to be successful using different tactics and methods of organisation. Rather than learn from the experiences of others, social movements are seen as raw material, as a source
fluence the shaping of the “workers’ state” by the party once it has taken power. This decisive influence of the party and its ideological as well as organisational assumptions can be seen when Trotsky argued in 1923 that “the party created the state apparatus and can rebuild it anew ... from the party you get the state, but not the party from the state.” [Leon Trotsky Speaks, p. 161] This is to be expected, after all the aim of the party is to take, hold and execute power. Given that the vanguard party is organised as it is to ensure effectiveness and efficiency, why should we assume that the ruling party will not seek to recreate these organisational principles once in power? As the Russian Revolution proves, this is the case (see section H.6)

To claim how we organise under capitalism is not important to a revolutionary movement is simply not true. The way revolutionaries organise have an impact both on themselves and how they will view the revolution developing. An ideological prejudice for centralisation and “top-down” organisation will not disappear once the revolution starts. Rather, it will influence the way the party acts within it and, if it aims to seize power, how it will exercise that power once it has.

For these reasons anarchists stress the importance of building the new world in the shell of the old (see section H.1.6). All organisations create social relationships which shape their memberships. As the members of these parties will be part of the revolutionary process, they will influence how that revolution will develop and any “transitional” institutions which are created. As the aim of such organisations is to facilitate the creation of socialism, the obvious implication is that the revolutionary organisation must, itself, reflect the society it is trying to create. Clearly, then, the idea that how we organise as revolutionaries today can be considered somehow independent of the revolutionary process and the nature of post-capitalist society and its institutions cannot be maintained (particularly if the aim of the “revolutionary” organisation is to seize power on behalf of the working class).

positive self-discipline is generated by the struggle against the way the workplace is organised under capitalism. Factory discipline, in other words, is completely different from the discipline required for social struggle or revolution. Workers become revolutionary in so far as they reject the hierarchical discipline of the workplace and develop the self-discipline required to fight it.

A key task of anarchism is to encourage working class revolt against this type of discipline, particularly in the capitalist workplace. The “discipline” Lenin praises simply replaces human thought and association with the following of orders and hierarchy. Thus anarchism aims to undermine capitalist (imposed and brutalising) discipline in favour of solidarity, the “discipline” of free association and agreement based on the community of struggle and the political consciousness and revolutionary enthusiasm that struggle creates. Thus, for anarchists, the model of the factory can never be the model for a revolutionary organisation any more than Lenin’s vision of society as “one big workplace” could be our vision of socialism (see section H.3.1). Ultimately, the factory exists to reproduce hierarchical social relationships and class society just as much as it exists to produce goods.

It should be noted that Lenin’s argument does not contradict his earlier ones. The proletarian and intellectual have complementary jobs in the party. The proletariat is to give lessons in political discipline to the intellectuals as they have been through the process of factory (i.e. hierarchical) discipline. The role of the intellectuals as providers of “political consciousness” is the same and so they give political lessons to the workers. Moreover, his vision of the vanguard party is basically the same as in What is to Be Done?. This can be seen from his comments that the leading Menshevik Martov “lumps together in the party organised and unorganised elements, those who lend themselves to direction and those who do not, the advanced and the incorrigibly backward.” He stressed that the “division of labour under the direction of a centre evokes from him [the intellectual] a tragical outcry against transforming people
into ‘cogs and wheels.’” [Op. Cit., p. 258 and p. 392] Thus there is the same division of labour as in the capitalist factory, with the boss (the “centre”) having the power to direct the workers (who submit to “direction”). Thus we have a “revolutionary” party organised in a capitalist manner, with the same “division of labour” between order givers and order takers.

H.5.3 Why does vanguardism imply party power?

As we discussed in section H.5.1, anarchists argue that the assumptions of vanguardism lead to party rule over the working class. Needless to say, followers of Lenin disagree. For example, Chris Harman of the British Socialist Workers Party argues the opposite case in his essay “Party and Class.” However, his own argument suggests the elitist conclusions libertarians have draw from Lenin’s.

Harman argues that there are two ways to look at the revolutionary party, the Leninist way and the traditional social-democratic way (as represented by the likes of Trotsky and Rosa Luxemburg in 1903–5). “The latter,” he argues, “was thought of as a party of the whole [working] class … All the tendencies within the class had to be represented within it. Any split within it was to be conceived of as a split within the class. Centralisation, although recognised as necessary, was feared as a centralisation over and against the spontaneous activity of the class. Yet it was precisely in this kind of party that the ‘autocratic’ tendencies warned against by Luxemburg were to develop most. For within it the confusion of member and sympathiser, the massive apparatus needed to hold together a mass of only half-politicised members in a series of social activities, led to a toning down of political debate, a lack of political seriousness, which in turn reduced the ability of the members to make independent political eval-

H.5.7 Is the way revolutionaries organise important?

As we discussed in the last section, anarchists argue that the way revolutionaries organise today is important. However, according to some of Lenin’s followers, the fact that the “revolutionary” party is organised in a non-revolutionary manner does not matter. In the words of Chris Harman, a leading member of the British Socialist Workers Party, “[e]xisting under capitalism, the revolutionary organisation [i.e. the vanguard party] will of necessity have a quite different structure to that of the workers’ state that will arise in the process of overthrowing capitalism.” [Party and Class, p. 34]

However, in practice this distinction is impossible to make. If the party is organised in specific ways then it is so because this is conceived to be “efficient,” “practical” and so on. Hence we find Lenin arguing against “backwardness in organisation” and that the “point at issue is whether our ideological struggle is to have forms of a higher type to clothe it, forms of Party organisation binding on all.” Why would the “workers’ state” be based on “backward” or “lower” kinds of organisational forms? If, as Lenin remarked, “the organisational principle of revolutionary Social-Democracy” was “to proceed from the top downward”, why would the party, once in power, reject its “organisational principle” in favour of one it thinks is “opportunistic,” “primitive” and so on? [Collected Works, vol. 7, p. 389, p. 388 and pp. 396–7]

Therefore, as the vanguard the party represents the level to which the working class is supposed to reach then its organisational principles must, similarly, be those which the class must reach. As such, Harman’s comments are incredulous. How we organise today is hardly irrelevant, particularly if the revolutionary organisation in question seeks (to use Lenin’s words) to “take[e] full state power alone.” [Op. Cit., vol. 26, p. 94] These prejudices (and the political and organisational habits they generate) will in-
Equally, in order that the “higher” bodies can evaluate the situation they need effective information from the “lower” bodies. If the “lower” bodies are deemed incapable of formulating their own policies, how can they be wise enough, firstly, to select the right leaders and, secondly, determine the appropriate information to communicate to the “higher” bodies? Given the assumptions for centralised power in the party, can we not see that “democratic centralised” parties will be extremely inefficient in practice as information and knowledge is lost in the party machine and whatever decisions which are reached at the top are made in ignorance of the real situation on the ground? As we discuss in section H.5.8, this is usually the fate of such parties.

Within the party, as noted, the role of “professional revolutionaries” (or “full timers”) is stressed. As Lenin argued, any worker which showed any talent must be removed from the workplace and become a party functionary. Is it surprising that the few Bolshevik cadres (i.e. professional revolutionaries) of working class origin soon lost real contact with the working class? Equally, what will their role within the party be? As we discuss in section H.5.12, their role in the Bolshevik party was essentially conservative in nature and aimed to maintain their own position.

That the anarchist critique of “democratic centralism” is valid, we need only point to the comments and analysis of numerous members (and often soon to be ex-members) of such parties. Thus we get a continual stream of articles discussing why specific parties are, in fact, “bureaucratic centralist” rather than “democratic centralist” and what is required to reform them. That every “democratic centralist” party in existence is not that democratic does not hinder their attempts to create one which is. In a way, the truly “democratic centralist” party is the Holy Grail of modern Leninism. As we discuss in section H.5.10, their goal may be as mythical as that of the Arthurian legends.

The problem for Harman is to explain how the proletariat can become the ruling class if this were true. He argues that “the party is not the embryo of the workers’ state — the workers’ council is. The working class as a whole will be involved in the organisations that constitute the state, the most backward as well as the most progressive elements.” The “function of the party is not to be the state.” [Op. Cit., p. 33] The implication is that the working class will take an active part in the decision making process during the revolution (although the level of this “involvement” is unspecified, probably for good reasons as we explain). If this is the case, then the problem of the mass party reappears, but in a new form (we must also note that this problem must have also appearing in 1917, when the Bolshevik party opened its doors to become a mass party).

As the “organisations that constitute the state” are made up of the working class “as a whole,” then, obviously, they cannot be expected to wield power (i.e. directly manage the revolution from below). If they did, then the party would be “mixed up” with the
“irremediably confused” and so could not lead (as we discuss in section H.5.5, Lenin linked “opportunism” to “primitive” democracy, i.e. self-management, within the party). Hence the need for party power. Which, of course, explains Lenin’s 1920 comments that an organisation embracing the whole working class cannot exercise the “dictatorship of the proletariat” and that a “vanguard” is required to do so (see section H.1.2 for details). Of course, Harman does not explain how the “irremediably confused” are able to judge that the party is the best representative of its interests. Surely if someone is competent enough to pick their ruler, they must also be competent enough to manage their own affairs directly? Equally, if the “irremediably confused” vote against the party once it is in power, what happens? Will the party submit to the “leadership” of what it considers “the most backward”? If the Bolsheviks are anything to go by, the answer has to be no.

Ironically, Harman argues that it “is worth noting that in Russia a real victory of the apparatus over the party required precisely the bringing into the party hundreds of thousands of ‘sympathisers,’ a dilution of the ‘party’ by the ‘class.’ … The Leninist party does not suffer from this tendency to bureaucratic control precisely because it restricts its membership to those willing to be serious and disciplined enough to take political and theoretical issues as their starting point, and to subordinate all their activities to those.” [Op. Cit., p. 33] It would be churlish to note that, firstly, the party had already imposed its dictatorship on the working class by that time and, secondly, his own party is regularly attacked by its own dissidents for being bureaucratic (see section H.5.11).

Significantly, this substitution of the rule of the party for working class self-government and the party apparatus for the party membership does not happen by accident. In order to have a socialist revolution, the working class as a whole must participate in the process so the decision making organisations will be based on the party being “mixed up” with the “irremediably confused” as if they were part of a non-Leninist party. So from Harman’s own assump-

course not. It is for this reason that anarchists argue that only in a “libertarian socialist movement the workers learn about non-dominating forms of association through creating and experimenting with forms such as libertarian labour organisations, which put into practice, through struggle against exploitation, principles of equality and free association.” [John Clark, The Anarchist Moment, p. 79]

As noted above, a “democratic centralist” party requires that the “lower” party bodies (cells, branches, etc.) should be subordinate to the higher ones (e.g. the central committee). The higher bodies are elected at the (usually) annual conference. As it is impossible to mandate for future developments, the higher bodies therefore are given carte blanche to determine policy which is binding on the whole party (hence the “from top-down” principle). In between conferences, the job of full time (ideally elected, but not always) officers is to lead the party and carry out the policy decided by the central committee. At the next conference, the party membership can show its approval of the leadership by electing another. The problems with this scheme are numerous:

“The first problem is the issue of hierarchy. Why should ‘higher’ party organs interpret party policy any more accurately than ‘lower’ ones? The pat answer is that the ‘higher’ bodies compromise the most capable and experienced members and are (from their lofty heights) in a better position to take an overall view on a given issue. In fact what may well happen is that, for example, central committee members may be more isolated from the outside world than mere branch members. This might ordinarily be the case because given the fact that many central committee members are full timers and therefore detached from more real issues such as making a living ...” [ACF, Marxism and its Failures, p. 8]
socialist revolution? Now, if Bolshevism can serve as a model for fascism, it must contain structural and functional elements which are also common to fascism. After all, no one has detected a tendency of Hitler or Mussolini, in their crusade against democracy, the organised labour movement and the left, to imitate the organisational principles of anarchism.

Surely we can expect decisive structural differences to exist between capitalism and socialism if these societies are to have different aims. Where one is centralised to facilitate minority rule, the other must be decentralised and federal to facilitate mass participation. Where one is top-down, the other must be from the bottom-up. If a “socialism” exists which uses bourgeois organisational elements then we should not be surprised if it turns out to be socialist in name only. The same applies to revolutionary organisations. As the anarchists of Trotwatch explain:

“In reality, a Leninist Party simply reproduces and institutionalises existing capitalist power relations inside a supposedly ‘revolutionary’ organisation: between leaders and led; order givers and order takers; between specialists and the acquiescent and largely powerless party workers. And that elitist power relation is extended to include the relationship between the party and class.”
[Carry on Recruiting!, p. 41]

If you have an organisation which celebrates centralisation, having an institutionalised “leadership” separate from the mass of members becomes inevitable. Thus the division of labour which exists in the capitalist workplace or state is created. Forms cannot and do not exist independently of people and so imply specific forms of social relationships within them. These social relationships shape those subject to them. Can we expect the same forms of authority to have different impacts simply because the organisation has “socialist” or “revolutionary” in its name? Of
a ‘vanguard’ is not the same as to substitute one’s own desires, or policies or interests, for those of the class.” He stresses that an “organisation that is concerned with participating in the revolutionary overthrow of capitalism by the working class cannot conceive of substituting itself for the organs of the direct rule of that class.” [Op. Cit., p. 33 and p. 34] However, the logic of his argument suggests otherwise. Simply put, his arguments against a broad party organisation are also applicable to self-management during the class struggle and revolution. The rank and file party members are “mixed up” in the class. This leads to party members becoming subject to bourgeois influences. This necessitates the power of the higher bodies over the lower (see section H.5.5). The highest party organ, the central committee, must rule over the party machine, which in turn rules over the party members, who, in turn, rule over the workers. This logical chain was, ironically enough, recognised by Trotsky in 1904 in his polemic against Lenin:

“The organisation of the party substitutes itself for the party as a whole; then the central committee substitutes itself for the organisation; and finally the ‘dictator’ substitutes himself for the central committee.” [quoted by Harman, Op. Cit., p. 22]

Obviously once in power this substitution was less of a concern for him! Which, however, does not deny the insight Trotsky had previously showed about the dangers inherent in the Bolshevik assumptions on working class spontaneity and how revolutionary ideas develop. Dangers which he, ironically, helped provide empirical evidence for.

This false picture of the party (and its role) explains the progression of the Bolshevik party after 1917. As the soviets organised all workers, we have the problem that the party (with its “scientific” knowledge) is swamped by the class. The task of the party is to “persuade, not coerce these [workers] into accepting its lead” and, as standable that self-management should not be applied as it strikes at the heart of class society and how it operates. That Lenin can appeal to “modern society” without recognising its class basis says a lot. The question becomes, if such a “principle” is valid for a class system, is it applicable in a socialist society and in the movement aiming to create such a society? Can we postpone the application of our ideas until “after the revolution” or can the revolution only occur when we apply our socialist principles in resisting class society?

In a nutshell, can the same set of organisational structures be used for the different ends? Can bourgeois structures be considered neutral or have they, in fact, evolved to ensure and protect minority rule? Ultimately, form and content are not independent of each other. Form and content adapt to fit each other and they cannot be divorced in reality. Thus, if the bourgeoisie embrace centralisation and representation they have done so because it fits perfectly with their specific form of class society. Neither centralisation and representation can undermine minority rule and, if they did, they would quickly be eliminated.

Interestingly, both Bukharin and Trotsky acknowledged that fascism had appropriated Bolshevik ideas. The former demonstrated at the 12th Congress of the Communist Party in 1923 how Italian fascism had “adopted and applied in practice the experiences of the Russian revolution” in terms of their “methods of combat.” In fact, “[i]f one regards them from the formal point of view, that is, from the point of view of the technique of their political methods, then one discovers in them a complete application of Bolshevik tactics… in the sense of the rapid concentration of forced [and] energetic action of a tightly structured military organisation.” [quoted by R. Pipes, Russia Under the Bolshevik Regime, 1919–1924, p. 253] The latter, in his uncompleted biography on Stalin noted that “Mussolini stole from the Bolsheviks … Hitler imitated the Bolsheviks and Mussolini.” [Stalin, vol. 2, p. 243] The question arises as to whether the same tactics and structures serve both the needs of fascist reaction and
the central committee is designated by a ‘democratically elected’ congress makes no difference since, once it is elected, it has complete (statutory) control over the body of the Party (and can dissolve the base organisations, kick out militants, etc.) or that, under such conditions, it can determine the composition of the next congress. The central committee could use its powers in an honourable way, these powers could be reduced; the members of the Party might enjoy ‘political rights’ such as being able to form factions, etc. Fundamentally this would not change the situation, for the central committee would still remain the organ that defines the political line of the organisation and controls its application from top to bottom, that, in a word, has permanent monopoly on the job of leadership. The expression of opinions only has a limited value once the way the group functions prevents this opinion from forming on solid bases, i.e. permanent participation in the organisation’s activities and in the solution of problems that arise. If the way the organisation is run makes the solution of general problems the specific task and permanent work of a separate category of militants, only their opinion will, or will appear, to count to the others.” [Castoriadis, Social and Political Writings, vol. 2, pp. 204–5]

Castoriadis’ insight is important and strikes at the heart of the problem with vanguard parties. They simply reflect the capitalist society they claim to represent. As such, Lenin’s argument against “primitive” democracy in the revolutionary and labour movements is significant. When he asserts that those who argue for direct democracy “completely” fail to “understand that in modern society this principle can have only a relative application,” he is letting the cat out of the bag. [Lenin, Op. Cit., p. 163] After all, “modern society” is capitalism, a class society. In such a society, it is under-

Lenin made clear, for it to take political power. [Harman, Op. Cit., p. 34] Once in power, the decisions of the party are in constant danger of being overthrown by the working class, which necessitates a state run with “iron discipline” (and the necessary means of coercion) by the party. With the disempowering of the mass organisations by the party, the party itself becomes a substitute for popular democracy as being a party member is the only way to influence policy. As the party grows, the influx of new members “dilutes” the organisation, necessitating a similar growth of centralised power at the top of the organisation. This eliminated the substitute for proletarian democracy which had developed within the party (which explains the banning of factions within the Bolshevik party in 1921). Slowly but surely, power concentrates into fewer and fewer hands, which, ironically enough, necessitates a bureaucracy to feed the party leaders information and execute its will. Isolated from all, the party inevitably degenerates and Stalinism results.

We are sure that many Trotskyists will object to our analysis, arguing that we ignore the problems facing the Russian Revolution in our discussion. Harman argues that it was “not the form of the party that produces party as opposed to soviet rule, but the decimation of the working class” that occurred during the Russian Revolution. [Op. Cit., p. 37] This is false. As noted, Lenin was always explicit about the fact that the Bolshevik’s sought party rule (“full state power”) and that their rule was working class rule. As such, we have the first, most basic, substitution of party power for workers power. Secondly, as we discuss in section H.6.1, the Bolshevik party had been gerrymandering and disbanding soviets before the start of the Civil War, so proving that the war cannot be held accountable for this process of substitution. Thirdly, Leninists are meant to know that civil war is inevitable during a revolution. To blame the inevitable for the degeneration of the revolution is hardly convincing (particularly as the degeneration started before the civil war broke out).
Unsurprisingly, anarchists reject the underlying basis of this progression, the idea that the working class, by its own efforts, is incapable of developing beyond a “trade union consciousness.” The actions of the working class itself condemned these attitudes as outdated and simply wrong long before Lenin’s infamous comments were put on paper. In every struggle, the working class has created its own organisations to co-ordinate its struggle. In the process of struggle, the working class changes its perspectives. This process is uneven in both quantity and quality, but it does happen. However, anarchists do not think that all working class people will, at the same time, spontaneously become anarchists. If they did, we would be in an anarchist society today! As we argue in section J.3, anarchists acknowledge that political development within the working class is uneven. The difference between anarchism and Leninism is how we see socialist ideas developing and how revolutionaries influence that process.

In every class struggle there is a radical minority which takes the lead and many of this minority develop revolutionary conclusions from their experiences. As such, members of the working class develop their own revolutionary theory and it does not need bourgeois intellectuals to inject it into them. Anarchists go on to argue that this minority (along with any members of other classes who have broken with their background and become libertarians) should organise and work together. The role of this revolutionary organisation is to spread, discuss and revise its ideas and help others draw the same conclusions as they have from their own, and others, experiences. The aim of such a group is, by word and deed, to assist the working class in its struggles and to draw out and clarify the libertarian aspects of this struggle. It seeks to abolish the rigid division between leaders and led which is the hallmark of class society by drawing the vast majority of the working class into social struggle and revolutionary politics by encouraging their direct management of the struggle. Only this participation and the
conception of democracy” exists in two groups, the “masses of the students and workers” and the “Economists of the Bernstein persuasion” (i.e. reformists). Thus the idea of directly democratic working class organisations is associated with opportunism. He was generous, noting that he “would not, of course, ... condemn practical workers who have had too few opportunities for studying the theory and practice of real democratic [sic!] organisation” but individuals “play[ing] a leading role” in the movement should be so condemned! [Op. Cit., p. 163] These people should know better! Thus “real” democratic organisation implies the restriction of democracy to that of electing leaders and any attempt to widen the input of ordinary members is simply an expression of workers who need educating from their “primitive” failings!

In summary, we have a model of a “revolutionary” party which is based on full-time “professional revolutionaries” in which the concept of direct democracy is replaced by a system of, at best, representative democracy. It is highly centralised, as befitting a specialised organisation. As noted in section H.3.3, the “organisational principle of revolutionary Social-Democracy” was “to proceed from the top downward” rather than “from the bottom upward.” [Lenin, Collected Works, vol. 7, pp. 396–7] Rather than being only applicable in Tsarist Russia, Lenin drew on examples from advanced, democratic capitalist countries to justify his model in 1902 and in 1920 he advocated a similar hierarchical and top-down organisation with a dual secret and public organisation in the Communist International. The continuity of ideas is clear.

H.5.6 Why do anarchists oppose “democratic centralism”? 

What to make of Lenin’s suggested model of “democratic centralism” discussed in the last section? It is, to use Cornelius Castoriadis’s term, a “revolutionary party organised on a capitalist manner” political discussion it generates will allow revolutionary ideas to become widespread.

In other words, anarchists argue that precisely because of political differences (“unevenness”) we need the fullest possible democracy and freedom to discuss issues and reach agreements. Only by discussion and self-activity can the political perspectives of those in struggle develop and change. In other words, the fact Bolshevism uses to justify its support for party power is the strongest argument against it.

Our differences with vanguardism could not be more clear.

H.5.4 Did Lenin abandon vanguardism? 

Vanguardism rests on the premise that the working class cannot emancipate itself. As such, the ideas of Lenin as expounded in What is to be Done? (WITBD) contradicts the key idea of Marx that the emancipation of the working class is the task of the working class itself. Thus the paradox of Leninism. On the one hand, it subscribes to an ideology allegedly based on working class self-liberation. On the other, the founder of that school wrote an obviously influential work whose premise not only logically implies that they cannot, it also provides the perfect rationale for party dictatorship over the working class (and as the history of Leninism in power shows, this underlying premise was much stronger than any democratic-sounding rhetoric).

It is for this reason that many Leninists are somewhat embarrassed by Lenin’s argument in that key text. Hence we see Chris Harman writing that “the real theoretical basis for [Lenin’s] argument on the party is not that the working class is incapable on its own of coming to theoretical socialist consciousness ... The real basis for his argument is that the level of consciousness in the working class is never uniform.” [Party and Class, pp. 25–6] In other words, Harman changes the focus of the question away from the point ex-
plicitly and repeatedly stated by Lenin that the working class was incapable on its own of coming to socialist consciousness and that he was simply repeating Marxist orthodoxy when he did.

Harman bases his revision on Lenin’s later comments regarding his book, namely that he sought to “straighten matters out” by “pull[ing] in the other direction” to the “extreme” which the “economists” had gone to. [Collected Works, vol. 6, p. 491] He repeated this in 1907, as we will discuss shortly. While Lenin may have been right to attack the “economists”, his argument that socialist consciousness comes to the working class only “from without” is not a case of going too far in the other direction; it is wrong. Simply put, you do not attack ideas you disagree with by arguing an equally false set of ideas. This suggests that Harman’s attempt to downplay Lenin’s elitist position is flawed. Simply put, the “real theoretical basis” of the argument was precisely the issue Lenin himself raised, namely the incapacity of the working class to achieve socialist consciousness by itself. It is probably the elitist conclusions of this argument which drives Harman to try and change the focus to another issue, namely the political unevenness within the working class.

Some go to even more extreme lengths, denying that Lenin even held such a position. For example, Hal Draper argued at length that Lenin did not, in fact, hold the opinions he actually expressed in his book! While Draper covers many aspects of what he called the “Myth of Lenin’s ‘Concept of The Party’” in his essay of the same name, we will concentrate on the key idea, namely that socialist ideas are developed outside the class struggle by the radical intelligentsia and introduced into the working class from without. Here, as argued in section H.5.1, is the root of the anti-socialist basis of Leninism.

So what did Draper say? On the one hand, he denied that Lenin held this theory (he states that it is a “virtually non-existent theory” and “non-existent after WITBD”). He argued that those who hold the position that Lenin actually meant what he said in his book 1920 is obvious. Thus we have a highly centralised party, one run by “professional revolutionaries” from the top down.

It will be objected that Lenin was discussing the means of party building under Tsarism and advocated wider democracy under legality. However, given that in 1920 he universalised the Bolshevik experience and urged the creation of a dual party structure (based on legal and illegal structures), his comments on centralisation are applicable to vanguardism in general. Moreover, in 1902 he based his argument on experiences drawn from democratic capitalist regimes. As he argued, “no revolutionary organisation has ever practised broad democracy, nor could it, however much it desired to do so.” This was not considered as just applicable in Russia under the Tsar as Lenin then goes on to quote the Webb’s “book on trade unionism” in order to clarify what he calls “the confusion of ideas concerning the meaning of democracy.” He noted that “in the first period of existence in their unions, the British workers thought it was an indispensable sign of democracy for all members to do all the work of managing the unions.” This involved “all questions [being] decided by the votes of all the members” and all “official duties” being “fulfilled by all the members in turn.” He dismissed “such a conception of democracy” as “absurd” and “historical experience” made them “understand the necessity for representative institutions” and “full-time professional officials.” [Essential Works of Lenin, p. 161 and pp. 162–3]

Needless to say, Lenin linked this to Kautsky, who “shows the need for professional journalists, parliamentarians, etc., for the Social-Democratic leadership of the proletarian class struggle” and who “attacks the ‘socialism of anarchists and litterateurs’ who ... proclaim the principle that laws should be passed directly by the whole people, completely failing to understand that in modern society this principle can have only a relative application.” The universal nature of his dismissal of self-management within the revolutionary organisation in favour of representative forms is thus stressed. Significantly, Lenin stated that this “'primitive'
we have a centralised organisation which is managed by specialists, by “professional revolutionaries.” This does not mean that these all come from the bourgeoisie or petit bourgeoisie. According to Lenin a “workingman agitator who is at all talented and ‘promising’ must not be left to work eleven hours a day in a factory. We must arrange that he be maintained by the Party, that he may in due time go underground.” [Essential Works of Lenin, p. 158, p. 153, p. 147, p. 148 and p. 155]

Thus the full time professional revolutionaries are drawn from all classes into the party apparatus. However, in practice the majority of such full-timers were/are middle class. Trotsky noted that “just as in the Bolshevik committees, so at the [1905] Congress itself, there were almost no workingmen. The intellectuals predominated.” [Stalin, vol. 1, p. 101] This did not change, even after the influx of working class members in 1917 the “incidence of middle-class activists increases at the highest echelons of the hierarchy of executive committees.” [Robert Service, Op. Cit., p. 47] An ex-worker was a rare sight in the Bolshevik Central Committee, an actual worker non-existent. However, regardless of their original class background what unites the full-timers is not their origin but rather their current relationship with the working class, one of separation and hierarchy.

The organisational structure of this system was made clear at around the same time as What is to be Done?, with Lenin arguing that the factory group (or cell) of the party “must consist of a small number of revolutionaries, receiving direct from the [central] committee orders and power to conduct the whole social-democratic work in the factory. All members of the factory committee must regard themselves as agents of the [central] committee, bound to submit to all its directions, bound to observe all ‘laws and customs’ of this ‘army in the field’ in which they have entered and which they cannot leave without permission of the commander.” [quoted by E.H. Carr, The Bolshevik Revolution, vol. 1, p. 33] The similarities to the structure proposed by Lenin and agreed to by the Comintern in

“never quote anything other than WITBD,” and stated that this is a “curious fact” (a fact we will disprove shortly). Draper argued as follows: “Did Lenin put this theory forward even in WITBD? Not exactly.” He then noted that Lenin “had just read this theory in the most prestigious theoretical organ of Marxism of the whole international socialist movement” and it had been “put forward in an important article by the leading Marxist authority,” Karl Kautsky and so “Lenin first paraphrased Kautsky” before “quot[ing] a long passage from Kautsky’s article.”

This much, of course, is well known by anyone who has read Lenin’s book. By paraphrasing and quoting Kautsky as he does, Lenin is showing his agreement with Kautsky’s argument. Indeed, Lenin states before quoting Kautsky that his comments are “profoundly true and important”. [Essential Works of Lenin, p. 79]

By explicitly agreeing with Kautsky, it can be said that it also becomes Lenin’s theory as well! Over time, particularly after Kautsky had been labelled a “renegade” by Lenin, Kautsky’s star waned and Lenin’s rose. Little wonder the argument became associated with Lenin rather than the discredited Kautsky. Draper then speculated that “it is curious… that no one has sought to prove that by launching this theory … Kautsky was laying the basis for the demon of totalitarianism.” A simply reason exists for this, namely the fact that Kautsky, unlike Lenin, was never the head of a one-party dictatorship and justified this system politically. Indeed, Kautsky attacked the Bolsheviks for this, which caused Lenin to label him a “renegade.” Kautsky, in this sense, can be considered as being inconsistent with his political assumptions, unlike Lenin who took these assumptions to their logical conclusions.

How, after showing the obvious fact that “the crucial ‘Leninist’ theory was really Kautsky’s,” he then wondered: “Did Lenin, in WITBD, adopt Kautsky’s theory?” He answered his own question with an astounding “Again, not exactly”! Clearly, quoting approvingly of a theory and stating it is “profoundly true” does not, in fact, make you a supporter of it! What evidence does Draper present for
his amazing answer? Well, Draper argued that Lenin “tried to get maximum mileage out of it against the right wing; this was the point of his quoting it. If it did something for Kautsky’s polemic, he no doubt figured that it would do something for his.” Or, to present a more simple and obvious explanation, Lenin agreed with Kautsky’s “profoundly true” argument!

Aware of this possibility, Draper tried to combat it. “Certainly,” he argued, “this young man Lenin was not (yet) so brash as to attack his ‘pope’ or correct him overtly. But there was obviously a feeling of discomfort. While showing some modesty and attempting to avoid the appearance of a head-on criticism, the fact is that Lenin inserted two longish footnotes rejecting (or if you wish, amending) precisely what was worst about the Kautsky theory on the role of the proletariat.” So, here we have Lenin quoting Kautsky to prove his own argument (and noting that Kautsky’s words were “profoundly true and important”) but “feeling discomfort” over what he has just approvingly quoted! Incredible!

So how does Lenin “amend” Kautsky’s “profoundly true and important” argument? In two ways, according to Draper. Firstly, in a footnote which “was appended right after the Kautsky passage” Lenin quoted. Draper argued that it “was specifically formulated to undermine and weaken the theoretical content of Kautsky’s position. It began: ‘This does not mean, of course, that the workers have no part in creating such an ideology.’ But this was exactly what Kautsky did mean and say. In the guise of offering a caution, Lenin was proposing a modified view. ‘They [the workers] take part, however,’ Lenin’s footnote continued, ‘not as workers, but as socialist theoreticians, as Proudhons and Weitlings; in other words, they take part only when they are able …’ In short, Lenin was reminding the reader that Kautsky’s sweeping statements were not even 100% true historically; he pointed to exceptions.” Yes, Lenin did point to exceptions in order to refute objections to Kautsky’s argument before they were raised! It is clear that Lenin was not refuting Kautsky. Thus Proudhon adds to socialist ideology in so far as he is a “socialist superior body are unconditionally and necessarily binding on lower ones, and existence of a strong central party leadership whose authority over all leading party comrades in the period between one party congress and the next is universally accepted.” [Op. Cit., p. 198]

For Lenin, speaking in the same year, democratic centralism meant “only that representatives from the localities meet and elect a responsible body which must then govern … Democratic centralism consists in the Congress checking on the Central Committee, removing it and electing a new one.” [quoted by Robert Service, The Bolshevik Party in Revolution, p. 131] Thus, “democratic centralism” is inherently top-down, although the “higher” party organs are, in principle, elected by the “lower.” However, the key point is that the central committee is the active element, the one whose decisions are implemented and so the focus of the structure is in the “centralism” rather than the “democratic” part of the formula.

As we noted in section H.2.14, the Communist Party was expected to have a dual structure, one legal and the other illegal. It goes without saying that the illegal structure is the real power in the party and that it cannot be expected to be as democratic as the legal party, which in turn would be less than democratic as the illegal would have the real power within the organisation.

All this has clear parallels with Lenin’s What is to done?, where he argued for “a powerful and strictly secret organisation, which concentrates in its hands all the threads of secret activities, an organisation which of necessity must be a centralised organisation.” This call for centralisation is not totally dependent on secrecy, though. As he noted, “specialisation necessarily presupposes centralisation, and in its turn imperatively calls for it.” Such a centralised organisation would need leaders and Lenin argued that “no movement can be durable without a stable organisation of leaders to maintain continuity.” As such, “the organisation must consist chiefly of persons engaged in revolutionary activities as a profession.” Thus,
Clearly, Draper was wrong. Lenin did, as indicated above, actually meant what he said in *WITBD*. The fact that Lenin quoted Kautsky simply shows, as Lenin intended, that this position was the orthodox Social Democratic one, held by the mainstream of the party (one with roots in Marx and Engels). Given that Leninism was (and still is) a “radical” offshoot of this movement, this should come as no surprise. However, Draper’s comments remind us how religious many forms of Marxism are — why do we need facts when we have the true faith?

H.5.5 What is “democratic centralism”?

Anarchists oppose vanguardism for three reasons, one of which is the way it recommends how revolutionaries should organise to influence the class struggle.

So how is a “vanguard” party organised? To quote the Communist International’s 1920 resolution on the role of the Communist Party in the revolution, the party must have a “centralised political apparatus” and “must be organised on the basis of iron proletarian centralism.” This, of course, suggests a top-down structure internally, which the resolution explicitly calls for. In its words, “Communist cells of every kind must be subordinate to one another as precisely as possible in a strict hierarchy.” [Proceedings and Documents of the Second Congress 1920, vol. 1, p. 193, p. 198 and p. 199] Therefore, the vanguard party is organised in a centralised, top-down way. However, this is not all, as well as being “centralised,” the party is also meant to be democratic, hence the expression “democratic centralism.” On this the resolution states:

“The Communist Party must be organised on the basis of democratic centralism. The most important principle of democratic centralism is election of the higher party organs by the lowest, the fact that all instructions by a theoretician” and not a worker! How clear can you be? This can be seen from the rest of the sentence Draper truncates. Lenin continued by noting that people like Proudhon “take part only to the extent that they are able, more or less, to acquire the knowledge of their age and advance that knowledge.” [Op. Cit., p. 82f] In other words, insofar as they learn from the “vehicles of science.” Neither Kautsky or Lenin denied that it was possible for workers to acquire such knowledge and pass it on (sometimes even develop it). However this does not mean that they thought workers, as part of their daily life and struggle as workers, could develop “socialist theory.” Thus Lenin’s footnote reiterated Kautsky’s argument rather than, as Draper hoped, refute it.

Draper turns to another footnote, which he noted “was not directly tied to the Kautsky article, but discussed the ‘spontaneity’ of the socialist idea. ‘It is often said,’ Lenin began, ‘that the working class spontaneously gravitates towards socialism. This is perfectly true in the sense that socialist theory reveals the causes of the misery of the working class … and for that reason the workers are able to assimilate it so easily,’ but he reminded that this process itself was not subordinated to mere spontaneity. ‘The working class spontaneously gravitates towards socialism; nevertheless, … bourgeois ideology spontaneously imposes itself upon the working class to a still greater degree.’” Draper argued that this “was obviously written to modify and recast the Kautsky theory, without coming out and saying that the Master was wrong.” So, here we have Lenin approvingly quoting Kautsky in the main text while, at the same time, providing a footnote to show that, in fact, he did not agree with what he has just quoted! Truly amazing — and easily refuted.

Lenin’s footnote stressed, in a part Draper did not consider it wise to quote, that workers appreciate socialist theory “provided, however, that this theory does not step aside for spontaneity and provided it subordinates spontaneity to itself.” [Op. Cit., p. 84f] In other words, workers “assimilate” socialist theory only when so-
cialist theory does not adjust itself to the “spontaneous” forces at work in the class struggle. The workers adjust to socialist theory, they do not create it. Thus, rather than refuting Kautsky by the backdoor, Lenin in this footnote still agreed with him. Socialism does not develop, as Kautsky stressed, from the class struggle but rather has to be injected into it. This means, by necessity, the party “subordinates spontaneity to itself.”

Draper argued that this “modification” simply meant that there “are several things that happen ’spontaneously,’ and what will win out is not decided only by spontaneity” but as can be seen, this is not the case. Only when “spontaneity” is subordinated to the theory (i.e. the party) can socialism be won, a totally different position. As such, when Draper asserted that “[a]ll that was clear at this point was that Lenin was justifiably dissatisfied with the formulation of Kautsky’s theory,” he was simply expressing wishful thinking. This footnote, like the first one, continued the argument developed by Lenin in the main text and in no way is in contradiction to it. As is obvious.

Draper as final evidence of his case asserted that it “is a curious fact that no one has ever found this alleged theory anywhere else in Lenin’s voluminous writings, not before and not after [WITBD]. It never appeared in Lenin again. No Leninologist has ever quoted such a theory from any other place in Lenin.” However, as this theory was the orthodox Marxist position, Lenin had no real need to reiterate this argument continuously. After all, he had quoted the acknowledged leader of Marxism on the subject explicitly to show the orthodoxy of his argument and the non-Marxist base of those he argued against. Once the debate had been won and orthodox Marxism triumphant, why repeat the argument again? This, as we will see, was exactly the position Lenin did take in 1907 when he wrote an introduction to a book which contained What is to Be Done?

In contradiction to Draper’s claim, Lenin did return to this matter. In October 1905 he wrote an a short article in praise of an and the German working men . . . is all but accomplished. With the philosophers to think, and the working mean to fight for us, will any earthly power be strong enough to resist our progress?” [Collected Works, vol. 4, pp. 526–7 and p. 236] This, of course, fits in with the Communist Manifesto’s assertion that “a small section of the ruling class cuts itself adrift, and joins the revolutionary class.” Today, this “portion of the bourgeois ideologists” have “raised themselves to the level of comprehending theoretically the historical movement as a whole.” [The Marx-Engels Reader, p. 481] This, needless to say, places “bourgeois ideologists” (like Marx, Engels, Kautsky and Lenin) in a privileged position within the movement and has distinctly vanguardist undercurrents.

Seemingly unaware how this admission destroyed his case, Draper went on to ask: “But what followed from those facts?” To which he argued that Marx and Engels “concluded, from the same facts and subsequent experiences, that the movement had to be sternly warned against the influence of bourgeois intellectuals inside the party.” (We wonder if Marx and Engels included themselves in the list of “bourgeois intellectuals” the workers had to be “sternly warned” about?) Thus, amusingly enough, Draper argued that Marx, Engels, Kautsky and Lenin all held to the “same facts” that socialist consciousness developed outside the experiences of the working classes!

Ultimately, the whole rationale for the kind of wishful thinking that Draper inflicted on us is flawed. As noted above, you do not combat what you think is an incorrect position with one which you consider as also being wrong or do not agree with! You counter what you consider as an incorrect position with one you consider correct and agree with. As Lenin, in WITBD, explicitly did. This means that later attempts by his followers to downplay the ideas raised in Lenin’s book are unconvincing. Moreover, as he was simply repeating Social-Democratic orthodoxy it seems doubly unconvincing.
to it its political and economic interests.” This would “prepare them to play an independent role in the social life of Russia.” [quoted by Neil Harding, Lenin’s Political Thought, vol. 1, p. 50 and p. 51]

As one expert notes, “Lenin’s position … did not differ in any essentials” from those “Plekhanov had himself expressed.” Its “basic theses were his own”, namely that it is “clear from Plekhanov’s writing that it was the intelligentsia which virtually created the working class movement in its conscious form. It brought it science, revolutionary theory and organisation.” In summary, “Lenin’s views of the Party … are not to be regarded as extraordinary, innovatory, perverse, essentially Jacobin or unorthodox. On the contrary” they were “the touchstone of orthodoxy” and so “what it [What is to be Done?] presented at the time” was “a restatement of the principles of Russian Marxist orthodoxy.” By quoting Kautsky, Lenin also proved that he was simply repeating the general Marxist orthodoxy: “Those who dispute Lenin’s conclusions on the genesis of socialist consciousness must it seems, also dispute Kautsky’s claim to represent Social-Democratic orthodoxy.” [Harding, Op. Cit., p. 170, p. 172, pp. 50–1, p. 187, p. 188, p. 189 and p. 169]

Moreover, Engels wrote some interesting words in the 1840s on this issue which places the subsequent development of Marxism into sharper light. He noted that “it is evident that the working-men’s movement is divided into two sections, the Chartists and the Socialists. The Chartists are theoretically the more backward, the less developed, but they are genuine proletarians … The Socialists are more far-seeing … but proceeding originally from the bourgeoisie, are for this reason unable to amalgamate completely with the working class. The union of Socialism with Chartism … will be the next step … Then, only when this has been achieved, will the working class be the true intellectual leader of England.” Thus socialist ideas have to be introduced into the proletariat, as they are “more backward” and cannot be expected to develop theory for themselves! In the same year, he expounded on what this “union” would entail, writing in an Owenite paper that “the union between the German philosophers …

article by Stalin on this very subject. Stalin had sought to explain Lenin’s ideas to the Georgian Social-Democracy and, like Lenin, had sought to root the argument in Marxist orthodoxy (partly to justify the argument, partly to expose the Menshevik opposition as being non-Marxists). Stalin argued along similar lines to Lenin:

“the question now is: who works out, who is able to work out this socialist consciousness (i.e. scientific socialism)? Kautsky says, and I repeat his idea, that the masses of proletarians, as long as they remain proletarians, have neither the time nor the opportunity to work out socialist consciousness … The vehicles of science are the intellectuals … who have both the time and opportunity to put themselves in the van of science and workout socialist consciousness. Clearly, socialist consciousness is worked out by a few Social-Democratic intellectuals who posses the time and opportunity to do so.” [Collected Works, vol. 1, p. 164]

Stalin stressed the Marxist orthodoxy by stating Social-Democracy “comes in and introduces socialist consciousness into the working class movement. This is what Kautsky has in mind when he says ‘socialist consciousness is something introduced into the proletarian class struggle from without.’” [Op. Cit., pp. 164–5] That Stalin was simply repeating Lenin’s and Kautsky’s arguments is clear, as is the fact it was considered the orthodox position within social-democracy.

If Draper was right, then Lenin would have taken the opportunity to attack Stalin’s article and express the alternative viewpoint Draper was convinced he held. Lenin, however, put pen to paper to praise Stalin’s work, noting “the splendid way in which the problem of the celebrated ‘introduction of a consciousness from without’ had been posed.” Lenin explicitly agreed with Stalin’s summary of his argument, writing that “social being determines consciousness …
Socialist consciousness corresponds to the position of the proletariat” before quoting Stalin: “Who can and does evolve this consciousness (scientific socialism)?” He answers by again approvingly quoting Stalin: “its ‘evolution’ is a matter for a few Social-Democratic intellectuals who posses the necessary means and time.” Lenin did argue that Social-Democracy meets “an instinctive urge towards socialism” when it “comes to the proletariat with the message of socialism,” but this does not counter the main argument that the working class cannot develop socialist consciousness by its own efforts and the, by necessity, elitist and hierarchical politics that flow from this position. [Lenin, *Collected Works*, vol. 9, p. 388]

That Lenin did not reject his early formulations can also be seen from his introduction to the pamphlet “Twelve Years” which contained *What is to be Done?*. Rather than explaining the false nature of that work’s more infamous arguments, Lenin in fact defended them. For example, as regards the question of professional revolutionaries, he argued that the statements of his opponents now “look ridiculous” as “today the idea of an organisation of professional revolutionaries has already scored a complete victory,” a victory which “would have been impossible if this idea had not been pushed to the forefront at the time.” He noted that his work had “vanquished Economism … and finally created this organisation.” On the question of socialist consciousness, he simply reiterated the Marxist orthodoxy of his position, noting that its “formulation of the relationship between spontaneity and political consciousness was agreed upon by all the Iskra editors … Consequently, there could be no question of any difference in principle between the draft Party programme and *What is to be Done?* on this issue.” So while Lenin argued that his book “straightens out what had been twisted by the Economists,” (who had “gone to one extreme”) he did not correct his earlier arguments. [*Collected Works*, vol. 13, p. 101, p. 102 and p. 107]

Looking at Lenin’s arguments at the Communist International on the question of the party we see an obvious return to the ideas of WITBD (see section H.5.5). Here was have a similar legal/illegal duality, strict centralism, strong hierarchy and the vision of the party as the “head” of the working class (i.e. its consciousness). In *Left-Wing Communism*, Lenin mocks those who reject the idea that dictatorship by the party is the same as that of the class (see section H.3.3).

For Draper, the key problem was that critics of Lenin “run two different questions together: (a) What was, historically, the initial role of intellectuals in the beginnings of the socialist movement, and (b) what is — and above all, what should be — the role of bourgeois intellectuals in a working-class party today.” He argued that Kautsky did not believe that “if it can be shown that intellectuals historically played a certain initiatory role, they must and should continue to play the same role now and forever. It does not follow; as the working class matured, it tended to throw off leading strings.” However, this is unconvincing. If socialist consciousness cannot be generated by the working class by its own struggles then this is applicable now and in the future. Thus workers who join the socialist movement will be repeating the party ideology, as developed by intellectuals in the past. If they do develop new theory, it would be, as Lenin stressed, “not as workers, but as socialist theoreticians” and so socialist consciousness still does not derive from their own class experiences. This places the party in a privileged position vis-à-vis the working class and so the elitism remains.

Somewhat ironically given how much Draper is at pains to distance his hero Lenin from claims of elitism, he himself agreed with the arguments of Kautsky and Lenin. For Draper socialism did not develop out of the class struggle: “As a matter of fact, in the International of 1902 no one really had any doubts about the historical facts concerning the beginnings of the movement.” This was true. Plekhanov, the father of Russian Marxism, made similar arguments to Kautsky’s before Lenin put pen to paper. For Plekhanov, the socialist intelligentsia “will bring consciousness into the working class.” It must “become the leader of the working class” and “explain

Post-volynka, workplaces “that had been prominent in unrest were particularly hit by ... purges ... The effect on the willingness of workers to support opposition parties was predictable.” However, “the ability to organise strikes did not disappear” and they continued to take place throughout 1921. The spring of 1922 saw “a new strike wave.” [Aves, Op. Cit., p. 182 and p. 183] For example, in early March, “long strikes” hit the textile towns around Moscow. At the Glukhovskaiamills 5000 workers struck for 5 days, 1000 at a nearby factory for 2 days and 4000 at the Voskresenskaia mills for 6 days. In May, 1921, workers in the city of Moscow reacted to supply problems “with a wave of strikes. Party officials reckoned that in a 24-day period in May there were stoppages at 66 large enterprises.” These included a sit-down strike at one of Moscow’s largest plants, while “workers at engineering factories in Krasnopresnia followed suit, and Cheka agents reported ‘dissent, culminating in strikes and occupation’ in Bauman.” August 1922 saw 19,000 workers strike in textile mills in Moscow region for several days. Tram workers also struck that year, while teachers “organised strikes and mass meetings”. Workers usually elected delegates to negotiate with their trade unions as well as their bosses as both were Communist Party members. Strike organisers, needless to say, were sacked. [Pirani, Op. Cit., p. 82, pp. 111–2 and p. 157]

While the strike wave of early 1921 is the most famous, due to the Kronstadt sailors rebelling in solidarity with it, the fact is that this was just one of many strike waves during the 1918 and 1921 period. In response to protests, “the government had combined concessions with severe repression to restore order” as well as “commonly resort[ing] to the lock out as a means of punishing and purging the work force.” Yet, “as the strike waves show, the regime’s sanctions were not sufficient to prevent all anti-Bolshevik political action.” [Remington, Op. Cit., p. 111, p. 107, and p. 109] In fact, repression “did not prevent strikes and other forms of protest by workers becoming en-

revolution proves the validity of vanguardism and “democratic centralism”? After all, there was a successful revolution, the Bolshevik party did seize power. However, the apparent success of 1917 was not due to the application of “democratic centralism,” quite the reverse. While the myth of 1917 is that a highly efficient, democratic centralist vanguard party ensured the overthrow of the Provisional Government in November 1917 in favour of the Soviets (or so it seemed at the time) the facts are somewhat different. Rather, the Bolshevik party throughout 1917 was a fairly loose collection of local organisations (each more than willing to ignore central commands and express their autonomy), with much internal dissent and infighting and no discipline beyond what was created by common loyalty. The “democratic centralist” party, as desired by Lenin, was only created in the course of the Civil War and the tightening of the party dictatorship. In other words, the party became more like a “democratic centralist” one as the revolution degenerated. As such, the various followers of Lenin (Stalinists, Trotskyists and their multitude of offshoots) subscribe to a myth, which probably explains their lack of success in reproducing a similar organisation since. So assuming that the Bolsheviks did play an important role in the Russian revolution, it was because it was not the centralised, disciplined Bolshevik party of Leninist myth. Indeed, when the party did operate in a vanguardist manner, failure was soon to follow.

This claim can be proven by looking at the history of the 1917 revolution. The February revolution started with a spontaneous protests and strikes yet “the Petrograd organisation of the Bolsheviks opposed the calling of strikes precisely on the eve of the revolution which was destined to overthrow the Tsar. Fortunately, the workers ignored the Bolshevik ‘directives’ and went on strike anyway. In the events which followed, no one was more surprised by the revolution than the ‘revolutionary’ parties, including the Bolsheviks.” [Murray Bookchin, Post-Scarcity Anarchism, p. 123] Trotsky quoted one of the Bolshevik leaders at the time:
“Absolutely no guiding initiative from the party centres was felt ... the Petrograd Committee had been arrested and the representative of the Central Committee ... was unable to give any directives for the coming day.” [quoted by Trotsky, History of the Russian Revolution, vol. 1, p. 147]

Not the best of starts. Of course rank and file Bolsheviks took part in the demonstrations, street fights and strikes and so violated the principles their party was meant to be based on. As the revolution progressed, so did the dual nature of the Bolshevik party (i.e. its practical divergence from “democratic centralism” in order to be effective and attempts to force it back into that schema which handicapped the revolution). However, during 1917, “democratic centralism” was ignored in order to ensure the Bolsheviks played any role at all in the revolution. As one historian of the party makes clear, in 1917 and until the outbreak of the Civil War, the party operated in ways that few modern “vanguard” parties would tolerate:

“The committees were a law unto themselves when it came to accepting orders from above. Democratic centralism, as vague a principle of internal administration as there ever has been, was commonly held at least to enjoin lower executive bodies that they should obey the behests of all higher bodies in the organisational hierarchy. But town committees in practice had the devil’s own job in imposing firm leadership ... Insubordination was the rule of the day whenever lower party bodies thought questions of importance were at stake.

“Suburb committees too faced difficulties in imposing discipline. Many a party cell saw fit to thumb its nose at higher authority and to pursue policies which it felt to be more suited to local circumstances or more desirable in general. No great secret was made of this. In fact, of arrested ones. Workers also struck on supply issues in May, July and August. [Pirani, Op. Cit., pp. 83–4]

While the Kronstadt revolt took place too late to help the Petrograd strikes, it did inspire a strike wave in Ekaterinoslavl (in the Ukraine) in May, 1921. It started in the railway workshops and became “quickly politicised,” with the strike committee raising a “series of political ultimatums that were very similar in content to the demands of the Kronstadt rebels” (many of the resolutions put to the meeting almost completely coincided with them). The strike “spread to the other workshops” and on June 1st the main large Ekaterinoslavl factories joined the strike. The strike was spread via the use of trains and telegraph and soon an area up to fifty miles around the town was affected. The strike was finally ended by the use of the Cheka, using mass arrests and shootings. Unsurprisingly, the local communists called the revolt a “little Kronstadt.” [Aves, Op. Cit., pp. 171–3]

Saratov also saw a mass revolt in March 1921, when a strike by railroad workers over a reduction in food rations spread to the metallurgical plants and other large factories “as workers and non-workers sent representatives to the railroad shops.” They forced the Communists to allow the setting up of a commission to re-examine the activities of all economic organs and the Cheka. During the next two days, “the assemblies held at factories to elect delegates to the commission bitterly denounced the Communists.” The “unrest spilled over into Pokrovska.” The commission of 270 had less than ten Communists and “demanded the freeing of political prisoners, new elections to the soviets and to all labour organisations, independent unions, and freedom of speech, the press, and assembly.” The Communists “resolved to shut down the commission before it could issue a public statement” and set up a Provincial Revolutionary Committee which “introduced martial law both in the city and the garrison” as well as arresting “the ringleaders of the workers’ movement.” The near general strike was broken by a “wave of repression” but “rail-
increased repression” although as “the number of striking factories increased some concessions were introduced.” Military units called in against striking workers “refused to open fire, and they were replaced by the armed communist detachments” which did. “That evening mass protest meetings were held... The following day several factories went on strike” and troops were “disarmed and locked in as a precaution” by the government against possible fraternising. February 23rd saw a 10,000 strong street demonstration and “Moscow was placed under martial law with a 24-hour watch on factories by the communist detachments and trustworthy army units.” The disturbances were accompanied by factory occupations and on the 1st of March the soviet called on workers “not to go on strike.” However, “wide-scale arrests deprived the movement of its leadership.” March 5th saw disturbances at the Bromlei works, “resulting in the now customary arrest of workers. A general meeting at the plant on 25 March called for new elections to the Moscow Soviet. The management dispersed the meeting but the workers called on other plants to support the calls for new elections. As usual, the ringleaders were arrested.” [Sakwa, Op. Cit., pp. 242–3, p. 245 and p. 246]

The events at the Bromlei works were significant in that the march 25th mass meeting passed an anarchist and Left-SR initiated resolution supporting the Kronstadt rebels. The party “responded by having them sacked en masse”. The workers “demonstrated through” their district “and inspired some brief solidarity strikes.” Over 3000 workers joined the strikes and about 1000 of these joined the flying picket (managers at one print shop locked their workers in to stop them joining the protest). While the party was willing to negotiate economic issues, “it had no wish to discuss politics with workers” and so arrested those who initiated the resolution, sacked the rest of the workforce and selectively re-employed them. Two more strikes were conducted “to defend the political activists in their midst” and two mass meetings demanded the release it was openly admitted that hardly a party committee existed which did not encounter problems in enforcing its will even upon individual activists.” [Robert Service, The Bolshevik Party in Revolution 1917–1923, pp. 51–2]

So while Lenin’s ideal model of a disciplined, centralised and top-down party had been expounded since 1902, the operation of the party never matched his desire. As Service notes, “a disciplined hierarchy of command stretching down from the regional committees to party cells” had “never existed in Bolshevik history.” In the heady days of the revolution, when the party was flooded by new members, Bolshevik party life was the exact opposite of that usually considered (by both opponents and supporters of Bolshevism) as its normal mode of operation. “Anarchist attitudes to higher authority,” he argues, “were the rule of the day” and “no Bolshevik leader in his right mind could have contemplated a regular insistence upon rigid standards of hierarchical control and discipline unless he had abandoned all hope of establishing a mass socialist party.” This meant that “in the Russia of 1917 it was the easiest thing in the world for lower party bodies to rebut the demands and pleas by higher authority.” He stresses that “[s]uburb and town committees ... often refused to go along with official policies ... they also ... sometimes took it into their heads to engage in active obstruction.” [Op. Cit., p. 80, p. 62 p. 56 and p. 60]

This worked both ways, of course. Town committees did “snub their nose at lower-echelon viewpoints in the time before the next election. Try as hard as they might, suburb committees and ordinary cells could meanwhile do little to rectify matters beyond telling their own representative on their town committee to speak on their behalf. Or, if this too failed, they could resort to disruptive tactics by criticising it in public and refusing it all collaboration.” [Op. Cit., pp. 52–3]

Even by early 1918, the Bolshevik party bore little resemblance to the “democratic centralist” model desires by Lenin:
“The image of a disciplined hierarchy of party committees was therefore but a thin, artificial veneer which was used by Bolshevik leaders to cover up the cracked surface of the real picture underneath. Cells and suburb committees saw no reason to kow-tow to town committees; nor did town committees feel under compulsion to show any greater respect to their provincial and regional committees than before.” [Op. Cit., p. 74]

It is this insubordination, this local autonomy and action in spite of central orders which explains the success of the Bolsheviks in 1917. Rather than a highly centralised and disciplined body of “professional” revolutionaries, the party saw a “significant change ... within the membership of the party at local level ... From the time of the February revolution requirements for party membership had been all but suspended, and now Bolshevik ranks swelled with impetuous recruits who knew next to nothing about Marxism and who were united by little more than overwhelming impatience for revolutionary action.” [Alexander Rabinowitch, Prelude to Revolution, p. 41]

This mass of new members (many of whom were peasants who had just recently joined the industrial workforce) had a radicalising effect on the party’s policies and structures. As even Leninist commentators argue, it was this influx of members who allowed Lenin to gain support for his radical revision of party aims in April. However, in spite of this radicalisation of the party base, the party machine still was at odds with the desires of the party. As Trotsky acknowledged, the situation “called for resolute confrontatation of the sluggish Party machine with masses and ideas in motion.” He stressed that “the masses were incomparably more revolutionary than the Party, which in turn was more revolutionary than its committeeemen.” Ironically, given the role Trotsky usually gave the party, he admits that “[w]ithout Lenin, no one had known with this massive strike wave, the Bolsheviks did what many ruling elites do: they called it something else. Rather than admit it was a strike, they “usually employed the word volynka, which means only a ‘go-slow’”. [Aves, Op. Cit., p. 3, p. 109, p. 112, pp. 111–2]

Mid-February 1921 saw workers in Moscow striking and “massive city-wide protest spread through Petrograd ... Strikes and demonstrations spread. The regime responded as it had done in the past, with lock-outs, mass arrests, heavy show of force — and concessions.” [Remington, Op. Cit., p. 111] As Paul Avrich recounts, in Petrograd these “street demonstrations were heralded by a rash of protest meetings” workplaces. On the 24th of February, the day after a workplace meeting, the Trubochny factory workforce downed tools and walked out the factory. Additional workers from nearby factories joined in. The crowd of 2,000 was dispersed by armed military cadets. The next day, the Trubochny workers again took to the streets and visited other workplaces, bringing them out on strike too. In the face of a near general strike, three-man Defence Committee was formed. Zinoviev “proclaimed martial law” and “[o]vernight Petrograd became an armed camp.” Strikers were locked out and the “application of military force and the widespread arrests, not to speak of the tireless propaganda waged by the authorities” was “indispensable in restoring order” (as were economic concessions). [Kronstadt 1921, pp. 37–8, p. 39, pp. 46–7 and p. 50]

In Moscow, “industrial unrest ... turned into open confrontation and protest spilled on to the streets”, starting with a “wave of strikes that had its centre in the heart of industrial Moscow.” Strikes were “also spreading outside Moscow city itself into the surrounding provinces” and so “Moscow and Moscow province were put under martial law”. [Aves, Op. Cit., p. 130, p. 138, p. 143 and p. 144] This strike wave started when “[m]eetings in factories and plants gathered and criticised government policies, beginning with supply and developing into general political criticism.” As was typical, the “first response of the civil authorities to the disturbances was
In Petrograd the Aleksandrovskii locomotive building works “had seen strikes in 1918 and 1919” and in August 1920 it again stopped work. The Bolsheviks locked the workers out and placed guards outside it. The Cheka then arrested the SRs elected to the soviet from that workplace as well as about 30 workers. After the arrests, the workers refused to co-operate with elections for new soviet delegates. The “opportunity was taken to carry out a general round-up, and arrests were made” at three other works. The enormous Briansk works “experienced two major strikes in 1920”, and second one saw the introduction of martial law on both the works and the settlement it was situated in. A strike in Tula saw the Bolsheviks declare a “state of siege”, although the repression “did not prevent further unrest and the workers put forward new demands” while, in Moscow, a strike in May by printers resulted in their works “closed and the strikers sent to concentration camps.” [Aves, Op. Cit., p. 41, p. 45, p. 47, pp. 48–9, pp. 53–4 and p. 59]

These expressions of mass protest and collective action continued in 1921, unsurprisingly as the civil war was effectively over in the previous autumn. Even John Rees had to acknowledge the general strike in Russia at the time, stating that the Kronstadt revolt was “preceded by a wave of serious but quickly resolved strikes.” [Op. Cit., p. 61] Significantly, he failed to note that the Kronstadt sailors rebelled in solidarity with those strikes and how it was state repression which “resolved” the strikes. Moreover, he seriously downplays the scale and importance of these strikes, perhaps unsurprisingly as “[b]y the beginning of 1921 a revolutionary situation with workers in the vanguard had emerged in Soviet Russia” with “the simultaneous outbreak of strikes in Petrograd and Moscow and in other industrial regions.” In February and March 1921, “industrial unrest broke out in a nation-wide wave of discontent or volynka. General strikes, or very widespread unrest” hit all but one of the country’s major industrial regions and “workers protest consisted not just of strikes but also of factory occupations, ‘Italian strikes’, demonstrations, mass meetings, the beating up of communists and so on.” Faced

what to make of the unprecedented situation.” [Stalin, vol. 1, p. 301, p. 305 and p. 297]

Which is significant in itself. The Bolshevik party is usually claimed as being the most “revolutionary” that ever existed, yet here is Trotsky admitting that its leading members did not have a clue what to do. He even argued that “[e]very time the Bolshevik leaders had to act without Lenin they fell into error, usually inclining to the Right.” [Op. Cit., p. 299] This negative opinion of the Bolsheviks applied even to the “left Bolsheviks, especially the workers” whom we are informed “tried with all their force to break through this quarantine” created by the Bolshevik leaders policy “of waiting, of accommodation, and of actual retreat before the Compromisers” after the February revolution and before the arrival of Lenin. Trotsky argued that “they did not know how to refute the premise about the bourgeois character of the revolution and the danger of an isolation of the proletariat. They submitted, gritting their teeth, to the directions of their leaders.” [History of the Russian Revolution, vol. 1, p. 273] It seems strange, to say the least, that without one person the whole of the party was reduced to such a level given that the aim of the “revolutionary” party was to develop the political awareness of its members.

Lenin’s arrival, according to Trotsky, allowed the influence of the more radical rank and file to defeat the conservatism of the party machine. By the end of April, Lenin had managed to win over the majority of the party leadership to his position. However, this “April conflict between Lenin and the general staff of the party was not the only one of its kind. Throughout the whole history of Bolshevism ... all the leaders of the party at all the most important moments stood to the right of Lenin.” [Op. Cit., p. 305] As such, if “democratic centralism” had worked as intended, the whole party would have been arguing for incorrect positions the bulk of its existence (assuming, of course, that Lenin was correct most of the time).
For Trotsky, “Lenin exerted influence not so much as an individual but because he embodied the influence of the class on the Party and of the Party on its machine.” Yet, this was the machine which Lenin had forged, which embodied his vision of how a “revolutionary” party should operate and was headed by him. To argue that the party machine was behind the party membership and the membership behind the class shows the bankruptcy of Lenin’s organisational scheme. This “backwardness”, moreover, indicates an independence of the party bureaucracy from the membership and the membership from the masses. As Lenin’s constantly repeated aim was for the party to seize power (based on the dubious assumption that class power would only be expressed, indeed was identical to, party power) this independence held serious dangers, dangers which became apparent once this goal was achieved. This is confirmed when Trotsky asked the question “by what miracle did Lenin manage in a few short weeks to turn the Party’s course into a new channel?” Significantly, he answers as follows: “Lenin’s personal attributes and the objective situation.” [Stalin, vol. 1, p. 299]

No mention is made of the democratic features of the party organisation, which suggests that without Lenin the rank and file party members would not have been able to shift the weight of the party machine in their favour. Trotsky seemed close to admitting this:

“As often happens, a sharp cleavage developed between the classes in motion and the interests of the party machines. Even the Bolshevik Party cadres, who enjoyed the benefit of exceptional revolutionary training, were definitely inclined to disregard the masses and to identify their own special interests and the interests of the machine on the very day after the monarchy was overthrown.” [Op. Cit., vol. 1, p. 298]

Thus the party machine, which embodied the principles of “democratic centralism” proved less than able to the task as-

at this time ... there were 109,100 workers” in the province. Overall, “the geographical extent of the February-March strike wave is impressive” and the “harsh discipline that went with labour militarisation led to an increase in industrial unrest in 1920.” [Aves, Op. Cit., p. 69, p. 70 and p. 80]

Saratov, for example, saw a wave of factory occupations break out in June and mill workers went out in July while in August, strikes and walkouts occurred in its mills and other factories and these “prompted a spate of arrests and repression.” In September railroad workers went out on strike, with arrests making “the situation worse, forcing the administration to accept the workers’ demands.” [Raleigh, Op. Cit., p. 375] In January 1920, a strike followed a mass meeting at a railway repair shop in Moscow. Attempts to spread were foiled by arrests. The workshop was closed, depriving workers of their rations and 103 workers of the 1,600 employed were imprisoned. “In late March 1920 there were strikes in some factories” in Moscow and “[a]t the height of the Polish war the protests and strikes, usually provoked by economic issues but not restricted to them, became particularly frequent ... The assault on non-Bolshevik trade unionism launched at this time was probably associated with the wave of unrest since there was a clear danger that they would provide a focus for opposition.” [Sakwa, Op. Cit., p. 95] The “largest strike in Moscow in the summer of 1920” was by tram workers over the equalisation of rations. It began on August 12th, when one tram depot went on strike, quickly followed by others while workers “in other industries joined in.” The tram workers “stayed out a further two days before being driven back by arrests and threats of mass sackings.” In the textile manufacturing towns around Moscow “there were large-scale strikes” in November 1920, with 1000 workers striking for four days in one district and a strike of 500 mill workers saw 3,000 workers from another mill joining in. [Simon Pirani, The Russian Revolution in Retreat, 1920–24, p. 32 and p. 43]
1919” local Menshevik party activists had been arrested while Petrograd saw “violent strikes” at around the same time. [Jonathan Aves, Workers Against Lenin, p. 19 and p. 23] As Vladimir Brovkin argues in his account of the strikes and protests of 1919:

“Data on one strike in one city may be dismissed as incidental. When, however, evidence is available from various sources on simultaneous independent strikes in different cities an overall picture begins to emerge. All strikes developed along a similar timetable: February, brewing discontent; March and April, peak of strikes: May, slackening in strikes; and June and July, a new wave of strikes ...

“Workers’ unrest took place in Russia’s biggest and most important industrial centres ... Strikes affected the largest industries, primarily those involving metal: metallurgical, locomotive, and armaments plants ... In some cities ... textile and other workers were active protesters as well. In at least five cities ... the protests resembled general strikes.” [“Workers’ Unrest and the Bolsheviks’ Response in 1919”, pp. 350–373, Slavic Review, Vol. 49, No. 3, p. 370]

These strikes raised both economic and political demands, such as “free and fair elections to the soviets.” Unsurprisingly, in all known cases the Bolsheviks’ “initial response to strikes was to ban public meetings and rallies” as well as “occup[y]ing the striking plant and dismiss[ing] the strikers en masse.” They also “arrested strikers” and executed some. [Op. Cit., p. 371 and p. 372]

1920 saw similar waves of strikes and protests. In fact, strike action “remained endemic in the first nine months of 1920.” Soviet figures report a total of 146 strikes, involving 135,442 workers for the 26 provinces covered. In Petrograd province, there were 73 strikes with 85,642 participants. “This is a high figure indeed, since signed it in practice. Without Lenin, it is doubtful that the party membership would have overcome the party machine:

“Lenin was strong not only because he understood the laws of the class struggle but also because his ear was faultlessly attuned to the stirrings of the masses in motion. He represented not so much the Party machine as the vanguard of the proletariat. He was definitely convinced that thousands from among those workers who had borne the brunt of supporting the underground Party would now support him. The masses at the moment were more revolutionary than the Party, and the Party more revolutionary than its machine. As early as March the actual attitude of the workers and soldiers had in many cases become stormily apparent, and it was widely at variance with the instructions issued by all the parties, including the Bolsheviks.” [Op. Cit., p. 299]

Little wonder the local party groupings ignored the party machine, practising autonomy and initiative in the face of a party machine inclined to conservatism, inertia, bureaucracy and remoteness. This conflict between the party machine and the principles it was based on and the needs of the revolution and party membership was expressed continually throughout 1917:

“In short, the success of the revolution called for action against the ‘highest circles of the party,’ who, from February to October, utterly failed to play the revolutionary role they ought to have taken in theory. The masses themselves made the revolution, with or even against the party — this much at least was clear to Trotsky the historian. But far from drawing the correct conclusion, Trotsky the theorist continued to argue that the masses are incapable of making a revolution without a leader.” [Daniel & Gabriel Cohn-Bendit, Op. Cit., p. 188]
Looking at the development of the revolution from April onwards, we are struck by the sluggishness of the party hierarchy. At every revolutionary upsurge, the party simply was not to the task of responding to the needs of masses and the local party groupings closest to them. The can be seen in June, July and October itself. At each turn, the rank and file groupings or Lenin had to constantly violate the principles of their own party in order to be effective.

For example, when discussing the cancellation by the central committee of a demonstration planned for June 10th by the Petrograd Bolsheviks, the unresponsiveness of the party hierarchy can be seen. The “speeches by Lenin and Zinoviev [justifying their actions] by no means satisfied the Petersburg Committee. If anything, it appears that their explanations served to strengthen the feeling that at best the party leadership had acted irresponsibly and incompetently and was seriously out of touch with reality.” Indeed, many “blamed the Central Committee for taking so long to respond to Military Organisation appeals for a demonstration.” During the discussions in late June, 1917, on whether to take direct action against the Provisional Government there was a “wide gulf” between lower organs evaluations of the current situation and that of the Central Committee. [Rabinowitch, Op. Cit., p. 88, p. 92 and p. 129]

Indeed, among the delegates from the Bolshevik military groups, only Lashevich (an old Bolshevik) spoke in favour of the Central Committee position and he noted that “frequently it is impossible to make out where the Bolshevik ends and the Anarchist begins.” [quoted by Rabinowitch, Op. Cit., p. 129]

In the July days, the breach between the local party groups and the central committee increased. This spontaneous uprising was opposed to by the Bolshevik leadership, in spite of the leading role of their own militants (along with anarchists) in fermenting it. While calling on their own activists to restrain the masses, the party leadership was ignored by the rank and file membership who played an active role in the event. Sickened by being asked to play the role of “fireman”, the party militants rejected party discipline party was now advocating party dictatorship. Thus, we find Victor Serge in the 1930s noting that “the degeneration of Bolshevism” was apparent by that time, “since at the start of 1919 I was horrified to read an article by Zinoviev ... on the monopoly of the party in power.” [The Serge-Trotsky Papers, p. 188] It should be noted, though, that Serge kept his horror well hidden throughout this period — and well into the 1930s (see section H.1.2 for his public support for this monopoly).

As noted above, this cycle of resistance and repression was not limited to Petrograd. In July 1918, a leading Bolshevik insisted “that server measures were needed to deal with strikes” in Petrograd while in other cities “harsher forms of repression” were used. For example, in Tula, in June 1918, the regime declared “martial law and arrested the protesters. Strikes followed and were suppressed by violence”. In Sormovo, 5,000 workers went on strike after a Menshevik-SR paper was closed. Violence was “used to break the strike.” [Remington, Op. Cit., p. 105]

Similar waves of protests and strikes as those in 1918 took place the following year with 1919 seeing a “new outbreak of strikes in March”, with the “pattern of repression ... repeated.” One strike saw “closing of the factory, the firing of a number of workers, and the supervised re-election of its factory committee.” In Astrakhan, a mass meeting of 10,000 workers was fired on by Red Army troops, killing 2,000 (another 2,000 were taken prisoner and subsequently executed). [Remington, Op. Cit., p. 109] Moscow, at the end of June, saw a “committee of defence (KOM) [being] formed to deal with the rising tide of disturbances.” The KOM “concentrated emergency power in its hands, overriding the Moscow Soviet, and demanding obedience from the population. The disturbances died down under the pressure of repression.” [Sakwa, Op. Cit., pp. 94–5] In the Volga region, delegates to a conference of railroad workers “protested the Cheka’s arrest of union members, which the delegates insisted further disrupted transport. It certainly curbed the number of strikes.” [Raleigh, Op. Cit., p. 371] In Tula “after strikes in the spring of
and armed patrols with authority to prevent work stoppages were formed and put on twenty-four hour duty at key points around the city.” Perhaps unsurprisingly, given “the brutal suppression of the EAD’s general strike”, it was not successful. [Rabinowitch, Op. Cit., p. 254 and p. 259]

Thus “[b]y the early summer of 1918” there were “widespread anti-Bolshevik protests. Armed clashes occurred in the factory districts of Petrograd and other industrial centres.” [William Rosenberg, Op. Cit., p. 107] It should also be noted that at the end of September of that year, there was a revolt by Baltic Fleet sailors demanding (as they did again in 1921) a “return to government by liberated, democratic soviets — that is, 1917-type soviets.” As after the more famous 1921 revolt, the Left-SR controlled Kronstadt soviet had been disbanded and replaced by a Bolshevik revolutionary committee in July 1918, during the repression after the Left-SR assassination of the German ambassador. [Rabinowitch, Op. Cit., p. 352 and p. 302]

As well as state repression, the politics of the opposition played a role in its defeat. Before October 1918, both the Mensheviks and SRs were in favour of the Constituent Assembly and Dumas as the main organs of power, with the soviets playing a minor role. This allowed the Bolsheviks to portray themselves as defenders of “soviet power” (a position which still held popular support). Understandably, many workers were unhappy to support an opposition which aimed to replace the soviets with typically bourgeois institutions. Many also considered the Bolshevik government as a “soviet power” and so, to some degree, their own regime. With the civil war starting, many working class people would also have been uneasy in protesting against a regime which proclaimed its soviet and socialist credentials. After October 1918, the Mensheviks supported the idea of (a democratically elected) soviet power, joining the Left-SRs (who were now effectively illegal after their revolt of July — see section H.6.1). However, by then it was far too late as Bolshevik ideology had adjusted to Bolshevik practice and the in order to maintain their credibility with the working class. Rank and file activists, pointing to the snowballing of the movement, showed clear dissatisfaction with the Central Committee. One argued that it “was not aware of the latest developments when it made its decision to oppose the movement into the streets.” Ultimately, the Central Committee appeal “for restraining the masses ... was removed from” Pravda “and so the party’s indecision was reflected by a large blank space on page one.” [Rabinowitch, Op. Cit., p. 150, p. 159 and p. 175] Ultimately, the indecisive nature of the leadership can be explained by the fact it did not think it could seize state power for itself (“the state of popular consciousness ... made impossible the seizure of power by the Bolsheviks in July.” [Trotsky, History of the Russian Revolution, vol. 2, p. 81]).

The indecision of the party hierarchy did have an effect, of course. While the anarchists at Kronstadt looked at the demonstration as the start of an uprising, the Bolsheviks there were “waving indecisively in the middle” between them and the Left-Social Revolutionaries who saw it as a means of applying pressure on the government. This was because they were “hamstrung by the indecision of the party Central Committee.” [Rabinowitch, Op. Cit., p. 187] Little wonder so many Bolshevik party organisations developed and protected their own autonomy and ability to act!

Significantly, one of the main Bolshevik groupings which helped organise and support the July uprising, the Military Organisation, started their own paper after the Central Committee had decreed after the failed revolt that neither it, nor the Petersburg Committee, should be allowed to have one. It “angrily insisted on what it considered its just prerogatives” and in “no uncertain terms it affirmed its right to publish an independent newspaper and formally protested what is referred to as 'a system of persecution and repression of an extremely peculiar character which had begun with the election of the new Central Committee.’” [Rabinowitch, Op. Cit., p. 227] The Central Committee backed down, undoubtedly due to the fact it could not enforce its decision.
This was but one example of what the Cohn-Bendit brothers pointed to, namely that “five months after the Revolution and three months before the October uprising, the masses were still governing themselves, and the Bolshevik vanguard simply had to toe the line.” [Op. Cit., p. 186] Within that vanguard, the central committee proved to be out of touch with the rank and file, who ignored it rather than break with their fellow workers.

Even by October, the party machine still lagged behind the needs of the revolution. In fact, Lenin could only impose his view by going over the head of the Central Committee. According to Trotsky’s account, “this time he [wa]s not satisfied with furious criticism” of the “ruinous Fabianism of the Petrograd leadership” and “by way of protest he resign[ed] from the Central Committee.” [History of the Russian Revolution, vol. 3, p. 131] Trotsky quoted Lenin as follows:

“I am compelled to request permission to withdraw from the Central Committee, which I hereby do, and leave myself freedom of agitation in the lower ranks of the party and at the party congress.” [quoted by Trotsky, Op. Cit., p. 131]

Thus the October revolution was precipitated by a blatant violation of the principles Lenin spent his life advocating. Indeed, if someone else other than Lenin had done this we are sure that Lenin, and his numerous followers, would have dismissed it as the action of a “petty-bourgeois intellectual” who cannot handle party “discipline.” This is itself is significant, as is the fact that he decided to appeal to the “lower ranks” of the party — rather than being “democratic” the party machine effectively blocked communication and control from the bottom-up. Looking to the more radical party membership, he “could only impose his view by going over the head of his Central Committee.” [Daniel and Gabriel Cohn-Bendit, Op. Cit., p. 187] He made sure to send his letter of protest to “the Petrograd and Moscow committees” and also made sure that “copies fell

...Anarchists should be not too surprised that the turning of popular organisations into parts of a state soon resulted in their growing isolation from the masses. The state, with its centralised structures, is simply not designed for mass participation — and this does doubly for the highly centralised Leninist state.

These protests and repression continued after the start of the civil war. “At the end of May and beginning of June, a wave of strikes to protest the lack of bread swept Nivskii district factories” and “strikes followed by bloody clashes between workers and Soviet authorities had erupted in scattered parts of central Russia.” On June 21, a general meeting of Obukhov workers “seized control of the plant” and the next day the assembled workers “resolved to demand that the EAD declare political strikes … to protest the political repression of workers.” Orders were issued by the authorities “to shut down Obukhov plant” and “the neighbourhood surrounding the plant was placed under martial law.” [Rabinowitch, Op. Cit., p. 231 and pp. 246–7] However “workers were not so readily pacified. In scores of additional factories and shops protests mounted and rapidly spread along the railways.” [Rosenberg, Op. Cit., pp. 126–7]

Faced with this mounting pressure of spontaneous strikes, the EAD declared a general for the 2nd of July. The Bolshevik authorities acted quickly: “Any sign of sympathy for the strike was declared a criminal act. More arrests were made. In Moscow, Bolsheviks raided the Aleksandrovsk railroad shops, not without bloodshed. Dissidence spread.” On July 1st, “machine guns were set up at main points throughout the Petrograd and Moscow railroad junctions, and elsewhere in both cities as well. Controls were tightened in factories. Meetings were forcefully dispersed.” [Rosenberg, Op. Cit., p. 127] Factories were warned “that if they participated in the general strike they would face immediate shutdown, and individual strikes were threatened with fines or loss of work. Agitators and members of strike committees were subject to immediate arrest.” Opposition printing presses “were sealed, the offices of hostile trade unions were raided, martial law on lines in the Petrograd rail hub was declared,
This was no isolated event, as “violent incidents against hungry workers and their family demanding bread occurred with increasing regularity.” [Alexander Rabinowitch, *The Bolsheviks in Power*, pp. 229–30] The shooting at Kolpino “triggered a massive wave of indignation ... Work temporarily stopped at a number of plants.” In Moscow, Tula, Kolomna, Nizhnii-Novoprod, Rybinsk, Orel, Tver’ and elsewhere “workers gathered to issue new protests.” In Petrograd, “textile workers went on strike for increased food rations and a wave of demonstrations spread in response to still more Bolshevik arrests.” This movement was the “first major wave of labour protest” against the regime, with “protests against some form of Bolshevik repression” being common. [William Rosenberg, *Russian Labor and Bolshevik Power*, pp. 123–4]

This general workers’ opposition generated the Menshevik inspired, but independent, Extraordinary Assembly of Delegates (EAD). “The emergence of the EAD”, Rabinowitch notes, “was also stimulated by the widespread view that trade unions, factory committees, and soviets ... were no longer representative, democratically run working-class institutions; instead they had been transformed into arbitrary, bureaucratic government agencies. There was ample reason for this concern.” To counter the EAD, the Bolsheviks organised non-party conferences which, in itself, shows that the soviets had become as distant from the masses as the opposition argued. District soviets “were deeply concerned about their increasing isolation ... At the end of March ... they resolved to convene successive nonparty workers’ conferences ... in part to undercut the EAD by strengthening ties between district soviets and workers.” This was done amidst “unmistakable signs of the widening rift between Bolshevik-dominated political institutions and ordinary factory workers.” The EAD, argues Rabinowitch, was an expression of the “growing disenchantment of Petrograd workers with economic conditions and the evolving structure and operation of Soviet political institutions”. [Op. Cit., p. 224, p. 232 and p. 231]

Into the hands of the more reliable party workers of the district locals.” By early October (and “over the heads of the Central Committee”) he wrote “directly to the Petrograd and Moscow committees” calling for insurrection. He also “appealed to a Petrograd party conference to speak a firm word in favour of insurrection.” [Trotsky, *Op. Cit.*, p. 131 and p. 132]

In October, Lenin had to fight what he called “a wavering” in the “upper circles of the party” which lead to a “sort of dread of the struggle for power, an inclination to replace this struggle with resolutions protests, and conferences.” [quoted by Trotsky, *Op. Cit.*, p. 132] For Trotsky, this represented “almost a direct pitting of the party against the Central Committee,” required because “it was a question of the fate of the revolution” and so “all other considerations fell away.” On October 8th, when Lenin addressed the Bolshevik delegates of the forthcoming Northern Congress of Soviets on this subject, he did so “personally” as there “was no party decision” and the “higher institutions of the party had not yet expressed themselves.” [Trotsky, *Op. Cit.*, pp. 132–3 and p. 133] Ultimately, the Central Committee came round to Lenin’s position but they did so under pressure of means at odds with the principles of the party.

This divergence between the imagine and reality of the Bolsheviks explains their success. If the party had applied or had remained true to the principles of “democratic centralism” it is doubtful that it would have played an important role in the movement. As Alexander Rabinowitch argues, Bolshevik organisational unity and discipline is “vastly exaggerated” and, in fact, Bolshevik success in 1917 was down to “the party’s internally relatively democratic, tolerant, and decentralised structure and method of operation, as well as its essentially open and mass character — in striking contrast to the traditional Leninist model.” In 1917, he goes on, “subordinate party bodies like the Petersburg Committee and the Military Organisation were permitted considerable independence and initiative ... Most importantly, these lower bodies were able to tailor their tactics and appeals to suit their own particular constituencies amid
rapidly changing conditions. Vast numbers of new members were re-
cruited into the party ... The newcomers included tens of thousands of
workers and soldiers ... who knew little, if anything, about Marxism
and cared nothing about party discipline.” For example, while the
slogan “All Power to the Soviets” was “officially withdrawn by the
Sixth [Party] Congress in late July, this change did not take hold at
the local level.” [The Bolsheviks Come to Power, p. 311, p. 312
and p. 313]

It is no exaggeration to argue that if any member of a current
vanguard party acted as the Bolshevik rank and file did in 1917,
they would quickly be expelled (this probably explains why no
such party has been remotely successful since). However, this fer-
ment from below was quickly undermined within the party with
the start of the Civil War. It is from this period when “democratic
centralism” was actually applied within the party and clarified as
an organisational principle:

“It was quite a turnabout since the anarchic days before
the Civil War. The Central Committee had always advo-
cated the virtues of obedience and co-operation; but the
rank-and-filers of 1917 had cared little about such en-
treaties as they did about appeals made by other higher
authorities. The wartime emergency now supplied an op-
portunity to expatiate on this theme at will.” [Service,
Op. Cit., p. 91]

Service stresses that “it appears quite remarkable how quickly the
Bolsheviks, who for years had talked idly about a strict hierarchy of
command inside the party, at last began to put ideas into practice.”
[Op. Cit., p. 96]

In other words, the conversion of the Bolshevik party into a fully
fledged “democratic centralist” party occurred during the degener-
ation of the Revolution. This was both a consequence of the rising
authoritarianism within the party, state and society as well as one
awareness of working class protest against the Bolsheviks, it will
be necessary to present substantial evidence of it.

This process of collective action by workers and Bolshevik re-
pression started before the Civil War began, continued throughout
and after it. For example, “[t]hroughout the civil war there was an
undercurrent of labour militancy in Moscow ... both the introduction
and the phasing out of war communism were marked by particularly
active periods of labour unrest.” In the Moscow area, while it is “im-
possible to say what proportion of workers were involved in the vari-
ous disturbances,” following the lull after the defeat of the protest
movement in mid-1918 “each wave of unrest was more powerful than
the last, culminating in the mass movement from late 1920.” [Richard
Sakwa, Soviet Communists in Power, p. 94 and p. 93] This was
the case across Russia, with “periodic swings in the workers’ political
temper. When Soviet rule stood in peril ... [this] spared the regime the
defection of its proletarian base. During lulls in the fighting, strikes
and demonstrations broke out.” [Thomas F. Remington, Building
Socialism in Bolshevik Russia, p. 101] Workers’ resistance and
protests against the Bolsheviks shows that not only that a “work-
ers’ state” is a contradiction in terms but also that there was a social
base for possible alternatives to Leninism.

The early months of Bolshevik rule were marked by “worker
protests, which then precipitated violent represions against hostile
workers. Such treatment further intensified the disenchantedness of
significant segments of Petrograd labour with Bolshevik-dominated
Soviet rule.” [Alexander Rabinowitch, Early Disenchantment
with Bolshevik Rule, p. 37] The first major act of state repression
was an attack on a march in Petrograd in support of the Con-
stituent Assembly when it opened in January 1918. Early May saw
“the shooting of protesting housewives and workers in the suburb of
Kolpino”, the “arbitrary arrest and abuse of workers” in Sestroretsk,
the “closure of newspapers and arrests of individuals who protested
the Kolpino and Sestroretsk events” and “the resumption of labour
unrest and conflict with authorities in other Petrograd factories.”
justify his regime as well as explaining both its authoritarianism and the rise of Stalinism.

It does, of course, contain an element of truth. The numbers of industrial workers did decrease dramatically between 1918 and 1921, particularly in Petrograd and Moscow (although the drop in both cities was exceptional, with most towns seeing much smaller reductions). As one historian summarises, the “social turmoil at this time undeniably reduced the size of Russia’s working class ... yet a substantial core of urban workers remained in the factories, and their attitudes towards the Bolsheviks were indeed transformed.” [Donald J. Raleigh, *Experiencing Russia’s Civil War*, p. 348] This core was those with the least ties with the countryside — the genuine industrial worker.

Nor can it be maintained that the Russian working class was incapable of collective action during the civil war. Throughout that period, as well as before and after, the Russian workers proved themselves quite capable of taking collective action — against the Bolshevik state. Simply put, an “atomised, individualised mass” does not need extensive state repression to control it. So while the working class was “a fraction of its former size” it was able “to exercise the collective power it had done in 1917.” Significantly, rather than decrease over the civil war period, the mass protests grew in militancy. By 1921 these protests and strikes were threatening the very existence of the Bolshevik dictatorship, forcing it to abandon key aspects of its economic policies.

Which shows a key flaw in the standard Leninist account — the Russian working class, while undoubtedly reduced in size and subject to extreme economic problems, was still able to organise, strike and protest. This awkward fact has been systematically downplayed, when not ignored, in Leninist accounts of this period. As in any class society, the history of the oppressed is ignored in favour of the resolutions and decisions of the enlightened few at the top of the social pyramid. Given the relative lack of

of its causes so it is quite ironic that the model used by modern day followers of Lenin is that of the party during the decline of the revolution, not its peak. This is not surprising. Once in power, the Bolshevik party imposed a state capitalist regime onto the Russian people. Can it be surprising that the party structure which it developed to aid this process was also based on bourgeois attitudes and organisation? The party model advocated by Lenin may not have been very effective during a revolution but it was exceedingly effective at promoting hierarchy and authority in the post-revolutionary regime. It simply replaced the old ruling elite with another, made up of members of the radical intelligentsia and the odd ex-worker or ex-peasant.

This was due to the hierarchical and top-down nature of the party Lenin had created. While the party base was largely working class, the leadership was not. Full-time revolutionaries, they were either middle-class intellectuals or (occasionally) ex-workers and (even rarer) ex-peasants who had left their class to become part of the party machine. Even the delegates at the party congresses did not truly reflect class basis of the party membership. For example, the number of delegates was still dominated by white-collar or others (59.1% to 40.9%) at the sixth party congress at the end of July 1917. [Cliff, *Lenin*, vol. 2, p. 160] So while the party gathered more working class members in 1917, it cannot be said that this was reflected in the party leadership which remained dominated by non-working class elements. Rather than being a genuine working class organisation, the Bolshevik party was a hierarchical group headed by non-working class elements whose working class base could not effectively control them even during the revolution in 1917. It was only effective because these newly joined and radicalised working class members ignored their own party structure and its defining ideology.

After the revolution, the Bolsheviks saw their membership start to decrease. Significantly, “the decline in numbers which occurred from early 1918 onwards” started happening “contrary to what is
usually assumed, some months before the Central Committee’s decree in midsummer that the party should be purged of its ‘undesirable’ elements.” These lost members reflected two things. Firstly, the general decline in the size of the industrial working class. This meant that the radicalised new elements from the countryside which had flocked to the Bolsheviks in 1917 returned home. Secondly, the loss of popular support due to the realities of the Bolshevik regime. This can be seen from the fact that while the Bolsheviks were losing members, the Left SRS almost doubled in size to 100,000 (the Mensheviks claimed to have a similar number). Rather than non-proletarians leaving, “[i]t is more probable by far that it was industrial workers who were leaving in droves. After all, it would have been strange if the growing unpopularity of Sovnarkom in factory milieu had been confined exclusively to non-Bolsheviks.” Unsurprisingly, given its position in power, “[a]s the proportion of working-class members declined, so that of entrants from the middle-class rose; the steady drift towards a party in which industrial workers no longer numerically predominated was under way.” By late 1918 membership started to increase again but “[m]ost newcomers were not of working-class origin ... the proportion of Bolsheviks of working-class origin fell from 57% per cent at the year’s beginning to 48 per cent at the end.” It should be noted that it was not specified how many were classed as having working-class origin were still employed in working-class jobs. [Robert Service, Op. Cit., p. 70, pp. 70–1 and p. 90] A new ruling elite was thus born, thanks to the way vanguard parties are structured and the application of vanguardist principles which had previously been ignored.

In summary, the experience of the Russian Revolution does not, in fact, show the validity of the “vanguard” model. The Bolshevik party in 1917 played a leading role in the revolution only insofar as its members violated its own organisational principles (Lenin included). Faced with a real revolution and an influx of more radical new members, the party had to practice anarchist ideas of autonomy, local initiative and the ignoring of central orders which had

### H.6.3 Were the Russian workers “declassed” and “atomised”?

A standard Leninist explanation for the dictatorship of the Bolshevik party (and subsequent rise of Stalinism) is based on the “atomisation” or “declassing” of the proletariat. Leninist John Rees summarised this argument:

“The civil war had reduced industry to rubble. The working class base of the workers’ state, mobilised time and again to defeat the Whites, the rock on which Bolshevik power stood, had disintegrated. The Bolsheviks survived three years of civil war and wars in intervention, but only at the cost of reducing the working class to an atomised, individualised mass, a fraction of its former size, and no longer able to exercise the collective power that it had done in 1917 ... The bureaucracy of the workers’ state was left suspended in mid-air, its class base eroded and demoralised. Such conditions could not help but have an effect on the machinery of the state and organisation of the Bolshevik Party.” [“In Defence of October,” pp. 3–82, International Socialism, no. 52, p. 65]

It should be noted that this perspective originated in Lenin’s arguments that the Russian proletariat had become “declassed.” In 1921 it was the case that the proletariat, “owning to the war and to the desperate poverty and ruin, has become declassed, i.e. dislodged from its class groove, and had ceased to exist as proletariat ... the proletariat has disappeared.” [Collected Works, vol. 33, p. 66] However, unlike his later-day followers, Lenin was sure that while it “would be absurd and ridiculous to deny that the fact that the proletariat is declassed is a handicap” it could still “fulfil its task of winning and holding state power.” [Op. Cit., vol. 32, p. 412] Since Lenin, this argument has been utilised repeatedly by Leninists to
according to its real social position. The real social situation of the Party is that of a directorial organ, and its point of view toward this society henceforth is not necessarily the same as the one this society has toward itself.” [Political and Social Writings, vol. 3, p. 97]

Ultimately, the Bolshevik’s acted as if they were trying to prove Bakunin’s critique of Marxism was right (see section H.1.1). Implementing a dictatorship of the proletariat in a country where the majority were not proletarians failed while, for the proletariat, it quickly became a dictatorship over the proletariat by the party (and in practice, a few party leaders and justified by the privileged access they had to socialist ideology). Moreover, centralisation proved to be as disempowering and inefficient as Bakunin argued.

Sadly, far too many Marxists seem keen on repeating rather than learning from history while, at the same time, ignoring the awkward fact that anarchism’s predictions were confirmed by the Bolshevik experience. It is not hard to conclude that another form of socialism was essential for the Russian revolution to have any chance of success. A decentralised socialism based on workers running their workplaces and the peasants controlling the land was not only possible but was being implemented by the people themselves. For the Bolsheviks, only a centralised planned economy was true socialism and, as a result, fought this alternative socialism and replaced it with a system reflecting that perspective. Yet socialism needs the mass participation of all in order to be created. Centralisation, by its very nature, limits that participation (which is precisely why ruling classes have always centralised power into states). As Russian Anarchist Voline argued, state power “seeks more or less to take in its hands the reins of social life. It predisposes the masses to passivity, and all spirit of initiative is stifled by the very existence of power” and so under state socialism the “tremendous new creative forces which are latent in the masses thus remain unused.” [The Unknown Revolution, p. 250] This cannot help have a negative impact on the development of the revolution and, as anarchists had long feared and predicted, it did.

no bearing to reality on the ground. When the party did try to apply the top-down and hierarchical principles of “democratic centralism” it failed to adjust to the needs of the moment. Moreover, when these principles were finally applied they helped ensure the degeneration of the revolution. This was to be expected, given the nature of vanguardism and the Bolshevik vision of socialism.
H.6 Why did the Russian Revolution fail?

The greatest myth of Marxism must surely be the idea that the Russian Revolution failed solely due to the impact of objective factors. While the date Leninists consider the revolution to have become beyond reform varies (over time it has moved backwards towards 1917 as the authoritarianism under Lenin and Trotsky has become better known), the actual reasons are common. For Leninists, the failure of the revolution was the product of such things as civil war, foreign intervention, economic collapse and the isolation and backwardness of Russia and not Bolshevik ideology. Bolshevik authoritarianism, then, was forced upon the party by difficult objective circumstances. It follows that there are no fundamental problems with Leninism and so it is a case of simply applying it again, hopefully in more fortuitous circumstances.

Anarchists are not impressed by this argument and we will show why by refuting common Leninist explanations for the failure of the revolution. For anarchists, Bolshevik ideology played its part, creating social structures (a new state and centralised economic organisations) which not only disempowered the masses but also made the objective circumstances being faced much worse. Moreover, we argue, vanguardism could not help turn the rebels of 1917 into the ruling elite of 1918. We explore these arguments and the evidence for them in this section.

For those who argue that the civil war provoked Bolshevik policies, the awkward fact is that many of the features of war communism, such as the imposition of one-man management and centralised state capitalist policies, have been implemented much earlier but Bolshevik ignorance and disdain for the peasantry combined with a false belief that centralised state control was more efficient and more socialist ensured that this option was unlikely to be pursued, particularly given the collapse of industrial production. Bolshevik state capitalist policies helped deepen.

The pre-revolution Bolshevik vision of a socialist system was fundamentally centralised and, consequently, top-down. This was what was implemented post-October, with disastrous results. At each turning point, the Bolsheviks tended to implement policies which reflected their prejudices in favour of centralism, nationalisation and party power. Unsurprisingly, this also undermined the genuine socialist tendencies which existed at the time and so the Bolshevik vision of socialism and democracy played a key role in the failure of the revolution. Therefore, the Leninist idea that politics of the Bolsheviks had no influence on the outcome of the revolution, that their policies during the revolution were a product purely of objective forces, is unconvincing. This is enforced by the awkward fact that the Bolshevik leaders “justified what they were doing in theoretical terms, e.g. in whole books by Bukharin and Trotsky.” [Pirani, *The Russian Revolution in Retreat, 1920–24*, p. 9]

Remember, we are talking about the ideology of a ruling party and so it is more than just ideas for after the seizure of power, they became a part of the real social situation within Russia. Individually, party members assumed leadership posts in all spheres of social life and started to make decisions influenced by that ideology and its prejudices in favour of centralisation, the privileged role of the party, the top-down nature of decision making, the notion that socialism built upon state capitalism, amongst others. Then there is the hierarchical position which the party leaders found themselves. “If it is true that people’s real social existence determines their consciousness,” argued Cornelius Castoriadis, “it is from that moment illusory to expect the Bolshevik party to act in any other fashion than...”
In the face of repression (up to and including torture and the destruction of whole villages), the peasantry responded by both cutting back on the amount of grain planted (something compounded by the state often taking peasant reserves for next season) and rising in insurrection. Unsurprisingly, opposition groups called for free trade in an attempt to both feed the cities and stop the alienation of the peasantry from the revolution. The Bolsheviks denounced the call, before being forced to accept it in 1921 due to mass pressure from below. Three years of bad policies had made a bad situation worse. Moreover, if the Bolsheviks had not ignored and alienated the Left-SRs, gerrymandered the Fifth All-Russian Congress of Soviets and pushed them into revolt then their links with the countryside would not have been so weak and sensible policies which reflected the reality of village life may have been implemented.

Nor did it help that the Bolsheviks undermined Russia’s extensive network of consumer co-operatives because they were associated with the moderate socialists. It should also be noted that the peasants (or “kulaks”) were blamed for food shortages when problems on the transport network or general bureaucratic mismanagement was the real reason. That there is “is little evidence to support the Leninist view” that kulaks were behind the peasant resistance and revolts resulting from the Bolshevik food requisition policies should go without saying. [Figes, Op. Cit., p. 155]

Given all this, it is not hard to conclude that alternatives existed to Bolshevik policies — particularly as even the Bolsheviks had to admit in 1919 their decisions of the previous year were wrong! The New Economic Policy (NEP) was introduced in 1921 (under immense popular pressure) in conditions even worse than those in 1918, for example. Since NEP allowed wage labour, it was a step backwards from the ideas of the peasantry itself, peasant based parties like the SRs and Left-SRs as well as such rebels as the Kronstadt sailors. A more socialistic policy, recognising that peasants exchanging the product of their labour was not capitalism, could
was one factor predisposing communists towards applying military methods” to the economy in early 1920, “ideological considerations were also important.” [Jonathan Aves, Workers Against Lenin, p. 2, p. 17, p. 15, p. 30, p. 17 and p. 11]

So it seems incredulous for Leninist John Rees to assert, for example, that “[w]ith the civil war came the need for stricter labour discipline and for ... ‘one man management’. Both these processes developed lock step with the war.” [“In Defence of October,” pp. 3–82, International Socialism, no. 52, p. 43] As we discuss in the next section, Lenin was advocating both of these before the outbreak of civil war in May 1918 and after it was effectively over. Indeed he explicitly, both before and after the civil war, stressed that these policies were being implemented because the lack of fighting meant that the Bolsheviks could turn their full attention to building socialism. How these facts can be reconciled with claims of policies being in “lock step” with the civil war is hard to fathom.

Part of the problem is the rampant confusion within Leninist circles as to when the practices condemned as Stalinism actually started. For example, Chris Harman (of the UK’s SWP) in his summary of the rise Stalinism asserted that after “Lenin’s illness and subsequent death” the “principles of October were abandoned one by one.” Yet the practice of, and ideological commitment to, party dictatorship, one-man management in industry, banning opposition groups/parties (as well as factions within the Communist Party), censorship, state repression of strikes and protests, piece-work, Taylorism, the end of independent trade unions and a host of other crimes against socialism were all implemented under Lenin and normal practice at the time of his death. In other words, the “principles of October” were abandoned under, and by, Lenin. Which, incidentally, explains why, Trotsky “continued to his death to harbour the illusion that somehow, despite the lack of workers’ democracy, Russia was a ‘workers’ state.” [Bureaucracy and Revolution in Eastern Europe, p. 14 and p. 20] Simply put, there had been no workers’ democracy when Trotsky held state power and did not become a major problem until the beginning of 1919, and that during the autumn the peasants, in general, were ‘wildly enthusiastic to sell as much grain as possible’ to the government.” This changed when the state reduced its fixed prices by 25% and “it became apparent that the new government would be unable to pay for grain procurements in industrial goods.” [Orlando Figes, Peasant Russia, Civil War, p. 253 and p. 254] Thus, in that region at least, it was after the introduction of central state food requisition in January 1919 that peasants started to hoard food. Thus Bolshevik policy made the situation worse. And as Alec Nove noted “at certain moments even the government itself was compelled to ‘legalise’ illegal trade. For example, in September 1918 the wicked speculators and meshochniki [bag-men] were authorised to take sacks weighing up to 1.5 poods (54 lbs.) to Petrograd and Moscow, and in this month ... they supplied four times more than did the official supply organisation.” [Op. Cit., p. 55]

Yet rather than encourage this kind of self-activity, the Bolsheviks denounced it as speculation and did all in their power to suppress it (this included armed pickets around the towns and cities). This, of course, drove the prices on the black market higher due to the risk of arrest and imprisonment this entailed and so the regime made the situation worse: “it was in fact quite impossible to live on the official rations, and the majority of the supplies even of bread come through the black market. The government was never able to prevent this market from functioning, but did sufficiently disrupt it to make food shortages worse.” By January 1919, only 19% of all food came through official channels and rose to around 30% subsequently. Official sources, however, announced an increase in grain, with total procurements amounting to 30 million poods in the agricultural year 1917–18 to 110 million poods in 1918–19. [Nove, Op. Cit., p. 55 and p. 54] Needless to say, the average worker in the towns saw nothing of this improvement in official statistics (and this in spite of dropping urban populations!).
deeply held views of the party on class struggle had overcome the need for evidence.” [Christopher Read, From Tsar to Soviet, p. 225]. Lenin, for example, thought that inequality in the villages was much, much higher than it actually was, a mistaken assumption which drove the unpopular and counter-productive “Committees of Poor Peasants” (kombedy) policy of 1918. Rather than a countryside dominated by a few rich kulaks (peasants who employed wage labour), Russian villages were predominantly pre-capitalist and based on actual peasant farming (i.e., people who worked their land themselves). While the Bolsheviks attacked kulaks, they, at best, numbered only 5 to 7 per cent of the peasantry and even this is high as only 1 per cent of the total of peasant households employed more than one labourer. The revolution itself had an equalising effect on peasant life, and during 1917 “average size of landholding fell, the extremes of riches and poverty diminished.” [Alec Nove, An economic history of the USSR: 1917–1991, p. 103 and p. 102]

By 1919, even Lenin had to admit that the policies pursued in 1918, against the advice and protest of the Left-SRs, were failures and had alienated the peasantry. While admitting to errors, it remains the case that it was Lenin himself, more than anyone, who was responsible for them. Still, there was no fundamental change in policy for another two years. Defenders of the Bolsheviks argue that the Bolshevik had no alternative but to use violence to seize food from the peasants to feed the starving cities. However, this fails to acknowledge two key facts. Firstly, Bolshevik industrial policy made the collapse of industry worse and so the lack of goods to trade for grain was, in part, a result of the government. It is likely that if the factory committees had been fully supported then the lack of goods to trade may have been reduced. Secondly, it cannot be said that the peasants did not wish to trade with the cities. They were, but at a fair price as can be seen from the fact that throughout Russia peasants with bags of grains on their backs went to the city to exchange them for goods. In fact, in the Volga region official state sources indicate “that grain-hoarding and the black market

he considered that regime a “workers’ state”. The question arises why Harman thinks Lenin’s Russia was some kind of “workers’ state” if workers’ democracy is the criteria by which such things are to be judged.

From this it follows that, unlike Leninists, anarchists do not judge a regime by who happens to be in office. A capitalist state does not become less capitalist just because a social democrat happens to be prime minister or president. Similarly, a regime does not become state capitalist just because Stalin is in power rather than Lenin. While the Marxist analysis concentrates on the transfer of state power from one regime to another, the anarchist one focuses on the transfer of power from the state and bosses to working class people. What makes a regime socialist is the social relationships it has, not the personal opinions of those in power. Thus if the social relationships under Lenin are similar to those under Stalin, then the nature of the regime is similar. That Stalin’s regime was far more brutal, oppressive and exploitative than Lenin’s does not change the underlying nature of the regime. As such, Chomsky is right to point to “the techniques of use of terminology to delude” with respect to the Bolshevik revolution. Under Lenin and Trotsky, “a popular revolution was taken over by a managerial elite who immediately dismantled all the socialist institutions.” They used state power to “create a properly managed society, run by smart intellectuals, where everybody does his job and does what he’s told . . . That’s Leninism. That’s the exact opposite of socialism. If socialism means anything, it means workers’ control of production and then on from there. That’s the first thing they destroyed. So why do we call it socialism?” [Language and Politics, p. 537]

To refute in advance one obvious objection to our argument, the anarchist criticism of the Bolsheviks is not based on the utopian notion that they did not create a fully functioning (libertarian) communist society. As we discussed section H.2.5, anarchists have never thought a revolution would immediately produce such an
outcome. As Emma Goldman argued, she had not come to Russia “expecting to find Anarchism realised” nor did she “expect Anarchism to follow in the immediate footsteps of centuries of despotism and submission.” Rather, she “hope[d] to find in Russia at least the beginnings of the social changes for which the Revolution had been fought” and that “the Russian workers and peasants as a whole had derived essential social betterment as a result of the Bolshevik regime.” Both hopes were dashed. [My Disillusionment in Russia, p. xlvi]

Equally, anarchists were, and are, well aware of the problems facing the revolution, the impact of the civil war and economic blockade. Indeed, both Goldman and Berkman used these (as Leninists still do) to rationalise their support for the Bolsheviks, in spite of their authoritarianism (for Berkman’s account see The Bolshevik Myth [pp. 328–31]). Their experiences in Russia, particularly after the end of the civil war, opened their eyes to the impact of Bolshevik ideology on its outcome.

Nor is it a case that anarchists have no solutions to the problems facing the Russian Revolution. As well as the negative critique that statist structures are unsuitable for creating socialism, particularly in the difficult economic circumstances that affects every revolution, anarchists stressed that genuine social construction had to be based on the people’s own organisations and self-activity. This was because, as Goldman concluded, the state is a “menace to the constructive development of the new social structure” and “would become a dead weight upon the growth of the new forms of life.” Therefore, she argued, only the “industrial power of the masses, expressed through their libertarian associations — Anarchosyndicalism — is alone able to organise successfully the economic life and carry on production.” If the revolution had been made a la Bakunin rather than a la Marx “the result would have been different and more satisfactory” as (echoing Kropotkin) Bolshevik methods “conclusively demonstrated how a revolution should not be made.” [Op. Cit., pp. 253–4 and p. liv]

If Bolshevik industrial policy reflected a basic ignorance of local conditions and the nature of industry, their agricultural policies were even worse. Part of the problem was that the Bolsheviks were simply ignorant of peasant life (as one historian put it, “the
It should also be mentioned that the standard Leninist justification for party dictatorship is that the opposition groups supported the counter-revolution or took part in armed rebellions against “soviet power” (i.e., the Bolsheviks). Rees, for example, asserts that some Mensheviks “joined the Whites. The rest alternated between accepting the legitimacy of the government and agitating for its overthrow. The Bolsheviks treated them accordingly.” [Op. Cit., p. 65] However, this is far from the truth. As one historian noted, while the “charge of violent opposition would be made again and again” by the Bolsheviks, along with being “active supporters of intervention and of counter-revolution”, in fact this “charge was untrue in relation to the Mensheviks, and the Communists, if they ever believed it, never succeeded in establishing it.” A few individuals did reject the Menshevik “official policy of confining opposition to strictly constitutional means” and they were “expelled from the party, for they had acted without its knowledge.” [Leonard Schapiro, _The Origin of the Communist Autocracy_, p. 193] Significantly, the Bolsheviks annulled their June 14th expulsion of the Mensheviks from the soviets on the 30th of November of the same year, 1918. [E. H. Carr, _The Bolshevik Revolution_, vol. 1, p. 180]

By “agitating” for the “overthrow” of the Bolshevik government, Rees is referring to the Menshevik tactic of standing for election to soviets with the aim of securing a majority and so forming a new government! Unsurprisingly, the sole piece of evidence presented by Rees is a quote from historian E.H. Carr: “If it was true that the Bolshevik regime was not prepared after the first few months to tolerate an organised opposition, it was equally true that no opposition party was prepared to remain within legal limits. The premise of dictatorship was common to both sides of the argument.” [Op. Cit., p. 190] Yet this “judgment ignores” the Mensheviks whose policy of legal opposition: “The charge that the Mensheviks were not prepared to remain within legal limits is part of the Bolsheviks’ case; it does not survive an examination of the facts.” [Schapiro, _Op. Cit._, p. 355fn]

until 1919 were the regime’s leaders prepared to acknowledge that small enterprises, under the conditions of the time, might be more efficient in using resources; and not until 1921 did a few Bolsheviks theorists grasp the economic reasons for this apparent violation of their standing assumption that larger units were inherently more productive.” [Remington, _Op. Cit._, p. 106] Given how disrupted transport was and how scarce supplies were, this kind of ideologically generated mistake could not fail to have substantial impact.

Post-October Bolshevik policy is a striking confirmation of the anarchist argument that a centralised structure would stifle the initiative of the masses and their own organs of self-management. Not only was it disastrous from a revolutionary perspective, it was hopelessly inefficient. The constructive self-activity of the people was replaced by the bureaucratic machinery of the state. The Bolshevik onslaught on workers’ control, like their attacks on soviet democracy and workers’ protest, undoubtedly engendered apathy and cynicism in the workforce, alienating even more the positive participation required for building socialism which the Bolshevik mania for centralisation had already marginalised. The negative results of Bolshevik economic policy confirmed Kropotkin’s prediction that a revolution which “establish[ed] a strongly centralised Government”, leaving it to “draw up a statement of all the produce” in a country and “then command that a prescribed quantity” of some good “be sent to such a place on such a day” and “stored in particular warehouses” would “not merely” be “undesirable, but it never could by any possibility be put into practice.” “In any case,” Kropotkin stressed, “a system which springs up spontaneously, under stress of immediate need, will be infinitely preferable to anything invented between four-walls by hide-bound theorists sitting on any number of committees.” [The Conquest of Bread, pp. 82–3 and p. 75]

Some Bolsheviks were aware of the problems. One left-wing Communist, Osinskii, concluded that “his six weeks in the provinces had taught him that the centre must rely on strong regional and
As regards the SRs, this issue is more complicated. The right-SRs welcomed and utilised the rebellion of the Czech Legion in May 1918 to reconvene the Constituent Assembly (within which they had an overwhelming majority and which the Bolsheviks had dissolved). After the White General Kolchak overthrew this government in November 1918 (and so turned the civil war into a Red against White one), most right-SRs sided with the Bolsheviks and, in return, the Bolsheviks restated them to the soviets in February 1919. [Carr, Op. Cit. p. 356 and p. 180] It must be stressed that, contra Carr, the SRs aimed for a democratically elected government, not a dictatorship (and definitely not a White one). With the Left-SRs, it was the Bolsheviks who denied them their majority at the Fifth All-Congress of Soviets. Their rebellion was not an attempted coup but rather an attempt to force the end of the Brest-Litovsk treaty with the Germans by restarting the war (as Alexander Rabinowitch proves beyond doubt in his The Bolsheviks in Power). It would be fair to say that the anarchists, most SRs, the Left SRs and Mensheviks were not opposed to the revolution, they were opposed to Bolshevik policy.

Ultimately, as Emma Goldman came to conclude, “what [the Bolsheviks] called ‘defence of the Revolution’ was really only the defence of [their] party in power.” [Op. Cit., p. 57]

At best it could be argued that the Bolsheviks had no alternative but to impose their dictatorship, as the other socialist parties would have succumbed to the Whites and so, eventually, a White dictatorship would have replaced the Red one. This was why, for example, Victor Serge claimed he sided with the Communists against the Kronstadt sailors even though the latter had right on their side for “the country was exhausted, and production practically at a standstill; there was no reserves of any kind ... The working-class elite that had been moulded in the struggle against the old regime was literally decimated. ... If the Bolshevik dictatorship fell, it was only a short step to chaos ... and in the end, through the sheer force of events, another piece-work systems.” He added that these were used by the Nazis and the Stalinists “for the same purpose.” [State Capitalism in Russia, pp. 18–9] Obviously piece-work is different when Lenin introduces it!

Other policies undermined working class collectivity. Banning trade helped undermine a collective response to the problems of exchange between city and country. For example, a delegation of workers from the Main Workshops of the Nikolaev Railroad to Moscow reported to a well-attended meeting that “the government had rejected their request [to obtain permission to buy food collectively] arguing that to permit the free purchase of food would destroy its efforts to come to grips with hunger by establishing a ‘food dictatorship.’” [David Mandel, The Petrograd Workers and the Soviet Seizure of Power, p. 392] Bolshevik ideology replaced collective working class action with an abstract “collective” response via the state, which turned the workers into isolated and atomised individuals. As such, the Bolsheviks provided a good example to support Malatesta’s argument that “if ... one means government action when one talks of social action, then this is still the resultant of individual forces, but only of those individuals who form the government ... it follows... that far from resulting in an increase in the productive, organising and protective forces in society, it would greatly reduce them, limiting initiative to a few, and giving them the right to do everything without, of course, being able to provide them with the gift of being all-knowing.” [Anarchy, pp. 38–9] Can it be surprising, then, that Bolshevik policies aided the atomisation of the working class by replacing collective organisation and action by state bureaucracy?

The negative impact of Bolshevik ideology showed up in other areas of the economy as well. For example, the Leninist fetish that bigger was better resulted in the “waste of scarce resources” as the “general shortage of fuel and materials in the city took its greatest toll on the largest enterprises, whose overhead expenditures for heating the plant and firing the furnaces were proportionately greater than those for smaller enterprises. This point ... was recognised later. Not
places “largely escaped the glavk administration” and “allowed the Bolsheviks to support a well equipped army amidst general distress and disorganisation.” [Op. Cit., p. 251, p. 477 and p. 502]

Needless to say, Lenin never wavered in his support for one-man management nor in his belief in the efficiency of centralism to solve all problems, particularly the problems it itself created in abundance. Nor did his explicit call to reproduce capitalist social relations in production cause him any concern for, if the primary issue were property and not who manages the means of production, then factory committees are irrelevant in determining the socialist nature of the economy. Equally, if (as with Engels) all forms of organisation are inherently authoritarian then it does not fundamentally matter whether that authority is exercised by an elected factory committee or an appointed dictatorial manager (see section H.4). And it must be noted that the politics of the leading members of the factory committee movement also played its part. While the committees expressed a spontaneous anarchism, almost instinctively moving towards libertarian ideas, the actual influence of conscious anarchists was limited. Most of the leaders of the movement were, or became, Bolsheviks and, as such, shared many of the statist and centralistic assumptions of the party leadership as well as accepting party discipline. As such, they did not have the theoretical accruement to resist their leadership’s assault on the factory committees and, as a result, did integrate them into the trade unions when demanded.

As well as advocating one-man management, Lenin’s proposals also struck at the heart of workers’ power in other ways. For example, he argued that “we must raise the question of piece-work and apply it and test in practice; we must raise the question of applying much of what is scientific and progressive in the Taylor system”. [Op. Cit., vol. 27, p. 258] As Leninist Tony Cliff noted, “the employers have at their disposal a number of effective methods of disrupting th[e] unity [of workers as a class]. One of the most important of these is the fostering of competition between workers by means of dictatorship, this time anti-proletarian.” [Memoirs of a Revolutionary, pp. 128–9]

This, however, is sheer elitism and utterly violates the notion that socialism is the self-emancipation of the working class. Moreover, it places immense faith on the goodwill of those in power — a utopian position. Equally, it should not be forgotten that both the Reds and Whites were anti-working class. At best it could be argued that the Red repression of working class protests and strikes as well as opposition socialists would not have been as terrible as that of the Whites, but that is hardly a good rationale for betraying the principles of socialism. Yes, libertarians can agree with Serge that embracing socialist principles may not work. Every revolution is a gamble and may fail. As libertarian socialist Ante Ciliga correctly argued:

“Let us consider, finally, one last accusation which is commonly circulated: that action such as that at Kronstadt could have indirectly let loose the forces of the counter-revolution. It is possible indeed that even by placing itself on a footing of workers’ democracy the revolution might have been overthrown; but what is certain is that it has perished, and that it has perished on account of the policy of its leaders. The repression of Kronstadt, the suppression of the democracy of workers and soviets by the Russian Communist party, the elimination of the proletariat from the management of industry, and the introduction of the NEP, already signified the death of the Revolution.” [“The Kronstadt Revolt”, pp. 330–7, The Raven, no. 8, p. 333 p. 335]

So it should be stressed that no anarchist would argue that if an anarchist path had been followed then success would have automatically followed. It is possible that the revolution would have failed but one thing is sure: by following the Bolshevik path it did
fail. While the Bolsheviks may have remained in power at the end of the civil war, the regime was a party dictatorship preceding over a state capitalist economy. In such circumstances, there could no further development towards socialism and, unsurprisingly, there was none. Ultimately, as the rise of Stalin showed, the notion that socialism could be constructed without basic working class freedom and self-government was a baseless illusion.

As we will show, the notion that objective circumstances (civil war, economic collapse, and so on) cannot fully explain the failure of the Russian Revolution. This becomes clear once the awkward fact that Bolshevik authoritarianism and state capitalist policies started before the outbreak of civil war is recognised (see section H.6.1); that their ideology inspired and shaped the policies they implemented and these policies themselves made the objective circumstances worse (see section H.6.2); and that the Bolsheviks had to repress working class protest and strikes against them throughout the civil war, so suggesting a social base existed for a genuinely socialist approach (see section H.6.3).

Finally, there is a counter-example which, anarchists argue, show the impact of Bolshevik ideology on the fate of the revolution. This is the anarchist influenced Makhnovist movement (see Peter Arshinov’s The History of the Makhnovist Movement or Alexandre Skirda’s Nestor Makhno Anarchy’s Cossack for more details). Defending the revolution in the Ukraine against all groups aiming to impose their will on the masses, the Makhnovists were operating in the same objective conditions facing the Bolsheviks — civil war, economic disruption, isolation and so forth. However, the policies the Makhnovists implemented were radically different than those of the Bolsheviks. While the Makhnovists called soviet congresses, the Bolsheviks disbanded them. The former encouraged free speech and organisation, the latter crushed both. While the Bolsheviks raised party dictatorship and one-man management to ideological truisms, the Makhnovists stood for and implemented workplace, army, village and soviet

tion to the economic problems being faced is not utopian. After all rates of “output and productivity began to climb steadily after” January 1918 and “[i]n some factories, production doubled or tripled in the early months of 1918... Many of the reports explicitly credited the factory committees for these increases.” [Carmen Sirianni, Workers’ Control and Socialist Democracy, p. 109] Another expert notes that there is “evidence that until late 1919, some factory committees performed managerial tasks successfully. In some regions factories were still active thanks to their workers’ initiatives in securing raw materials.” [Malle, Op. Cit., p. 101]

Moreover, given how inefficient the Bolshevik system was, it was only the autonomous self-activity at the base which keep it going. Thus the Commissariat of Finance was “not only bureaucratically cumbersome, but [it] involved mountainous accounting problems” and “with the various offices of the Sovnarkhoz and commissariat structure literally swamped with ‘urgent’ delegations and submerged in paperwork, even the most committed supporters of the revolution — perhaps one should say especially the most committed — felt impelled to act independently to get what workers and factories needed, even if this circumvented party directives.” [William G. Rosenberg, “The Social Background to Tsektran,” pp. 349–373, Party, State, and Society in the Russian Civil War, Diane P. Koenker, William G. Rosenberg and Ronald Grigor Suny (eds.), p. 357] “Requisition and confiscation of resources,” as Malle notes, “largely undertaken by the glavki, worked against any possible territorial network of complementary industries which might have been more efficient in reducing delays resulting from central financing, central ordering, central supply and delivery.” By integrating the factory committees into a centralised state structure, this kind of activity became harder to do and, moreover, came up against official resistance and opposition. Significantly, due to “the run-down of large-scale industry and the bureaucratic methods applied to production orders” the Red Army turned to small-scale workplaces to supply personal equipment. These work-
of industry. Control over nationalisation was hard to obtain, however. Although the SEC intended to plan branch-wide nationalisations, it was overwhelmed with requests to order the nationalisation of individual enterprises. Generally it resorted to the method, for want of a better one, of appointing a commissar to carry out each act of nationalisation. These commissars, who worked closely with the Cheka, had almost unlimited powers over both workers and owners, and acted largely on their own discretion.” [Op. Cit., p. 61–2]

Unsurprisingly, “[r]esentment of the glavki was strongest where local authorities had attained a high level of competence in co-ordinating local production. They were understandably distressed when orders from central organs disrupted local production plans.” Particularly given that the centre “drew up plans for developing or reorganising the economy of a region, either in ignorance, or against the will, of the local authorities.” “Hypercentralisation”, ironically, “multiplied the lines of command and accountability, which ultimately reduced central control.” For example, one small condensed milk plan, employing fewer than 15 workers, “became the object of a months-long competition among six organisations.” Moreover, the glavki “were filled with former owners.” Yet “throughout 1919, as the economic crisis grew worse and the war emergency sharper the leadership strengthened the powers of the glavki in the interests of centralisation.” [Op. Cit., p. 68, p. 69, p. 70 and p. 69]

A clearer example of the impact of Bolshevik ideology on the fate of the revolution would be hard to find. While the situation was pretty chaotic in early 1918, this does not prove that the factory committees’ socialism was not the most efficient way of running things under the (difficult) circumstances. Unless of course, like the Bolsheviks, you have a dogmatic belief that centralisation is always more efficient. That favouring the factory committees, as anarchists stressed then and now, could have been a possible solu-

H.6.1 Can objective factors explain the failure of the Russian Revolution?

Leninist John Rees recounts the standard argument, namely that the objective conditions in Russia meant that the “subjective factor” of Bolshevik ideology “was reduced to a choice between capitulation to the Whites or defending the revolution with whatever means were at hands. Within these limits Bolshevik policy was decisive. But it could not wish away the limits and start with a clean sheet.” From this perspective, the key factor was the “vice-like pressure of the civil war” which “transformed the state” as well as the “Bolshevik Party self-management. As one historian suggests, far from being necessary or even functional, Bolshevik policies “might even have made the war more difficult and more costly. If the counter-example of Makhno is anything to go by then [they] certainly did.” [Christopher Read, From Tsar to Soviets, p. 265] Anarchists argue that it shows the failure of Bolshevism cannot be put down to purely objective factors like the civil war: the politics of Leninism played their part.

Needless to say, this section can only be a summary of the arguments and evidence. It does not pretend to be a comprehensive account of the revolution or civil war. It concentrates on the key rationales by modern day Leninists to justify Bolshevik actions and policies. We do so simply because it would be impossible to cover every aspect of the revolution and because these rationales are one of the main reasons why Leninist ideology has not been placed in the dustbin of history where it belongs. For further discussion, see the appendix on the Russian Revolution or Voline’s The Unknown Revolution, Alexander Berkman’s The Russian Tragedy and The Bolshevik Myth, Emma Goldman’s My Disillusionment in Russia or Maurice Brinton’s essential The Bolsheviks and Workers’ Control.
itself.” Industry was “reduced … to rubble” and the “bureaucracy of the workers’ state was left suspended in mid-air, its class based eroded and demoralised.” [In Defence of October,” pp. 3–82, International Socialism, no. 52, p. 30, p. 66 and p. 65]

Due to these factors, argue Leninists, the Bolsheviks became dictators over the working class and not due to their political ideas. Anarchists are not convinced by this analysis, arguing that is factually and logically flawed. The first problem is factual. Bolshevik authoritarianism started before the start of the civil war and major economic collapse. Whether it is soviet democracy, workers’ economic self-management, democracy in the armed forces or working class power and freedom generally, the fact is the Bolsheviks had systematically attacked and undermined it from the start. They also, as we indicate in section H.6.3 repressed working class protests and strikes along with opposition groups and parties. As such, it is difficult to blame something which had not started yet for causing Bolshevik policies.

Although the Bolsheviks had seized power under the slogan “All Power to the Soviets,” as we noted in section H.3.11 the facts are the Bolsheviks aimed for party power and only supported soviets as long as they controlled them. To maintain party power, they had to undermine the soviets and they did. This onslaught on the soviets started quickly, in fact overnight when the first act of the Bolsheviks was to create an executive body, the the Council of People’s Commissars (or Sovnarkom), over and above the soviets. This was in direct contradiction to Lenin’s The State and Revolution, where he had used the example of the Paris Commune to argue for the merging of executive and legislative powers. Then, a mere four days after this seizure of power by the Bolsheviks, the Sovnarkom unilaterally took for itself legislative power simply by issuing a decree to this effect: “This was, effectively, a Bolshevik coup d’état that made clear the government’s (and party’s) pre-eminence over the soviets and their executive organ. Increasingly, the Bolsheviks

on which the glavk system was based” and “the maximum centralisation of production.” Even the “admission that some of the largest works had been closed down, owning to the scarcity of raw materials and fuel, did not induce the economists of the party to question the validity of concentration, although in Russia at the time impediments due to lack of transport jeopardised the whole idea of convergence of all productive activity in a few centres.” The party leadership “decided to concentrate the tasks of economic reconstruction in the hands of the higher organs of the state.” Sadly, “the glavk system in Russia did not work … Confronted with production problems, the central managers needed the collaboration of local organs, which they could not obtain both because of reciprocal suspicion and because of a lack of an efficient system of information, communications and transport. But the failure of glavkism did not bring about a reconsideration of the problems of economic organisation … On the contrary, the ideology of centralisation was reinforced.” [Op. Cit., p. 271 and p. 275]

The failings of centralisation can be seen from the fact that in September 1918, the Supreme Economic Council (SEC) chairman reported that “approximately eight hundred enterprises were known to have been nationalised and another two hundred or so were presumed to be nationalised but were not registered as such. In fact, well over two thousand enterprises had been taken over by this time.” The “centre’s information was sketchy at best” and “efforts by the centre to exert its power more effectively would provoke resistance from local authorities.” [Thomas F. Remington, Op. Cit., pp. 58–9] This kind of clashing could not help but occur when the centre had no real knowledge nor understanding of local conditions:

“Organisations with independent claims to power frequently ignored it. It was deluged with work of an ad hoc character … Demands for fuel and supplies piled up. Factories demanded instructions on demobilisation and conversion. Its presidium … scarcely knew what its tasks were, other than to direct the nationalisation
whereas in others there was a shortage. Moreover, the length of the procedure needed to release the products increased scarcity at given moments, since products remained stored until the centre issued a purchase order on behalf of a centrally defined customer. Unused stock coexisted with acute scarcity. The centre was unable to determine the correct proportions among necessary materials and eventually to enforce implementation of the orders for their total quantity. The gap between theory and practice was significant.” [Op. Cit., p. 233]

Thus there was a clear “gulf between the abstraction of the principles on centralisation and its reality.” This was recognised at the time and, unsuccessfully, challenged. Provincial delegates argued that “waste of time was ... the effect of strict compliance of vertical administration ... semi-finished products [were] transferred to other provinces for further processing, while local factories operating in the field were shut down” (and given the state of the transport network, this was a doubly inefficient). The local bodies, knowing the grassroots situation, “had proved to be more far-sighted than the centre.” For example, flax had been substituted for cotton long before the centre had issued instructions for this. Arguments reversing the logic centralisation were raised: “there was a lot of talk about scarcity of raw materials, while small factories and mills were stuffed with them in some provinces: what’s better, to let work go on, or to make plans?” These “expressed feelings ... about the inefficiency of the glavk system and the waste which was visible locally.” Indeed, “the inefficiency of central financing seriously jeopardised local activity.” While “the centre had displayed a great deal of conservatism and routine thinking,” the localities “had already found ways of rationing raw materials, a measure which had not yet been decided upon at the centre.” [Op. Cit., p.269, p. 270 and pp. 272–3]

This did not result in changes as such demands “challenged ... the central directives of the party” which “approved the principles relied upon the appointment from above of commissars with plenipotentiary powers, and they split up and reconstituted fractious Soviets and intimidated political opponents.” [Neil Harding, Leninism, p. 253]

The highest organ of soviet power, the Central Executive Committee (VTsIK) was turned into little more than a rubber stamp, with its Bolshevik dominated presidium using its power to control the body. Under the Bolsheviks, the presidium was converted “into the de facto centre of power within VTsIK.” It “began to award representations to groups and factions which supported the government. With the VTsIK becoming ever more unwieldy in size by the day, the presidium began to expand its activities” and was used “to circumvent general meetings.” Thus the Bolsheviks were able “to increase the power of the presidium, postpone regular sessions, and present VTsIK with policies which had already been implemented by the Sovnarkom. Even in the presidium itself very few people determined policy.” [Charles Duval, “Yakov M. Sverdlov and the All-Russian Central Executive Committee of Soviets (VTsIK),” pp. 3–22, Soviet Studies, vol. XXXI, no. 1, p.7, p. 8 and p. 18]

At the grassroots, a similar process was at work with oligarchic tendencies in the soviets increasing post-October and “effective power in the local soviets relentlessly gravitated to the executive committees, and especially their presidia. Plenary sessions became increasingly symbolic and ineffectual.” The party was “successful in gaining control of soviet executives in the cities and at uezd and guberniya levels. These executive bodies were usually able to control soviet congresses, though the party often disbanded congresses that opposed major aspects of current policies.” Local soviets “had little input into the formation of national policy” and “even at higher levels, institutional power shifted away from the soviets.” [Carmen Sirianni, Workers’ Control and Socialist Democracy, p. 204 and p. 203] In Moscow, for example, power in the soviet “moved away from the plenum to ever smaller groups at the apex.” The presid-
ium, created in November 1917, “rapidly accrued massive powers.” [Richard Sakwa, Soviet Communists in Power, p. 166]

The Bolshevik dominated soviet executives used this power to maintain a Bolshevik majority, by any means possible, in the face of popular disillusionment with their regime. In Saratov, for example, “as early as the spring of 1918 ... workers clashed with the soviet” while in the April soviet elections, as elsewhere, the Bolsheviks’ “powerful majority in the Soviet began to erode” as moderate socialists “criticised the nondemocratic turn Bolshevik power has taken and the soviet’s loss of their independence.” [Donald J. Raleigh, Experiencing Russia’s Civil War, p. 366 and p. 368] While the influence of the Mensheviks “had sunk to insignificance by October 1917”, the “unpopularity of government policy” changed that and by the “middle of 1918 the Mensheviks could claim with some justification that large numbers of the industrial working class were now behind them, and that but for the systematic dispersal and packing of the soviets, and the mass arrests at workers’ meeting and congresses, their party could have one power by its policy of constitutional opposition.” The soviet elections in the spring of 1918 across Russia saw “arrests, military dispersal, even shootings” whenever Mensheviks “succeeded in winning majorities or a substantial representation.” [Leonard Schapiro, The Origin of the Communist Autocracy, p. 191]

One such technique to maintain power was to postpone new soviet elections, another was to gerrymander the soviets to ensure their majority. The Bolsheviks in Petrograd, for example, faced “demands from below for the immediate re-election” of the Soviet. However, before the election, the Bolshevik Soviet confirmed new regulations “to help offset possible weaknesses” in their “electoral strength in factories.” The “most significant change in the makeup of the new soviet was that numerically decisive representation was given to agencies in which the Bolsheviks had overwhelming strength, among them the Petrograd Trade Union Council, individual trade unions, factory committees in closed enterprises, district soviets, and

...were often ignored as unworkable.” It got so bad that “a number of local Bolshevik officials ... began in the fall of 1918 to call for the restoration of workers’ control, not for ideological reasons, but because workers themselves knew best how to run the line efficiently, and might obey their own central committee’s directives if they were not being constantly countermanded.” [William G. Rosenberg, Workers’ Control on the Railroads, p. D1208, p. D1207, p. D1213 and pp. D1208-9]

That it was Bolshevik policies and not workers’ control which was to blame for the state of the economy can be seen from what happened after Lenin’s one-man management was imposed. The centralised Bolshevik economic system quickly demonstrated how to really mismanage an economy. The Bolshevik onslaught against workers’ control in favour of a centralised, top-down economic regime ensured that the economy was handicapped by an unresponsive system which wasted the local knowledge in the grassroots in favour of orders from above which were issued in ignorance of local conditions. Thus the glavki “did not know the true number of enterprises in their branch” of industry. To ensure centralism, customers had to go via a central orders committee, which would then past the details to the appropriate glavki and, unsurprisingly, it was “unable to cope with these enormous tasks”. As a result, workplaces often “endeavoured to find less bureaucratic channels” to get resources and, in fact, the “comparative efficiency of factories remaining outside the glavki sphere increased.” In summary, the “shortcomings of the central administrations and glavki increased together with the number of enterprises under their control”. [Malle, Op. Cit., p. 232, p. 233 and p. 250] In summary:

“The most evident shortcoming ... was that it did not ensure central allocation of resources and central distribution of output, in accordance with any priority ranking ... materials were provided to factories in arbitrary proportions: in some places they accumulated,
state control in late June 1918. This saw state-appointed “dictatorial” managers replacing the remaining capitalists (when it was not simply a case of the old boss being turned into a state manager). The Bolshevik vision of socialism as nationalised property replacing capitalist property was at the root of the creation of state capitalism within Russia. This was very centralised and very inefficient:

“it seems apparent that many workers themselves... had now come to believe... that confusion and anarchy [sic!] at the top were the major causes of their difficulties, and with some justification. The fact was that Bolshevik administration was chaotic... Scores of competitive and conflicting Bolshevik and Soviet authorities issued contradictory orders, often brought to factories by armed Chekists. The Supreme Economic Council... issued dozens of orders and passed countless directives with virtually no real knowledge of affairs.” [William G. Rosenberg, Russian Labour and Bolshevik Power, p. 116]

Faced with the chaos that their own politics, in part, had created, like all bosses, the Bolsheviks blamed the workers. Yet abolishing the workers’ committees resulted in “a terrifying proliferation of competitive and contradictory Bolshevik authorities, each with a claim of life or death importance... Railroad journals argued plaintively about the correlation between failing labour productivity and the proliferation of competing Bolshevik authorities.” Rather than improving things, Lenin’s one-man management did the opposite, “leading in many places... to a greater degree of confusion and indecision” and “this problem of contradictory authorities clearly intensified, rather than lessened.” Indeed, the “result of replacing workers’ committees with one man rule... on the railways... was not directiveness, but distance, and increasing inability to make decisions appropriate to local conditions. Despite coercion, orders on the railroads district non-party workers’ conferences.” This ensured that “[o]nly 260 of roughly 700 deputies in the new soviet were to be elected in factories, which guaranteed a large Bolshevik majority in advance” and so the Bolsheviks “contrived a majority” in the new Soviet long before gaining 127 of the 260 factory delegates. Then there is “the nagging question of how many Bolshevik deputies from factories were elected instead of the opposition because of press restrictions, voter intimidation, vote fraud, or the short duration of the campaign.” The SR and Menshevik press, for example, were reopened “only a couple of days before the start of voting.” Moreover, “Factory Committees from closed factories could and did elect soviet deputies (the so-called dead souls), one deputy for each factory with more than one thousand workers at the time of shutdown” while the electoral assemblies for unemployed workers “were organised through Bolshevik-dominated trade union election commissions.” Overall, then, the Bolshevik election victory “was highly suspect, even on the shop floor.” [Alexander Rabinowitch, The Bolsheviks in Power, pp. 248–9, p. 251 and p. 252] This meant that it was “possible for one worker to be represented in the soviet five times... without voting once.” Thus the soviet “was no longer a popularly elected assembly: it had been turned into an assembly of Bolshevik functionaries.” [Vladimir N. Brovkin, The Mensheviks After October, p. 240]

When postponing and gerrymandering failed, the Bolsheviks turned to state repression to remain in power. For all the provincial soviet elections in the spring and summer of 1918 for which data is available, there was an “impressive success of the Menshevik-SR block” followed by “the Bolshevik practice of disbanding soviets that came under Menshevik-SR control.” The “subsequent wave of anti-Bolshevik uprisings” were repressed by force. [Brovkin, Op. Cit., p. 159] Another historian also notes that by the spring of 1918 “Menshevik newspapers and activists in the trade unions, the Soviets, and the factories had made a considerable impact on a working class which was becoming increasingly disillusioned with the Bolshevik regime, so much so that in many places the Bolsheviks felt con-
strained to dissolve Soviets or prevent re-elections where Mensheviks and Socialist Revolutionaries had gained majorities.” [Israel Getzler, Martov, p. 179]

When the opposition parties raised such issues at the VTsIK, it had no impact. In April 1918, one deputy “protested that non-Bolshevik controlled soviets were being dispersed by armed force, and wanted to discuss the issue.” The chairman “refus[ed] to include it in the agenda because of lack of supporting material” and requested such information be submitted to the presidium of the soviet. The majority (i.e. the Bolsheviks) “supported their chairman” and the facts were “submitted … to the presidium, where they apparently remained.” [Charles Duval, Op. Cit., pp. 13–14] Given that the VTsIK was meant to be the highest soviet body between congresses, this lack of concern clearly shows the Bolshevik contempt for soviet democracy.

The Bolsheviks also organised rural poor committees, opposed to by all other parties (particularly the Left-SRs). The Bolshevik leadership “was well aware that the labouring peasantry, largely represented in the countryside by the Left Socialist-Revolutionary party, would be excluded from participation.” These committees were “subordinated to central policy and thus willing to implement a policy opposing the interests of the mass of the peasants” and were also used for the “disbandment of the peasants’ soviets in which Bolshevik representation was low or nil”. It should be noted that between March and August 1918 “the Bolsheviks were losing power not only in favour of the Left Socialist-Revolutionaries but also in favour of non-party people.” [Silvana Malle, The Economic Organisation of War Communism, 1918–1921, p. 95 and p. 94]

Unsurprisingly, the same contempt was expressed at the fifth All-Russian Soviet Congress in July 1918 when the Bolshevik gerrymandered it to maintain their majority. The Bolsheviks banned the Mensheviks in the context of political loses before the Civil War, which gave the Bolsheviks an excuse and they “drove them underground, just on the eve of the elections to the Fifth Congress of particular industries. The pattern is informative” as it “gradually took over” the Tsarist state agencies such as the Glakvi (as Lenin had promised) “and converted them . . . into administrative organs subject to [its] direction and control.” The Bolsheviks “clearly opted” for the taking over of “the institutions of bourgeois economic power and use[d] them to their own ends.” This system “necessarily implies the perpetuation of hierarchical relations within production itself, and therefore the perpetuation of class society.” [Brinton, Op. Cit., p. 22, p. 36 and p. 22] Thus the Supreme Council of the National Economy “was an expression of the principle of centralisation and control from above which was peculiar to the Marxist ideology.” In fact, it is “likely that the arguments for centralisation in economic policy, which were prevalent among Marxists, determined the short life of the All-Russian Council of Workers’ Control.” [Silvana Malle, The Economic Organisation of War Communism, 1918–1921, p. 95 and p. 94]

Moreover, the Bolsheviks had systematically stopped the factory committee organising together, using their controlled unions to come “out firmly against the attempt of the Factory Committees to form a national organisation.” The unions “prevented the convocation of a planned All-Russian Congress of Factory Committees.” [I. Deutscher, quoted by Brinton, Op. Cit., p. 19] Given that one of the key criticisms of the factory committees by leading Bolsheviks was their "localism", this blocking of co-ordination is doubly damning.

At this time Lenin “envisioned a period during which, in a workers’ state, the bourgeoisie would still retain the formal ownership and effective management of most of the productive apparatus” and workers’ control “was seen as the instrument” by which the “capitalists would be coerced into co-operation.” [Brinton, Op. Cit., p. 13] The Bolsheviks turned to one-management in April, 1918 (it was applied first on the railway workers). As the capitalists refused to co-operate, with many closing down their workplaces, the Bolsheviks were forced to nationalise industry and place it fully under
tees had seen workers’ control as being exercised directly by the workers and their class organisations, the Bolshevik leadership saw it in terms of state control in which the factory committees would play, at best, a minor role. Given who held actual power in the new regime, it is unsurprising to discover which vision was actually introduced:

“On three occasions in the first months of Soviet power, the [factory] committee leaders sought to bring their model into being. At each point the party leadership overruled them. The result was to vest both managerial and control powers in organs of the state which were subordinate to the central authorities, and formed by them.” [Thomas F. Remington, Building Socialism in Bolshevik Russia, p. 38]

Given his vision of socialism, Lenin’s rejection of the factory committee’s model comes as no surprise. As Lenin put it in 1920, the “domination of the proletariat consists in the fact that the landowners and capitalists have been deprived of their property ... The victorious proletariat has abolished property ... and therein lies its domination as a class. The prime thing is the question of property.” [Op. Cit., vol. 30, p. 456] As we proved in section H.3.13, the Bolsheviks had no notion that socialism required workers’ self-management of production and, unsurprisingly, they, as Lenin had promised, built from the top-down their system of unified administration based on the Tsarist system of central bodies which governed and regulated certain industries during the war. The Supreme Economic Council (Vesenka) was set up in December of 1917, and “was widely acknowledged by the Bolsheviks as a move towards ‘statisation’ (ogosudarstvleniye) of economic authority.” During the early months of 1918, the Bolsheviks began implementing their vision of “socialism” and the Vesenka began “to build, from the top, its ‘unified administration’ of Soviets in which the Mensheviks were expected to make significant gains”. While the Bolsheviks “offered some formidable fictions to justify the expulsions” there was “of course no substance in the charge that the Mensheviks had been mixed in counter-revolutionary activities on the Don, in the Urals, in Siberia, with the Czechoslovaks, or that they had joined the worst Black Hundreds.” [Getzler, Op. Cit., p. 181]

With the Mensheviks and Right-SRs banned from the soviets, popular disenchantment with Bolshevik rule was expressed by voting Left-SR. The Bolsheviks ensured their majority in the congress and, therefore, a Bolshevik government by gerrymandering it has they had the Petrograd soviet. Thus “electoral fraud gave the Bolsheviks a huge majority of congress delegates”. In reality, “the number of legitimately elected Left SR delegates was roughly equal to that of the Bolsheviks.” The Left-SRs expected a majority but did not include “roughly 399 Bolsheviks delegates whose right to be seated was challenged by the Left SR minority in the congress’s credentials commission.” Without these dubious delegates, the Left SRs and SR Maximalists would have outnumbered the Bolsheviks by around 30 delegates. This ensured “the Bolshevik’s successful fabrication of a large majority in the Fifth All-Russian Congress of Soviets.” [Rabinowitch, Op. Cit., p. 396, p. 288, p. 442 and p. 308] Moreover, the Bolsheviks also “allowed so-called committees of poor peasants to be represented at the congress. ... This blatant gerrymandering ensured a Bolshevik majority ... Deprived of their democratic majority the Left SRs resorted to terror and assassinated the German ambassador Mirbach.” [Geoffrey Swain, The Origins of the Russian Civil War, p. 176] The Bolsheviks falsely labelled this an uprising against the soviets and the Left-SRs joined the Mensheviks and Right-SRs in being made illegal. It is hard not to agree with Rabinowitch when he comments that “however understandable framed against the fraudulent composition of the Fifth All-Russian Congress of Soviets and the ominous developments at the congresses’s start” this act “offered
Lenin a better excuse than he could possibly have hoped for to eliminate the Left SRs as a significant political rival.” [Op. Cit., p. 308]

So before the start of the civil war all opposition groups, bar the Left-SRs, had suffered some form of state repression by the hands of the Bolshevik regime (the Bolsheviks had attacked the anarchist movement in April, 1918 [Paul Avrich, The Russian Anarchists, pp. 184–5]). Within six weeks of it starting every opposition group had been excluded from the soviets. Significantly, in spite of being, effectively, a one-party state Lenin later proclaimed that soviet power “is a million times more democratic than the most democratic bourgeois republic” and pointed to the 6th Congress of Soviets in November with its 97% of Bolsheviks! [Collected Works, vol. 28, p. 248 and p. 303]

A similar authoritarian agenda was aimed at the armed forces and industry. Trotsky simply abolished the soldier’s committees and elected officers, stating that “the principle of election is politically purposeless and technically inexpedient, and it has been, in practice, abolished by decree.” [How the Revolution Armed, vol. 1, p. 47] The death penalty for disobedience was restored, along with, more gradually, saluting, special forms of address, separate living quarters and other privileges for officers. Somewhat ironically, nearly 20 years later, Trotsky himself lamented how the “de-mobilisation of the Red Army of five million played no small role in the formation of the bureaucracy. The victorious commanders assumed leading posts in the local Soviets, in economy, in education, and they persistently introduced everywhere that regime which had ensured success in the civil war.” For some reason he failed to mention who had introduced that very regime, although he felt able to state, without shame, that the ‘commanding staff needs democratic control. The organisers of the Red Army were aware of this from the beginning, and considered it necessary to prepare for such a measure as the election of commanding staff.” [The Revolution Betrayed, p. 90 and p. 211] So it would be churlish to note that “the root of the problem lay in the very organisation of the army on traditional lines, ples were applied roused increasing opposition.” [Sakwa, Op. Cit., p. 182 and p. 30] This consensus existed in all the so-called opposition (including the Workers’ Opposition and Trotsky’s Left Opposition in the 1920s). The ease with which the Bolsheviks embraced party dictatorship is suggestive of a fundamental flaw in their political perspective which the problems of the revolution, combined with lost of popular support, simply exposed.

Then there is the Bolshevik vision of socialism. As we discussed in section H.3.12, the Bolsheviks, like other Marxists at the time, saw the socialist economy as being built upon the centralised organisations created by capitalism. They confused state capitalism with socialism. The former, Lenin wrote in May 1917, “is a complete material preparation for socialism, the threshold of socialism” and so socialism “is nothing but the next step forward from state capitalist monopoly.” It is merely state-capitalist monopoly which is made to serve the interests of the whole people and has to that extent ceased to be capitalist monopoly.” [Collected Works, vol. 25, p. 359 and p. 358] A few months later, he was talking about how the institutions of state capitalism could be taken over and used to create socialism. Unsurprisingly, when defending the need for state capitalism in the spring of 1918 against the “Left Communists,” Lenin stressed that he gave his “high’ appreciation of state capitalism … before the Bolsheviks seized power.” And, as Lenin noted, his praise for state capitalism can be found in his State and Revolution and so it was “significant that [his opponents] did not emphasise this” aspect of his 1917 ideas. [Op. Cit., vol. 27, p. 341 and p. 354] Unsurprisingly, modern-day Leninists do not emphasise that element of Lenin’s ideas either.

Given this perspective, it is unsurprising that workers’ control was not given a high priority once the Bolsheviks seized power. While in order to gain support the Bolsheviks had paid lip-service to the idea of workers’ control, as we noted in section H.3.14 the party had always given that slogan a radically different interpretation than the factory committees had. While the factory commit-
Petersburg Bolsheviks were convinced that “only a strong party along class lines can guide the proletarian political movement and preserve the integrity of its program, rather than a political mixture of this kind, an indeterminate and vacillating political organisation such as the workers council represents and cannot help but represent.” [quoted by Anweiler, The Soviets, p. 77] In other words, the soviets could not reflect workers’ interests because they were elected by the workers! The implications of this perspective became clear in 1918, as are its obvious roots in Lenin’s arguments in What is to be Done?. As one historian argues, the 1905 position on the soviets “is of particular significance in understanding the Bolshevik’s mentality, political ambitions and modus operandi.” The Bolshevik campaign “was repeated in a number of provincial soviets” and “reveals that from the outset the Bolsheviks were distrustful of, if not hostile towards the Soviets, to which they had at best an instrumental and always party-minded attitude.” The Bolsheviks actions showed an “ultimate aim of controlling [the soviets] and turning them into one-party organisations, or, failing that, of destroying them.” [Israel Getzler, “The Bolshevik Onslaught on the Non-Party ‘Political Profile’ of the Petersburg Soviet of Workers’ Deputies October-November 1905”, Revolutionary History, pp. 123–146, vol. 5, no. 2, pp. 124–5]

That the mainstream of Bolshevism expressed this perspective once in power goes without saying, but even dissident Communists expressed identical views. Left-Communist V. Sorin argued in 1918 that the “party is in every case and everywhere superior to the soviets ... The soviets represent labouring democracy in general; and its interest, and in particular the interests of the petty bourgeois peasantry, do not always coincide with the interests of the proletariat.” [quoted by Sakwa, Op. Cit., p. 182] As one historian notes, “[a]ccording to the Left Communists ... the party was the custodian of an interest higher than that of the soviets.” Unsurprisingly, in the party there was “a general consensus over the principles of party dictatorship for the greater part of the [civil] war. But the way in which these princi-

for which Trotsky himself had been responsible, and against which the Left Communists in 1918 had warned.” [Richard Sakwa, Soviet Communists in Power, p. 231]

In industry, Lenin, as we discussed in section H.3.14, started to champion one-man management armed with “dictatorial” powers in April, 1918. Significantly, he argued that his new policies were not driven by the civil war for “[i]n the main ... the task of suppressing the resistance of the exploiters was fulfilled” (since “[approximately] February 1918.”). The task “now coming to the fore” was that of “organising [the] administration of Russia.” It “has become the main and central task” precisely because of “the peace which has been achieved — despite its extremely onerous character and extreme instability” and so “the Russian Soviet Republic has gained an opportunity to concentrate its efforts for a while on the most important and most difficult aspect of the socialist revolution, namely, the task of organisation.” This would involve imposing one-man management, that is “individual executives” with “dictatorial powers (or ‘unlimited’ powers)” as there was “absolutely no contradiction in principle between Soviet (that is, socialist) democracy and the exercise of dictatorial powers by individuals.” [Op. Cit., vol. 27, p. 242, p. 237, p. 267 and p. 268]

Trotsky concurred, arguing in the same speech which announced the destruction of military democracy that workplace democracy “is not the last word in the economic constructive work of the proletariat”. The “next step must consist in self-limitation of the collegiate principle” and its replacement by “[p]olitical collegiate control by the Soviets”, i.e. the state control Lenin had repeatedly advocated in 1917. However “for executive functions we must appoint technical specialists.” He ironically called this the working class “throwing off the one-man management principles of its masters of yesterday” and failed to recognise it was imposing the one-man management principles of new masters. As with Lenin, the destruction of workers’ power at the point of production was of little concern for what mattered was that “with power in our
hands, we, the representatives of the working class” would introduce socialism. [How the Revolution Armed, vol. 1, p. 37 and p. 38]

In reality, the Bolshevik vision of socialism simply replaced private capitalism with state capitalism, taking control of the economy out of the hands of the workers and placing it into the hands of the state bureaucracy. As one historian correctly summarises the s-called workers’ state “oversaw the reimposition of alienated labour and hierarchical social relations. It carried out this function in the absence of a ruling class, and them played a central role in ushering that class into existence — a class which subsequently ruled not through its ownership of private property but through its ‘ownership’ of the state. That state was antagonistic to the forces that could have best resisted the retreat of the revolution, i.e. the working class.” [Simon Pirani, The Russian Revolution in Retreat, 1920–24, p. 240]

Whether it is in regards to soviet, workplace or army democracy or the rights of the opposition to organise freely and gather support, the facts are the Bolsheviks had systematically eliminated them before the start of the civil war. So when Trotsky asserted that “[i]n the beginning, the party had wished and hoped to preserve freedom of political struggle within the framework of the Soviets” but that it was civil war which “introduced stern amendments into this calculation,” he was rewriting history. Rather than being “regarded not as a principle, but as an episodic act of self-defence” the opposite is the case. As we note in section H.3.8 from roughly October 1918 onwards, the Bolsheviks did raise party dictatorship to a “principle” and did not care that this was “obviously in conflict with the spirit of Soviet democracy.” Trotsky was right to state that “on all sides the masses were pushed away gradually from actual participation in the leadership of the country.” [The Revolution Betrayed, p. 96 and p. 90] He was just utterly wrong to imply that this process happened after the end of the civil war rather than before its start and that the Bolsheviks did not play a key role in so doing. Thus, “in the soviets and in economic management the embryo of centralised and
vik vision of democracy became the means by which real democracy was eliminated in area after area of Russian working class life. Needless to say, a state which eliminates functional democracy in the grassroots will not stay democratic in any meaningful sense for long.

Nor does it come as too great a surprise to discover that a government which considers itself as “better able to judge” things than the people finally decides to annul any election results it dislikes. As we discussed in section H.5, this perspective is at the heart of van-guardism, for in Bolshevik ideology the party, not the class, is in the final analysis the repository of class consciousness. This means that once in power it has a built-in tendency to override the decisions of the masses it claimed to represent and justify this in terms of the advanced position of the party (as historian Richard Sakwa notes a “lack of identification with the Bolshevik party was treated as the absence of political consciousness altogether” [Op. Cit., p. 94]). Combine this with a vision of “democracy” which is highly centralised and which undermines local participation then we have the necessary foundations for the turning of party power into party dictatorship.

Which brings us to the next issue, namely the Bolshevik idea that the party should seize power, not the working class as a whole, equating party power with popular power. The question instantly arises of what happens if the masses turn against the party? The gerrymandering, disbanding and marginalisation of the soviets in the spring and summer of 1918 answers that question (see last section). It is not a great step to party dictatorship over the proletariat from the premises of Bolshevism. In a clash between soviet democracy and party power, the Bolsheviks consistently favoured the latter – as would be expected given their ideology.

This can be seen from the Bolsheviks’ negative response to the soviets of 1905. At one stage the Bolsheviks demanded the St. Petersburg soviet accept the Bolshevik political programme and then disband. The rationale for these attacks is significant. The St.
nor did they object to the centralisation of power and activity (and so the bureaucratisation of life). As such, the Bolsheviks failed to understand how their own politics helped the rise of this new ruling class. They failed to understand the links between centralism and bureaucracy. Bolshevik nationalisation and centralism (as well as being extremely inefficient) also ensured that the control of society, economic activity and its product would be in the hands of the state and, so, class society would continue. Unsurprisingly, complaints by working class people about the privileges enjoyed by Communist Party and state officials were widespread.

Another problem was the Bolshevik vision of (centralised) democracy. Trotsky is typical. In April 1918 he argued that once elected the government was to be given total power to make decisions and appoint people as required as it is “better able to judge in the matter than” the masses. The sovereign people were expected to simply obey their public servants until such time as they “dismiss that government and appoint another.” Trotsky raised the question of whether it was possible for the government to act “against the interests of the labouring and peasant masses?” And answered no! Yet it is obvious that Trotsky’s claim that “there can be no antagonism between the government and the mass of the workers, just as there is no antagonism between the administration of the union and the general assembly of its members” is just nonsense. [Leon Trotsky Speaks, p. 113] The history of trade unionism is full of examples of committees betraying their membership. Needless to say, the subsequent history Lenin’s government shows that there can be “antagonism” between rulers and ruled and that appointments are always a key way to further elite interests.

This vision of top-down “democracy” can, of course, be traced back to Marx and Lenin (see sections H.3.2 and H.3.3). By equating centralised, top-down decision making by an elected government with “democracy,” the Bolsheviks had the ideological justification to eliminate the functional democracy associated with the soviets, factory committees and soldiers committees. The Bolshevik bureaucratic state forms had already emerged by mid-1918.” [Sakwa, Op. Cit., pp. 96–7]

It may be argued in objection to this analysis that the Bolsheviks faced resistance from the start and, consequently, civil war existed from the moment Lenin seized power and to focus attention on the events of late May 1918 gives a misleading picture of the pressures they were facing. After all, the Bolsheviks had the threat of German Imperialism and there were a few (small) White Armies in existence as well as conspiracies to combat. However, this is unconvincing as Lenin himself pointed to the ease of Bolshevik success post-October. On March 14th, 1918, Lenin had proclaimed that “the civil war was one continuous triumph for Soviet power” and in June argued that “the Russian bourgeoisie was defeated in open conflict ... in the period from October 1917 to February and March 1918”. [Collected Works, vol. 27, p. 174 and p. 428] It can be concluded that the period up until March 1918 was not considered by the Bolsheviks themselves as being so bad as requiring the adjustment of their politics. This explains why, as one historian notes, that the “revolt of the Czechoslovak Legion on 25 May 1918 is often considered to be the beginning of full-scale military activity. There followed a succession of campaigns.” This is reflected in Bolshevik policy as well, with war communism “lasting from about mid-1918 to March 1921.” [Sakwa, Op. Cit., p. 22 and p. 19]

Significantly, the introduction of one-man management was seen not as an emergency measure forced upon the Bolsheviks by dire circumstances of civil war but rather as a natural aspect of building socialism itself. In March, 1918, for example, Lenin argued that civil war “became a fact” on October, 25, 1917 and “[i]n this civil war ... victory was achieved with ... extraordinary ease ... The Russia revolution was a continuous triumphal march in the first months.” [Op. Cit., pp. 88–9] Looking back at this time from April 1920, Lenin reiterated his position (“Dictatorial powers and one-man management are not contradictory to socialist democracy.”) while also stressing that this was not forced upon the Bolsheviks.
by civil war. Discussing how, again, the civil war was ended and it was time to build socialism he argued that the “whole attention of the Communist Party and the Soviet government is centred on peaceful economic development, on problems of the dictatorship and of one-man management ... When we tackled them for the first time in 1918, there was no civil war and no experience to speak of.” So it was “not only experience” of civil war, argued Lenin “but something more profound ... that has induced us now, as it did two years ago, to concentrate all our attention on labour discipline.” [Op. Cit., vol. 30, p. 503 and p. 504] Trotsky also argued that Bolshevik policy was not conditioned by the civil war (see section H.3.14).

As historian Jonathan Aves notes, “the Communist Party took victory as a sign of the correctness of its ideological approach and set about the task of economic construction on the basis of an intensification of War Communism policies.” [Workers Against Lenin, p. 37] In addition, this perspective flowed, as we argue in the next section, from the Bolshevik ideology, from its vision of socialism, rather than some alien system imposed upon an otherwise healthy set of ideas.

Of course, this can be ignored in favour of the argument that party rule was required for the revolution to succeed. That would be a defendable, if utterly incorrect, position to take. It would, however, also necessitate ripping up Lenin’s *State and Revolution* as it is clearly not relevant to a socialist revolution nor can it be considered as the definitive guide of what Leninism really stands for, as Leninists like to portray it to this day.

The growth in power of the bureaucracy should not, therefore, come as a major surprise given that it had existed from the start in sizeable numbers. Yet, for the Bolsheviks “the development of a bureaucracy” was a puzzle, “whose emergence and properties mystified them.” It should be noted that, “[f]or the Bolsheviks, bureaucratism signified the escape of this bureaucracy from the will of the party as it took on a life of its own.” [Op. Cit., p. 182 and p. 190] This was the key. They did not object the usurpation of power by the party (indeed they placed party dictatorship at the core of their politics and universalised it to a general principle for all “socialist” revolu-
hands of the Bolshevik government was automatically no longer
in the hands of the working class. So when Leninists argue that “objective” circumstances forced the Bolsheviks to substitute their
power for that of the masses, anarchists reply that this substitu-
tion had occurred the moment the Bolsheviks centralised power
and placed it into their own hands. As a result, popular participa-
tion and institutions began to wither and die. Moreover, once in
power, the Bolsheviks were shaped by their new position and the
social relationships it created and, consequently, implemented poli-
cies influenced and constrained by the hierarchical and centralised
structures they had created.

This was not the only negative impact of Bolshevik centralism.
It also spawned a bureaucracy. As we noted in section H.1.7, the
rise of a state bureaucracy started immediately with the seizure of
power. Thus “red tape and vast administrative offices typified Soviet
reality” as the Bolsheviks “rapidly created their own [state] appa-
ratus to wage the political and economic offensive against the bour-
geoise and capitalism. As the functions of the state expanded, so
did the bureaucracy” and so “following the revolution the process
of institutional proliferation reached unprecedented heights ... a mass
of economic organisations [were] created or expanded.” [Richard
Sakwa, Soviet Communists in Power, p. 190 and p. 191] This
was a striking confirmation of the anarchist analysis which argued
that a new bureaucratic class develops around any centralised body.
This body would soon become riddled with personal influences and
favours, so ensuring that members could be shielded from popular
control while, at the same time, exploiting its power to feather their
own nest. Overtime, this permanent collection of bodies would be-
come the real power in the state, with the party members nomi-
nally in charge really under the control of an unelected and uncon-
trolled officiodom. This was recognised by Lenin in 1922:

“If we take Moscow with its 4,700 Communists in respon-
sible positions, and if we take that huge bureaucratic ma-

anarchists for not believing that a revolution needs to defend it-
self. Yet, ironically, their whole defence of Bolshevism rests on the
“exceptional circumstances” produced by the civil war they claim is
inevitable. If Leninism cannot handle the problems associated with
actually conducting a revolution then, surely, it should be avoided
at all costs. This is particularly the case as leading Bolsheviks all
argued that the specific problems their latter day followers blame for
their authoritarianism were natural results of any revolution and,
consequently, unavoidable. Lenin, for example, in 1917 mocked
those who opposed revolution because “the situation is exception-
ally complicated.” He noted “the development of the revolution itself
always creates an exceptionally complicated situation” and that it
was an “incredibly complicated and painful process.” In fact, it was
“the most intense, furious, desperate class war and civil war. Not a sin-
gle great revolution in history has taken place without civil war. And
only a ‘man in a muffler’ can think that civil war is conceivable with-
out an ‘exceptionally complicated situation.’” “If the situation were
not exceptionally complicated there would be no revolution.” [Op.
Cit., vol. 26, pp. 118–9]

He reiterated this in 1918, arguing that “every great revolution,
and a socialist revolution in particular, even if there is no external
war, is inconceivable without internal war, i.e., civil war, which is
even more devastating than external war, and involves thousands
and millions of cases of wavering and desertion from one side to an-
other, implies a state of extreme indefiniteness, lack of equilibrium
and chaos.” [Op. Cit., vol. 27, p. 264] He even argued that revolu-
tion in an advanced capitalist nations would be far more devastat-
ing and ruinous than in Russia. [Op. Cit., vol. 28, p. 298]

Therefore, Lenin stressed, “it will never be possible to build social-
ism at a time when everything is running smoothly and tranquilly;
it will never be possible to realise socialism without the landowners
and capitalists putting up a furious resistance.” Those “who believe
that socialism can be built at a time of peace and tranquillity are pro-
foundly mistaken: it will be everywhere built at a time of disruption,
at a time of famine. That is how it must be.” Moreover, “not one of the great revolutions of history has taken place” without civil war and “without which not a single serious Marxist has conceived the transition from capitalism to socialism.” Obviously, “there can be no civil war — the inevitable condition and concomitant of socialist revolution — without disruption.” [Op. Cit., vol. 27, p. 520, p. 517, p. 496 and p. 497]

Moreover, anarchists had long argued that a revolution would be associated with economic disruption, isolation and civil war and, consequently, had developed their ideas to take these into account. For example, Kropotkin was “certain that the coming Revolution ... will burst upon us in the middle of a great industrial crisis ... There are millions of unemployed workers in Europe at this moment. It will be worse when Revolution has burst upon us ... The number of the out-of-works will be doubled as soon as barricades are erected in Europe and the United States ... we know that in time of Revolution exchange and industry suffer most from the general upheaval ... A Revolution in Europe means, then, the unavoidable stoppage of at least half the factories and workshops.” The “smallest attack upon property will bring in its train the complete disorganisation” of the capitalist economy. This meant that society “itself will be forced to take production in hand ... and to reorganise it to meet the needs of the whole people.” [The Conquest of Bread, pp. 69–70] This prediction was a common feature of Kropotkin’s politics (as can be seen from, say, his “The First Work of the Revolution” [Act for Yourselves, pp. 56–60]).

Revolutionary anarchism, then, is based on a clear understanding of the nature of a social revolution, the objective problems it will face and the need for mass participation and free initiative to solve them. So it must, therefore, be stressed that the very “objective factors” supporters of Bolshevism use to justify the actions of Lenin and Trotsky were predicted correctly by anarchists decades beforehand and integrated into our politics. Moreover, anarchists had developed their ideas on social revolution to make sure that

cept ... that the whole course of events was ‘historically inevitable’ and ‘objectively determined’. Bolshevist ideology and practice were themselves important and sometimes decisive factors in the equation, at every critical stage of this critical period.” [The Bolsheviks and Workers’ Control, p. 84]

This is not to suggest that the circumstances played no role in the development of the revolution. It is simply to indicate that Bolshevist ideology played its part as well by not only shaping the policies implemented but also how the results of those policies themselves contributed to the circumstances being faced. This is to be expected, given that the Bolsheviks were the ruling party and, consequently, state power was utilised to implement their policies, policies which, in turn, were influenced by their ideological preferences and prejudices. Ultimately, to maintain (as Leninists do) that the ideology of the ruling party played no (or, at best, a minor) part hardly makes sense logically nor, equally importantly, can it be supported once even a basic awareness of the development of the Russian Revolution is known.

A key issue is the Bolsheviks support for centralisation. Long before the revolution, Lenin had argued that within the party it was a case of “the transformation of the power of ideas into the power of authority, the subordination of lower Party bodies to higher ones.” [Collected Works, vol. 7, p. 367] Such visions of centralised organisation were the model for the revolutionary state and, once in power, they did not disappoint. Thus, “for the leadership, the principle of maximum centralisation of authority served more than expedience. It consistently resurfaced as the image of a peacetime political system as well.” [Thomas F. Remington, Building Socialism in Bolshevik Russia, p. 91]

However, by its very nature centralism places power into a few hands and effectively eliminates the popular participation required for any successful revolution to develop. The power placed into the
“In the stages leading up to the Bolshevik coup in October 1917, there were incipient socialist institutions developing in Russia — workers’ councils, collectives, things like that. And they survived to an extent once the Bolsheviks took over — but not for very long; Lenin and Trotsky pretty much eliminated them as they consolidated their power. I mean, you can argue about the justification for eliminating them, but the fact is that the socialist initiatives were pretty quickly eliminated.

“Now, people who want to justify it say, ‘The Bolsheviks had to do it’ — that’s the standard justification: Lenin and Trotsky had to do it, because of the contingencies of the civil war, for survival, there wouldn’t have been food otherwise, this and that. Well, obviously the question is, was that true. To answer that, you’ve got to look at the historical facts: I don’t think it was true. In fact, I think the incipient socialist structures in Russia were dismantled before the really dire conditions arose ... But reading their own writings, my feeling is that Lenin and Trotsky knew what they were doing, it was conscious and understandable.” [Understanding Power, p. 226]

Chomsky is right on both counts. The attack on the basic building blocks of genuine socialism started before the civil war. Moreover, it did not happen by accident. The attacks were rooted in the Bolshevik vision of socialism. As Maurice Brinton concluded:

“there is a clear-cut and incontrovertible link between what happened under Lenin and Trotsky and the later practices of Stalinism ... The more one unearths about this period the more difficult it becomes to define — or even to see — the 'gulf' allegedly separating what happened in Lenin’s time from what happened later. Real knowledge of the facts also makes it impossible to ac-

these inevitable disruptions would be minimised. By stressing the need for self-management, mass participation, self-organisation and free federation, anarchism showed how a free people could deal with the difficult problems they would face (as we discuss in the section H.6.2 there is substantial evidence to show that Bolshevik ideology and practice made the problems facing the Russian revolution much worse than they had to be).

It should also be noted that every revolution has confirmed the anarchist analysis. For example, the German Revolution after 1918 faced an economic collapse which was, relatively, just as bad as that facing Russia the year before. The near revolution produced extensive political conflict, including civil war, which was matched by economic turmoil. Taking 1928 as the base year, the index of industrial production in Germany was slightly lower in 1913, namely 98 in 1913 to 100 in 1928. In 1917, the index was 63 and by 1918, it was 61 (i.e. industrial production had dropped by nearly 40%). In 1919, it fell again to 37, rising to 54 in 1920 and 65 in 1921. Thus, in 1919, the “industrial production reached an all-time low” and it “took until the late 1920s for [food] production to recover its 1912 level.” [V. R. Berghahn, Modern Germany, p. 258, pp. 67–8 and p. 71] In Russia, the index for large scale industry fell to 77 in 1917 from 100 in 1913, falling again to 35 in 1918, 26 in 1919 and 18 in 1920. [Tony Cliff, Lenin, vol. 3, p. 86]

Strangely, Leninists do not doubt that the spread of the Russian Revolution to Germany would have allowed the Bolsheviks more leeway to avoid authoritarianism and so save the Revolution. Yet this does not seem likely given the state of the German economy. Comparing the two countries, there is a similar picture of economic collapse. In the year the revolution started, production had fallen by 23% in Russia (from 1913 to 1917) and by 43% in Germany (from 1913 to 1918). Once revolution had effectively started, production fell even more. In Russia, it fell to 65% of its pre-war level in 1918, in Germany it fell to 62% of its pre-war level in 1919. However, no Leninist argues that the German Revolution was impossible or
doomed to failure. Similarly, no Leninist denies that a socialist revolution was possible during the depths of the Great Depression of the 1930s or to post-world war two Europe, marked as it was by economic collapse. This was the case in 1917 as well, when economic crisis had been a fact of Russian life throughout the year. This did not stop the Bolsheviks calling for revolution and seizing power. Nor did this crisis stop the creation of democratic working class organisations, such as soviets, trade unions and factory committees being formed nor did it stop mass collective action. It appears, therefore, that while the economic crisis of 1917 did not stop the development of socialist tendencies to combat it, the seizure of power by a socialist party did.

To conclude, it seems hypocritical in the extreme for Leninists to blame difficult circumstances for the failure of the Russian Revolution. As Lenin himself argued, the Bolsheviks "never said that the transition from capitalism to socialism would be easy. It will invoke a whole period of violent civil war, it will involve painful measures.” They knew "that the transition from capitalism to socialism is a struggle of an extremely difficult kind" and so "[if there ever existed a revolutionary who hoped that we could pass to the socialist system without difficulties, such a revolutionary, such a socialist, would not be worth a brass farthing,” [Op. Cit., p. 431, p. 433 and pp. 432–3] He would have been surprised to discover that many of his own followers would be "such a socialist!"

Consequently, it is not hard to conclude that for Leninists difficult objective circumstances place socialism off the agenda only when they are holding power. So even if we ignore the extensive evidence that Bolshevik authoritarianism started before the civil war, the logic of the Leninist argument is hardly convincing. Yet it does have advantages, for by focusing attention on the civil war, Leninists also draw attention away from Bolshevik ideology and tactics. As Peter Kropotkin recounted to Emma Goldman this simply cannot be done:

“the Communists are a political party firmly adhering to the idea of a centralised State, and that as such they were bound to misdirect the course of the Revolution … [Their policies] have paralysed the energies of the masses and have terrorised the people. Yet without the direct participation of the masses in the reconstruction of the country, nothing essential could be accomplished … They created a bureaucracy and officialdom … [which were] parasites on the social body … It was not the fault of any particular individual: rather it was the State they had created, which discredits every revolutionary ideal, stifles all initiative, and sets a premium on incompetence and waste … Intervention and blockade were bleeding Russia to death, and were preventing the people from understanding the real nature of the Bolshevik regime.” [My Disillusionment in Russia, p. 99]

Obviously, if the “objective” factors do not explain Bolshevik authoritarianism and the failure of the revolution we are left with the question of which aspects of Bolshevik ideology impacted negatively on the revolution. As Kropotkin’s comments indicate, anarchists have good reason to argue that one of the greatest myths of state socialism is the idea that Bolshevik ideology played no role in the fate of the Russian Revolution. We turn to this in the next section.

H.6.2 Did Bolshevik ideology influence the outcome of the Russian Revolution?

As we discussed in the last section, anarchists reject the Leninist argument that the failure of Bolshevism in the Russian Revolution can be blamed purely on the difficult objective circumstances they faced. As Noam Chomsky summarises:
as we indicated in section B.4, most people have little option but to agree to work for others.

We must stress here that not all anarchists are opposed to the market. Individualist anarchists favour it while Proudhon wanted to modify it while retaining competition. For many, the market equals capitalism but this is not the case as it ignores the fundamental issue of (economic) class, namely who owns the means of production. Capitalism is unique in that it is based on wage labour, i.e. a market for labour as workers do not own their own means of production and have to sell themselves to those who do. Thus it is entirely possible for a market to exist within a society and for that society not to be capitalist. For example, a society of independent artisans and peasants selling their product on the market would not be capitalist as workers would own and control their means of production. Similarly, Proudhon’s competitive system of self-managed co-operatives and mutual banks would be non-capitalist (and socialist) for the same reason. Anarchists object to capitalism due to the quality of the social relationships it generates between people (i.e. it generates authoritarian ones). If these relationships are eliminated then the kinds of ownership which do so are anarchistic. Thus the issue of ownership matters only in-so-far it generates relationships of the desired kind (i.e. those based on liberty, equality and solidarity). To concentrate purely on “markets” or “property” means to ignore social relationships and the key aspect of capitalism, namely wage labour. That right-wingers do this is understandable (to hide the authoritarian core of capitalism) but why (libertarian or other) socialists should do so is less clear.

In this section of the FAQ we discuss anarchist objections to the market as such rather than the capitalist market. The workings of the market do have problems with them which are independent of, or made worse by, the existence of wage-labour. It is these problems which make most anarchists hostile to the market and so desire a (libertarian) communist society. So, even if we assume a mutualist (a libertarian market-socialist) system of competing self-

demic in 1919 and 1920” while in early 1921 the Communist Party “faced what amounted to a revolutionary situation. Industrial unrest was only one aspect of a more general crisis that encompassed the Kronstadt revolt and the peasant rising in Tambov and Western Siberia.” This “industrial unrest represented a serious political threat to the Soviet regime ... From Ekaterinburg to Moscow, from Petrograd to Ekaterinoslav, workers took to the streets, often in support of political slogans that called for the end of Communist Party rule ... soldiers in many of the strike areas showed themselves to be unreliable [but] the regime was able to muster enough forces to master the situation. Soldiers could be replaced by Chekists, officer cadets and other special units where Party members predominated.” [Aves, Op. Cit., p. 187, p. 155 and p. 186]

Yet, an “atomised” and powerless working class does not need martial law, lockouts, mass arrests and the purging of the workforce to control it. As Russian anarchist Ida Mett succinctly put it: “And if the proletariat was that exhausted how come it was still capable of waging virtually total general strikes in the largest and most heavily industrialised cities?” [The Kronstadt Rebellion, p. 81] The end of the civil war also saw the Bolsheviks finally destroy what was left of non-Bolshevik trade unionism. In Moscow, this took place against fierce resistance of the union members. As one historian concludes:

“Reflecting on the determined struggle mounted by printers, bakers and chemical workers in Moscow during 1920–1, in spite of appalling economic conditions, being represented by organisations weakened by constant repression ... to retain their independent labour organisations it is difficult not to feel that the social basis for a political alternative existed.” [Jonathan Aves, “The Demise of Non-Bolshevik Trade Unionism in Moscow: 1920–21”, pp. 101- 33, Revolutionary Russia, vol. 2, no. 1, p. 130]
Elsewhere, Aves argues that an “examination of industrial unrest after the Bolshevik seizure of power … shows that the Revolution had brought to the surface resilient traditions of organisation in society and had released tremendous forces in favour of greater popular participation … The survival of the popular movement through the political repression and economic devastation of the Civil War testifies to its strength.” [Workers Against Lenin, p. 186] The idea that the Russian working class was incapable of collective struggle is hard to defend given this series of struggles (and state repression). The class struggle in Bolshevik Russia did not stop, it continued except the ruling class had changed. All the popular energy and organisation this expressed, which could have been used to combat the problems facing the revolution and create the foundations of a genuine socialist society, were wasted in fighting the Bolshevik regime. Ultimately, though, the “sustained, though ultimately futile, attempts to revive an autonomous workers’ movement, especially in mid-1918 and from late 1920, failed owing to repression.” [Sakwa, Op. Cit., p. 269] Another historian notes that “immediately after the civil war” there was “a revival of working class collective action that culminated in February-March 1921 in a widespread strike movement and the revolt at the Kronstadt naval base.” As such, the position expounded by Rees and other Leninists “is so one-sided as to be misleading.” [Pirani, Op. Cit., p. 7 and p. 23]

Nor is this commonplace Leninist rationale for Bolshevik rule particularly original, as it dates back to Lenin and was first formulated “to justify a political clamp-down.” Indeed, this argument was developed in response to rising working class protest rather than its lack: “As discontent amongst workers became more and more difficult to ignore, Lenin … began to argue that the consciousness of the working class had deteriorated … workers had become ‘declassed.’” However, there “is little evidence to suggest that the demands that workers made at the end of 1920 … represented a fundamental change in aspirations since 1917.” [Aves, Op. Cit., p. 18, p. 90 and p. 91] So while the “working class had decreased in size and changed in compo-
criteria of ‘efficiency’ and ‘rationality’ are not the same as they are under capitalism.” [Op. Cit., p. 137] Under communist-anarchism, the decision-making system used to determine the best use of resources is not more or less “efficient” than market allocation, because it goes beyond the market-based concept of “efficiency.” It does not seek to mimic the market but to do what the market fails to do. This is important, because the market is not the rational system its defenders often claim. While reducing all decisions to one common factor is, without a doubt, an easy method of decision making, it also has serious side-effects because of its reductionistic basis. The market makes decision making simplistic and generates a host of irrationalities and dehumanising effects as a result. So, to claim that communism will be “more” efficient than capitalism or vice versa misses the point. Libertarian communism will be “efficient” in a totally different way and people will act in ways considered “irrational” only under the narrow logic of capitalism.

For another critique of Mises, see Robin Cox’s “The ‘Economic Calculation’ controversy: unravelling of a myth” [Common Voice, Issue 3]

### I.1.3 What is wrong with markets anyway?

A lot. Markets soon result in what are termed “market forces,” impersonal forces which ensure that the people in the economy do what is required of them in order for the economy to function. The market system, in capitalist apologetics, is presented to appear as a regime of freedom where no one forces anyone to do anything, where we “freely” exchange with others as we see fit. However, the facts of the matter are somewhat different, since the market often ensures that people act in ways opposite to what they desire or forces them to accept “free agreements” which they may not actually desire. Wage labour is the most obvious example of this, for,
producing more goods (and, ironically, by the propertarian right against the welfare state for, it should be remembered, that volume of output, like profitability and so “efficiency”, in the market depends on income distribution and a redistribution from rich to poor could easily result in more output becoming profitable). Similarly, that capitalism produces more alcohol and Prozac to meet the higher demand for dulling the minds of those trying to survive under it would not be an argument against libertarian communism!

As we discuss in section I.4, while anarchists seek to meet material human needs we do not aim, as under capitalism, to sacrifice all other goals to that aim as capitalism does. Thus, to state the obvious, the aim for maximum volume of output only makes sense under capitalism as the maximum of human happiness and liberty may occur with a lower volume of output in a free society. The people of a society without oppression, exploitation and alienation will hardly act in identical ways, nor seek the same volume of output, as those in one, like capitalism, marked by those traits!

Moreover, the volume of output is a somewhat misleading criteria as it totally ignores its distribution. If the bulk of that volume goes to a few, then that is hardly a good use of resources. This is hardly an academic concern as can be seen from the Hayek influenced neo-liberalism of the 1980s onwards. As economist Paul Krugman notes, the value of the output of an average worker “has risen almost 50 percent since 1973. Yet the growing concentration of income in the hands of a small minority had proceeded so rapidly that we’re not sure whether the typical American has gained anything from rising productivity.” This means that wealth have flooded upwards, and “the lion’s share of economic growth in America over the past thirty years has gone to a small, wealthy minority.” [The Conscience of a Liberal, p. 124 and p. 244]

To conclude. Capitalist “efficiency” is hardly rational and for a fully human and ecological efficiency libertarian communism is required. As Buick and Crump point out, “socialist society still has to be concerned with using resources efficiently and rationally, but the
The authentic proletariat remained till the end, having the most slender connections with the countryside.

“This fact must be emphasised, in order to nail the official lies seeking to attribute the Petrograd strikes ... to peasant elements, ‘insufficiently steeled in proletarian ideas.’ The real situation was the very opposite ... There was certainly no exodus of peasants into the starving towns! ... It was the famous Petrograd proletariat, the proletariat which had played such a leading role in both previous revolutions, that was finally to resort to the classical weapon of the class struggle: the strike.” [The Kronstadt Uprising, p. 36]

As one expert on this issue argues, while the number of workers did drop “a sizeable core of veteran urban proletarians remained in the city; they did not all disappear.” In fact, “it was the loss of young activists rather than of all skilled and class-conscious urban workers that caused the level of Bolshevik support to decline during the Civil War. Older workers had tended to support the Menshevik Party in 1917”. Given this, “it appears that the Bolshevik Party made deurbanisation and declassing the scapegoats for its political difficulties when the party’s own policies and its unwillingness to accept changing proletarian attitudes were also to blame.” It should also be noted that the notion of declassing to rationalise the party’s misfortunes was used before long before the civil war: “This was the same argument used to explain the Bolshevik’s lack of success among workers in the early months of 1917 — that the cadres of conscious proletarians were diluted by nonproletarian elements.” [Diane P. Koenker, “Urbanisation and Deurbanisation in the Russian Revolution and Civil War”, pp. 81–104, Party, State, and Society in the Russian Civil War, Diane P. Koenker, William G. Rosenberg and Ronald Grigor Suny (eds.), p. 96, p. 95, p. 100 and p. 84]

While there is still much research required, what facts that are available suggest that throughout the time of Lenin’s regime the is to allow more goods to be produced in order to accumulate more capital. It could be argued that the market forces producers to minimise costs on the assumption that lower costs will be more likely to result in higher profits. However, this leaves the social impact of such cost-cutting out of the equation. For example, imposing externalities on others does reduce a firm’s prices and, as a result, is rewarded by the market however alienating and exhausting work or rising pollution levels does not seem like a wise thing to do. So, yes, it is true that a capitalist firm will seek to minimise costs in order to maximise profits. This, at first glance, could be seen as leading to an efficient use of resources until such time as the results of this become clear. Thus goods could be created which do not last as long as they could, which need constant repairing, etc. So a house produced “efficiently” under capitalism could be a worse place to live simply because costs were reduced by cutting corners (less insulation, thinner walls, less robust materials, etc.). In addition, the collective outcome of all these “efficient” decisions could be socially inefficient as they reduce the quality of life of those subject to them as well as leading to over-investment, over-production, falling profits and economic crisis. As such, it could be argued that Mises’ argument exposes more difficulties for capitalism rather than for anarchism.

Finally, it should be noted that most anarchists would question the criteria Hayek and Mises used to judge the relative merits of communism and capitalism. As the former put it, the issue was “a distribution of income independent of private property in the means of production and a volume of output which was at least approximately the same or even greater than that procured under free competition.” [“The Nature and History of the Problem”, Op. Cit., p. 37] Thus the issue is reduced to that of output (quantity), not issues of freedom (quality). If slavery or Stalinism had produced more output than free market capitalism, that would not make either system desirable. This was, in fact, a common argument against Stalinism during the 1950s and 1960s when it did appear that central planning was
plans? Libertarian communists argue, yes, it does (as we discuss at length in section I.1.5).

All choices involve lost possibilities, so the efficient use of resources is required to increase the possibilities for creating other goods. At best, all you can say is that by picking options which cost the least a market economy will make more resources available for other activities. Yet this assumption crucially depends on equating “efficient” with profitable, a situation which cannot be predicted beforehand and which easily leads to inefficient allocation of resources (particularly if we are looking at meeting human needs). Then there are the costs of using money for if we are talking of opportunity costs, of the freeing up of resources for other uses, then the labour and other resources used to process money related activities should be included. While these activities (banking, advertising, defending property, and so forth) are essential to a capitalist economy, they are not needed and unproductive from the standpoint of producing use values or meeting human need. This would suggest that a libertarian communist economy would have a productive advantage over a capitalist economy as the elimination of this structural waste intrinsic to capitalism will free up a vast amount of labour and materials for socially useful production. This is not to mention the so-called “costs” which are no such thing, but relate to capitalist property rights. Thus “rent” may be considered a cost under capitalism, but would disappear if those who used a resource controlled it rather than pay a tribute to gain access to it. As Kropotkin argued, “the capitalist system makes us pay for everything three or four times its labour value” thanks to rent, profit, interest and the actions of middle men. Such system specific “costs” hide the actual costs (in terms of labour and resource use) by increasing the price compared to if we “reckon our expenses in labour”. [Op. Cit., p. 68]

Moreover, somewhat ironically, this “economising” of resources which the market claims to achieve is not to conserve resources for future generations or to ensure environmental stability. Rather, it Russian workers took collective action in defence of their interests. This is not to say that workers did not also respond to the problems they faced in an individualistic manner, often they did. However, such responses were, in part (as we noted in the last section), because Bolshevik policy itself gave them little choice as it limited their ability to respond collectively. Yet in the face of difficult economic circumstances, workers turned to mass meetings and strikes. In response, the Bolshevik’s used state repression to break resistance and protest against their regime. In such circumstances it is easy to see how the Bolshevik party became isolated from the masses they claimed to be leading but were, in fact, ruling. This transformation of rebels into a ruling elite comes as no great surprise given that Bolshevik’s aimed to seize power themselves in a centralised and hierarchical institution, a state, which has always been the method by which ruling classes secured their position (as we argued in section H.3.7, this perspective flowed from the flawed Marxist theory of the state). Just as they had to, first, gerrymander and disband soviets to regime in power in the spring and summer of 1918, so the Bolsheviks had to clamp down on any form of collective action by the masses. As such, it is incredulous that latter day Leninists justify Bolshevik authoritarianism on a lack of collective action by workers when that authoritarianism was often driven precisely to break it!

So the claim by John Rees that the “dialectical relationship between the Bolsheviks and the working class was broken, shattered because the working class itself was broke-backed after the civil war” leaves a lot to be desired. [Op. Cit., p. 22] The Bolsheviks did more than their fair share of breaking the back of the working class. This is unsurprising for a government which grants to the working class the greatest freedom undermines its own power by so doing. Even a limited relaxation of its authority will allow people to organise themselves, listen to alternative points of view and to act on them. That could not but undermine the rule of the party and so could not be supported — nor was it.
For example, in his 1920 diatribe against Left-wing Communism, Lenin pointed to “non-Party workers’ and peasants’ conferences” and Soviet Congresses as means by which the party secured its rule. Yet, if the congresses of soviets were "democratic institutions, the like of which even the best democratic republics of the bourgeois have never know", the Bolsheviks would have no need to "support, develop and extend" non-Party conferences “to be able to observe the temper of the masses, come closer to them, meet their requirements, promote the best among them to state posts". [The Lenin Anthology, p. 573] How the Bolsheviks met “their requirements” is extremely significant — they disbanded them, just as they had with soviets with non-Bolshevik majorities in 1918. This was because “[d]uring the disturbances” of late 1920, “they provided an effective platform for criticism of Bolshevik policies.” Their frequency was decreased and they “were discontinued soon afterward.” [Sakwa, Op. Cit., p. 203]

In the soviets themselves, workers turned to non-partyism, with non-party groups winning majorities in soviet delegates from industrial workers’ constituencies in many places. This was the case in Moscow, where Bolshevik support among “industrial workers collapsed” in favour of non-party people. Due to support among the state bureaucracy and the usual packing of the soviet with representatives from Bolshevik controlled organisations, the party had, in spite of this, a massive majority. Thus the Moscow soviet elections of April-May 1921 “provided an opportunity to revive working-class participation. The Bolsheviks turned it down.” [Pirani, Op. Cit., pp. 97–100 and p. 23] Indeed, one Moscow Communist leader stated that these soviet elections had seen “a high level of activity by the masses and a striving to be in power themselves.” [quoted by Pirani, Op. Cit., p. 101]

1921 also saw the Bolshevik disperse provincial trade unions conferences in Vologda and Vitebsk “because they had anti-communist majorities.” [Aves, Op. Cit., p. 176] At the All-Russian Congress of Metalworkers’ Union in May, the delegates voted down the party-

In summary, then, Mises considered only central planning as genuine socialism, meaning that a decentralised communism was not addressed. Weighting up the pros and cons of how to use millions of different goods in the millions of potential situations they could be used would be impossible in a centralised system, yet in decentralised communism this is not an issue. Each individual commune and syndicate would be choosing from the few alternatives required to meet their needs. With the needs known, the alternatives can be compared — particularly if agreed criteria (“aids to the mind”) are utilised and the appropriate agreed information communicated.

Efficient economic decision making in a moneyless “economy” is possible, assuming that sufficient information is passed between syndicates and communes to evaluate the relative and absolute costs of a good. Thus, decisions can be reached which aimed to reduce the use of goods in short supply or which take large amounts of resources to produce (or which produce large externalities to create). While a centralised system would be swamped by the large number of different uses and combinations of goods, a decentralised communist system would not be.

Thus, anarchists argue that Mises was wrong. Communism is viable, but only if it is libertarian communism. Ultimately, though, the real charge is not that socialism is “impossible” but rather that it would be inefficient, i.e., it would allocate resources such that too much is used to achieve specified goals and that there would be no way to check that the allocated resources were valued sufficiently to warrant their use in the first place. While some may portray this as a case of planning against markets (no-planning), this is false. Planning occurs in capitalism (as can be seen from any business), it is a question of whether capitalism ensures that more plans can be co-ordinated and needs meet by means of relative prices and profit-loss accounting than by communism (free access and distribution according to need). As such, the question is does the capitalist system adds additional problems to the efficient co-ordination of
“health, happiness and contentment” of people? Or the beauty of their surroundings? Which, moreover, penalises those who take these factors into consideration? For anarchists, Mises comments indicate well the inverted logic of capitalism. That Mises can support a system which ignores the needs of individuals, their happiness, health, surroundings, environment and so on by “its very nature” says a lot. His suggestion that we assign monetary values to such dimensions begs the question and has plausibility only if it assumes what it is supposed to prove. [Op. Cit., p. 99–100] Indeed, the person who would put a price on friendship simply would have no friends as they simply do not understand what friendship is and are thereby excluded from much which is best in human life. Likewise for other “extra-economic” goods that individual’s value, such as beautiful places, happiness, the environment and so on.

So essential information required for sensible decision making would have to be recorded and communicated in a communist society and used to evaluate different options using agreed methods of comparison. This differs drastically from the price mechanism as it recognises that mindless, automatic calculation is impossible in social choices. Such choices have an unavoidable ethical and social dimension simply because they involve other human beings and the environment. As Mises himself acknowledged, monetary calculation does not capture such dimensions.

We, therefore, need to employ practical judgement in making choices aided by a full understanding of the real social and ecological costs involved using, of course, the appropriate “aids to the mind.” Given that an anarchist society would be complex and integrated, such aids would be essential but, due to its decentralised nature, it need not embrace the price mechanism. It can evaluate the efficiency of its decisions by looking at the real costs involved to society rather than embrace the distorted system of costing explicit in the price mechanism (as Kropotkin once put it, “if we analyse price” we must “make a distinction between its different elements”. [Op. Cit., p. 72]).
notion ... that political power was forced on the Bolsheviks because the working class was so weakened by the civil war that it was incapable of wielding it. In reality, non-party workers were willing and able to participate in political processes, but in the Moscow soviet and elsewhere, were pushed out of them by the Bolsheviks. The party’s vanguardism, i.e. its conviction that it had the right, and the duty, to make political decisions on the workers’ behalf, was now reinforced by its control of the state apparatus. The working class was politically expropriated: power was progressively concentrated in the party, specifically in the party elite.” [Op. Cit., p. 4]

It should also be stressed that fear of arrest limited participation. A sadly typical example of this occurred in April 1920, which saw the first conference of railway workers on the Perm-Ekaterinburg line. The meeting of 160 delegates elected a non-Party chairman who “demanded that delegates be guaranteed freedom of debate and immunity from arrest.” [Aves, Op. Cit., p. 44] A Moscow Metalworkers’ Union conference in early February 1921 saw the first speakers calling “for the personal safety of the delegates to be guaranteed” before criticisms would be aired. [Sakwa, Op. Cit., p. 244] Later that year dissidents in the Moscow soviet demanded “that delegates be given immunity from arrest unless sanctioned by plenary session of the soviet.” Immediately afterwards two of them, including an anarcho-syndicalist, were detained. It was also proposed that delegates’ freedom of speech “included immunity from administrative or judicial punishment” along with the right of any number of delegates “to meet and discuss their work as they chose.” [Pirani, Op. Cit., p. 104] Worse, “by the end of 1920 workers not only had to deal with the imposition of harsh forms of labour discipline, they also had to face the Cheka in their workplace.” This could not help hinder working class collective action, as did the use of the Cheka and other troops to repress strikes. While it is impossible to accurately

they are based on a definition of cost which excludes all ‘free goods’ ... [such as the] environment, except for those parts that have been privately appropriated. This means that an activity can be economic although it plays hell with the environment, and that a competing activity, if at some cost it protects and conserves the environment, will be uneconomic.” Moreover, “do not overlook the words ‘to those who undertake it.’ It is a great error to assume, for instance, that the methodology of economics is normally applied to determine whether an activity carried out by a group within society yields a profit to society as a whole.” [Op. Cit., p. 29]

To claim that prices include all these “externalities” is nonsense. If they did, we would not see capital moving to third-world countries with few or no anti-pollution or labour laws. At best, the “cost” of pollution would only be included in a price if the company was sued successfully in court for damages — in other words, once the damage is done. Ultimately, companies have a strong interest in buying inputs with the lowest prices, regardless of how they are produced. In fact, the market rewards such behaviour as a company which was socially responsible would be penalised by higher costs, and so market prices. It is reductionist accounting and its accompanying “ethics of mathematics” that produces the “irrationality of rationality” which plagues capitalism’s exclusive reliance on prices (i.e. profits) to measure “efficiency.”

Ironically enough, Mises also pointed to the irrational nature of the price mechanism. He stated (correctly) that there are “extra-economic” elements which “monetary calculation cannot embrace” because of “its very nature.” He acknowledged that these “considerations themselves can scarcely be termed irrational” and, as examples, listed “[i]n any place where men regard as significant the beauty of a neighbourhood or a building, the health, happiness and contentment of mankind, the honour of individuals or nations.” He also noted that “they are just as much motive forces of rational conduct as are economic factors” but they “do not enter into exchange relationships.” How rational is an economic system which ignores the
Similarly, those investments which have a higher initial cost but which, in the long run, would have, say, a smaller environmental impact would not be selected in a profit-driven system.

This has seriously irrational effects, because the managers of capitalist enterprises are obliged to choose technical means of production which produce the cheapest results. All other considerations are subordinate, in particular the health and welfare of the producers and the effects on the environment. The harmful effects resulting from “rational” capitalist production methods have long been pointed out. For example, speed-ups, pain, stress, accidents, boredom, overwork, long hours and so on all harm the physical and mental health of those involved, while pollution, the destruction of the environment, and the exhaustion of non-renewable resources all have serious effects on both the planet and those who live on it. As green economist E. F. Schumacher argued:

“But what does it mean when we say that something is uneconomic? . . . Something is uneconomic when it fails to earn an adequate profit in terms of money. The method of economics does not, and cannot, produce any other meaning . . . The judgement of economics . . . is an extremely fragmentary judgement; out of the large number of aspects which in real life have to be seen and judged together before a decision can be taken, economics supplies only one — whether a money profit accrues to those who undertake it or not.” [Small is Beautiful, pp. 27–8]

Schumacher stressed that “about the fragmentary nature of the judgements of economics there can be no doubt whatever. Even with the narrow compass of the economic calculus, these judgements are necessarily and methodically narrow. For one thing, they give vastly more weight to the short than to the long term...”

measure how many workers were shot by the Cheka for participation in labour protest, looking at individual cases “suggests that shootings were employed to inspire terror and were not simply used in the occasional extreme case.” [Aves, Op. Cit., p. 35] Which means, ironically, those who had seized power in 1917 in the name of the politically conscious proletariat were in fact ensuring their silence by fear of the Cheka or weeding them out, by means of workplace purges and shooting.

Perhaps unsurprisingly, but definitely significantly, of the 17,000 camp detainees on whom statistical information was available on 1 November 1920, peasants and workers constituted the largest groups, at 39% and 34% respectively. Similarly, of the 40,913 prisoners held in December 1921 (of whom 44% had been committed by the Cheka) nearly 84% were illiterate or minimally educated, clearly, therefore, either peasants of workers. [George Leggett, The Cheka: Lenin’s Political Police, p. 178] Needless to say, Lenin failed to mention this aspect of his system in The State and Revolution (a failure shared by later Leninists). Ultimately, the contradictions between Bolshevik rhetoric and the realities of working class life under their rule was closed by coercion.

Such forms of repression could not help ensure both economic chaos and push the revolution away from socialism. As such, it is hard to think of a more incorrect assertion than Lenin’s 1921 one that “[i]ndustry is indispensable, democracy is not. Industrial democracy breeds some utterly false ideas.” [Collected Works, vol. 32, p. 27] Yet without industrial democracy, any development towards socialism is aborted and the problems of a revolution cannot be solved in the interests of the working masses.

This account of workers’ protest being crushed by the so-called workers’ state raises an important theoretical question. Following Marx and Engels, Lenin asserted that the “state is nothing but a machine for the suppression of one class by another” [Collected Works, vol. 28, p. 259] Yet here is the working class being suppressed by “its” state. If the state is breaking strikes, including general
strikes, by what stretch of the imagination can it be considered a "workers' state"? Particularly as the workers, like the Kronstadt sailors, demanded free soviet elections, not as the Leninists then and now claim, "soviets without Communists" (although one soviet historian noted with regards the 1921 revolt that "taking account of the mood of the workers, the demand for free elections to the soviets meant the implementation in practice of the infamous slogan of soviets without communists." [quoted by Aves, Op. Cit., p. 123]). If the workers are being repressed and denied any real say in the state, how can they be considered the ruling class? And what class is doing the "suppression"? As we discussed in section H.3.8, Bolshevik ideology adjusted to this reality by integrating the need for party dictatorship to combat the "wavering" within the working class into its theory of the state. Yet it is the party (i.e., the state) which determines what is and is not wavering. This suggests that the state apparatus has to be separate from the working class in order to repress it (as always, in its own interests).

So anarchists argue that the actual experience of the Bolshevik state shows that the state is no mere "machine" of class rule but has interests of its own. Which confirms the anarchist theory of the state rather than the Marxist (see section H.3.7). It should be stressed that it was after the regular breaking of working class protest and strikes that the notion of the dictatorship of the party became Bolshevik orthodoxy. This makes sense, as protests and strikes express "wavering" within the working class which needs to be solved by state repression. This, however, necessitates a normal state power, one which is isolated from the working class and which, in order to enforce its will, must (like any state) atomise the working class people and render them unable, or unwilling, to take collective action in defence of their interests. For the defenders of Bolshevism to turn round and blame Bolshevik authoritarianism on the atomisation required for the party to remain in power and enforce its will is staggering.

Economic decisions, in other words, cannot be reduced down to one factor yet Mises argued that anyone "who wished to make calculations in regard to a complicated process of production will immediately notice whether he has worked more economically than others or not; if he finds, from reference to the exchange values obtaining in the market, that he will not be able to produce profitably, this shows that others understand how to make better use of the higher-order goods in question." [Op. Cit., pp. 97–8] However, this only shows whether someone has worked more profitably than others, not whether it is more economical. Market power automatically muddles this issue, as does the possibility of reducing the monetary cost of production by recklessly exploiting natural resources and labour, polluting, or otherwise passing costs onto others. Similarly, the issue of wealth inequality is important, for if the production of luxury goods proves more profitable than basic essentials for the poor does this show that producing the former is a better use of resources? And, of course, the key issue of the relative strength of market power between workers and capitalists plays a key role in determining "profitably."

Basing your economic decision making on a single criteria, namely profitability, can, and does, lead to perverse results. Most obviously, the tendency for capitalists to save money by not introducing safety equipment ("To save a dollar the capitalist build their railroads poorly, and along comes a train, and loads of people are killed. What are their lives to him, if by their sacrifice he has saved money?" [Emma Goldman, A Documentary History of the American Years, vol. 1, p. 157]). Similarly, it is considered a more "efficient" use of resources to condemn workers to deskilling and degrading work than "waste" resources in developing machines to eliminate or reduce it ("How many machines remain unused solely because they do not return an immediate profit to the capitalist! ... How many discoveries, how many applications of science remain a dead letter solely because they don't bring the capitalist enough!" [Carlo Cafiero, “Anarchy and Communism”, pp. 2871]...
be also achieved and a record of its costs made and communicated to those who seek to use it.

While the specific “aids to the mind” as well as “costs” and their relative weight would be determined by the people of a free society, we can speculate that it would include direct and indirect labour, externalities (such as pollution), energy use and materials, and so forth. As such, it must be stressed that a libertarian communist society would seek to communicate the “costs” associated with any specific product as well as its relative scarcity. In other words, it needs a means of determining the objective or absolute costs associated with different alternatives as well as an indication of how much of a given good is available at a given it (i.e., its scarcity). Both of these can be determined without the use of money and markets.

Section I.4 discusses possible frameworks for an anarchist economy, including suggestions for libertarian communist economic decision-making processes. In terms of “aids to the mind”, these include methods to compare goods for resource allocation by indicating the absolute costs involved in producing a good and the relative scarcity of a specific good, among other things. Such a framework is necessary because “an appeal to a necessary role for practical judgements in decision making is not to deny any role to general principles. Neither ... does it deny any place for the use of technical rules and algorithmic procedures ... Moreover, there is a necessary role for rules of thumb, standard procedures, the default procedures and institutional arrangements that can be followed unreflectively and which reduce the scope for explicit judgements comparing different states of affairs. There are limits in time, efficient use of resources and the dispersal of knowledge which require rules and institutions. Such rules and institutions can free us for space and time for reflective judgements where they matter most.” [John O’Neill, Ecology, Policy and Politics, pp. 117–8] It is these “rules and institutions need themselves to be open to critical and reflective appraisal.” [O’Neill, The Market, p. 118]

Finally, it should be noted that Zinoviev, a leading Bolshevik, tried to justify the hierarchical position of the Bolshevik party arguing that “[i]n time of strike every worker knows that there must be a Strike Committee — a centralised organ to conduct the strike, whose orders must be obeyed — although this Committee is elected and controlled by the rank and file. Soviet Russia is on strike against the whole capitalist world. The social Revolution is a general strike against the whole capitalist system. The dictatorship of the proletariat is the strike committee of the social Revolution.” [Proceedings and Documents of the Second Congress 1920, vol. 2, p. 929]

In strikes, however, the decisions which are to be obeyed are those of the strikers. They should make the decisions and the strike committees should carry them out. The actual decisions of the Strike Committee should be accountable to the assembled strikers who have the real power (and so power is decentralised in the hands of the strikers and not in the hands of the committee). A far better analogy for what happened in Russia was provided by Emma Goldman:

“There is another objection to my criticism on the part of the Communists. Russia is on strike, they say, and it is unethical for a revolutionist to side against the workers when they are striking against their masters. That is pure demagoguery practised by the Bolsheviki to silence criticism. It is not true that the Russian people are on strike. On the contrary, the truth of the matter is that the Russian people have been locked out and that the Bolshevik State — even as the bourgeois industrial master — uses the sword and the gun to keep the people out. In the case of the Bolsheviki this tyranny is masked by a world-stirring slogan: thus they have succeeded in blinding the masses. Just because I am a revolutionist I
refuse to side with the master class, which in Russia is called the Communist Party.” [My Disillusionment in Russia, p. xl ix]

The isolation of the Bolsheviks from the working class was, in large part, required to ensure their power and, moreover, a natural result of utilising state structures. “The struggle against oppression — political, economic, and social, against the exploitation of man by man” argued Alexander Berkman, “is always simultaneously a struggle against government as such. The political State, whatever its form, and constructive revolutionary effort are irreconcilable. They are mutually exclusive.” Every revolution “faces this alternative: to build freely, independently and despite of the government, or to choose government with all the limitation and stagnation it involves … Not by the order of some central authority, but organically from life itself, must grow up the closely knit federation of the industrial, agrarian, and other associations; by the workers themselves must they be organised and managed.” The “very essence and nature” of the socialist state “excludes such an evolution. Its economic and political centralisation, its governmentality and bureaucratisation of every sphere of activity and effort, its inevitable militarisation and degradation of the human spirit mechanically destroy every germ of new life and extinguish the stimuli of creative, constructive work.” [The Bolshevik Myth, pp. 340–1] By creating a new state, the Bolsheviks ensured that the mass participation required to create a genuine socialist society could not be expressed and, moreover, came into conflict with the Bolshevik authorities and their attempts to impose their (essentially state capitalist) vision of “socialism”.

It need not have been that way. As can be seen from our discussion of labour protest under the Bolsheviks, even in extremely hard circumstances the Russian people were able to organise themselves to conduct protest meetings, demonstrations and strikes. The social base for an alternative to Bolshevik power and policies existed. Sadly Bolshevik politics, policies and the repression they required consumers for them to make informed and rational decisions concerning their economic activity.

It is useful to remember that Mises argued that it is the complexity of a modern economy that ensures money is required: “Within the narrow confines of household economy, for instance, where the father can supervise the entire economic management, it is possible to determine the significance of changes in the processes of production, without such aids to the mind [as monetary calculation], and yet with more or less of accuracy.” However, “the mind of one man alone — be it ever so cunning, is too weak to grasp the importance of any single one among the countlessly many goods of higher order. No single man can ever master all the possibilities of production, innumerable as they are, as to be in a position to make straightway evident judgements of value without the aid of some system of computation.” [Op. Cit., p. 102]

A libertarian communist society would, it must be stressed, use various “aids to the mind” to help individuals and groups to make economic decisions. This would reduce the complexity of economic decision making, by allowing different options and resources to be compared to each other. Hence the complexity of economic decision making in an economy with a multitude of goods can be reduced by the use of rational algorithmic procedures and methods to aid the process. Such tools would aid decision making, not dominate it as these decisions affect humans and the planet and should never be made automatically.

That being the case, a libertarian communist society would quickly develop the means of comparing the real impact of specific “higher order” goods in terms of their real costs (i.e. the amount of labour, energy and raw materials used plus any social and ecological costs). Moreover, it should be remembered that production goods are made up on inputs of other goods, that is, higher goods are made up of consumption goods of a lower order. If, as Mises admits, calculation without money is possible for consumption goods then the creation of “higher order” goods can
correlation between actual and price costs? One can determine whether such a correlation exists by measuring one against the other. If this cannot be done, then the claim that prices measure costs is a tautology (in that a price represents a cost and we know that it is a cost because it has a price). If it can be done, then we can calculate costs in some other sense than in market prices and so the argument that only market prices represent costs falls. Equally, there may be costs (in terms of quality of life issues) which cannot be reflected in price terms.

Simply put, the market fails to distribute all relevant information and, particularly when prices are at disequilibrium, can communicate distinctly misleading information. In the words of two South African anarchists, “prices in capitalism provided at best incomplete and partial information that obscured the workings of capitalism, and would generate and reproduce economic and social inequalities. Ignoring the social character of the economy with their methodological individualism, economic liberals also ignored the social costs of particular choices and the question of externalities.” [Michael Schmidt and Lucien van der Walt, *Black Flame*, p. 92] This suggests that prices cannot be taken to reflect real costs any more that they can reflect the social expression of the valuation of goods. They are the result of a conflict waged over these goods and those that acted as their inputs (including, of course, labour). Market and social power, much more than need or resource usage, decides the issue. The inequality in the means of purchasers, in the market power of firms and in the bargaining position of labour and capital all play their part, so distorting any relationship a price may have to its costs in terms of resource use. Prices are misshapen.

Little wonder Kropotkin asked whether “are we not yet bound to analyse that compound result we call price rather than to accept it as a supreme and blind ruler of our actions?” [Fields, Factories and Workshops Tomorrow, p. 71] It is precisely these real costs, hidden by price, which need to be communicated to producers and ensured that it could not be used constructively during the revolution to create a genuine socialist revolution.
Section I — What would an anarchist society look like?

Indeed, prices often mis-value goods as companies can gain a competitive advantage by passing costs onto society (in the form of pollution, for example, or de-skilling workers, increasing job insecurity, and so on). This externalisation of costs is actually rewarded in the market as consumers seek the lowest prices, unaware of the reasons why it is lower (such information cannot be gathered from looking at the price). Even if we assume that such activity is penalised by fines later, the damage is still done and cannot be undone. Indeed, the company may be able to weather the fines due to the profits it originally made by externalising costs (see section E.3). Thus the market creates a perverse incentive to subsidise their input costs through off-the-book social and environmental externalities. As Chomsky suggests:

“it is by now widely realised that the economist’s ‘externalities can no longer be consigned to footnotes. No one who gives a moment’s thought to the problems of contemporary society can fail to be aware of the social costs of consumption and production, the progressive destruction of the environment, the utter irrationality of the utilisation of contemporary technology, the inability of a system based on profit or growth-maximisation to deal with needs that can only be expressed collectively, and the enormous bias this system imposes towards maximisation of commodities for personal use in place of the general improvement of the quality of life.” [Radical Priorities, pp. 190–1]

Prices hide the actual costs that production involved for the individual, society, and the environment, and instead boils everything down into one factor, namely price. There is a lack of dialogue and information between producer and consumer.

Moreover, without using another means of cost accounting instead of prices how can supporters of capitalism know there is a
by more than costs, with, for example, market power increasing market prices far higher than actual costs. Market prices also fail to take into account public goods and so bias allocation choices against them not to mention ignoring the effects on the wider society, i.e. beyond the direct buyers and sellers. Similarly, in order to make rational decisions relating to using a good, you need to know why the price has changed if a change is permanent or transient implies different responses. Thus the current price is not enough in itself. Has the good become more expensive temporarily, due, say, to a strike? Or is it because the supply of the resource has been exhausted? Actions that are sensible in the former situation will be wrong in the other. As O’Neill suggests, “the information [in the market] is passed back without dialogue. The market informs by ‘exit’—some products find a market, others do not. ‘Voice’ is not exercised. This failure of dialogue ... represents an informational failure of the market, not a virtue ... The market ... does distribute information ... it also blocks a great deal.” [Op. Cit., p. 99]

So far this FAQ has been largely critical, focusing on hierarchy, capitalism, the state and so on, and the problems to which they have led, as well as refuting some bogus “solutions” that have been offered by authoritarians of both the right and the left. It is now time to examine the constructive side of anarchism—the libertarian-socialist society that anarchists envision. This is important because anarchism is essentially a constructive theory, in stark contradiction to the picture of usually painted of anarchism as chaos or mindless destruction.

In this section of the FAQ we will give an outline of what an anarchist society might look like. Such a society has basic features—such as being non-hierarchical, decentralised and, above all else, spontaneous like life itself. To quote Glenn Albrecht, anarchists “lay great stress on the free unfolding of a spontaneous order without the use of external force or authority.” [“Ethics, Anarchy and Sustainable Development”, pp. 95–117. Anarchist Studies, vol. 2, no. 2, p. 110] This type of development implies that anarchist society would be organised from the simple to the complex, from the individual upwards to the community, the bio-region and, ultimately, the planet. The resulting society, which would be the outcome of nature freely unfolding toward greater diversity and complexity, is ethically preferable to any other sort of order simply because it allows for the highest degree of organic solidarity and freedom. Kropotkin described this vision of a truly free society as follows:

“We foresee millions and millions of groups freely constituting themselves for the satisfaction of all the varied needs of human beings ... All these will be composed of human beings who will combine freely ... ‘Take pebbles,’ said Fourier, ‘put them in a box and shake them, and they will arrange themselves in a mosaic that you could never get by instructing to anyone the work of arranging them harmoniously.’” [The Place of Anarchism in Socialistic Evolution, pp. 11–12]
Anarchist opposition to hierarchy is an essential part of a “spontaneously ordered” society, for authority stops the free development and growth of the individual. From this natural growth of individuals, groups and society as a whole anarchists expect a society which meets the needs of all — for individual and social freedom, material goods to meet physical needs and free and equal social relationships that meet what could be termed “spiritual needs” (i.e., mental and emotional wellbeing, creativity, ethical development and so on). Any attempt to force society or individuals into a pre-determined structure which restricts their liberty will produce dis-order as natural balances and development is hindered and distorted in anti-social and destructive directions. Thus an anarchist society must be a free society of free individuals, associating within libertarian structures, rather than a series of competing hierarchies (be they political or economical). Only in freedom can society and individuals develop and create a just and fair world. In Proudhon’s words, “liberty is the mother of order, not its daughter.”

As the individual does not exist in a social vacuum, appropriate social conditions are required for individual freedom to develop and blossom according to its full potential. The theory of anarchism is built around the central assertion that individuals and their organisations cannot be considered in isolation from each other. That is, social structures shape us, “that there is an inter-relationship between the authority structures of institutions and the psychological qualities and attitudes of individuals” and that “the major function of participation is an educative one.” [Carole Pateman, Participation and Democratic Theory, p. 27] Anarchism presents this position in its most coherent and libertarian form. In other words, freedom is only sustained and protected by activity under conditions of freedom, namely self-government. Freedom is the only precondition for acquiring the maturity required for continued freedom: “Only in freedom can man grow to his full stature. Only in freedom will be learn to think and move, and give the very best in him.” [Emma Goldman, Red Emma Speaks, p. 72]
The flaw in his argument is clear. Assuming that an hour of socially necessary labour is £10 then, in price terms, P would have £80 of direct labour costs, with £20 of raw material A while Q would have £90 of direct labour and £10 of A. Both cost £100 so it hard to see how this “corresponds to the nature and purpose of calculation”! Using less of raw material A is a judgement made in addition to “calculation” in this example. The question of whether to economise on the use of A simply cannot be made using prices. If P, for example, can only be produced via a more ecologically destructive process than Q or if the work process by which P is created is marked by dull, mindless work but Q’s is more satisfying for the people involved than Q may be considered a better decision. Sadly, that kind of information is not communicated by the price mechanism.

As John O’Neill points out, “Mises’ earlier arguments against socialist planning turned on an assumption about commensurability. His central argument was that rational economic decision-making required a single measure on the basis of which the worth of alternative states of affairs could be calculated and compared.” [Ecology, Policy and Politics, p. 115] This central assumption was unchallenged by Taylor and Lange in their defence of “socialism”, meaning that from the start the debate against Mises was defensive and based on the argument that socialist planning could mimic the market and produce results which were efficient from a capitalist point of view.

Anarchists question whether using prices means basing all decision making on one criterion and ignoring all others is a rational thing to do. As O’Neill suggests, “the relative scarcity of items ... hardly exhaust the full gamut of information that is distributed throughout society which might be relevant to the co-ordination of economic activities and plans.” [The Market, p. 196] Saying that a good costs £10 does not tell you much about the amount of pollution its production or use generates, under what conditions of labour it was produced, whether its price is affected by the market

As individual freedom can only be created, developed and defended by self-government and free association, a system which encourages individuality must be decentralised and participatory in order for people to develop a psychology that allows them to accept the responsibilities of self-management. Living under the state or any other authoritarian system produces a servile character, as the individual is constantly placed under hierarchical authority, which blunts their critical and self-governing abilities by lack of use. Such a situation cannot promote freedom, and so anarchists “realise that power and authority corrupt those who exercise them as much as those who are compelled to submit to them.” [Bakunin, The Political Philosophy of Bakunin, p. 249]

Looking at capitalism, we find that under wage labour people sell their creative energy and control over their activity for a given period. The boss does not just take surplus value from the time employees sell, but the time itself — their liberty, their ability to make their own decisions, express themselves through work and with their fellow workers. Wage labour equals wage slavery as you sell your time and skills (i.e. liberty) everyday at work and you will never be able to buy that time back for yourself. Once it is gone; it is gone for good. It also generates, to quote Godwin, a “sense of dependence” and a “servile and truckling spirit”, so ensuring that the “feudal spirit still survives that reduced the great mass of mankind to the rank of slaves and cattle for the service of the few.” [The Anarchist Writings of William Godwin, pp. 125–6] This is why anarchists see the need to “create the situation where each person may live by working freely, without being forced to sell his [or her] work and his [or her] liberty to others who accumulate wealth by the labour of their serfs.” [Kropotkin, Words of a Rebel, p. 208]

Thus the aim of anarchism is to create a society in which every person “should have the material and moral means to develop his humanity” and so to “organise society in such a way that every individual ... should find ... approximately equal means for the development of [their] various faculties and for their
utilisation in [their] work; to create a society which would place every individual ... in such a position that it would be impossible for [them] to exploit the labour of anyone else” and be “enabled to participate in the enjoyment of social wealth” as long as they “contributed directly toward the production of that wealth.” [Bakunin, Op. Cit., p. 409] As such, anarchists would agree with George Orwell: “The question is very simple. Shall people ... be allowed to live the decent, fully human life which is now technically achievable, or shan’t they? Shall the common man be pushed back into the mud, or shall he not?” [Orwell on Spain, p. 361]

Anarchism, in summary, is about changing society and abolishing all forms of authoritarian social relationship, putting life before the soul-destroying “efficiency” needed to survive under capitalism; for the anarchist “takes his stand on his positive right to life and all its pleasures, both intellectual, moral and physical. He loves life, and intends to enjoy it to the full.” [Bakunin, Michael Bakunin: Selected Writings, p. 101] Thus, to quote Emma Goldman, “all human-beings, irrespective of race, colour, or sex, are born with the equal right to share at the table of life; that to secure this right, there must be established among men economic, social, and political freedom.” [A Documentary History of the American Years, vol. 2, p. 450] This would be a classless and non-hierarchical society, one without masters and servants, one based on the free association of free individuals which encourages and celebrates individuality and freedom:

“The phrase, ‘a classless society’, no doubt has terrors for any thoughtful person. It calls up immediately the image of dull mediocrity ... all one uniform scale of self-sufficient individuals, living in model-houses, travelling in uniform Fords along endless uniform roads ... But ... the sharing of this wealth would not produce a uniformity of life, simply because there is no uniformity of desire. Uniformity is an unintelligent nightmare; there can be put to good effect. It is not ... the only way”. “The strength of the epistemological argument for the market depends in part on the implausibility of assuming that all knowledge could be centralised upon some particular planning agency” he stresses, but Mises’ “argument ignores, however, the existence of the decentralised but predominantly non-market institutions for the distribution of knowledge ... The assumption that only the market can co-ordinate dispersed non-vocalisable knowledge is false.” [Op. Cit., p. 118 and p. 132]

So, in order to determine if a specific good is useful to a person, that person needs to know its “cost.” Under capitalism, the notion of cost has been so associated with price that we have to put the word “cost” in quotation marks. However, the real cost of, say, writing a book, is not a sum of money but so much paper, so much energy, so much ink, so much human labour. In order to make a rational decision on whether a given good is better for meeting a given need than another, the would-be consumer requires this information. However, under capitalism this information is hidden by the price.

Somewhat ironically, given how “Austrian” economics tends to stress that the informational limitations are at the root of its “impossibility” of socialism, the fact is that the market hides a significant amount of essential information required to make a sensible investment decision. This can be seen from an analysis of Mises’ discussion on why labour-time cannot replace money as a decision-making tool. Using labour, he argued, “leaves the employment of material factors of production out of account” and presents an example of two goods, P and Q, which take 10 hours to produce. P takes 8 hours of labour, plus 2 units of raw material A (which is produced by an hour’s socially necessary labour). Q takes 9 hours of labour and one unit of A. He asserts that in terms of labour P and Q “are equivalent, but in value terms P is more valuable than Q. The former is false, and only the later corresponds to the nature and purpose of calculation.” [“Economic Calculation in the Socialist Commonwealth”, Op. Cit., p. 113]
dividual firm or commune knows exactly what is required to meet its needs, and so the number of possible alternatives is reduced as well (for example, certain materials are simply technically unsuitable for certain tasks).

Mises’ other assumption is equally flawed. This is that without the market, no information is passed between producers beyond the final outcome of production. In other words, he assumed that the final product is all that counts in evaluating its use. Needless to say, it is true that without more information than the name of a given product it is impossible to determine whether using it would be an efficient utilisation of resources. Yet more information can be provided which can be used to inform decision making. As socialists Adam Buick and John Crump point out, “at the level of the individual production unit or industry, the only calculations that would be necessary in socialism would be calculations in kind. On the one side would be recorded the resources (materials, energy, equipment, labour) used up in production and on the other the amount of good produced, together with any by-products. Socialist production is simply the production of use values from use values, and nothing more.” [State Capitalism: The Wages System Under New Management, p. 137] Thus any good used as an input into a production process would require the communication of this kind of information.

The generation and communication of such information implies a decentralised, horizontal network between producers and consumers. This is because what counts as a use-value can only be determined by those directly using it. Thus the production of use-values from use-values cannot be achieved via central planning, as the central planners have no notion of the use-value of the goods being used or produced. Such knowledge lies in many hands, dispersed throughout society, and so socialist production implies decentralisation. Capitalist ideologues claim that the market allows the utilisation of such dispersed knowledge, but as John O’Neill notes, “the market may be one way in which dispersed knowledge can be no uniformity in a free human society. Uniformity can only be created by the tyranny of a totalitarian regime.” [Herbert Read, Anarchy and Order, pp. 87–8]

Anarchists think that the essential social values are human values, and that society is a complex of associations which express the wills of their members, whose well-being is its purpose. We consider that it is not enough that the forms of association should have the passive or “implied” consent of their members, but that the society, and the individuals who make it up, will be healthy only if it is in the full sense libertarian, i.e. self-governing, self-managed, and egalitarian. This implies not only that all the members should have a right to influence its policy if they so desire, but that the greatest possible opportunity should be afforded for every person to exercise this right. Anarchism involves an active, not merely passive, citizenship on the part of society’s members and holds that this principle is not only applied to some “special” sphere of social action called “politics” but to any and every form of social action, including economic activity.

So, as will be seen, the key concept underlying both the social/political and the economic structure of libertarian socialism is “self-management,” a term that implies not only workers control of their workplaces but also citizens’ control of their communities (where it becomes “self-government”), through direct democracy and voluntary federation. Thus self-management is the positive implication of anarchism’s “negative” principle of opposition to hierarchical authority. For through self-management, hierarchical authority is dissolved as self-managing workplace and community assemblies/councils are decentralised, “horizontal” organisations in which each participant has an equal voice in the decisions that affect his or her life, instead of merely following orders and being governed by others. Self-management, therefore, is the essential condition for a world in which individuals will be free to fol-
low their own dreams, in their own ways, co-operating together as equals without interference from any form of authoritarian power (such as government or boss).

Perhaps needless to say, this section is intended as a heuristic device only, as a way of helping readers envision how anarchist principles might be embodied in practice. It is not (nor is it intended to be, nor is it desired to be) a definitive statement of how they must be embodied. The idea that a few people could determine exactly what a free society would look like is contrary to the anarchist principles of free growth and thought, and is far from our intention. Here we simply try to indicate some of the structures that an anarchist society may contain, based on the what ideals and ideas anarchists hold, informed by the few examples of anarchy in action that have existed and our critical evaluation of their limitations and successes. As Herbert Read once put it, “it is always a mistake to build a priori constitutions. The main thing is to establish your principles — the principles of equity, of individual freedom, of workers’ control. The community then aims at the establishment of these principles from the starting-point of local needs and local conditions.” [Op. Cit., p. 51]

Moreover, we must remember that, the state has changed over time and, indeed, has not always existed. Thus it is possible to have a social organisation which is not a state and to confuse the two would be a “confusion” made by those “who cannot visualise Society without a concentration of the State.” Yet this “is to overlook the fact that Man lived in Societies for thousands of years before the State had been heard of” and that “large numbers of people [have] lived in communes and free federations.” These were not states as the state “is only one of the forms assumed by society in the course of history. Why then make no distinction between what is permanent and what is accidental?” [Kropotkin, The State: Its Historic Role, pp. 9–10] Similarly, the axioms of capitalist economics not withstand, capitalism is but latest of a series of economies. Just as serfdom replaced slavery and capitalism replaced serfdom, so free (associated)

As John O’Neill summarises, the “argument against centralised planning is one that has been articulated within the history of socialist planning as an argument for democratic and decentralised decision making.” [The Market, p. 132] So, for good economic and political reasons, anarchists reject central planning. This central libertarian socialist position feeds directly into refuting Mises’ argument, for while a centralised system would need to compare a large (“infinite”) number of possible alternatives to a large number of possible needs, this is not the case in a decentralised system. Rather than a vast multitude of alternatives which would swamp a centralised planning agency, one workplace comparing different alternatives to meet a specific need faces a much lower number of possibilities as the objective technical requirements (use-values) of a project are known and so local knowledge will eliminate most of the options available to a small number which can be directly compared.

As such, removing the assumption of a central planning body automatically drains Mises’ critique of much of its force — rather than an “the ocean of possible and conceivable economic combinations” faced by a central body, a specific workplace or community has a more limited number of possible solutions for a limited number of requirements. Moreover, any complex machine is a product of less complex goods, meaning that the workplace is a consumer of other workplace’s goods. If, as Mises admitted, a customer can decide between consumption goods without the need for money then the user and producer of a “higher order” good can decide between consumption goods required to meet their needs.

In terms of decision making, it is true that a centralised planning agency would be swamped by the multiple options available to it. However, in a decentralised socialist system individual workplaces and communes would be deciding between a much smaller number of alternatives. Moreover, unlike a centralised system, the in-
benefits of free agreement against state tutelage, Kropotkin noted that only the former allowed the utilisation of “the co-operation, the enthusiasm, the local knowledge” of the people. [The Conquest of Bread, pp. 82–3 and p. 137]

Kropotkin’s own experience had shown how the “high functionaries” of the Tsarist bureaucracy “were simply charming in their innocent ignorance” of the areas they were meant to be administrating and how, thanks to Marxism, the socialist ideal had “lost the character of something that had to be worked out by the labour organisations themselves, and became state management of industries — in fact, state socialism; that is, state capitalism.” As an anarchist, he knew that governments become “isolated from the masses” and so “the very success of socialism” required “the ideas of no-government, of self-reliance, of free initiative of the individual” to be “preached side by side with those of socialised ownership and production.” Thus it was essential that socialism was decentralised, federal and participatory, that the “structure of the society which we longed for” was “worked out, in theory and practice, from beneath” in by “all labour unions” with “a full knowledge of local needs of each trade and each locality.” [Memoirs of a Revolutionist, p. 184, p. 360, p. 374–5 and p. 376]

So anarchists can agree with Mises that central planning cannot work in practice as its advocates hope. Or, more correctly, Mises agreed with the anarchists, as we had opposed central planning first. We have long recognised that no small body of people can be expected to know what happens in society and plan accordingly (“No single brain nor any bureau of brains can see to this organisation.” [Issac Puente, Libertarian Communism, p. 29]). Moreover, there is the pressing question of freedom as well, for “the despotism of [the ‘socialist’] State would be equal to the despotism of the present state, increased by the economic despotism of all the capital which would pass into the hands of the State, and the whole would be multiplied by all the centralisation necessary for this new State. And it is for this reason that we, the Anarchists, friends of lib-

labour can replace hired labour. As Proudhon noted, the “period through which we are now passing ... is distinguished by a special characteristic, — WAGES.” Capitalism, this system of wage-labour, has not always existed nor need it continue. Thus “the radical vice of political economy”, namely “affirming as a definitive state a transitory condition — namely, the division of society into patricians and proletares.” [System of Economic Contradictions, p. 198 and p. 67] Anarchists seek to make that transitory condition shorter rather than longer.

Ultimately, a free society based on self-managed communities and associated labour is, in many ways, a natural evolution of tendencies within existing society. For example, the means of production can only be used collectively, so suggesting that relations of equality and freedom based on associations of workers are a sensible alternative to ones based on hierarchy, exploitation and oppression based on masters and servants. It is the struggle against those oppressive social relationships which creates the very associations (workplace strike assemblies) which could expropriate the workplaces and make that possibility a reality.

So an anarchist society will not be created overnight nor without links to the past, and so it will initially be based on structures created in social struggle (i.e. created within but against capitalism and the state) and will be marked with the ideas that inspired and developed within that struggle. For example, the anarchist collectives in Spain were organised in a bottom-up manner, similar to the way the C.N.T. (the anarcho-syndicalist labour union) was organised before the revolution. In this sense, anarchy is not some distant goal but rather an expression of working class struggle. The creation of alternatives to the current hierarchical, oppressive, exploitative and alienated society is a necessary part of the struggle and the maintaining of your liberty and humanity in the insane world of hierarchical society. As such, an anarchist society will be the generalisation of the various types of “anarchy in action”
created in the various struggles against all forms of oppression and exploitation (see section I.2.3).

This means that how an anarchist society would look like and work is not independent of the specific societies it is created from nor the means used to create it. In other words, an anarchist society will reflect the economic conditions inherited from capitalism, the social struggles which preceded it and the ideas which existed within that struggle as modified by the practical needs of any given situation. Therefore the vision of a free society indicated in this section of the FAQ is not some sort of abstraction which will be created overnight. If anarchists did think that then we would rightly be called utopian. No, an anarchist society is the outcome of social struggle, self-activity which helps to create a mass movement which contains individuals who can think for themselves and are willing and able to take responsibility for their own lives.

So, when reading this section please remember that this is not a blueprint but only possible suggestions of what anarchy would look like. It is designed to provoke thought and indicate that an anarchist society is possible. We hope that our arguments and ideas presented in this section will inspire more debate and discussion of how a free society could work and, equally as important, help to inspire the struggle which will create that society. After all, anarchists desire to build the new world in the shell of the old. Unless we have some idea of what that new society will be like it is difficult to pre-figure it in our activities today! A point not lost on Kropotkin who argued that “the economic changes that will result from the social revolution will be so immense and so profound … that it will be impossible for one or even a number of individuals to elaborate the social forms to which a further society must give birth. The elaboration of new social forms can only be the collective work of the masses.” [Words of a Rebel, p. 175] Kropotkin, likewise, dismissed the notion of central planning as the “economic changes that will result from the social revolution will be so immense and so profound … that it will be impossible for one or even a number of individuals to elaborate the social forms to which a further society must give birth. The elaboration of new social forms can only be the collective work of the masses.” [Words of a Rebel, p. 175] The notion that a “strongly centralised Government” could “command that a prescribed quantity” of a good “be sent to such a place on such a day” and be “received on a given day by a specified official and stored in particular warehouses” was not only “undesirable” but also “wildly Utopian.” During his discussion of the
simply stand perplexed before the problems of management and location.” Thus we would quickly see “the spectacle of a socialist economic order floundering in the ocean of possible and conceivable economic combinations without the compass of economic calculation.” [“Economic Calculation in the Socialist Commonwealth”, pp. 87–130, Collectivist Economic Planning, F.A. von Hayek (ed.), p. 104, p. 103 and p. 110] Hence the claim that monetary calculation based on market prices is the only solution.

This argument is not without its force. How can a producer be expected to know if tin is a better use of resources than iron when creating a product if all they know is that iron and tin are available and suitable for their purpose? Or, if we have a consumer good which can be made with \( A + 2B \) or \( 2A + B \) (where \( A \) and \( B \) are both input factors such as steel, oil electricity, etc.) how can we tell which method is more efficient (i.e. which one used least resources and so left the most over for other uses)? With market prices, Mises’ argued, it is simple. If \( A \) cost $10 and \( B \) $5, then clearly method one would be the most efficient ($20 versus $25).

Without the market, Mises argued, such a decision would be impossible and so every decision would be “groping in the dark.” [Op. Cit., p. 110]

Mises’ argument rests on three flawed assumptions, two against communism and one for capitalism. The first two negative assumptions are that communism entails central planning and that it is impossible to make investment decisions without money values. We discuss why each is wrong in this section. Mises’ positive assumption for capitalism, namely that markets allow exact and efficient allocation of resources, is discussed in section I.1.5.

Firstly, Mises assumes a centralised planned economy. As Hayek summarised, the crux of the matter was “the impossibility of a rational calculation in a centrally directed economy from which prices are necessarily absent”, one which “involves planning on a most extensive scale — minute direction of practically all productive activity by one central authority”. Thus the “one central authority has to solve

[Noam Chomsky, Turning the Tide, p. 250] This section of the FAQ can be considered as a contribution to the articulating of libertarian alternatives to existing society, of what we want to build for the future.

We are not afraid that many will argue that much of the vision we present in this section of the FAQ is utopian. Perhaps they are right, but, as Oscar Wilde once said:

“A map of the world that does not include Utopia is not worth glancing at, for it leaves out the one country at which Humanity is always landing. And when Humanity lands there, it looks out and, seeing a better country, sets sail. Progress is the realisation of Utopias.” [The Soul of Man Under Socialism, p. 1184]

However, we have attempted to be as practical as we are visionary, presenting realistic problems as well as presenting evidence for our solutions to these problems from real life where possible, rather than present a series of impossible assumptions which dismiss possible problems by definition. It is better to consider the worse possible cases for if they do not appear then nothing has been lost and if they do at least we have a starting point for possible solutions. So, all in all, we have tried to be practical utopians!

We must stress, however, that anarchists do not want a “perfect” society (as is often associated with the term “utopia”). This would be as impossible as the neo-classical economic vision of perfect competition. Rather we want a free society and so one based on real human beings and so one with its own problems and difficulties. Our use of the word “utopia” should not be taken to imply that anarchists assume away all problems and argue that an anarchist society would be ideal and perfect. No society has ever been perfect and no society ever will be. All we argue is that an anarchist society will have fewer problems than those before and be better to live within. Anyone looking for perfection should look
elsewhere. Anyone looking for a better, but still human and so imperfect, world may find in anarchism a potential end for their quest.

So anarchists are realistic in their hopes and dreams. We do not conjure up hopes that cannot achieved but rather base our visions in an analysis of what is wrong with society today and a means of changing the world for the better. And even if some people call us utopians, we shrug off the accusation with a smile. After all, dreams are important, not only because they often the source of change in reality but because of the hope they express:

“People may ... call us dreamers ... They fail to see that dreams are also a part of the reality of life, that life without dreams would be unbearable. No change in our way of life would be possible without dreams and dreamers. The only people who are never disappointed are those who never hope and never try to realise their hope.” [Rudolf Rocker, The London Years, p. 95]

One last point. We must point out here that we are discussing the social and economic structures of areas within which the inhabitants are predominately anarchists. It is obviously the case that areas in which the inhabitants are not anarchists will take on different forms depending upon the ideas that dominate there. Hence, assuming the end of the current state structure, we could see anarchist communities along with statist ones (capitalist or socialist) and these communities taking different forms depending on what their inhabitants want — communist to individualist communities in the case of anarchist ones, state socialist to private state communities in the statist areas, ones based on religious sects and so on. As Malatesta argued, anarchists “must be intransigent in our opposition to all capitalist imposition and exploitation, and tolerant of all social concepts which prevail in different human groupings, so long as they do not threaten the equal rights and freedom of others.”

I.1.2 Is libertarian communism impossible?

In a word, no. While the “calculation argument” (see last section) is often used by propertarians (so-called right-wing “libertarians”) as the basis for the argument that communism (a moneyless society) is impossible, it is based on certain false ideas of what prices do, the nature of the market and how a communist-anarchist society would function. This is hardly surprising, as Mises based his theory on a variation of neo-classical economics and the Marxist social-democratic (and so Leninist) ideas of what a “socialist” economy would look like. So there has been little discussion of what a true (i.e. libertarian) communist society would be like, one that utterly transformed the existing conditions of production by workers’ self-management and the abolition of both wage-labour and money. However, it is useful here to indicate exactly why communism would work and why the “calculation argument” is flawed as an objection to it.

Mises argued that without money there was no way a socialist economy would make “rational” production decisions. Not even Mises denied that a moneyless society could estimate what is likely to be needed over a given period of time (as expressed as physical quantities of definite types and sorts of objects). As he argued, “calculation in natura in an economy without exchange can embrace consumption-goods only.” His argument was that the next step, working out which productive methods to employ, would not be possible, or at least would not be able to be done “rationally,” i.e. avoiding waste and inefficiency. The evaluation of producer goods “can only be done with some kind of economic calculation. The human mind cannot orient itself properly among the bewildering mass of intermediate products and potentialities without such aid. It would
exchanges of property rights” (somewhat annoyingly, Hodgson incorrectly asserts that “Proudhon described himself as an anarchist, not a socialist” when, in reality, the French anarchist repeatedly referred to himself and his mutualist system as socialist).

[Economics and Utopia, p. 20, p. 37 and p. 20]

Thus it is possible for a socialist economy to allocate resources using markets. By suppressing capital markets and workplace hierarchies, a mutualist system will improve upon capitalism by removing an important source of perverse incentives which hinder efficient use of resources as well as long term investment and social responsibility in addition to reducing inequalities and increasing freedom. As David Ellerman once noted, many “still look at the world in bipolar terms: capitalism or (state) socialism.” Yet there “are two broad traditions of socialism: state socialism and self-management socialism. State socialism is based on government ownership of major industry, while self-management socialism envisions firms being worker self-managed and not owned or managed by the government.” [Op. Cit., p. 147] Mutualism is a version of the second vision and anarchists reject the cosy agreement between mainstream Marxists and their ideological opponents on the proprietary right that only state socialism is “real” socialism.

Finally, it should be noted that most anarchists are not mutualists but rather aim for (libertarian) communism, the abolition of money. Many do see a mutualist-like system as an inevitable stage in a social revolution, the transitional form imposed by the objective conditions facing a transformation of a society marked by thousands of years of oppression and exploitation (collectivist-anarchism contains elements of both mutualism and communism, with most of its supporters seeing it as a transitional system). This is discussed in section I.2.2, while section I.1.3 indicates why most anarchists reject even non-capitalist markets. So does Mises’s argument mean that a socialism that abolishes the market (such as libertarian communism) is impossible? Given that the vast major-

[Errico Malatesta: His Life and Ideas, p. 174] Thus we respect the wishes of others to experiment and live their own lives as they see fit, while encouraging those in capitalist and other statist communities to rise in revolution against their masters and join the free federation of the anarchist community. Needless to say, we do not discuss non-anarchist communities here as it is up to non-anarchists to present their arguments in favour of their kind of statism.

So remember that we are not arguing that everyone will live in an anarchist way in a free society. Far from it. There will be pockets of unfreedom around, simply because the development of ideas varies from area to area. Anarchists, needless to say, are against forcing people to become anarchists (how can you force someone to be free?) Our aim is to encourage those subject to authority to free themselves and to work with them to create an anarchist society but, obviously, how successful we are at this will vary. We can, therefore, expect areas of freedom to co-exist with areas dominated by, say, state socialism, religion or capitalism just as we can expect to see different kinds of anarchism co-existing.

However, it would be a mistake to assume that just because there are many choices of community available that it automatically makes a society an anarchist one. For example, the modern world boasts over 200 different states. For most of them, individuals can leave and join another if it will let them. There is no world government as such. This does not make this series of states an anarchy. Similarly, a system based on different corporations is not an anarchy either, nor would be one based on a series of company towns and neither would a (quasi-feudal or neo-feudal?) system based on a multitude of landlords who hire their land and workplaces to workers in return for rent. The nature of the associations is just as important as their voluntary nature. As Kropotkin argued, the “communes of the next revolution will not only break down the state and substitute free federation for parliamentary rule; they will part with parliamentary rule within the commune itself...
They will be anarchist within the commune as they will be anarchist outside it.” [Selected Writings on Anarchism and Revolution, p. 132] Hence an anarchist society is one that is freely joined and left, is internally non-hierarchical and non-oppressive and non-exploitative. Thus anarchist communities may co-exist with non-anarchist ones but this does not mean the non-anarchist ones are in any way anarchistic or libertarian.

To conclude. Anarchists, to state the blindly obvious, do not aim for chaos, anarchy in the popular sense of the word (George Orwell once noted how one right-wing author “use[d] ‘Anarchism’ indifferently with ‘anarchy’, which is a hardly more correct use of words than saying that a Conservative is one who makes jam.” [Op. Cit., p. 298]). Nor do anarchists reject any discussion of what a free society would be like (such a rejection is usually based on the somewhat spurious grounds that you cannot prescribe what free people would do). In fact, anarchists have quite strong opinions on the basic outlines of a free society, always premised on the assumption that these are guidelines only. These suggestions are based on libertarian principles, developments in the class struggle and a keen awareness of what is wrong with class and hierarchical systems (and so what not to do!).

When reading this section of the FAQ remember that an anarchist society will be created by the autonomous actions of the mass of the population, not by anarchists writing books about it. This means any real anarchist society will make many mistakes and develop in ways we cannot predict. This implies that this is only a series of suggestions on how things could work in an anarchist society — it is not a blueprint of any kind. All anarchists can do is present what we believe and why we think such a vision is both desirable and viable. We hope that our arguments and ideas presented in this section of the FAQ will inspire more debate and discussion of how a free society would work. In addition, and equally as important, we hope it will help inspire the struggle that will create that society.

an extensive discussion of a dynamic, decentralised market socialist system which has obvious similarities with mutualism — a link which some Leninists recognise and stress in order to discredit market socialism via guilt-by-association (Proudhon “the anarchist and inveterate foe of Karl Marx ... put forward a conception of society, which is probably the first detailed exposition of a ‘socialist market.’” [Hillel Ticktin, “The Problem is Market Socialism”, pp. 55–80, Op. Cit., p. 56]). So far, most models of market socialism have not been fully libertarian, but instead involve the idea of workers’ control within a framework of state ownership of capital (Engler in Apostles of Greed is an exception to this, supporting community ownership). Ironically, while these Leninists reject the idea of market socialism as contradictory and, basically, not socialist they usually acknowledge that the transition to Marxist-communism under their workers’ state would utilise the market.

So, as anarchist Robert Graham points out, “Market socialism is but one of the ideas defended by Proudhon which is both timely and controversial ... Proudhon’s market socialism is indissolubly linked with his notions of industrial democracy and workers’ self-management.” [“Introduction”, P-J Proudhon, General Idea of the Revolution, p. xxxii] As we discuss in section I.3.5 Proudhon’s system of agro-industrial federations can be seen as a non-statist way of protecting self-management, liberty and equality in the face of market forces (Proudhon, unlike individualist anarchists, was well aware of the negative aspects of markets and the way market forces can disrupt society). Dissident economist Geoffrey M. Hodgson is right to suggest that Proudhon’s system, in which “each co-operative association would be able to enter into contractual relations with others”, could be “described as an early form of ‘market socialism’”. In fact, “instead of Lange-type models, the term ‘market socialism’ is more appropriately to such systems. Market socialism, in this more appropriate and meaningful sense, involves producer co-operatives that are owned by the workers within them. Such co-operatives sell their products on markets, with genuine
labour (and so liberty) to those who do. If quoting Engels is not too out of place, the "object of production — to produce commodities — does not import to the instrument the character of capital" as the "production of commodities is one of the preconditions for the existence of capital... as long as the producer sells only what he himself produces, he is not a capitalist; he becomes so only from the moment he makes use of his instrument to exploit the wage labour of others." [Collected Works, Vol. 47, pp. 179–80] In this, as noted in section C.2.1, Engels was merely echoing Marx (who, in turn, was simply repeating Proudhon’s distinction between property and possession). As mutualism eliminates wage labour by self-management and free access to the means of production, its use of markets and prices (both of which pre-date capitalism) does not mean it is not socialist (and as we note in section G.1.1 Marx, Engels, Bakunin and Kropotkin, like Mises, acknowledged Proudhon as being a socialist). This focus on the market, as David Schweickart suggests, is no accident:

"The identification of capitalism with the market is a pernicious error of both conservative defenders of laissez-faire [capitalism] and most left opponents... If one looks at the works of the major apologists for capitalism... one finds the focus of the apology always on the virtues of the market and on the vices of central planning. Rhetorically this is an effective strategy, for it is much easier to defend the market than to defend the other two defining institutions of capitalism. Proponents of capitalism know well that it is better to keep attention toward the market and away from wage labour or private ownership of the means of production.” [“Market Socialism: A Defense”, pp. 7–22, Market Socialism: the debate among socialists, Bertell Ollman (ed.), p. 11]

The theoretical work of such socialists as David Schweickart (see his books Against Capitalism and After Capitalism) present

I.1 Isn’t libertarian socialism an oxymoron?

In a word, no. This question is often asked by those who have come across the so-called "libertarian" right. As discussed in section A.1.3, the word “libertarian” has been used by anarchists for far longer than the pro-free market right have been using it. In fact, anarchists have been using it as a synonym for anarchist for over 150 years, since 1858. In comparison, widespread use of the term by the so-called “libertarian” right dates from the 1970s in America (with, from the 1940s onwards, limited use by a few individuals). Indeed, outside of North America “libertarian” is still essentially used as an equivalent of “anarchist” and as a shortened version of “libertarian socialist.” As Noam Chomsky notes:

"Let me just say regarding the terminology, since we happen to be in the United States, we have to be rather careful. Libertarian in the United States has a meaning which is almost the opposite of what it has in the rest of the world traditionally. Here, libertarian means ultra right-wing capitalist. In the European tradition, libertarian meant socialist. So, anarchism was sometimes called libertarian socialism, a large wing of anarchism, so we have to be a little careful about terminology.” [Reluctant Icon]

This in itself does not prove that the term "libertarian socialist" is free of contradiction. However, as we will show below, the claim
that the term is self-contradictory rests on the assumption that socialism requires the state in order to exist and that socialism is incompatible with liberty (and the equally fallacious claim that capitalism is libertarian and does not need the state). This assumption, as is often true of many objections to socialism, is based on a misconception of what socialism is, a misconception that many authoritarian socialists and the state capitalism of Soviet Russia have helped to foster. In reality it is the term “state socialism” which is the true oxymoron.

Sadly many people take for granted the assertion of many on the right and left that socialism equals Leninism or Marxism and ignore the rich and diverse history of socialist ideas, ideas that spread from communist and individualist-anarchism to Leninism. As Benjamin Tucker once noted, “the fact that State Socialism … has overshadowed other forms of Socialism gives it no right to a monopoly of the Socialistic idea.” [Instead of a Book, pp. 363–4] Unfortunately, many on the left combine with the right to do exactly that. Indeed, the right (and, of course, many on the left) consider that, by definition, “socialism” is state ownership and control of the means of production, along with centrally planned determination of the national economy (and so social life).

Yet even a quick glance at the history of the socialist movement indicates that the identification of socialism with state ownership and control is not common. For example, Anarchists, many Guild Socialists, council communists (and other libertarian Marxists), as well as followers of Robert Owen, all rejected state ownership. Indeed, anarchists recognised that the means of production did not change their form as capital when the state took over their ownership nor did wage-labour change its nature when it is the state employing labour (for example, see section H.3.13). For anarchists state ownership of capital is not socialist in the slightest. Indeed, as Tucker was well aware, state ownership turned everyone into a proletarian (bar the state bureaucracy) — hardly a desirable thing for a political theory aiming for the end of wage slavery!

This is incorrect — rather than being market socialists, they are in fact “neo-classical” socialists, building a “socialist” system which mimics capitalist economic theory rather than its reality. Replacing Walrus’s mythical creation of the “Auctioneer” with a planning board does not really get to the heart of the problem! Nor does their vision of “socialism” have much appeal — a re-production of capitalism with a planning board and a more equal distribution of money income. Anarchists reject such “socialism” as little more than a nicer version of capitalism, if that.

With the collapse of the Soviet Union, it has been fashionable to assert that “Mises was right” and that socialism is impossible (of course, during the cold war such claims were ignored as the Soviet threat had to boosted and used as a means of social control and to justify state aid to capitalist industry). Nothing could be further from the truth as these countries were not socialist at all and did not even approximate the (libertarian) socialist idea (the only true form of socialism). The Stalinist countries had authoritarian “command economies” with bureaucratic central planning, and so their failure cannot be taken as proof that a decentralised, libertarian socialism cannot work. Nor can Mises’ and Hayek’s arguments against Taylor and Lange be used against a libertarian mutualist or collectivist system as such a system is decentralised and dynamic (unlike the “neo-classical” socialist model). Libertarian socialism of this kind did, in fact, work remarkably well during the Spanish Revolution in the face of amazing difficulties, with increased productivity and output in many workplaces as well as increased equality and liberty (see section I.8).

Thus the “calculation argument” does not prove that socialism is impossible. Mises was wrong in asserting that “a socialist system with a market and market prices is as self-contradictory as is the notion of a triangular square.” [Human Action, p. 706] This is because capitalism is not defined by markets as such but rather by wage labour, a situation where working class people do not have free access to the means of production and so have to sell their
of Socialism). In light of their work, Hayek shifted the question from theoretical impossibility to whether the theoretical solution could be approximated in practice. Which raises an interesting question, for if (state) socialism is “impossible” (as Mises assured us) then what did collapse in Eastern Europe? If the “Austrians” claim it was “socialism” then they are in the somewhat awkward position that something they assure us is “impossible” existed for decades. Moreover, it should be noted that both sides of the argument accepted the idea of central planning of some kind or another. This means that most of the arguments of Mises and Hayek did not apply to libertarian socialism, which rejects central planning along with every other form of centralisation.

Nor was the response by Taylor and Lange particularly convincing in the first place. This was because it was based far more on neo-classical capitalist economic theory than on an appreciation of reality. In place of the Walrasian “Auctioneer” (the “god in the machine” of general equilibrium theory which ensures that all markets clear) Taylor and Lange presented the “Central Planning Board” whose job it was to adjust prices so that all markets cleared. Neo-classical economists who are inclined to accept Walrasian theory as an adequate account of a working capitalist economy will be forced to accept the validity of their model of “socialism.” Little wonder Taylor and Lange were considered, at the time, the victors in the “socialist calculation” debate by most of the economics profession (with the collapse of the Soviet Union, this decision has been revised somewhat — although we should stress that such a method holds problems as different dictionaries have different definitions and the fact that dictionaries are rarely politically sophisticated. Use one definition, and someone else will counter with one more to their liking. For example, “socialism” is often defined as “state ownership of wealth” and “anarchy” as “disorder.” Neither of these definitions are useful when discussing political ideas, particularly anarchism as, obviously, no form of anarchism would be socialist by such a definition nor do anarchists seek disorder. Therefore, the use of dictionaries is not the end of a discussion and often misleading when applied to politics.

Libertarian, though, is generally defined to mean someone who upholds the principles of liberty, especially individual liberty of thought and action. Such a situation cannot but be encouraged by socialism, by free access to the means of life. This is because in such a situation people associate as equals and so. as John Most and Emma Goldman once argued, the “system of communism logically excludes any and every relation between master and servant, and means really Anarchism.” [“Talking about Anarchy”, p. 28, Black Flag, no. 228, p. 28] In other words, by basing itself on free association and self-management in every aspect of life the anarchist form of socialism cannot but be libertarian.

In other words, there is a reason why anarchists have used the term libertarian for over 150 years! More to the point, why assume that the right’s recent appropriation of the word be considered the base point? That implies that private property defends individual liberty rather than suppresses it. Such an assumption, as anarchists have argued from the start of anarchism as a distinct socio-political theory, is wrong. As we discussed earlier (see section B.4, for example), capitalism denies liberty of thought and action within the workplace (unless one is the boss, of course). As one staunch de-
fader of capitalism (and a classical liberal often listed as a forefather of right-wing “libertarianism”) glibly noted, the capitalist “of course exercises power over the workers”, although “he cannot exercise it arbitrarily” thanks to the market but within this limit “the entrepreneur is free to give full rein to his whims” and “to dismiss workers offhand” [Ludwig von Mises, Socialism, p. 443 and p. 444] Right-wing “libertarians” are utterly blind to the liberty-destroying hierarchies associated with private property, perhaps unsurprisingly as they are fundamentally pro-capitalist and anti-socialist (equally unsurprisingly, genuine libertarians tend to call them “propertarians”). As left-wing economist Geoffrey M. Hodgson correctly notes:

“By their own logic, [such] market individualists are forced to disregard the organisational structure of the firm, or to falsely imagine that markets exist inside it. To do otherwise would be to admit that a system as dynamic as capitalism depends upon a mode of organisation from which markets are excluded … This ... allows market individualists to ignore the reality of non-market organisations in the private sector … They can thus ignore the reality of control and authority within the private capitalist corporation but remain critical of public sector bureaucracy and state planning.”

[Economics and Utopia, pp. 85–6]

The propertarian perspective inevitably generates massive contradictions, such as admitting that both the state and private property share a common monopoly of decision making over a given area yet opposing only the former (see section F.1). As anarchists have long pointed out, the hierarchical social relations associated with private property have nothing to do with individual liberty. Removing the state but keeping private property would, therefore, not be a step forward: “A fine business we would make if we destroyed the State and replaced it with a mass of little States! killing

This conclusion, it should be stressed, is not idle speculation and that Mises was utterly wrong in his assertions related to self-management. People, he stated, “err” in thinking that profit-sharing “would spur the worker on to a more zealous fulfilment of his duties” (indeed, it “must lead straight to Syndicalism”) and it was “nonsensical to give ‘labour’ … a share in management. The realisation of such a postulate would result in syndicalism.” [Socialism, p. 268, p. 269 and p. 305] Yet, as we note in section I.3.2, the empirical evidence is overwhelmingly against Mises (which suggests why “Austrians” are so dismissive of empirical evidence, as it exposes flaws in the great chains of deductive reasoning they so love). In fact, workers’ participation in management and profit sharing enhance productivity. In one sense, though, Mises is right, in that capitalist firms will tend not to encourage participation or even profit sharing as it shows to workers the awkward fact that while the bosses may need them, they do not need the bosses. As discussed in section J.5.12, bosses are fearful that such schemes will lead to “syndicalism” and so quickly stop them in order to remain in power — in spite (or, more accurately, because) of the efficiency and productivity gains they result in.

“Both capitalism and state socialism,” summarises Ellerman, “suffer from the motivational inefficiency of the employment relation.” [Op. Cit., pp. 210–1] Mutualism would be more efficient as well as freer for, once the stock market and workplace hierarchies are removed, serious blocks and distortions to information flow will be eliminated.

Unfortunately, the state socialists who replied to Mises in the 1920s and 1930s did not have such a libertarian economy in mind. In response to Mises initial challenge, a number of economists pointed out that Pareto’s disciple, Enrico Barone, had already, 13 years earlier, demonstrated the theoretical possibility of a “market-simulated socialism.” However, the principal attack on Mises’s argument came from Fred Taylor and Oscar Lange (for a collection of their main papers, see On the Economic Theory
“In the second place, the way in which production is organised is set up entirely against the workers. They always are being asked, one way or another, to do more work without getting paid for it. Management’s orders, therefore, inevitably meet with fierce resistance on the part of those who have to carry them out.” [Political and Social Writings, vol. 2, pp. 62–3]

This is “the same objection as that Hayek raises against the possibility of a planned economy. Indeed, the epistemological problems that Hayek raised against centralised planned economies have been echoed within the socialist tradition as a problem within the capitalist firm.” There is “a real conflict within the firm that parallels that which Hayek makes about any centralised economy.” [John O’Neill, The Market, p. 142] This is because workers have knowledge about their work and workplace that their bosses lack and a self-managed co-operative workplace would motivate workers to use such information to improve the firm’s performance. In a capitalist workplace, as in a Stalinist economy, the workers have no incentive to communicate this information as “improvements in the organisation and methods of production initiated by workers essentially profit capital, which often then seizes hold of them and turns them against the workers. The workers know it and consequently they restrict their participation in production ... They restrict their output; they keep their ideas to themselves ... They organise among themselves to carry out their work, all the while keeping up a facade of respect for the official way they are supposed to organise their work.” [Castoriadis, Op. Cit., pp. 181–2] An obvious example would be concerns that management would seek to monopolise the workers’ knowledge in order to accumulate more profits, better control the workforce or replace them (using the higher productivity as an excuse). Thus self-management rather than hierarchy enhances the flow and use of information in complex organisations and so improves efficiency.

“For example, your workplace is one point of contact and association. So, workplaces ought to be democratically controlled by participants ... there are all kinds of ways in which people interact with one another. The forms of organisation and association that grow out of those should be, to the extent possible, non-authoritarian, non-hierarchical, managed and directed by the participants.” [Reluctant Icon]

Therefore, anarchists argue, real libertarian ideas must be based on workers self-management, i.e. workers must control and manage the work they do, determining where and how they do it and what happens to the fruit of their labour, which in turn means the elimination of wage labour. Or, to use Proudhon’s words, the “abolition of the proletariat.” [Selected Writings of Pierre-Joseph Proudhon, p. 179] Unless this is done then the majority of people will become subject to the authoritarian social relationships the likes of Mises and other right-wing “libertarians” support. As one communist-anarchist put it:

“It is because the individual does not own himself, and is not permitted to be his true self. He has become a mere market commodity, an instrument for the accumulation...
of property — for others … Individuality is stretched on the Procrustes bed of business … If our individuality were to be made the price of breathing, what ado there would be about the violence done to the personality! And yet our very right to food, drink and shelter is only too often conditioned upon our loss of individuality. These things are granted to the propertyless millions (and how scantily!) only in exchange for their individuality — they become the mere instruments of industry.” [Max Baginski, “Stirner: The Ego and His Own”, pp. 142–151, Mother Earth, Vol. II, No. 3, p. 150]

Socialism, anarchists argue, can only mean a classless and anti-authoritarian (i.e. libertarian) society in which people manage their own affairs, either as individuals or as part of a group (depending on the situation). In other words, it implies self-management in all aspects of life — including work. It has always struck anarchists as somewhat strange and paradoxical (to say the least) that a system of “natural” liberty (Adam Smith’s term, misappropriated by supporters of capitalism) involves the vast majority having to sell that liberty in order to survive. Thus to be consistently libertarian is, logically, to advocate self-management, and so socialism (see section G.4.2). This explains the long standing anarchist opposition to the phoney “individualism” associated with classical liberalism (so-called right-wing “libertarian” ideology, although better termed “propertarian” to avoid confusion). Thus we find Emma Goldman dismissing “this kind of individualism” in “whose name … social oppression are defended and held up as virtues.” [Red Emma Speaks, p. 112]

As we will discuss in section I.3.3, socialisation is advocated to ensure the elimination of wage labour and is a common theme of all genuine forms of socialism. In theory at least, anarchist argue that state socialism does not eliminate wage labour, rather it universalises it. In fact, state socialism shows that socialism is neces-

“Bureaucratic planning is nothing but the extension to the economy as a whole of the methods created and applied by capitalism in the ‘rational’ direction of large production units. If we consider the most profound feature of the economy, the concrete situation in which people are placed, we see that bureaucratic planning is the most highly perfected realisation of the spirit of capitalism; it pushes to the limit its most significant tendencies. Just as in the management of a large capitalist production unit, this type of planning is carried out by a separate stratum of managers … Its essence, like that of capitalist production, lies in an effort to reduce the direct producers to the role of pure and simple executants of received orders, orders formulated by a particular stratum that pursues its own interests. This stratum cannot run things well, just as the management apparatus … [in capitalist] factories cannot run things well. The myth of capitalism’s productive efficiency at the level of the individual factory, a myth shared by bourgeois and Stalinist ideologues alike, cannot stand up to the most elemental examination of the facts, and any industrial worker could draw up a devastating indictment against capitalist ‘rationalisation’ **judged on its own terms.””

“First of all, the managerial bureaucracy does not know what it is supposed to be managing. The reality of production escapes it, for this reality is nothing but the activity of the producers, and the producers do not inform the managers … about what is really taking place. Quite often they organise themselves in such a way that the managers won’t be informed (in order to avoid increased exploitation, because they feel antagonistic, or quite simply because they have no interest: It isn’t their business).
In summary, then, firms are “overwhelmingly self-financing—that is, most of their investment expenditures are funded through profits (about 90%, on longer-term averages).” The stock markets provide “only a sliver of investment funds.” There are, of course, some “periods like the 1990s, during which the stock market serves as a conduit for shovelling huge amounts of cash into speculative venues, most of which have evaporated… Much, maybe most, of what was financed in the 1990s didn’t deserve the money.” Such booms do not last forever and are “no advertisement for the efficiency of our capital markets.” [Henwood, After the New Economy, p. 187 and p. 188]

Thus there is substantial reason to question the suggestion that a stock market is necessary for the efficient allocation of capital. There is no need for capital markets in a system based on mutual banks and networks of co-operatives. As Henwood concludes, “the signals emitted by the stock market are either irrelevant or harmful to real economic activity, and that the stock market itself counts little or nothing as a source of finance. Shareholders… have no useful role.” [Wall Street, p. 292]

Then there is also the ironic nature of Rothbard’s assertion that self-management would ensure there “could be no efficiency in production because the requisite knowledge would be lacking.” This is because capitalist firms are hierarchies, based on top-down central planning, and this hinders the free flow of knowledge and information. As with Stalinism, within the capitalist firm information passes up the organisational hierarchy and becomes increasingly simplified and important local knowledge and details lost (when not deliberately falsified to ensure continual employment by suppressing bad news). The top-management takes decisions based on highly aggregated data, the quality of which is hard to know. The management, then, suffers from information and knowledge deficiencies while the workers below lack sufficient autonomy to act to correct inefficiencies as well as incentive to communicate accurate information and act to improve the production process. As Cornelius Castoriadis correctly noted:

“...it could be argued with much more reason that we are the most logical and most complete socialists, since we demand for every person not just his [or her] entire measure of the wealth of society but also his [or her] portion of social power, which is to say, the real ability to make his [or her] influence felt, along with that of everybody else, in the administration of public affairs.” [Malatesta and Hamon, Op. Cit., vol. 2, p. 20]

The election of someone to administer public affairs for you is not having a portion of social power. It is, to use of words of Emile Pouget (a leading French anarcho-syndicalist) “an act of abdication,”

sarily libertarian, not statist. For if the state owns the workplace, then the producers do not, and so they will not be at liberty to manage their own work but will instead be subject to the state as the boss. Moreover, replacing the capitalist owning class by state officials in no way eliminates wage labour; in fact it makes it worse in many cases. Therefore “socialists” who argue for nationalisation of the means of production are not socialists (which means that the Soviet Union and the other so-called “socialist” countries are not socialist nor are parties which advocate nationalisation socialist).

Indeed, attempts to associate socialism with the state misunderstands the nature of socialism. It is an essential principle of socialism that (social) inequalities between individuals must be abolished to ensure liberty for all (natural inequalities cannot be abolished, nor do anarchists desire to do so). Socialism, as Proudhon put it, “is egalitarian above all else.” [No Gods, No Masters, vol. 1, p. 57] This applies to inequalities of power as well, especially to political power. And any hierarchical system (particularly the state) is marked by inequalities of power — those at the top (elected or not) have more power than those at the bottom. Hence the following comments provoked by the expulsion of anarchists from the social democratic Second International:

"It could be argued with much more reason that we are the most logical and most complete socialists, since we demand for every person not just his [or her] entire measure of the wealth of society but also his [or her] portion of social power, which is to say, the real ability to make his [or her] influence felt, along with that of everybody else, in the administration of public affairs.” [Malatesta and Hamon, Op. Cit., vol. 2, p. 20]

The election of someone to administer public affairs for you is not having a portion of social power. It is, to use of words of Emile Pouget (a leading French anarcho-syndicalist) “an act of abdication,”
the delegating of power into the hands of a few. [Op. Cit., p. 67] This means that “[a]ll political power inevitably creates a privileged situation for the men who exercise it. Thus it violates, from the beginning, the equalitarian principle.” [Voline, The Unknown Revolution, p. 249]

From this short discussion we see the links between libertarian and socialism. To be a true libertarian requires you to support workers’ control otherwise you support authoritarian social relationships. To support workers’ control, by necessity, means that you must ensure that the producers own (and so control) the means of producing and distributing the goods they create. Without ownership, they cannot truly control their own activity or the product of their labour. The situation where workers possess the means of producing and distributing goods is socialism. Thus to be a true libertarian requires you to be a socialist.

Similarly, a true socialist must also support individual liberty of thought and action, otherwise the producers “possess” the means of production and distribution in name only. If the state owns the means of life, then the producers do not and so are in no position to manage their own activity. As the experience of Russia under Lenin shows, state ownership soon produces state control and the creation of a bureaucratic class which exploits and oppresses the workers even more so than their old bosses. Since it is an essential principle of socialism that inequalities between people must be abolished in order to ensure liberty, it makes no sense for a genuine socialist to support any institution based on inequalities of power (and as we discussed in section B.2, the state is just such an institution). To oppose inequality and not extend that opposition to inequalities in power, especially political power, suggests a lack of clear thinking. Thus to be a true socialist requires you to be a libertarian, to be for individual liberty and opposed to inequalities of power which restrict that liberty.

Therefore, rather than being an oxymoron, “libertarian socialism” indicates that true socialism must be libertarian and that a libertar-

Taking the first issue, the existence of a stock market has serious (negative) effects on investment. As Doug Henwood notes, there “are serious communication problems between managers and shareholders.” This is because “[e]ven if participants are aware of an upward bias to earnings estimates [of companies], and even if they correct for it, managers would still have an incentive to try to fool the market. If you tell the truth, your accurate estimate will be marked down by a sceptical market. So, it’s entirely rational for managers to boost profits in the short term, either through accounting gimmickry or by making only investments with quick paybacks.” So, managers “facing a market [the stock market] that is famous for its preference for quick profits today rather than patient long-term growth have little choice but to do its bidding. Otherwise, their stock will be marked down, and the firm ripe for take-over.” While “[f]irms and economies can’t get richer by starving themselves” stock market investors “can get richer when the companies they own go hungry — at least in the short term. As for the long term, well, that’s someone else’s problem the week after next.” [Wall Street, p. 171]

Ironically, this situation has a parallel with Stalinist central planning. Under that system the managers of State workplaces had an incentive to lie about their capacity to the planning bureaucracy. The planner would, in turn, assume higher capacity, so harming honest managers and encouraging them to lie. This, of course, had a seriously bad impact on the economy. Unsurprisingly, the similar effects caused by capital markets on economies subject to them are as bad as well as downplaying long term issues and investment. In addition, it should be noted that stock-markets regularly experience bubbles and subsequent bursts. Stock markets may reflect the collective judgements of investors, but it says little about the quality of those judgements. What use are stock prices if they simply reflect herd mentality, the delusions of people ignorant of the real economy or who fail to see a bubble? Particularly when the real-world impact when such bubbles burst can be devastating to those uninvolved with the stock market?
David Engler points out, "[s]upporters of the system … claim that stock exchanges mobilise funds for business. Do they? When people buy and sell shares, ‘no investment goes into company treasuries … Shares simply change hands for cash in endless repetition.’ Company treasuries get funds only from new equity issues. These accounted for an average of a mere 0.5 per cent of shares trading in the US during the 1980s.” [Apostles of Greed, pp. 157–158] This is echoed by David Ellerman:

“In spite of the stock market’s large symbolic value, it is notorious that it has relatively little to do with the production of goods and services in the economy (the gambling industry aside). The overwhelming bulk of stock transactions are in second-hand shares so that the capital paid for shares usually goes to other stock traders, not to productive enterprises issuing new shares.” [The Democratic Worker-Owned Firm, p. 199]

This suggests that the “efficient allocation of capital in production does not require a stock market (witness the small business sector [under capitalism]).” “Socialist firms,” he notes, “are routinely attacked as being inherently inefficient because they have no equity shares exposed to market valuation. If this argument had any merit, it would imply that the whole sector of unquoted closely-held small and medium-sized firms in the West was ‘inherently inefficient’ — a conclusion that must be viewed with some scepticism. Indeed, in the comparison to large corporations with publicly-traded shares, the closely-held firms are probably more efficient users of capital.” [Op. Cit., p. 200 and p. 199]

In terms of the impact of the stock market on the economy there is good reason to think that this hinders economic efficiency by generating a perverse set of incentives and misleading information flows and so their abolition would actually aid production and productive efficiency).
Far from there being any contradiction between libertarianism and socialism, libertarian ideals imply socialist ones, and vice versa. As Bakunin put it in 1867:

“We are convinced that freedom without Socialism is privilege and injustice, and that Socialism without freedom is slavery and brutality.” [Bakunin on Anarchism, p. 127]

History has proven him correct. Rather than libertarian socialism being the oxymoron, it is state socialism and libertarian capitalism that are. Both historically (in terms of who first used the word) and logically (in terms of opposing all hierarchical organisations) it is anarchists who should be called libertarians, not the propertarian right.

I.1.1 Is socialism impossible?

In 1920, the right-wing economist Ludwig von Mises declared socialism to be impossible. A leading member of the “Austrian” school of economics, he argued this on the grounds that without private ownership of the means of production, there cannot be a competitive market for production goods and without a market for production goods, it is impossible to determine their values. Without knowing their values, economic rationality is impossible and so a socialist economy would simply be chaos: “the absurd output of a senseless apparatus.” For Mises, socialism meant central planning with the economy “subject to the control of a supreme authority.” [“Economic Calculation in the Socialist Commonwealth”, pp. 87–130, Collectivist Economic Planning, F.A von Hayek (ed.), p. 104 and p. 106] While applying his “economic calculation argument” to Marxist ideas of a future socialist society, his argument, it is claimed, is applicable to all schools of socialist thought, including libertarian ones. It is on the basis of his arguments that prohibit rational economic calculation under state socialism.

Sadly, socialism is still equated with central planning, for such a system is certainly not socialism. Nor, however, is it capitalism in the conventional sense of the term.” In fact, it is not capitalism at all and if we assume that free access to resources such as workplaces and credit, then it most definitely is socialism (“Legal ownership is not the chief issue in defining workers’ self-management — management is. Worker-managers, though not necessarily the legal owners of all the factors of production collected within the firm, are free to experiment and establish enterprise policy as they see fit.”). [David L. Prychitko, Op. Cit., p. 136, p. 135, pp. 4–5, p. 4 and p. 135] This suggests that non-labour factors can be purchased from other co-operatives, credit provided by mutual banks (credit co-operatives) at cost and so forth. As such, a mutualist system is perfectly feasible.

Thus economic calculation based on competitive market prices is possible under a socialist system. Indeed, we see examples of this even under capitalism. For example, the Mondragon co-operative complex in the Basque Country indicate that a libertarian socialist economy can exist and flourish. Perhaps it will be suggested that an economy needs stock markets to price companies, as Mises did. Thus investment is “not a matter for the managers of joint stock companies, it is essentially a matter of the capitalists” in the “stock exchanges”. Investment, he asserted, was “not a matter of wages” of managers but of “the capitalist who buys and sell stocks and shares, who make loans and recover them, who make deposits in the banks.” [Socialism, p. 139]

It would be churlish to note that the members of co-operatives under capitalism, like most working class people, are more than able to make deposits in banks and arrange loans. In a mutualist economy, workers will not lose this ability just because the banks are themselves co-operatives. Similarly, it would be equally churlish but essential to note that the stock market is hardly the means by which capital is actually raised within capitalism. As
hon, who considered it “inevitable” that in a free society “the two functions of wage-labourer on the one hand, and of proprietor-capitalist-contractor on the other, become equal and inseparable in the person of every workingman”. This was the “first principle of the new economy, a principle full of hope and of consolation for the labourer without capital, but a principle full of terror for the parasite and for the tools of parasitism, who see reduced to naught their celebrated formula: Capital, labour, talent!” [Proudhon’s Solution of the Social Problem, p. 165 and p. 85]

And it does seem a strange co-incidence that someone born into a capitalist economy, ideologically supporting it with a passion and seeking to justify its class system just happens to deduce from a given set of axioms that landlords and capitalists happen to play a vital role in the economy! It would not take too much time to determine if someone in a society without landlords or capitalists would also logically deduce from the same axioms the pressing economic necessity for such classes. Nor would it take long to ponder why Greek philosophers, like Aristotle, concluded that slavery was natural. And it does seem strange that centuries of coercion, authority, statism, classes and hierarchies all had absolutely no impact on how society evolved, as the end product of real history (the capitalist economy) just happens to be the same as Rothbard’s deductions from a few assumptions predict. Little wonder, then, that “Austrian” economics seems more like rationalisations for some ideologically desired result than a serious economic analysis.

Even some dissident “Austrian” economists recognise the weakness of Rothbard’s position. Thus “Rothbard clearly misunderstands the general principle behind producer co-operatives and self-management in general.” In reality, “[a]s a democratic method of enterprise organisation, workers’ self-management is, in principle, fully compatible with a market system” and so “a market economy comprised of self-managed enterprises is consistent with Austrian School theory ... It is fundamentally a market-based system ... that doesn’t seem to face the epistemological hurdles ...

many right-wingers claim that libertarian (or any other kind of) socialism is impossible in principle.

Yet as David Schweickart observes “[i]t has long been recognised that Mises’s argument is logically defective. Even without a market in production goods, their monetary values can be determined.” [Against Capitalism, p. 88] In other words, economic calculation based on prices is perfectly possible in a libertarian socialist system. After all, to build a workplace requires so many tonnes of steel, so many bricks, so many hours of work and so on. If we assume a mutualist society, then the prices of these goods can be easily found as the co-operatives in question would be offer their services on the market. These commodities would be the inputs for the construction of production goods and so the latter’s monetary values can be found.

Ironically enough, Mises did mention the idea of such a mutualist system in his initial essay. “Exchange relations between production-goods can only be established on the basis of private ownership of the means of production” he asserted. “When the ‘coal syndicate’ provides the ‘iron syndicate’ with coal, no price can be formed, except when both syndicates are the owners of the means of production employed in their business. This would not be socialisation but workers’ capitalism and syndicalism.” [Op. Cit., p. 112] However, his argument is flawed for numerous reasons.

First, and most obvious, socialisation (as we discuss in section I.3.3) simply means free access to the means of life. As long as those who join a workplace have the same rights and liberties as existing members then there is socialisation. A market system of co-operatives, in other words, is not capitalist as there is no wage labour involved as a new workers become full members of the syndicate, with the same rights and freedoms as existing members. Thus there are no hierarchical relationships between owners and wage slaves (even if these owners also happen to work there). As all workers’ control the means of production they use, it is not capitalism.
Second, nor is such a system usually called, as Mises suggests, “syndicalism” but rather mutualism and he obviously considered its most famous advocate, Proudhon and his “fantastic dreams” of a mutual bank, as a socialist. [Op. Cit., p. 88] Significantly, Mises subsequently admitted that it was “misleading” to call syndicalism workers’ capitalism, although “the workers are the owners of the means of production” it was “not genuine socialism, that is, centralised socialism”, as it “must withdraw productive goods from the market. Individual citizens must not dispose of the shares in the means of production which are allotted to them.” Syndicalism, i.e., having those who do the work control of it, was “the ideal of plundering hordes”! [Socialism, p. 274fn, p. 270, p. 273 and p. 275]

His followers, likewise, concluded that “syndicalism” was not capitalism with Hayek stating that there were “many types of socialism” including “communism, syndicalism, guild socialism”. Significantly, he indicated that Mises argument was aimed at systems based on the “central direction of all economic activity” and so “earlier systems of more decentralised socialism, like guild-socialism or syndicalism, need not concern us here since it seems now to be fairly generally admitted that they provide no mechanism whatever for a rational direction of economic activity.” [“The Nature and History of the Problem”, pp. 1–40, Collectivist Economic Planning, F.A von Hayek (ed.), p. 17, p. 36 and p. 19] Sadly he failed to indicate who “generally admitted” such a conclusion. More recently, Murray Rothbard urged the state to impose private shares onto the workers in the former Stalinist regimes of Eastern Europe as ownership was “not to be granted to collectives or co-operatives or workers or peasants holistically, which would only bring back the ills of socialism in a decentralised and chaotic syndicalist form.” [The Logic of Action II, p. 210]

Third, syndicalism usually refers to a strategy (revolutionary unionism) used to achieve (libertarian) socialism rather than the goal itself (as Mises himself noted in a tirade against unions, “Syndicalism is nothing else but the French word for trade unionism” or his followers, likewise, concluded that “syndicalism” was not capitalism with Hayek stating that there were “many types of socialism” including “communism, syndicalism, guild socialism”. Significantly, he indicated that Mises argument was aimed at systems based on the “central direction of all economic activity” and so “earlier systems of more decentralised socialism, like guild-socialism or syndicalism, need not concern us here since it seems now to be fairly generally admitted that they provide no mechanism whatever for a rational direction of economic activity.” [“The Nature and History of the Problem”, pp. 1–40, Collectivist Economic Planning, F.A von Hayek (ed.), p. 17, p. 36 and p. 19] Sadly he failed to indicate who “generally admitted” such a conclusion. More recently, Murray Rothbard urged the state to impose private shares onto the workers in the former Stalinist regimes of Eastern Europe as ownership was “not to be granted to collectives or co-operatives or workers or peasants holistically, which would only bring back the ills of socialism in a decentralised and chaotic syndicalist form.” [The Logic of Action II, p. 210]

Third, syndicalism usually refers to a strategy (revolutionary unionism) used to achieve (libertarian) socialism rather than the goal itself (as Mises himself noted in a tirade against unions, “Syndicalism is nothing else but the French word for trade unionism” or his followers, likewise, concluded that “syndicalism” was not capitalism with Hayek stating that there were “many types of socialism” including “communism, syndicalism, guild socialism”. More recently, Murray Rothbard urged the state to impose private shares onto the workers in the former Stalinist regimes of Eastern Europe as ownership was “not to be granted to collectives or co-operatives or workers or peasants holistically, which would only bring back the ills of socialism in a decentralised and chaotic syndicalist form.” [The Logic of Action II, p. 210]

Let us add the landlord class to this society. Now the landlord can tell the farmer what to grow as their rent income indicates how to allocate the land to its most productive use. Except, of course, it is still the farmers who decide what to produce. Knowing that they will need to pay rent (for access to the land) they will decide to devote their (rented) land to the most profitable use in order to both pay the rent and have enough to live on. Why they do not seek the most profitable use without the need for rent is not explored by Rothbard. Much the same can be said of artisans subject to a boss, for the worker can evaluate whether an investment in a specific new tool will result in more income or reduced time labouring or whether a new product will likely meet the needs of consumers. Moving from a pre-capitalist society to a post-capitalist one, it is clear that a system of self-managed co-operatives can make the same decisions without requiring economic masters. This is unsurprising, given that Mises’ asserted that the boss “of course exercises power over the workers” but that the “lord of production is the consumer.” [Socialism, p. 443] In which case, the boss need not be an intermediary between the real “lord” and those who do the production!

All in all, Rothbard confirms Kropotkin’s comments that economics (“that pseudo-science of the bourgeoisie”) “does not cease to give praise in every way to the benefits of individual property” yet “the economists do not conclude, ‘The land to him who cultivates it.’ On the contrary, they hasten to deduce from the situation, ‘The land to the lord who will get it cultivated by wage earners!’” [Words of a Rebel, pp. 209–10] In addition, Rothbard implicitly places “efficiency” above liberty, preferring dubious “efficiency” gains to the actual gains in freedom which the abolition of workplace autocracy would create. Given a choice between liberty and “efficiency”, the genuine anarchist would prefer liberty. Luckily, though, workplace liberty increases efficiency so Rothbard’s decision is a wrong one. It should also be noted that Rothbard’s position (as is usually the case) is directly opposite that of Proud-
free-access (socialisation), it is a form of socialism (as socialists define it, Mises’ protestations that “this is incompatible with socialism” not-with-standing!). [Socialism, p. 518]

Murray Rothbard suggested that a self-managed system would fail, and a system “composed exclusively of self-managed enterprises is impossible, and would lead ... to calculative chaos and complete breakdown.” When “each firm is owned jointly by all factor-owners” then “there is no separation at all between workers, landowners, capitalists, and entrepreneurs. There would be no way, then, of separating the wage incomes received from the interest or rent incomes or profits received. And now we finally arrive at the real reason why the economy cannot consist completely of such firms (called ‘producers’ co-operatives’). For, without an external market for wage rates, rents, and interest, there would be no rational way for entrepreneurs to allocate factors in accordance with the wishes of the consumers. No one would know where he could allocate his land or his labour to provide the maximum monetary gains. No entrepreneur would know how to arrange factors in their most value-productive combination to earn greatest profit. There could be no efficiency in production because the requisite knowledge would be lacking.” [quoted by David L. Prychitko, Markets, Planning and Democracy, p. 135 and p. 136]

It is hard to take this argument seriously. Consider, for example, a pre-capitalist society of farmers and artisans. Both groups of people own their own means of production (the land and the tools they use). The farmers grow crops for the artisans who, in turn, provide the farmers with the tools they use. According to Rothbard, the farmers would have no idea what to grow nor would the artisans know which tools to buy to meet the demand of the farmers nor which to use to reduce their working time. Presumably, both the farmers and artisans would stay awake at night worrying what to produce, wishing they had a landlord and boss to tell them how best to use their labour and resources.

Socialism, p. 480]. It could be argued that such a mutualist system could be an aim for some syndicalists, although most were and still are in favour of libertarian communism (a simple fact apparently unknown to Mises). Indeed, Mises ignorance of syndicalist thought is striking, asserting that the “market is a consumers’ democracy. The syndicalists want to transform it into a producers’ democracy.” [Human Action, p. 809] Most syndicalists, however, aim to abolish the market and all aim for workers’ control of production to complement (not replace) consumer choice. Syndicalists, like other anarchists, do not aim for workers’ control of consumption as Mises asserts. Given that Mises asserts that the market, in which one person can have a thousand votes and another one, is a “democracy” his ignorance of syndicalist ideas is perhaps only one aspect of a general ignorance of reality.

More importantly, the whole premise of his critique of mutualism is flawed. “Exchange relations in productive goods” he asserted, “can only be established on the basis of private property in the means of production. If the Coal Syndicate delivers coal to the Iron Syndicate a price can be fixed only if both syndicates own the means of production in industry.” [Socialism, p. 132] This may come as a surprise to the many companies whose different workplaces sell each other their products! In other words, capitalism itself shows that workplaces owned by the same body (in this case, a large company) can exchange goods via the market. That Mises makes such a statement indicates well the firm basis of his argument in reality. Thus a socialist society can have extensive autonomy for its co-operatives, just as a large capitalist firm can:

“the entrepreneur is in a position to separate the calculation of each part of his total enterprise in such a way that he can determine the role it plays within his whole enterprise. Thus he can look at each section as if it were a separate entity and can appraise it according to the
share it contributes to the success of the total enterprise. Within this system of business calculation each section of a firm represents an integral entity, a hypothetical independent business, as it were. It is assumed that this section ‘owns’ a definite part of the whole capital employed in the enterprise, that it buys from other sections and sells to them, that it has its own expenses and its own revenues, that its dealings result either in a profit or in a loss which is imputed to its own conduct of affairs as distinguished from the result of the other sections. Thus the entrepreneur can assign to each section’s management a great deal of independence … Every manager and sub-manager is responsible for the working of his section or subsection. It is to his credit if the accounts show a profit, and it is to his disadvantage if they show a loss. His own interests impel him toward the utmost care and exertion in the conduct of his section’s affairs.” [Human Action, pp. 301–2]

So much, then, for the notion that common ownership makes it impossible for market socialism to work. After all, the libertarian community can just as easily separate the calculation of each part of its enterprise in such a way as to determine the role each co-operative plays in its economy. It can look at each section as if it were a separate entity and appraise it according to the share it contributes as it is assumed that each section “owns” (i.e., has use rights over) its definite part. It can then buy from, and sell to, other co-operatives and a profit or loss can be imputed to evaluate the independent action of each co-operative and so their own interests impel the co-operative workers toward the utmost care and exertion in the conduct of their co-operative’s affairs.

So to refute Mises, we need only repeat what he himself argued about large corporations! Thus there can be extensive autonomy for workplaces under socialism and this does not in any way contradict the fact that “all the means of production are the property of the community.” [“Economic Calculation in the Socialist Commonwealth”, Op. Cit., p. 89] Socialisation, in other words, does not imply central planning but rather free access and free association. In summary, then, Mises confused property rights with use rights, possession with property, and failed to see now a mutualist system of socialised co-operatives exchanging products can be a viable alternative to the current exploitative and oppressive economic regime.

Such a mutualist economy also strikes at the heart of Mises’ claims that socialism was “impossible.” Given that he accepted that there may be markets, and hence market prices, for consumer goods in a socialist economy his claims of the impossibility of socialism seems unfounded. For Mises, the problem for socialism was that “because no production-good will ever become the object of exchange, it will be impossible to determine its monetary value.” [Op. Cit., p. 92] The flaw in his argument is clear. Taking, for example, coal, we find that it is both a means of production and of consumption. If a market in consumer goods is possible for a socialist system, then competitive prices for production goods is also possible as syndicates producing production-goods would also sell the product of their labour to other syndicates or communes. As Mises admitted when discussing one scheme of guild socialism, “associations and sub-associations maintain a mutual exchange-relationship; they receive and give as if they were owners. Thus a market and market-prices are formed.” Thus, when deciding upon a new workplace, railway or house, the designers in question do have access to competitive prices with which to make their decisions. Nor does Mises’ argument work against communal ownership in such a system as the commune would be buying products from syndicates in the same way as one part of a company can buy products from another part of the same company under capitalism. That goods produced by self-managed syndicates have market-prices does not imply capitalism for, as they abolish wage labour and are based on
state agency, as in the concept of nationalised or state-owned industry.

The exact dynamics of a socialised self-managed system varies between anarchist schools. Most obviously, as discussed in section I.3.6, while individualists view competition between workplaces as unproblematic and mutualists see its negative aspects but consider it necessary, collectivists and communists oppose it and argue that a free society can do without it. Moreover, socialisation should not be confused with forced collectivisation — individuals and groups will be free not to join a syndicate and to experiment in different forms of economy (see section I.3.7). Lastly, anarchists argue that such a system would be applicable to all economies, regardless of size and development, and aim for an economy based on appropriately sized technology (Marxist assertions not withstanding — see section I.3.8).

Regardless of the kind of anarchy desired, anarchists all agree on the importance of decentralisation, free agreement and free association. Kropotkin’s summary of what anarchy would look like gives an excellent feel of what sort of society anarchists desire:

“harmony in such a society being obtained, not by submission to law, or by obedience to any authority, but by free agreements concluded between the various groups, territorial and professional, freely constituted for the sake of production and consumption, as also for the satisfaction of the infinite variety of needs and aspirations of a civilised being.

“In a society developed on these lines ... voluntary associations ... would represent an interwoven network, composed of an infinite variety of groups and federations of all sizes and degrees, local, regional, national and international temporary or more or less permanent — for all possible purposes: production, consumption and exchange, communications, sanitary arrangements, edu-

managed workplaces, then communist anarchists would argue that market forces would soon result in many irrationalities occurring.

Most obviously, operating in a market means submitting to the profit criterion. This means that however much workers might want to employ social criteria in their decision making, they cannot. To ignore profitability would cause their firm to go bankrupt. Markets, therefore, create conditions that compel producers to decide things which are not be in their, or others, interest, such as introducing deskilling or polluting technology, working longer hours, and so on, in order to survive on the market. For example, a self-managed workplace will be more likely to invest in safe equipment and working practices, this would still be dependent on finding the money to do so and may still increase the price of their finished product. So we could point to the numerous industrial deaths and accidents which are due to market forces making it unprofitable to introduce adequate safety equipment or working conditions, (conservative estimates for industrial deaths in the USA are between 14,000 and 25,000 per year plus over 2 million disabled), or to increased pollution and stress levels which shorten life spans.

This tendency for self-managed firms to adjust to market forces by increasing hours, working more intensely, allocating resources to accumulating equipment rather than leisure time or consumption can be seen in co-operatives under capitalism. While lacking bosses may reduce this tendency in a post-capitalist economy, it will not eliminate it. This is why many socialists, including anarchists, call the way markets force unwilling members of a co-operatives make such unpleasant decisions a form of “self-exploitation” (although this is somewhat misleading, as there no exploitation in the capitalist sense of owners appropriating unpaid labour). For communist-anarchists, a market system of co-operatives “has serious limitations” as “a collective enterprise is not necessarily a commune — nor is it necessarily communistic in its outlook.” This is because it can end up “competing with like concerns for resources, customers, privileges, and even profits” as
they “become a particularistic interest” and “are subjected to the same social pressures by the market in which they must function.” This “tends increasingly to encroach on their higher ethical goals — generally, in the name of ‘efficiency’, and the need to ‘grow’ if they are to survive, and the overwhelming temptation to acquire larger earnings.” [Murray Bookchin, Remaking Society, pp. 193–4]

Similarly, a market of self-managed firms would still suffer from booms and slumps as the co-operatives response to changes in prices would still result in over-production (see section C.7.2) and over-investment (see section C.7.3). While the lack of non-labour income would help reduce the severity of the business cycle, it seems unlikely to eliminate it totally. Equally, many of the problems of market-increased uncertainty and the destabilising aspects of price signals discussed in section I.1.5 are just as applicable to all markets, including post-capitalist ones.

This is related to the issue of the “tyranny of small decisions” we highlighted in section B.6. This suggests that the aggregate effect of individual decisions produces social circumstances which are irrational and against the interests of those subject to them. This is the case with markets, where competition results in economic pressures which force its participants to act in certain ways, ways they would prefer not to do but, as isolated individuals or workplaces, end up doing due to market forces. In markets, it is rational for people try to buy cheap and sell dear. Each tries to maximise their income by either minimising their costs or maximising their prices, not because they particularly want to but because they need to as taking into account other priorities is difficult as there is no means of finding them out and deeply inadvisable as it is competitively suicidal as it places burdens on firms which their competitors need not face.

As we noted in section E.3, markets tend to reward those who act in anti-social ways and externalise costs (in terms of pollution and so on). In a market economy, it is impossible to determine whether a low cost reflects actual efficiency or a willingness to ex-
belong to the workers; to the workers’ associations.” These associations are often called “co-operatives” and “syndicates” (see section I.3.1). This feeds into an essential economic concept for libertarian socialists is “workers’ self-management” This refers to those who do the work managing it, where the land and workplaces are “owned and operated by the workers themselves: by their freely organised federations of industrial and agricultural workers” (see section I.3.2). For most anarchists, “socialisation” is the necessary foundation for a free society, as only this ensures universal self-management by allowing free access to the means of production (see section I.3.3). Thus an anarchist economy would be based on “the land, tools of production and all other capital” being “converted into collective property of the whole of society and utilised only by the workers, i.e., by their agricultural and industrial associations.” [Bakunin on Anarchy, p. 247, p. 400 and p. 427] As Berkman summarised:

“The revolution abolishes private ownership of the means of production, distribution, and with it goes capitalistic business. Personal possession remains only in the things you use. Thus, your watch is your own, but the watch factory belongs to the people. Land, machinery, and all other public utilities will be collective property, neither to be bought nor sold. Actual use will be considered the only title [in communist anarchism] — not to ownership but to possession. The organisation of the coal miners, for example, will be in charge of the coal mines, not as owners but as the operating agency. Similarly will the railroad brotherhoods run the railroads, and so on. Collective possession, co-operatively managed in the interests of the community, will take the place of personal ownership privately conducted for profit.” [What is Anarchism?, p. 217]
it is at any rate helpful that we come to an agreement about human labours that they may not, as under competition, claim all our time and toil.” [The Ego and Its Own, p. 268] Value needs to be created, and that can only be done by labour and so even a non-capitalist market system will see work dominate people’s lives. Thus the need to survive on the market can impact on broader (non-monetary) measures of welfare, with quality of life falling as a higher GDP is created as the result of longer working hours with fewer holidays. Such a regime may, perhaps, be good for material wealth but it is not great for people.

The market can also block the efficient use of resources. For example, for a long time energy efficient light-bulbs were much more expensive than normal ones. Over the long period, however, they used far less energy than normal ones, meaning less need to produce more energy (and so burn coal and oil, for example). However, the high initial price ensured that most people continued to use the less efficient bulbs and so waste resources. Much the same can be said of alternative forms of energy, with investment in (say) wind energy ignored in favour of one-use and polluting energy sources. A purely market system would not allow decisions which benefit the long-term interests of people to be made (for example, by distributing energy-efficient light-bulbs freely or at a reduced cost) as these would harm the profits of those co-operatives which tried to do so.

Also, markets do not reflect the values of things we do not put a price upon (as we argued in section B.5). It cannot protect wilderness, for example, simply because it requires people to turn it into property and sell it as a commodity. If you cannot afford to visit the new commodity, the market turns it into something else, no matter how much you value it. The market also ignores the needs of future generations as they always discount the value of the long term future. A payment to be made 1,000 years from now (a mere speck in geological time) has a market value of virtually zero according to any commonly used discount rate. Even 50 years in the

“If it is correct, as I believe it is, that a fundamental element of human nature is the need for creative work or creative inquiry, for free creation without the arbitrary limiting effects of coercive institutions, then of course it will follow that a decent society should maximise the possibilities for this fundamental human characteristic to be realised. Now, a federated, decentralised system of free associations incorporating economic as well as social institutions would be what I refer to as anarchosyndicalism. And it seems to me that it is the appropriate form of social organisation for an advanced technological society, in which human beings do not have to be forced into the position of tools, of cogs in a machine.” [Noam Chomsky, Manufacturing Consent: Noam Chomsky and the Media, p. 31]

So, as one might expect, since the essence of anarchism is opposition to hierarchical authority, anarchists totally oppose the way the current economy is organised. This is because authority in the economic sphere is embodied in centralised, hierarchical workplaces that give an elite class (capitalists) dictatorial control over privately owned means of production, turning the majority of the population into order takers (i.e. wage slaves). In contrast, the libertarian-socialist economy will be based on decentralised, egalitarian workplaces in which workers democratically self-manage their productive activity in socially owned means of production.

The key principles of libertarian socialism are decentralisation, self-management, socialisation, voluntary association, and free federation. These principles determine the form and function of both the economic and political systems. In this section we will consider just the economic system. Bakunin gives an excellent overview of such an economy when he wrote that in a free society the “land belongs to only those who cultivate it with their own hands; to the agricultural communes. The capital and all the tools of production
system.” [The Great Transformation, p. 57] Given the negative effects of such an arrangement, little wonder that anarchism seeks to reverse it.

Also, by discussing the economy first we are not implying that dealing with economic domination or exploitation is more important than dealing with other aspects of the total system of domination, e.g. social hierarchies, patriarchal values, racism, etc. We follow this order of exposition because of the need to present one thing at a time, but it would have been equally easy to start with the social and political structure of anarchy. However, Rudolf Rocker is correct to argue that an economic transformation in the economy is an essential aspect of a social revolution:

“[A] social development in this direction [i.e. a stateless society] was not possible without a fundamental revolution in existing economic arrangements; for tyranny and exploitation grow on the same tree and are inseparably bound together. The freedom of the individual is secure only when it rests on the economic and social well-being of all ... The personality of the individual stands the higher, the more deeply it is rooted in the community, from which arise the richest sources of its moral strength. Only in freedom does there arise in man the consciousness of responsibility for his acts and regard for the rights of others; only in freedom can there unfold in its full strength that most precious of social instinct: man’s sympathy for the joys and sorrows of his fellow men and the resultant impulse toward mutual aid and in which are rooted all social ethics, all ideas of social justice.” [Nationalism and Culture, pp. 147–8]

The aim of any anarchist society would be to maximise freedom and so creative work:

future cannot be adequately considered as competitive pressures force a short term perspective on people harmful to present and future generations, plus the ecology of the planet. Then there are corrosive effects of the market on human personalities. As we have argued elsewhere (see section B.1.3), competition in a free market creates numerous problems — for example, the creation of an “ethics of mathematics” and the strange inversion of values in which things (property/money) become more important than people. This can have a de-humanising effect, with people becoming cold-hearted calculators who put profits before people. This can be seen in capitalism, where economic decisions are far more important than ethical ones — particularly as such an inhuman mentality can be rewarded on the market. Merit does not necessarily breed success, and the successful do not necessarily have merit. The truth is that, in the words of Noam Chomsky, “wealth and power tend to accrue to those who are ruthless, cunning, avaricious, self-seeking, lacking in sympathy and compassion, subservient to authority and willing to abandon principle for material gain, and so on ... Such qualities might be just the valuable ones for a war of all against all.” [For Reasons of State, pp. 139–140]

Needless to be said, if the market does reward such people with success it can hardly be considered as a good thing. A system which elevates making money to the position of the most important individual activity will obviously result in the degrading of human values and an increase in neurotic and psychotic behaviour. Little wonder, as Alfie Kohn has argued, competition can have serious negative effects on us outside of work, with it damaging both our personal psychology and our interpersonal relationships. Thus competition “itself is responsible for the development of a lower moral standard” which places winning at any cost above fairness and justice. Kohn quotes Nathan Ackerman, the father of family therapy, who noted that the “strife of competition reduces empathic sympathy, distorts communication, impairs the mutuality of support and sharing, and decreases the satisfaction of personal need.” [No Con-
test, p. 163 and pp. 142–3] Thus, the market can impoverish us as individuals, sabotaging self-esteem, promoting conformity, ru-
ing relationships and making us less than what we could be. This is a problem of markets as such, not only capitalist ones and so non-
capitalist markets could make us less human and more a robot.

All market decisions are crucially conditioned by the purchasing power of those income groups that can back their demands with money. Not everyone can work (the sick, the very old, children and so forth) and for those who can, personal circumstances may impact on their income. Moreover, production has become so interwoven that it “is utterly impossible to draw a distinction between the work of each” and so we should “put the needs above the works, and first of all to recognise the right to live, and later on the right to well-being for all those who took their share in production.” This is particularly the case as “the needs of the individual, do not always correspond to his works” — for example, “a man of forty, father of three children, has other needs than a young man of twenty” and “the woman who suckles her infant and spends sleepless nights at its bed-
side, cannot do as much work as the man who has slept peacefully.” [Kropotkin, Conquest of Bread, p. 170 and p. 171] This was why communist-anarchists like Kropotkin stressed the need not only to abolish wage-labour but also money, the wages system.

So it goes without saying that purchasing power (demand) and need are not related, with people often suffering simply because they do not have the money required to purchase, say, health care, housing or food for themselves or their families. While economic distress may be less in a non-capitalist market system, it still would exist as would the fear of it. The market is a continuous bidding for goods, resources, and services, with those who have the most purchasing power the winners. This means that the market system is the worst one for allocating resources when purchasing power is unequally distributed (this is why orthodox economists make the convenient assumption of a “given distribution of income” when they try to show that a capitalist allocation of resources is the best dom of development implies difference of development, hence differ-
ence of ideas and actions.” Experience, then, is “the best teacher, and the necessary experience can only be gained by entire freedom of action.” [quoted by Ruth Kinna, “Fields of Vision: Kropotkin and Revolutionary Change”, pp. 67–86, SubStance, Vol. 36, No. 2, p. 81] There may, of course, be other economic practices but these may not be libertarian. In Malatesta’s words:

“Admitted the basic principle of anarchism — which is that no-one should wish or have the opportunity to reduce others to a state of subjection and oblige them to work for him — it is clear that all, and only, those ways of life which respect freedom, and recognise that each individual has an equal right to the means of production and to the full enjoyment of the product of his own labour, have anything in common with anarchism.” [Errico Malatesta: His Life and Ideas, p. 33]

In addition, it should be kept in mind that in practice it is impossible to separate the economic realm from the social and political realms, as there are numerous interconnections between them: anarchist thinkers like Bakunin argued that the “political” institutions of a free society would be based upon workplace associations while Kropotkin placed the commune at the heart of his vision of a communist-anarchist economy and society. Thus the division between social and economic forms is not clear cut in anarchist theory — as it should be as society is not, and cannot be, considered as separate from or inferior to the economy. An anarchist society will try to integrate the social and economic, embedding the latter in the former in order to stop any harmful externalities associated economic activity being passed onto society. As Karl Polanyi argued, capitalism “means no less than the running of society as an adjunct to the market. Instead of the economy being being embed-
ded in social relations, social relations are embedded in the economic
I.3 What could the economic structure of anarchy look like?

Here we will examine possible frameworks of a libertarian socialist economy. We stress that it is frameworks rather than framework because it is likely that any anarchist society will see a diverse number of economic systems co-existing in different areas, depending on what people in those areas want. “In each locality,” argued Diego Abad de Santillan, “the degree of communism, collectivism or mutualism will depend on the conditions prevailing. Why dictate rules? We who make freedom our banner, cannot deny it in economy. Therefore there must be free experimentation, free show of initiative and suggestions, as well as the freedom of organisation.”

As such, anarchism “can be realised in a multiformity of economic arrangements, individual and collective. Proudhon advocated mutualism; Bakunin, collectivism; Kropotkin, communism. Malatesta has conceived the possibility of mixed agreements, especially during the first period.” [After the Revolution, p. 97 and p. 96]

Here, we will highlight and discuss the four major schools of anarchist economic thought: Individualist anarchism, mutualism, collectivism and communism. It is up to the reader to evaluate which school best maximises individual liberty and the good life (as individualist anarchist Joseph LaBade wisely said, “Anarchism will not dictate to them any explicit rules as to what they must do, but that it opens to them the opportunities of putting into practice their own ideas of enhancing their own happiness.” [The Individualist Anarchists, pp. 260–1]). “Nothing is more contrary to the real spirit of Anarchy than uniformity and intolerance,” argued Kropotkin. “Free-

one via “Pareto optimality”). While a mutualist system should reduce inequality drastically, it cannot be assumed that inequalities will not increase over time. This is because inequalities in resources leads to inequalities of power on the market and, assuming self-interest, any trade or contract will benefit the powerful more than the powerless, so re-enforcing and potentially increasing the inequalities and power between the parties. Similarly, while an anarchist society would be created with people driven by a sense of solidarity and desire for equality, markets tend to erode those feelings and syndicates or communes which, thanks to the resources they control (such as rare raw materials or simply the size of their investments reducing competitive pressures) have an advantage on the market may be tempted to use their monopoly power vis-à-vis other groups in society to accrue more income for themselves at the expense of less fortunate syndicates and communes. This could degenerate back into capitalism as any inequalities that exist between co-operatives would be increased by competition, forcing weaker co-operatives to fail and so creating a pool of workers with nothing to sell but their labour. The successful co-operatives could then hire those workers and so re-introduce wage labour. So these possibilities could, over time, lead to a return a post-capitalist market system to capitalism if the inequalities become so great that the new rich become so alienated from the rest of society they recreate wage-labour and, by necessity, a state to enforce a desire for property in land and the means of production against public opinion.

All this ensures that the market cannot really provide the information necessary for rational-decision making in terms of ecological impact as well as human activity and so resources are inefficiently allocated. We all suffer from the consequences of that, with market forces impoverishing our environment and quality of life. Thus are plenty of reasons for concluding that efficiency and the market not only do not necessarily coincide, but, indeed, necessarily do not coincide. Indeed, rather than respond to individual needs, the market responds to money (more correctly, profit),
which by its very nature provides a distorted indication of individual preferences (and does not take into account values which are enjoyed collectively, such as clean air, or potentially enjoyed, such as the wilderness a person may never visit but desires to see exist and protected).

This does not mean that social anarchists propose to “ban” the market — far from it. This would be impossible. What we do propose is to convince people that a profit-based market system has distinctly bad effects on individuals, society and the planet’s ecology, and that we can organise our common activity to replace it with libertarian communism. As Max Stirner argued, competition “has a continued existence” because “all do not attend to their affair and come to an understanding with each other about it … . Abolishing competition is not equivalent to favouring the guild. The difference is this: In the guild baking, etc., is the affair of the guild-brothers; in competition, the affair of chance competitors; in the union, of those who require baked goods, and therefore my affair, yours, the affair of neither guildic nor the concessionary baker, but the affair of the united.” [Op. Cit., p. 275]

Therefore, social anarchists do not appeal purely to altruism in their struggle against the de-humanising effects of the market, but also to egoism: the simple fact that co-operation and mutual aid is in our best interests as individuals. By co-operating and controlling “the affairs of the united,” we can ensure a free society which is worth living in, one in which the individual is not crushed by market forces and has time to fully develop his or her individuality and uniqueness:

“Solidarity is therefore the state of being in which Man attains the greatest degree of security and wellbeing; and therefore egoism itself, that is the exclusive consideration of one’s own interests, impels Man and human society towards solidarity.” [Errico Malatesta, Anarchy, p. 30]
the same way, it rejected the very idea of the state or statism, meaning government of society from above downward ... Therefore, it took the opposite, or negative, position: anarchy, meaning the free and independent organisation of all the units and parts of the community and their voluntary federation from below upward, not by the orders of any authority, even an elected one, and not by the dictates of any scientific theory, but as the natural development of all the varied demands put forth by life itself.

“Therefore no scholar can teach the people or even define for himself how they will and must live on the morrow of the social revolution. That will be determined first by the situation of each people, and secondly by the desires that manifest themselves and operate most strongly within them.” [Statism and Anarchy, pp. 198–9]

So while it will be reasonable to conclude that, for example, the federation of strike/factory assemblies and their councils/committees will be the framework by which production will initially be organised, this framework will mutate to take into account changing production and social needs. The actual structures created will, by necessity, be transformed as industry is transformed from below upwards to meet the real needs of society and producers as both the structure and nature of work and industry developed under capitalism bears the marks of its economic class, hierarchies and power (“a radical social ecology not only raises traditional issues such as the reunion of agriculture with industry, but also questions the very structure of industry itself.” [Murray Bookchin, The Ecology of Freedom, p. 408]). Therefore, under workers’ self-management industry, work and the whole structure and organisation of production will be transformed in ways we can only guess at today. We can point the general direction (i.e. self-managed, ecologically balanced, decentralised, federal, empowering, creative and so on) but

In conclusion then, communist-anarchists argue that even non-capitalist markets would result in everyone being so busy competing to further their “self-interest” that they would loose sight of what makes life worth living and so harm their actual interests. Ultimately, what counts as self-interest is shaped by the surrounding social system. The pressures of competing may easily result in short-term and narrow interests taking precedence over richer, deeper needs and aspirations which a communal system could allow to flourish by providing the social institutions by which individuals can discuss their joint interests, formulate them and act to achieve them. That is, even non-capitalist markets would result in people simply working long and hard to survive on the market rather than living. If one paradox of authoritarian socialism is that it makes everyone miserable by forcing them to altruistically look out for the happiness of others, market-based libertarian socialism could produce the potential paradox of making everyone miserable by the market forcing them to pursue a limited notion of self-interest which ensures that they do not have the time or opportunity to really be happy and at one with themselves and others.

In other words, bosses act as they do under capitalism in part because markets force them to. Getting rid of bosses need not eliminate all the economic pressures which influence the bosses’ decisions and, in turn, could force groups of workers to act in similar ways. Thus a competitive system would undermine many of the benefits which people sought when they ended capitalism. This is why some socialists inaccurately call socialist schemes of competing co-operatives “self-managed capitalism” or “self-exploitation” — they are simply drawing attention to the negative aspects of markets which getting rid of the boss cannot solve. Significantly, Proudhon was well aware of the negative aspect of market forces and suggested various institutional structures, such as the ago-industrial federation, to combat them (so while in favour of competition he was, unlike the individualist anarchists, against the free market). Communist anarchists, unsurprisingly,
argue that individualist anarchists tend to stress the positive aspects of competition while ignoring or downplaying its negative sides. While, undoubtedly, capitalism makes the negative side of competition worse than it could be it does not automatically follow that a non-capitalist market would not have similar, if smaller, negative aspects to it.

I.1.4 If capitalism is exploitative, then isn’t socialism as well?

Some libertarian Marxists (as well as Leninists) claim that non-communist forms of socialism are just “self-managed” capitalism. Strangely, propertarians (the so-called “libertarian” right) also say yes to this question, arguing that socialist opposition to exploitation does not imply socialism but what they also call “self-managed” capitalism. Thus some on the left proclaim anything short of communism is a form of capitalism while, on the right, some proclaim that communism is exploitative and only a market system (which they erroneously equate to capitalism) is non-exploitative.

Both are wrong. First, and most obviously, socialism does not equal communism (and vice versa). While there is a tendency on both right and left to equate socialism with communism (particularly Marxism), in reality, as Proudhon once noted, socialism “was not founded as a sect or church; it has seen a number of different schools.” [Selected Writings of Pierre-Joseph Proudhon, p. 177] Only a few of these schools are communist, just as only a few of them are libertarian. Second, not all socialist schools aim to abolish the market and payment by deed. Proudhon, for example, opposed communism and state socialism just as much as he opposed capitalism. Third, capitalism does not equal the market. The market predates capitalism and, for some libertarian socialists, will survive it. Even from a Marxist position, a noted

are struggling.” [Peter Arshinov, The History of the Makhnovist Movement, pp. 239–40]

The role of anarchists is “to help the masses to take the right road in the struggle and in the construction of the new society” and “support their first constructive efforts, assist them intellectually.” However, the working class “once it has mastered the struggle and begins its social construction, will no longer surrender to anyone the initiative in creative work. The working class will then direct itself by its own thought; it will create its society according to its own plans.” [Arshinov, Op. Cit., pp. 240–1] All anarchists can do is help this process by being part of it, arguing our case and winning people over to anarchist ideas (see section J.3 for more details). Thus the process of struggle and debate will, hopefully, turn a struggle against capitalism and statism into one for anarchism. In other words, anarchists seek to preserve and extend the anarchistic elements that exist in every struggle and to help them become consciously libertarian by discussion and debate as members of those struggles.

Lastly, we must stress that it is only the initial framework of a free society which is created in the class struggle. As an anarchist society develops, it will start to change and develop in ways we cannot predict. The forms in which people express their freedom and their control over their own lives will, by necessity, change as these requirements and needs change. As Bakunin argued:

“Even the most rational and profound science cannot divine the form social life will take in the future. It can only determine the negative conditions, which follow logically from a rigorous critique of existing society. Thus, by means of such a critique, social and economic science rejected hereditary individual property and, consequently, took the abstract and, so to speak, negative position of collective property as a necessary condition of the future social order. In
society must be based on resisting and destroying those evils. This is why anarchists stress tactics and organisations which increase the power, confidence, autonomy, initiative, participation and self-activity of oppressed people. As we indicate in section J ("What Do Anarchists Do") this means supporting direct action, solidarity and self-managed organisations built and run from the bottom-up. Only by fighting our own battles, relying on ourselves and our own abilities and power, in organisations we create and run ourselves, can we gain the power and confidence and experience needed to change society for the better and, hopefully, create a new society in place of the current one.

Needless to say, a revolutionary movement will never, at its start, be purely anarchist:

“All of the workers’ and peasants’ movements which have taken place . . . have been movements within the limits of the capitalist regime, and have been more of less tinged with anarchism. This is perfectly natural and understandable. The working class do not act within a world of wishes, but in the real world where they are daily subjected to the physical and psychological blows of hostile forces . . . the workers continually feel the influence of all the real conditions of the capitalist regime and of intermediate groups . . . Consequently it is natural that the struggle which they undertake inevitably carries the stamp of various conditions and characteristics of contemporary society. The struggle can never be born in the finished and perfected anarchist form which would correspond to all the requirements of the ideas . . . When the popular masses engage in a struggle of large dimensions, they inevitably start by committing errors, they allow contradictions and deviations, and only through the process of this struggle do they direct their efforts in the direction of the ideal for which they

in section I.1.1, the defining feature of capitalism is wage labour, not the market.

Why some socialists desire to reduce the choices facing humanity to either communism or some form of capitalism is frankly strange, but also understandable because of the potential dehumanising effects of market systems (as shown under capitalism). Why the propertarian right wishes to do so is more clear, as it aims to discredit all forms of socialism by equating them to communism (which, in turn, it equates to central planning and Stalinism).

Yet this is not a valid inference to make. Opposition to capitalism can imply both socialism (distribution according to deed, or selling the product of ones labour) and communism (distribution according to need, or a moneyless economy). The theory is a critique of capitalism, based on an analysis of that system as being rooted in the exploitation of labour (as we discussed in section C.2), i.e., it is marked by workers not being paid the full-value of the goods they create. This analysis, however, is not necessarily the basis of a socialist economy although it can be considered this as well. As noted, Proudhon used his critique of capitalism as an exploitative system as the foundation of his proposals for mutual banking and co-operatives. Marx, on the other hand, used a similar analysis as Proudhon’s purely as a critique of capitalism while hoping for communism. Robert Owen used it as the basis of his system of labour notes while Kropotkin argued that such a system was just the wages-system under another form and a free society “having taken possession of all social wealth, having boldly proclaimed the right of all to this wealth . . . will be compelled to abandon any system of wages, whether in currency or labour-notes.” [The Conquest of Bread, p. 167]

In other words, though a system of co-operative selling on the market (what is mistakenly termed “self-managed” capitalism by some) or exchanging labour-time values would not be communism, it is not capitalism. This is because the workers are not separated from the means of production. Therefore, the attempts by proper-
tarians to claim that it is capitalism are false, an example of misinformed insistence that virtually every economic system, bar state socialism and feudalism, is capitalist. However, it could be argued that communism (based on free access and communal ownership of all resources including the product of labour) would mean that workers are exploited by non-workers (the young, the sick, the elderly and so on). As communism abolishes the link between performance and payment, it could be argued that the workers under communism would be just as exploited as under capitalism, although (of course) not by a class of capitalists and landlords but by the community. As Proudhon put it, while the “members of a community, it is true, have no private property” the community itself “is proprietor” and so communism “is inequality, but not as property is. Property is the exploitation of the weak by the strong. Communism is the exploitation of the strong by the weak.” [What is Property?, p. 250]

Needless to say, subsequent anarchists rejected Proudhon’s blanket opposition to all forms of communism, rejecting this position as only applicable to authoritarian, not libertarian, communism. Which, it must be remembered, was the only kind around when this was written in 1840 (as we noted in section H.1. what was known as communism in Proudhon’s time was authoritarian). Suffice to say, Proudhon’s opposition to communism shares little with that of the Propertarian-right, which reflects the sad lack of personal empathy (and so ethics) of the typical defender of capitalism. However, the notion that communism (distribution according to need) rather than socialism (distribution according to deed) is exploitative misses the point as far as communist anarchism goes. This is because of two reasons.

Firstly, “Anarchist Communism … means voluntary Communism, Communism from free choice.” [Alexander Berkman, What is Anarchism, p. 148] This means it is not imposed on anyone but is created and practised only by those who believe in it.

cide to occupy the workplace and the strike assemblies take over the means of production. The strike committees become the basis for factory committees which could administer the workplaces, based on workers’ self-management via workplace assemblies (the former strikers’ assemblies). The federation of strikers’ delegates becomes the local communal council, replacing the existing state with a self-managed federation of workers’ associations. In this way, the class struggle creates the framework of a free society.

This, obviously, means that any suggestions of how an anarchist society would look like are based on the fact that the actual framework of a free society will be the product of actual struggles. This means that the form of the free society will be shaped by the process of social change and the organs it creates. This is an important point and worth repeating.

So, as well as changing themselves while they change the world, a people in struggle also create the means by which they can manage society. By having to organise and manage their struggles, they become accustomed to self-management and self-activity and create the possibility of a free society and the organisations which will exist within it. Anarchy is not a jump into the dark but rather a natural progression of the struggle for freedom in an unfree society. The contours of a free society will be shaped by the process of creating it and, therefore, will not be an artificial construction imposed on society. Rather, it will be created from below up by society itself as working class people start to break free of hierarchy. The class struggle thus transforms those involved as well as society and creates the organisational structure and people required for a libertarian society.

This clearly suggests that the means anarchists support are important as they are have a direct impact on the ends they create. In other words, means influence ends and so our means must reflect the ends we seek and empower those who use them. As the present state of affairs is based on the oppression, exploitation and alienation of the working class, any tactics used in the pursuit of a free
framework of an anarchist society, as providing the basis for the
defree federation of workers’ associations which would constitute
the commune. Others, such as the Russians Maximov, Arshinov,
Voline and Makhno, saw the spontaneously created workers’
councils (soviets) of 1905 and 1917 as the basis of a free society, as
another example of Bakunin’s federation of workers’ associations.

Thus, for all anarchists, the structural framework of an anarchist
society was created by the class struggle, by the needs of working
class people to resist oppression, exploitation and hierarchy.
As Kropotkin stressed, “[d]uring a revolution new forms of life will
always germinate on the ruins of the old forms ... It is impossible
to legislate for the future. All we can do is vaguely guess its essen-
tial tendencies and clear the road for it.” [Evolution and Environ-
ment, pp. 101–2] These essential tendencies were discovered, in
practice, by the needs of the class struggle. The necessity of prac-
tising mutual aid and solidarity to survive under capitalism (as in
any other hostile environment) makes working people and other
oppressed groups organise together to fight their oppressors and
exploiters. Thus the co-operation necessary for a libertarian social-
ist society, like its organisational framework, would be generated
by the need to resist oppression and exploitation under capitalism.
The process of resistance produces organisation on a wider and
wider scale which, in turn, can become the framework of a free
society as the needs of the struggle promote libertarian forms of
organisation such as decision making from the bottom up, auton-
omy, federalism, mandated delegates subject to instant recall and
so on.

For example, a strikers’ assembly would be the basic decision-
making forum in a struggle for improved wages and working con-
ditions. It would create a strike committee to implement its de-
cisions and send delegates to spread the strike. These delegates
inspire other strikes, requiring a new organisation to co-ordinate
the struggle. This results in delegates from all the strikes meet-
ing and forming a federation (a workers’ council). The strikers de-

Therefore it would be up to the communities and syndicates to
decide how they wish to distribute the products of their labour and
individuals to join, or create, those that meet their ideas of right
and wrong. Some may decide on equal pay, others on payment in
terms of labour time, yet others on communist associations. The
important thing to realise is that individuals and the co-operatives
they join will decide what to do with their output, whether to ex-
change it or to distribute it freely. Hence, because it is based on free
agreement, communism-anarchism cannot be exploitative. Mem-
ers of a commune or co-operative which is communist are free
to leave, after all. Needless to say, the co-operatives will usually
distribute their product to others within their confederation and
exchange with the non-communist ones in a different manner. We
say “usually” for in the case of emergencies like earthquakes and
so forth the situation would call for, and produce, mutual aid just
as it does today to a large degree, even under capitalism.

The reason why capitalism is exploitative is that workers have
to agree to give the product of their labour to another (the boss, the
landlord) in order to be employed in the first place (see section B.4).
While they can choose who to be exploited by (and, to varying de-
grees, pick the best of the limited options available to them) they
cannot avoid selling their liberty to property owners (a handful
do become self-employed and some manage to join the exploiting
class, but not enough to make either a meaningful option for the
bulk of the working class). In libertarian communism, by contrast,
the workers themselves agree to distribute part of their product to
others (i.e. society as a whole, their neighbours, friends, and so
forth). It is based on free agreement, while capitalism is marked
by power, authority, and the firm (invisible) hand of market forces
(supplemented, as necessary, by the visible fist of the state). As re-
sources are held in common under anarchism, people always have
the option of working alone if they so desired (see section I.3.7).

Secondly, unlike under capitalism, there is no separate class
which is appropriating the goods produced. The so-called “non-
workers” in a libertarian communist society have been, or will be, workers. As the noted Spanish anarchist De Santillan pointed out, “[n]aturally, children, the aged and the sick are not considered parasites. The children will be productive when they grow up. The aged have already made their contribution to social wealth and the sick are only temporarily unproductive.” [After the Revolution, p. 20] In other words, over their life time, everyone contributes to society and so using the “account book” mentality of capitalism misses the point. As Kropotkin put it:

“Services rendered to society, be they work in factory or field, or mental services, cannot be valued in money. There can be no exact measure of value (of what has been wrongly-termed exchange value), nor of use value, with regard to production. If two individuals work for the community five hours a day, year in year out, at different work which is equally agreeable to them, we may say that on the whole their labour is equivalent. But we cannot divide their work, and say that the result of any particular day, hour, or minute of work of the one is worth the result of a minute or hour of the other.” [Conquest of Bread, p. 168]

So it is difficult to evaluate how much an individual worker or group of workers actually contribute to society. This can be seen whenever workers strike, particularly so-called “key” areas like transport. Then the media is full of accounts of how much the strike is costing “the economy” and it is always far more than that of the wages lost in strike action. Yet, according to capitalist economics, the wages of a worker are equal to their contribution to production — no more, no less. Striking workers, in other words, should only harm the economy to the value of their wages yet, of course, this is obviously not the case. This is because of the interconnected nature of any advanced economy, where contributions of individuals are so bound together.

representatives, were practising what was to be described later as Direct Self-Government.” Such a system did not imply isolation, for while “the districts strove to maintain their own independence” they also “sought for unity of action, not in subjection to a Central Committee, but in a federative union.” The Commune “was thus made from below upward, by the federation of the district organisations; it spring up in a revolutionary way, from popular initiative.” Thus the process of class struggle, of the needs of the fighting against the existing system, generated the framework of an anarchist society for “the districts of Paris laid the foundations of a new, free, social organisation.” Little wonder he argued that “the principles of anarchism … already dated from 1789, and that they had their origin, not in theoretical speculations, but in the deeds of the Great French Revolution” and that “the libertarians would no doubt do the same to-day.” [The Great French Revolution, vol. 1, p. 261, p. 200, p. 203, p. 206, p. 204 and p. 206]

Similarly, as we noted in section H.2.6 we discover him arguing in Mutual Aid that strikes and labour unions were an expression of mutual aid in capitalist society. Elsewhere, Kropotkin argued that “labour combinations” like the “Sections” of French revolution were one of the “main popular anarchist currents” in history, expressing the “same popular resistance to the growing power of the few.” [Anarchism, p. 159] For Kropotkin, like Bakunin, libertarian labour unions were “natural organs for the direct struggle with capitalism and for the composition of the future social order.” [quoted by Paul Avrich, The Russian Anarchists, p. 81]

As can be seen, the major anarchist thinkers pointed to forms of organisation autonomously created and managed by the working class as the framework of an anarchist society. Both Bakunin and Kropotkin pointed to militant, direct action based labour unions while Proudhon pointed towards workers’ experiments in co-operative production and mutual credit. Later anarchists followed them. The anarcho-syndicalists, like Bakunin and Kropotkin, pointed to the developing labour movement as the
“the revolution must set out from the first to radically and totally destroy the State ... The natural and necessary consequence of this destruction will be [among others, the] dissolution of army, magistracy, bureaucracy, police and priesthood... confiscation of all productive capital and means of production on behalf of workers’ associations, who are to put them to use ... the federative Alliance of all working men’s associations [will] constitute the Commune ... [the] Communal Council [will be] composed of ... delegates ... vested with plenary but accountable and removable mandates... all provinces, communes and associations ... by first reorganising on revolutionary lines ... [will] constitute the federation of insurgent associations, communes and provinces ... [and] organise a revolutionary force capable defeating reaction ... [and for] self-defence ... [The] revolution everywhere must be created by the people, and supreme control must always belong to the people organised into a free federation of agricultural and industrial associations ... organised from the bottom upwards by means of revolutionary delegation.”

[Michael Bakunin: Selected Writings, pp. 170–2]

Like Bakunin, Kropotkin stressed that revolution transformed those taking part in it. As he noted in his classic account of the French Revolution, "by degrees, the revolutionary education of the people was being accomplished by the revolution itself." Part of this process involved creating new organisations which allowed the mass of people to take part in the decision making of the revolution. He pointed to "the popular Commune," arguing that "the Revolution began by creating the Commune ... and through this institution it gained ... immense power." He stressed that it was "by means of the 'districts' [of the Communes] that ... the masses, accustomed themselves to act without receiving orders from the national

Needless to say, this does not imply that a free people would tolerate the able-bodied simply taking without contributing towards the mass of products and services society. As we discuss in section I.4.14, such people will be asked to leave the community and be in the same situation as those who do not wish to be communists.

Ultimately, the focus on calculating exact amounts and on the evaluation of contributions down to the last penny is exactly the kind of narrow-minded account-book mentality which makes most people socialists in the first place. It would be ironic if, in the name of non-exploitation, a similar accounting mentality to that which records how much surplus value is extracted from workers under capitalism is continued into a free society. It makes life easier not to have to worry whether you can afford to visit the doctors or dentists, not to have to pay for use of roads and bridges, know that you can visit a public library for a book and so forth. For those who wish to spend their time calculating such activities and seeking to pay the community for them simply because they hate the idea of being "exploited" by the "less" productive, the ill, the young or the old then we are sure that a libertarian communist society will accommodate them (although we are sure that emergencies will be an exception and they will be given free access to communal hospitals, fire services and so forth).

Thus the notion that communism would be exploitative like capitalism misses the point. While all socialists accuse capitalism for failing to live up to its own standards, of not paying workers the full product of their labour, most do not think that a socialist society should seek to make that full payment a reality. Life, for libertarian communists, is just too complex and fleeting to waste time and energy calculating exactly the contribution of each to society. As Malatesta put it:

"I say that the worker has the right to the entire product of his work: but I recognise that this right is only a formula of abstract justice; and means, in prac-
tice, that there should be no exploitation, that everyone must work and enjoy the fruits of their labour, according to the custom agreed among them.

“Workers are not isolated beings that live for themselves and for themselves, but social beings ... Moreover, it is impossible, the more so with modern production methods, to determine the exact labour that each worker contributed, just as it is impossible to determine the differences in productivity of each worker or each group of workers, how much is due to the fertility of the soil, the quality of the implements used, the advantages or difficulties flowing from the geographical situation or the social environment. Hence, the solution cannot be found in respect to the strict rights of each person, but must be sought in fraternal agreement, in solidarity.” [At the Café, pp. 56–7]

All in all, most anarchists reject the notion that people sharing the world (which is all communism really means) equates to them being exploited by others. Rather than waste time trying to record the minutiae of who contributed exactly what to society, most anarchists are happy if people contribute to society roughly equal amounts of time and energy and take what they need in return. To consider such a situation of free co-operation as exploitative is simply ridiculous (just as well consider the family as the exploitation of its working members by their non-working partners and children). Those who do are free to leave such an association and pay their own way in everything (a task which would soon drive home the simplicity and utility of communism, most anarchists would suggest).

“Do not the workmen’s unions at this moment serve as the cradle for the social revolution ... ? Are they not always the open school, both theoretical and practical, where the workman learns the science of the production and distribution of wealth, where he studies, without masters and without books, by his own experience solely, the laws of ... industrial organisation ... ?” [General Idea of the Revolution, p. 78]

Attempts to form workers associations, therefore, “should be judged, not by the more or less successful results which they obtain, but only according to their silent tendency to assert and establish the social republic.” The “importance of their work lies, not in their petty union interests, but in their denial of the rule of capitalists, money lenders and governments.” They “should take over the great departments of industry, which are their natural inheritance.” [Op. Cit., p. 98–9]

This linking of the present and the future through the self-activity and self-organisation of working class people is also found in Bakunin. Unlike Proudhon, Bakunin stressed revolutionary activity and so he saw the militant labour movement, and the revolution itself, as providing the basic structure of a free society. As he put it, “the organisation of the trade sections and their representation in the Chambers of Labour ... bear in themselves the living seeds of the new society which is to replace the old one. They are creating not only the ideas, but also the facts of the future itself.” [Bakunin on Anarchism, p. 255]

The needs of the class struggle would create the framework of a new society, a federation of workers councils, as “strikes indicate a certain collective strength already, a certain understanding among the workers ... each strike becomes the point of departure for the formation of new groups.” [The Basic Bakunin, pp. 149–50] This pre-revolutionary development would be accelerated by the revolution itself:
affairs of our life, constantly creating new conditions.” It “stands for
the spirit of revolt” and so “[d]irect action against the authority in
the shop, direct action against the authority of the law, of direct ac-
tion against the invasive, meddlesome authority of our moral code,
is the logical, consistent method of Anarchism.” [Emma Goldman,
_Anarchism and Other Essays_, p. 63 and p. 66]

Anarchism draws upon the autonomous self-activity and spon-
taneity of working class people in struggle to inform both its po-
litical theory and its vision of a free society. The struggle against
hierarchy teaches us not only how to be anarchists but also gives us
a glimpse of what an anarchist society would be like, what its ini-
tial framework could be and the experience of managing our own
activities which is required for such a society to function success-
fully.

Therefore, as is clear, anarchists have long had a clear vision
of what an anarchist society would look like and, equally as im-
portant, where such a society would spring from (as we proved in
section H.1.4 Lenin’s assertion that anarchists “have absolutely no
clear idea of _what_ the proletariat will put in its [the states] place” is
simply false). It would, therefore, be useful to give a quick sum-
mary of anarchist views on this subject.

Proudhon, for example, looked to the self-activity of French
workers, artisans and peasants and used that as the basis of his
ideas on anarchism. While seeing such activity as essentially
reformist in nature, like subsequent revolutionary anarchists he
saw the germs of anarchy “generating from the bowels of the people,
from the depths of labour, a greater authority, a more potent fact,
which shall envelop capital and the State and subjugate them” as “it
is of no use to change the holders of power or introduce some vari-
ation into its workings: an agricultural and industrial combination
must be found by means of which power, today the ruler of society,
shall become its slave.” [*System of Economical Contradictions*,
p. 399 and p. 398] Workers should follow the example of those
already creating co-operatives:

I.1.5 Does capitalism efficiently allocate
resources?

We have discussed, in section I.1.1, the negative effects of work-
place hierarchy and stock markets and, in section I.1.2, the infor-
mational problems of prices and the limitations in using profit as
the sole criteria for decision making for the efficient allocation
of resources. As such, anarchists have reason to doubt the argu-
ments of the “Austrian” school of economics that (libertarian) so-
cialism is impossible, as first suggested by Ludwig Von Mises in
1920. [“Economic Calculation in the Socialist Commonwealth”, _Col-
lectivist Economic Planning_, F.A von Hayek (ed.), pp. 87–130]

Here, we discuss why anarchists also have strong reason to ques-
tion the underlying assumption that capitalism efficiently allocates
resources and how this impacts on claims that “socialism” is impos-
sible. This is based on an awareness of the flaws in any (implicit)
assumption that all prices are at equilibrium, the issue of uncer-
tainty, the assumption that human well-being is best served by
market forces and, lastly, the problem of periodic economic crisis
under capitalism.

The first issue is that prices only provide adequate knowledge for
rational decision making only if they are at their equilibrium val-
ues as this equates supply and demand. Sadly, for the "Austrian"
school and its arguments against socialism, it rejects the notion
that prices could be at equilibrium. While modern “Austrian” eco-
nomics is keen to stress its (somewhat underdeveloped) disequilib-
rium analysis of capitalism, this was not always the case. When
Mises wrote his 1920 essay on socialism his school of economics
was considered a branch of the neo-classicalism and this can be
seen from Mises’ critique of central planning. In fact, it would be
fair to say that the neo-“Austrian” focus of prices as information
and (lip-service to) disequilibrium flowed from the Economic Cal-
culation debate, specifically the awkward fact that their more or-
thodox neo-classical peers viewed Lange’s “solution” as answering Mises and Hayek.

Thus there is a fundamental inconsistency in Mises’ argument, namely that while Austrian economics reject the notion of equilibrium and the perfect competition of neo-classical economics he nonetheless maintains that market prices are the correct prices and can be used to make rational decisions. Yet, in any real market, these correct prices must be ever changing so making the possibility that “precise” economic decisions by price can go wrong on a large scale (i.e., in slumps). In other words, Mises effectively assumed away uncertainty and, moreover, failed to mention that this uncertainty is increased dramatically within capitalism.

This can be seen from modern “Austrian” economics which, after the Economic Calculation debates of the 1920s and 1930s, moved increasingly away from neo-classical equilibrium theory. However, this opened up a whole new can of worms which, ironically, weakened the “Austrian” case against socialism. For the modern “Austrian” economist, the economy is considered not to be in equilibrium, with entrepreneur being seen as the means by which it brought towards it. Thus “this approach postulates a tendency for profit opportunities to be discovered and grasped by routine-resisting entrepreneurial market participants”, with this “tending to nudge the market in the equilibrative direction.” Lip-service is paid to the obvious fact that entrepreneurs can make errors but “there is no tendency for entrepreneurial errors to be made. The tendency which the market generates toward greater mutual awareness, is not offset by any equal but opposite tendency in the direction of diminishing awareness” and so the “entrepreneurial market process may indeed reflect a systematically equilibrative tendency, but this by no means constitutes a guaranteed unidirectional, flawlessly converging trajectory.” All this results on the “speculative actions of entrepreneurs who see opportunities for pure profit in the conditions of disequilibrium.” [Israel M. Kirzner, “Entrepreneurial Discovery and the Competitive Market Process: An

and agriculture — first in the communities, then through federation of communities into districts, districts into nations, and nations into international brotherhood.’ These proposals are indeed strikingly similar to the structure of the subsequent Russian system of councils ...

“Bakunin’s ideas about spontaneous development of the revolution and the masses’ capacity for elementary organisation undoubtedly were echoed in part by the subsequent soviet movement... Because Bakunin ... was always very close to the reality of social struggle, he was able to foresee concrete aspects of the revolution. The council movement during the Russian Revolution, though not a result of Bakunin’s theories, often corresponded in form and progress to his revolutionary concepts and predictions.” [The Soviets, pp. 8–11]

“As early as the 1860’s and 1870’s,” Paul Avrich also noted, “the followers of Proudhon and Bakunin in the First International were proposing the formation of workers’ councils designed both as a weapon of class struggle against capitalists and as the structural basis of the future libertarian society.” [The Russian Anarchists, p. 73]

In this sense, anarchy is not some distant goal but rather an aspect of the current struggles against domination, oppression and exploitation (i.e. the class struggle, to use an all-embracing term, although we must stress that anarchists use this term to cover all struggles against domination). “Anarchism,” argued Kropotkin, “is not a mere insight into a remote future. Already now, whatever the sphere of action of the individual, he [or she] can act, either in accordance with anarchist principles or on an opposite line.” It was “born among the people — in the struggles of real life” and “owes its origin to the constructive, creative activity of the people.” [Anarchism, p. 75, p. 150 and p. 149] Thus, “Anarchism is not ... a theory of the future to be realised by divine inspiration. It is a living force in the
as those which developed during the 1905 and 1917 Russian Rev-
olutions). As Oskar Anweiler notes in his definitive work on the
Russian Soviets (Workers’ Councils):

“Proudhon’s views are often directly associated with the
Russian councils ... Bakunin ..., much more than Proud-
hon, linked anarchist principles directly to revolutionary
action, thus arriving at remarkable insights into the rev-
olutionary process that contribute to an understanding
of later events in Russia ...

“In 1863 Proudhon declared ... ‘All my economic ideas
as developed over twenty-five years can be summed up
in the words: agricultural-industrial federation. All my
political ideas boil down to a similar formula: political
federation or decentralisation.’ ... Proudhon’s conception
of a self-governing state [sic!] founded on producers’ cor-
porations [i.e. federations of co-operatives], is certainly
related to the idea of a democracy of producers’ which
emerged in the factory soviets. To this extent Proudhon
 can be regarded as an ideological precursor of the coun-
cils ...

“Bakunin ... suggested the formation of revolutionary
committees with representatives from the barricades,
the streets, and the city districts, who would be given
binding mandates, held accountable to the masses, and
subject to recall. These revolutionary deputies were
to form the ‘federation of the barricades,’ organising
a revolutionary commune to immediately unite with
other centres of rebellion ...

“Bakunin proposed the formation of revolutionary com-
mittees to elect communal councils, and a pyramidal or-
ganisation of society ‘through free federation from the
bottom upward, the association of workers in industry

Austrian Approach”, pp. 60–85. Journal of Economic Literature,
Vol. 35, No. 1, p. 71, p. 73, p. 82, p. 72 and p. 68]

When evaluating this argument, it is useful to remember that
“postulate” means “to assume without proof to be true” or
“to take as self-evident.” At its most simple, this argument
ignores how entrepreneurial activity pushes an economy away
from equilibrium (unlike radical economists, only a few “Austrian”
economists, such as those who follow Ludwig Lachmann, recog-
nise that market forces have both equilibrating and disequilibrium
effects, acknowledged in passing by Kirzner: “In a world of inces-
sant change, they argue, it is precisely those acts of entrepre-
norial boldness which must frustrate any discovery efforts made by fellow
entrepreneurs.” [Op. Cit., p. 79]). In other words, market activity
lead to economic crisis and inefficient allocation decisions. A
successful entrepreneur will, by their actions, frustrate the plans
of others, most obviously those of his competitors but also those
who require the goods they used to produce their commodities
and those whose incomes are reduced by the new products being
available. It staggers belief to think that every action by a firm
will be step towards equilibrium or a better co-ordination of plans,
particularly if you include unsuccessful entrepreneurs into the
process. In other words, the market can be as discoordinating as
it can be co-ordinating and it cannot be “postulated” beforehand
which will predominate at any given time.

There is an obvious example of entrepreneurial activity which
leads to increasing disequilibrium, one (ironically) drawn straight
from “Austrian” economics itself. This is the actions of bankers
extending credit and so deviating from the “natural” (equilibrium)
rate of interest. As one post-Keynesian economist notes, this, the
“Austrian” theory of the business cycle, “not only proved to be vul-
nerable to the Cambridge capital critique … , but also appeared to
reply upon concepts of equilibrium (the ‘natural rate of interest’, for
example) that were inconsistent with the broader principles of Aus-
trian economic theory.” [J.E. King, A history of post Keynesian
As we discussed in section C.8, this kind of activity is to be expected of entrepreneurs seeking to make money from meeting market demand. The net result of this activity is a tendency away from equilibrium. This can be generalised for all markets, with the profit seeking activities of some businesses frustrating the plans of others. Ultimately, the implication that all entrepreneurial activity is stabilising, virtuous arbitrage that removes disequilibria is unconvincing as the suggestion that the misinformation conveyed by disequilibrium prices can cause very substantial macroeconomic distortions for only one good (credit). Surely, the argument as regards interest rates can apply to other disequilibrium prices, with responses to unsustainable prices for other goods being equally capable of generating mal-investment (which only becomes apparent when the prices adjust towards their “natural” levels). After all, any single price distortion leads to all other prices becoming distorted because of the ramifications for exchange ratios throughout the economy.

One of the reasons why neo-classical economists stress equilibrium is that prices only provide the basis for rational calculation only in that state for disequilibrium prices can convey extremely misleading information. When people trade at disequilibrium prices, it has serious impacts on the economy (which is why neo-classical economics abstracts from it). As one economist notes, if people “were to buy and sell at prices which did not clear the market” then once “such trading has taken place, there can be no guarantee that, even if an equilibrium exists, the economy will ever converge to it. In fact, it is likely to move in cycles around the equilibrium.” This “is more than a mere supposition. It is an accurate description of what does happen in the real world.” [Paul Ormerod, The Death of Economics, pp. 87–8] Once we dismiss the ideologically driven “postulate” of “Austrian” economics, we can see how these opportunities for “pure profit” (and, of course, a corresponding pure lose for the buyer) impacts on the economy.

I.2.3 How is the framework of an anarchist society created?

Anarchists do not abstractly compare a free society with the current one. Rather, we see an organic connection between what is and what could be. In other words, anarchists see the initial framework of an anarchist society as being created under statism and capitalism when working class people organise themselves to resist hierarchy. As Kropotkin argued:

“To make a revolution it is not ... enough that there should be ... [popular] risings ... It is necessary that after the risings there should be something new in the institutions [that make up society], which would permit new forms of life to be elaborated and established.”

[The Great French Revolution, vol. 1, p. 200]

Anarchists have seen these new institutions as being linked with the need of working class people to resist the evils of hierarchy, capitalism and statism, as being the product of the class struggle and attempts by working class people to resist authority, oppression and exploitation. Thus the struggle of working class people to protect and enhance their liberty under hierarchical society will be the basis for a society without hierarchy. This basic insight allowed anarchists like Bakunin and Proudhon to predict future developments in the class struggle such as workers’ councils (such
will erupt, no doubt, before the work of anarchist education has been completed … [and as] a result …, while we do preach perfect communism, it is not in the certainty or expectation of [libertarian] communism’s being the social form of the future: it is in order to further men’s [and women’s] education … so that, by the time of the day of conflagration comes, they will have attained maximum emancipation. But must the transitional state to be endured necessarily or inevitably be the collectivist [i.e. state socialist/capitalist] jail? Might it not consist of libertarian organisation confined to the needs of production and consumption alone, with all political institutions having been done away with?” [No Gods, No Masters, vol. 2, p. 55]

One thing is certain: an anarchist social revolution or mass movement will need to defend itself against attempts by statists and capitalists to defeat it. Every popular movement, revolt, or revolution has had to face a backlash from the supporters of the status quo. An anarchist revolution or mass movement will face (and indeed has faced) such counter-revolutionary movements. However, this does not mean that the destruction of the state and capitalism need be put off until after the forces of reaction are defeated. For anarchists, a social revolution and free society can only be defended by anti-statist means (for more discussion of this important subject see section J.7.6).

So, given an anarchist revolution which destroys the state, the type and nature of the economic system created by it will depend on local circumstances and the level of awareness in society. The individualists are correct in the sense that what we do now will determine how the future develops. Obviously, any “transition period” starts in the here and now, as this helps determine the future. Thus, while social anarchists usually reject the idea that capitalism can be reformed away, we agree with the individualist and mutu-

and how the market system adds to uncertainty. As dissident economist Steve Keen puts it:

“However, a change in prices in one market will affect consumer demand in all other markets. This implies that a move towards equilibrium by one market could cause some or all others to move away from equilibrium. Clearly it is possible that this … might never settle down to equilibrium.

“This will be especially so if trades actually occur at disequilibrium – as in practice they must … A disequilibrium trade will mean that the people on the winning side of the bargain — sellers if the price is higher than equilibrium — will gain real income at the expense of the losers, compared to the alleged standard of equilibrium. This shift in income distribution will then affect all other markets, making the dance of many markets even more chaotic.”

[Debunking Economics, p. 169]

That prices can, and do, convey extremely misleading information is something which “Austrians” have a tendency to downplay. Yet in economies closer to their ideal (for example, nineteenth century America) there were many more recessions (usually triggered by financial crises arising from the collapse of speculative bubbles) than in the twentieth and so the economy was fundamentally more unstable, resulting in the market "precisely" investing in the "wrong" areas. Of course, it could be argued that there was not really free market capitalism then (e.g., protectionism, no true free banking due to regulation by state governments and so on) yet this would be question begging in the extreme (particularly since the end of the 20th and dawn of the 21st centuries saw speculative crises precisely in those areas which were regulated least).

Thus, the notion that prices can ensure the efficient allocation of resources is question begging. If prices are in disequilibrium,
as “Austrians” suggest, then the market does not automatically ensure that they move towards equilibrium. Without equilibrium, we cannot say that prices provide companies sufficient information to make rational investment decisions. They may act on price information which is misleading, in that it reflects temporary highs or lows in the market or which is a result of speculative bubbles. An investment decision made on the mis-information implied in disequilibrium prices is as likely to produce mal-investment and subsequent macro-economic distortions as decisions made in light of the interest rate not being at its "natural" (equilibrium) value. So unless it is assumed that the market is in equilibrium when an investment decision is made then prices can reflect misinformation as much as information. These, the obvious implications of disequilibrium, help undermine Mises’ arguments against socialism.

Even if we assume that prices are at or, at best, near equilibrium when investment decisions are made, the awkward fact is that these prices do not tell you prices in the future nor what will be bought when production is finished. Rather, they tell you what was thought to be profitable before investment began. There are always differences between the prices used to cost various investments and the prices which prevail on the market when the finished goods are finally sold, suggesting that the market presents systematically misleading signals. In addition, rival companies respond to the same price signals by undertaking long term investments at the same time, so creating the possibility of a general crisis of over-accumulate and over-production when they are complete. As we discussed in section C.7.2, this is a key factor in the business cycle. Hence the recurring possibility of over-production, when the aggregate response to a specific market’s rising price results in the market being swamped by good, so driving the market price down. Thus the market is marked by uncertainty, the future is not known. So it seems ironic to read Mises asserting that “in the socialist commonwealth every economic change becomes an undertaking whose success can be neither appraised in advance nor later...

“To organise a [libertarian] communist society on a large scale it would be necessary to transform all economic life radically, such as methods of production, of exchange and consumption; and all this could not be achieved other than gradually, as the objective circumstances permitted and to the extent that the masses understood what advantages could be gained and were able to act for themselves.” [Op. Cit., p. 36]

This means that while the conditions necessary of a free society would be created in a broad way by a social revolution, it would be utopian to imagine everything will be perfect immediately. Few anarchists have argued that such a jump would be possible — rather they have argued that revolutions create the conditions for the evolution towards an anarchist society by abolishing state and capitalism. “Besides,” argued Alexander Berkman, “you must not confuse the social revolution with anarchy. Revolution, in some of its stages, is a violent upheaval; anarchy is a social condition of freedom and peace. The revolution is the means of bringing anarchy about but it is not anarchy itself. It is to pave the road to anarchy, to establish conditions which will make a life of liberty possible.” However, “to achieve its purpose the revolution must be imbued with and directed by the anarchist spirit and ideas. The end shapes the means ... the social revolution must be anarchist in method as in aim.” [What is Anarchism?, p. 231]

This means that while acknowledging the possibility of a transitional society, anarchists reject the notion of a transitional state as confused in the extreme (and, as can be seen from the experience of Marxism, dangerous as well). An anarchist society can only be achieved by anarchist means. Hence French Syndicalist Fernand Pelloutier’s comments:

“Nobody believes or expects that the coming revolution ... will realise unadulterated anarchist-communism... it
So the degree which a society which has abolished the state can progress towards free communism depends on objective conditions and what a free people want. Bakunin and other collectivists doubted the possibility of introducing a communist system instantly after a revolution. For Kropotkin and many other anarcho-communists, communist anarchy can, and must, be introduced as far as possible and as soon as possible in order to ensure a successful revolution. We should mention here that some anarchists, like the individualists and mutualists, do not support the idea of revolution and instead see anarchist alternatives growing within capitalism and slowly replacing it.

In other words anarchists agree that an anarchist society cannot be created overnight, for to assume so would be to imagine that anarchists could enforce their ideas on a pliable population. Libertarian socialism can only be created from below, by people who want it and understand it, organising and liberating themselves. “Communist organisations,” argued Kropotkin, “must be the work of all, a natural growth, a product of the constructive genius of the great mass. Communism cannot be imposed from above; it could not live even for a few months if the constant and daily co-operation of all did not uphold it. It must be free.” [Anarchism, p. 140] The results of the Russian Revolution should have cleared away long ago any contrary illusions about how to create “socialist” societies. The lesson from every revolution is that the mistakes made by people in liberating themselves and transforming society are always minor compared to the results of creating authorities, who eliminate such “ideological errors” by destroying the freedom to make mistakes (and so freedom as such). Freedom is the only real basis on which socialism can be built (“Experience through freedom is the only means to arrive at the truth and the best solutions; and there is no freedom if there is not the freedom to be wrong.” [Malatesta, Op. Cit., p. 72]). Therefore, most anarchists would agree with Malatesta:
of these too, but the amount of future income cannot. Equally, the impact of building the new railroad will change the distribution of income as well, which in turn affects prices across the market and people’s consumption decisions which, in turn, affects the profitability of new railroad investment. Yet all this is ignored in order to attack socialism.

In other words, Mises assumes that the future can be accurately predicted in order to attack socialism. Thus he asserts that a socialist society “would issue an edict and decide for or against the projected building. Yet this decision would depend at best upon vague estimates; it would never be based upon the foundation of an exact calculation of value.” [Op. Cit., p. 109] Yet any investment decision in a real capitalist economy depends “at best upon vague estimates” of future market conditions and expected returns on the investment. This is because accounting is backward looking, while investment depends on the unknowable future.

In other words, “people recognise that their economic future is uncertain (nonergodic) and cannot be reliably predicted from existing market information. Consequently, investment expenditures on production facilities and people’s desire to save are typically based on differing expectations of an unknowable, uncertain future.” This means that in an uncertain world future profits “can neither be reliably forecasted from existing market information, nor endogenously determined via today’s planned saving propensity of income earners … Thus, unless one assumes that entrepreneurs can accurately predict the future from here to eternity, current expectations of prospective yield must depend on the animal optimism or pessimism of entrepreneurs” [Paul Davidson, John Maynard Keynes, pp. 62–3] So, yes, under capitalism you can determine the money cost (price) of a building but the decision to build is based on estimates and guesses of the future, to use Mises’ words “vague estimates.” A change in the market can mean that even a building which is constructed exactly to expected costs does not produce a profit and so sits empty. Even in terms of “exact calculation” of inputs these can individuals reshape and change themselves as they are reshaping and changing the world about them. Thus Malatesta:

“And even after a successful insurrection, could we overnight realise all desires and pass from a governmental and capitalist hell to a libertarian-communist heaven which is the complete freedom of man within the wished-for community of interests with all men?

“Those are illusions which can take root among authoritarians who look upon the masses as the raw material which those who have power can, by decrees, supported by bullets and handcuffs, mould to their will. But these illusions have not taken among anarchists. We need the people’s consensus, and therefore we must persuade by means of propaganda and example … to win over to our ideas an ever greater number of people.” [Op. Cit., pp. 82–3]

So, clearly, the idea of a “one-day revolution” is one rejected as a harmful fallacy by anarchists. We are aware that revolutions are a process and not an event (or series of events). However, one thing that anarchists do agree on is that it is essential for both the state and capitalism to be undermined as quickly as possible. It is true that, in the course of social revolution, we anarchists may not be able to stop a new state being created or the old one from surviving. It all depends on the balance of support for anarchist ideas in the population and how willing people are to introduce them. There is no doubt, though, that for a social revolt to be fully anarchist, the state and capitalism must be destroyed and new forms of oppression and exploitation not put in their place. How quickly after such a destruction we move to a fully communist-anarchist society is a moot point, dependent on the conditions the revolution is facing and the ideas and wants of the people making it.
work of a free society would be created by the struggle for freedom itself, by the class struggle within but against hierarchical society. This revolution would come “from below” and would expropriate capital as well as smash the state (see section H.2.4). Such a society, as Bakunin argued, will not be “perfect” by any means:

“I do not say that the peasants [and workers], freely organised from the bottom up, will miraculously create an ideal organisation, confirming in all respects to our dreams. But I am convinced that what they construct will be living and vibrant, a thousands times better and more just than any existing organisation. Moreover, this … organisation, being on the one hand open to revolutionary propaganda … , and on the other, not petrified by the intervention of the State … will develop and perfect itself through free experimentation as fully as one can reasonably expect in our times.

“With the abolition of the State, the spontaneous self-organisation of popular life … will revert to the communes. The development of each commune will take its point of departure the actual condition of its civilisation.” [Bakunin on Anarchism, p. 207]

How far such a new social organisation will meet the all the ideals and hopes of communist-anarchists will vary according to objective circumstances and the influence of libertarian theory. As people start to liberate themselves they will undergo an ethical and psychological transformation as they act to the end specific hierarchical social structures and relationships. It does not imply that people need to be “perfect” nor that a perfect anarchist society will come about “overnight. Rather, it means that while an anarchist society (i.e., one without a state or private property) would be created by revolution, it will be one initially marked by the society it came from and would require a period of self-activity by which

change, so undermining the projected final cost and so its profit margin.

For a good explanation of the problems of uncertainty, we must turn to Keynes who placed it at the heart of his analysis of capitalism. “The actual results of an investment over a long term of years,” argued Keynes, “very seldom agree with the initial expectation” since “our existing knowledge does not provide a sufficient basis for a calculated mathematical expectation. In point of fact, all sorts of considerations enter into the market valuation which are in no way relevant to the prospective yield.” He stressed that “human decisions affecting the future, whether personal or political or economic, cannot depend on strict mathematical expectation, since the basis for making such calculations does not exist.” He also suggested that the “chief result” of wage flexibility “would be to cause a great instability of prices, so violent perhaps as to make business calculations futile.” [The General Theory, p. 152, pp. 162–3 and p. 269]

Much the same can be said of other prices as well. As Proudhon argued decades before Mises proclaimed socialism impossible, profit is ultimately an unknown value. Under capitalism wages are the “least that can be given” to a worker: “that is, we do not know.” The “price of the merchandise put upon the market” by the capitalist will be the “highest that he can obtain; that is, again, we do not know.” Economics “admits” that “the prices of merchandise and labour … can be estimated” and “that estimation is essentially an arbitrary operation, which never can lead to sure and certain conclusions.” Thus capitalism is based on “the relation between two unknowns” which “cannot be determined.” [System of Economic Contradictions, p. 64]

So under capitalism all decisions are “groping in the dark”. Which can, and does, lead to inefficient allocations of resources:

“It leads, that is to say, to misdirected investment. But over and above this it is an essential characteristic of the boom that investments which will in fact yield, say, 2 per
cent. in conditions of full employment are made in the expectation of a yield of, say, 6 per cent., and are valued accordingly. When the disillusion comes, this expectation is replaced by a contrary ‘error of pessimism’, with the result that the investments, which would in fact yield 2 per cent. in conditions of full employment, are expected to yield less than nothing; and the resulting collapse of new investment then leads to a state of unemployment in which the investments, which would have yielded 2 per cent. in conditions of full employment, in fact yield less than nothing. We reach a condition where there is a shortage of houses, but where nevertheless no one can afford to live in the houses that there are.” [Keynes, Op. Cit., pp. 321–2]

Thus uncertainty and expectations of profit can lead to massive allocation inefficiencies and waste. Of course Mises pays lip-service to this uncertainty of markets. He noted that there are “ceaseless alternations in other economic data” and that exchange relations are “subject to constant … fluctuations” but those “fluctuations disturb value calculations only in the slightest degree”! He admitted that “some mistakes are inevitable in such a calculation” but rest assured “[w]hat remains of uncertainty comes into the calculation of the uncertainty of future conditions, which is an inevitable concomitant of the dynamic nature of economic life.” [Op. Cit., p. 98, p. 110 and p. 111] So, somewhat ironically, Mises assumed that, when attacking socialism, that prices are so fluid that no central planning agency could ever compute their correct price and so allocated resources inefficiently yet, when it comes to capitalism, prices are not so fluid that they make investment decisions difficult!

The question is, does capitalism reduce or increase these uncertainties? We can suggest that capitalism adds two extra layers of uncertainty. As with any economy, there is the uncertainty that development of a revolution and so the “circumstances will dictate the measures.” [Op. Cit., pp. 69–70, p. 191 and p. 79]

Thus we have anarcho-communism being introduced “during a revolutionary period” rather than instantly and the possibility that it will be “partial” in many, if not all areas, depending on the “circumstances” encountered. Therefore the (Marxist inspired) claim that anarchists think a fully communist society is possible overnight is simply false — we recognise that a social revolution takes time to develop after it starts. As Malatesta put it, “after the revolution, that is after the defeat of the existing powers and the overwhelming victory of the forces of insurrection” then “gradualism really comes into operation. We shall have to study all the practical problems of life: production, exchange, the means of communication, relations between anarchist groupings and those living under some kind of authority, between communist collectives and those living in an individualistic way; relations between town and country … and so on.” [Errico Malatesta: His Life and Ideas, p. 173] In other words, “each community will decide for itself during the transition period the method they deem best for the distribution of the products of associated labour.” [James Guillaume, “On Building the New Social Order”, pp. 356–79. Bakunin on Anarchism, p. 362]

However, if by “anarchist society” it is meant a society that has abolished the state and started the process of transforming society from below then anarchists argue that such a society is not only possible after a successful revolution, it is essential. Thus the anarchist social revolution would be political (abolition of the state), economic (abolition of capitalism) and social (abolition of hierarchical social relationships). Or, more positively, the introduction of self-management into every aspect of life. In other words, “political transformation” and “economic transformation” must be “accomplished together and simultaneously.” [Bakunin, The Basic Bakunin, p. 106] This transformation would be based upon the organisations created by working class people in their struggle against capitalism and the state (see next section). Thus the frame-
its _earliest_ insurrections, to have a communist character, we would have to relinquish the possibility of a revolution, since in that case there would be need of a strong majority to agree on carrying through a change in the direction of communism.” [Kropotkin, quoted by Max Nettlau, _A Short History of Anarchism_, pp. 282–3]

In addition, different areas will develop in different speeds and in different ways, depending on the influences dominant in the area. “Side by side with the revolutionised communes,” argued Kropotkin, other areas “would remain in an expectant attitude, and would go on living on the Individualist system ... revolution would break out everywhere, but revolution under different aspects; in one country State Socialism, in another Federation; everywhere more or less Socialism, not conforming to any particular rule.” Thus “the Revolution will take a different character in each of the different European nations; the point attained in the socialisation of wealth will not be everywhere the same.” [The Conquest of Bread, pp. 81–2 and p. 81]

Kropotkin was also aware that a revolution would face many problems, including the disruption of economic activity, civil war and isolation. He argued that it was “certain that the coming Revolution ... will burst upon us in the middle of a great industrial crisis ... There are millions of unemployed workers in Europe at this moment. It will be worse when Revolution has burst upon us ... The number of the out-of-works will be doubled as soon as barricades are erected in Europe and the United States ... we know that in time of Revolution exchange and industry suffer most from the general upheaval ... A Revolution in Europe means, then, the unavoidable stoppage of at least half the factories and workshops.” He stressed that there would be “the complete disorganisation” of the capitalist economy and that during a revolution “[i]nternational commerce will come to a standstill” and “[t]he circulation of commodities and of provisions will be paralysed.” This would, of course, have an impact on the produced goods will meet an actual need of others (i.e., that it has a use-value). The market adds another layer of uncertainty by adding the need for its price to exceed costs a market. Finally, capitalism adds another level of uncertainty in that the capitalist class must make sufficient profits as well. Thus, regardless of how much people need a specific good if capitalists cannot make a profit from it then it will not be produced.

Uncertainty will, of course, afflict a communist-anarchist society. Mistakes in resource allocation will happen, with some goods over produced at times and under-produced at others. However, a communist society removes the added uncertainty associated with a capitalist economy as such mistakes do not lead to general slumps as losses result in the failure of firms and rising unemployment. In other words, without Mises’ precise economic calculation society will no longer be afflicted by the uncertainty associated with the profit system.

Significantly, there are developments within capitalism which point to the benefits of communism in reducing uncertainty. This is the rise of the large-scale corporation. In fact, many capitalist firms expand precisely to reduce the uncertainties associated with market prices and their (negative) impact on the plans they make. Thus companies integrate horizontally by take-over to gain more control over investment and supply decisions as well as vertically to stabilise costs and secure demand for necessary inputs.

As economist John Kenneth Galbraith noted, when investment is large, “[n]o form of market uncertainty is so serious as that involving the terms and conditions on which capital is obtained.” As a result internal funds are used as “the firm has a secure source of capital” and “no longer faces the risks of the market.” This applies to other inputs, for a “firm cannot satisfactorily foresee and schedule future action or prepare for contingencies if it does not know what its prices will be, what its sales will be, what its costs, including labour and capital costs, will be and what will be available at these costs. If the market is uncontrolled, it will not know these things ... Much
of what the firm regards as planning consists in minimising uncontrolled market influences.” This partly explains why firms grow (the other reason is to dominate the market and reap oligopolistic profits). The “market is superseded by vertical integration” as the firm “takes over the source of supply or the outlet”. This “does not eliminate market uncertainty” but rather replaces “the large and unmanageable uncertainty as to the price” of inputs with “smaller, more diffuse and more manageable uncertainties” such as the costs of labour. A large firm can only control the market, by “reducing or eliminating the independence of action” of those it sells to or buys from. This means the behaviour of others can be controlled, so that “uncertainty as to that behaviour is reduced.” Finally, advertising is used to influence the amount sold. Firms also “eliminate market uncertainty” by “entering into contracts specifying prices and amounts to be provided or bought for substantial periods of time.” Thus “one of the strategies of eliminating market uncertainty is to eliminate the market.” [The New Industrial State p. 47, pp. 30–6 and p. 47]

Of course, such attempts to reduce uncertainty within capitalism are incomplete and subject to breakdown. Such planning systems can come into conflict with others (for example, the rise of Japanese corporations in the 1970s and 1980s and subsequent decline of American industrial power). They are centralised, hierarchically structured and based on top-down central planning (and so subject to the informational problems we highlighted in section I.1.2). Market forces can reassert themselves, making a mockery of even the best organised plans. However, these attempts at transcending the market within capitalism, as incomplete as they are, show a major problem with relying on markets and market prices to allocate resources. They add an extra layer of uncertainty which ensure that investors and firms are as much in the dark about their decisions as Mises argued central planners would be. As such, to state as Mises does that production in socialism can “never be based upon the foundation of an exact calculation of value” is somewhat begging the question. [Op. Cit., p. 109] This is because know-

If it is meant a fully classless society (what some people, inaccurately, would call a “utopia”) then the answer is a clear “no, that would be impossible.” Anarchists are well aware that “class difference do not vanish at the stroke of a pen whether that pen belongs to the theoreticians or to the pen-pushers who set out laws or decrees. Only action, that is to say direct action (not through government) expropriation by the proletarians, directed against the privileged class, can wipe out class difference.” [Luigi Fabbri, “Anarchy and ‘Scientific’ Communism”, pp. 13–49, The Poverty of Statism, pp. 13–49, Albert Meltzer (ed.), p. 30]

As we discussed in section H.2.5, few anarchists consider it likely that a perfectly functioning libertarian communist society would be the immediate effect of a social revolution. For anarchists a social revolution is a process and not an event (although, of course, a process marked by such events as general strikes, uprisings, insurrections and so on). As Kropotkin argued:

“It is a whole insurrectionary period of three, four, perhaps five years that we must traverse to accomplish our revolution in the property system and in social organisation.” [Words of a Rebel, p. 72]

His famous work The Conquest of Bread aimed, to use his words, at “prov[ing] that communism — at least partial — has more chance of being established than collectivism, especially in communes taking the lead” and tried “to indicate how, during a revolutionary period, a large city — if its inhabitants have accepted the idea — could organise itself on the lines of free communism.” [Anarchism, p. 298] The revolution, in other words, would progress towards communism after the initial revolt:

“we know that an uprising can overthrow and change a government in one day, while a revolution needs three or four years of revolutionary convulsion to arrive at tangible results … if we should expect the revolution, from
“A movement of the left should distinguish with clarity between its long-range revolutionary aims and certain more immediate effects it can hope to achieve ...

“But in the long run, a movement of the left has no chance of success, and deserves none, unless it develops an understanding of contemporary society and a vision of a future social order that is persuasive to a large majority of the population. Its goals and organisational forms must take shape through their active participation in political struggle [in its widest sense] and social reconstruction. A genuine radical culture can be created only through the spiritual transformation of great masses of people the essential feature of any social revolution that is to extend the possibilities for human creativity and freedom ... . The cultural and intellectual level of any serious radical movement will have to be far higher than in the past ... It will not be able to satisfy itself with a litany of forms of oppression and injustice. It will need to provide compelling answers to the question of how these evils can be overcome by revolution or large-scale reform. To accomplish this aim, the left will have to achieve and maintain a position of honesty and commitment to libertarian values.” [Radical Priorities, pp. 189–90]

We hope that this section of the FAQ, in its own small way, will encourage as many people as possible to discuss what a libertarian society would be like and use that discussion to bring it closer.

I.2.2 Will it be possible to go straight to an anarchist society from capitalism?

Possibly, it depends what is meant by an anarchist society.
fact is that maximising profit does not equal maximising human well-being.

Neither well-being nor efficiency equals profitability as the latter does not take into account need. Meeting needs is not “retrospectively determined” under capitalism, only profit and loss. An investment may fail not because it is not needed but because there is no effective demand for it due to income inequalities. So it is important to remember that the distribution of income determines whether something is an “efficient” use of resources or not. As Thomas Balogh noted, real income “is measured in terms of a certain set of prices ruling in a given period and that these prices will reflect the prevailing distribution of income. (With no Texan oil millionaires here would be little chance of selling a baby blue Roll-Royce ... at a price ten times the yearly income of a small farmer or sharecropper).” [The Irrelevance of Conventional Economics, pp. 98–9]

The market demand for commodities, which allocates resources between uses, is based not on the tastes of consumers but on the distribution of purchasing power between them. This, ironically, was mentioned by Mises as part of his attack on socialism, arguing that the central planners could not use current prices for “the transition to socialism must, as a consequence of the levelling out of the differences in income and the resultant re-adjustments in consumption, and therefore production, change all economic data.” [Op. Cit., p. 109]

He did not mention the impact this has in terms of “efficiency” or profitability! After all, what is and is not profitable (“efficient”) depends on effective demand, which in turn depends of a specific income distribution. Identical production processes become efficient and inefficient simply by a redistribution of income from the rich to the poor, and vice versa. Similarly, changes in market prices may make once profitably investments unprofitable, without affecting the needs they were satisfying. And this, needless to say, can have serious impacts on human well-being.

As discussed in section C.1.5, this becomes most obvious during famines. As Allan Engler points out, “[w]hen people are de-

lions of people who participated already shared a similar vision and started to build a society based on it, thus learning firsthand where their books were wrong and which areas of life they did not adequately cover.

So, this discussion of what an anarchist society might look like is not a drawing up of blueprints, nor is it an attempt to force the future into the shapes created in past revolts. It is purely and simply an attempt to start people discussing what a free society would be like and to learn from previous experiments. However, as anarchists recognise the importance of building the new world in the shell of the old, our ideas of what a free society would be like can feed into how we organise and struggle today. And vice versa; for how we organise and struggle today will have an impact on the future.

As Malatesta pointed out, such discussions are necessary and essential, for it is “absurd to believe that, once government has been destroyed and the capitalists expropriated, ‘things will look after themselves’ without the intervention of those who already have an idea on what has to be done and who immediately set about doing it” for “social life, as the life of individuals, does not permit of interruption.” He stressed that to “neglect all the problems of reconstruction or to prearrange complete and uniform plans are both errors, excesses which, by different routes, would led to our defeat as anarchists and to the victory of new or old authoritarian regime. The truth lies in the middle.” [Op. Cit., p. 121]

Moreover, the importance of discussing the future can help indicate whether our activities are actually creating a better world. After all, if Karl Marx had been more willing to discuss his vision of a socialist society then the Stalinists would have found it much harder to claim that their hellish system was, in fact, socialism. Given that anarchists like Proudhon and Bakunin gave a broad outline of their vision of a free society it would have been impossible for anarchism to be twisted as Marxism was. Most anarchists would agree with Chomsky’s evaluation of the issue:
I.2.1 Why discuss what an anarchist society would be like at all?

Partly, in order to indicate why people should become anarchists. Most people do not like making jumps in the dark, so an indication of what anarchists think a desirable society could look like may help those people who are attracted to anarchism, inspiring them to become committed to its practical realisation. Partly, it’s a case of learning from past mistakes. There have been numerous anarchistic social experiments on varying scales, and its useful to understand what happened, what worked and what did not. In that way, hopefully, we will not make the same mistakes twice.

However, the most important reason for discussing what an anarchist society would look like is to ensure that the creation of such a society is the action of as many people as possible. As Errico Malatesta indicated in the middle of the Italian revolutionary “Two Red Years” (see section A.5.5), “either we all apply our minds to thinking about social reorganisation, and right away, at the very same moment that the old structures are being swept away, and we shall have a more humane and more just society, open to future advances, or we shall leave such matters to the ‘leaders’ and we shall have a new government.” [The Anarchist Revolution, p. 69]

Hence the importance of discussing what the future will be like in the here and now. The more people who have a fairly clear idea of what a free society would look like the easier it will be to create that society and ensure that no important matters are left to others to decide for us. The example of the Spanish Revolution comes to mind. For many years before 1936, the C.N.T. and F.A.I. put out publications discussing what an anarchist society would look like (for example, After the Revolution by Diego Abel de Santillan and Libertarian Communism by Isaac Puente), the end product of libertarians organising and educating in Spain for almost seventy years before the revolution. When it finally occurred, the million access to the means of livelihood, the invisible hand of market forces does not intervene on their behalf. Equilibrium between supply and demand has no necessary connection with human need. For example, assume a country of one million people in which 900,000 are without means of livelihood. One million bushels of wheat are produced. The entire crop is sold to 100,000 people at $10 a bushel. Supply and demand are in equilibrium, yet 900 000 people will face starvation.” [Apostles of Greed, pp. 50–51] In case anyone thinks that this just happens in theory, the example of numerous famines (from the Irish famine of the 1840s to those in African countries in 1980s) gives a classic example of this occurring in practice, with rich landowners exporting food to the other nations while millions starve in their own.

So the distributional consequences of the market system play havoc with any attempt to define what is and is not an “efficient” use of resources. As markets inform by ‘exit’ only — some products find a market, others do not — ‘voice’ is absent. The operation of ‘exit’ rather than ‘voice’ leaves behind those without power in the marketplace. For example, the wealthy do not buy food poisoned with additives, the poor consume it. This means a division grows between two environments: one inhabited by those with wealth and one inhabited by those without it. As can be seen from the current capitalist practice of “exporting pollution” to developing countries, this problem can have serious ecological and social effects. So, far from the market being a “democracy” based on “one dollar, one vote,” it is an oligarchy in which, for example, the “79,000 Americans who earned the minimum wage in 1987 have the same influence [or “vote”] as Michael Milken, who ‘earned’ as much as all of them combined.” [Michael Albert and Robin Hahnel, The Political Economy of Participatory Economics, p. 21] One dissident economist states the blindly obvious, namely that the “market and democracy clash at a fundamental level. Democracy runs on the principle of ‘one man (one person), one vote.’ The market runs on the principle of ‘one dollar, one vote.’ Naturally, the former gives equal
weight to each person, regardless of the money she/he has. The latter gives greater weight to richer people.” This means that the market is automatically skewed in favour of the wealthy and so “[l]eaving everything to the market means that the rich may be able to realise even the most frivolous element of their desires, while the poor may not be able even to survive — thus the world spends twenty times more research money on slimming drugs than on malaria, which claims more than a million lives and debilitates millions more in developing countries every year.” [Ha-Joon Chang, Bad Samaritans, p. 172 and p. 174]

In other words, markets are always biased in favour of effective demand, i.e. in favour of the demands of people with money, and so can never (except in the imaginary abstractions of neo-classical economics) allocate the necessities of life to those who need them the most. Thus a simple redistribution of wealth (via militant unions or the welfare state, for example) could make previously “bad” investments good simply because the new income allows those who had previously needed, but could not afford, the good or service in question to purchase it. So just because something makes a loss under one distribution of income does not mean that it is an inefficient use of resources in the sense of meeting human needs (and could make a profit under another, more equal, distribution of wealth). So the “efficient” allocation of resources in terms of price (i.e., profit) is often no such thing as the wealthy few skews market decisions in their favour.

It is important to remember that, for the “Austrians”, preferences are demonstrated through action in the market and they are not interested in opinions, thus any preference which is not expressed by action is irrelevant to them. So any attempt to collectively prioritise, say, building decent housing for all, provide health care for everyone, abolish poverty, and so forth are all considered “inefficient” uses of resources as those who receive them would not, normally, be able to afford them and, consequently, do not really desire them anyway (as they, needless to say, do not express that desire by make decisions) rather than the “content” of an anarchist society (the nature of the decisions reached). Moreover, the implication of this distinction also extends to the organisations created in the class struggle that would, in all likelihood, become the framework of a free society. However, form is as, perhaps more, important than content. This is because “form” and “content” are inter-related — a libertarian, participatory “form” of organisation allows the “content” of a decision, society or struggle to change. Self-management has an educational effect on those involved, as they are made aware of different ideas, think about them and decide between them (and, of course, formulate and present their own ones). Thus the nature of these decisions can and will evolve. Thus form has a decisive impact on “content” and so we make no apologies for discussing the form of a free society. As Murray Bookchin argued:

“To assume that the forms of freedom can be treated merely as forms would be as absurd as to assume that legal concepts can be treated merely as questions of jurisprudence. The form and content of freedom, like law and society, are mutually determined. By the same token, there are forms of organisation that promote and forms that vitiate the goal of freedom ... To one degree or another, these forms either alter the individual who uses them or inhibit his [or her] further development.”

[Post-Scarcity Anarchism, p. 89]

And the content of decisions are determined by the individuals involved. Thus participatory, decentralised, self-managed organisations are essential for the development of the content of decisions because they develop the individuals who make them.
“Labour will not only SHUT DOWN the industries, but Labour will REOPEN, under the management of the appropriate trades, such activities as are needed to preserve public health and public peace. If the strike continues, Labour may feel led to avoid public suffering by reopening more and more activities, "UNDER ITS OWN MANAGEMENT."

“And that is why we say that we are starting on a road that leads — NO ONE KNOWS WHERE!” [quoted by Jeremy Brecher, Strike!, p. 110]

People’s lives in a post-revolutionary society will not centre around fixed jobs and workplaces as they do now. Productive activity will go on, but not in the alienated way it does today. Similarly, in their communities people will apply their imaginations, skills and hopes to transform them into better places to live (the beautification of the commune, as the CNT put it). The first stage, of course, will be to take over their existing communities and place them under community control. Therefore, it is essential to remember that our discussion can only provide an indication on how an anarchist society will operate in the months and years after a successful revolution, an anarchist society still marked by the legacy of capitalism. However, it would be a great mistake to think that anarchists do not seek to transform all aspects of society to eliminate that legacy and create a society fit for unique individuals to live in. As an anarchist society develops it will, we stress, transform society in ways we cannot guess at now, based on the talents, hopes, dreams and imaginations of those living in it.

Lastly, it could be argued that we spend too much time discussing the “form” (i.e. the types of organisation and how they market exchanges!). Yet this ignores the awkward fact that in the market, people can only act if they have money to make their preferences known. Thus those who have a need but no money do not count when determining if the market is efficient or not. There is simply no room for the real people who can be harmed by real markets. As economist Amartya Sen argues, the workings of a “pure” capitalist market, as desired by “Austrians” economists and other propertarians, “can be problematic since the actual consequences of the operation of these entitlements can, quite possibly, include rather terrible results. It can, in particular, lead to the violation of the substantive freedom of individuals to achieve those things to which they have reason to attach great importance, including escaping avoidable morality, being well nourished and healthy, being able to read, write and count and so on.” In fact, “even gigantic famines can result without anyone’s [right] libertarian rights (including property rights) being violated. The destitutes such as the unemployed or the impoverished may starve precisely because their ‘entitlements’ … do not give them enough food.” Similarly, “deprivation” such as “regular undernourishment”, the “lack of medical care for curable illnesses” can “coexist with all [right] libertarian rights (including rights of property ownership) being fully satisfied.” [Development as Freedom, p. 66]

All of which, it must be stressed, is ignored in the “Austrian” case against socialism. Ultimately, if providing food to a rich person’s pets makes a profit then it becomes a more economical and efficient use of the resource than providing food to famine victims who cannot purchase food on the market. So it should never be forgotten that the “Austrians” insist that only preferences demonstrated in action are real. So if you cannot act on the market (i.e., buy something) then your need for it is not real. In other words, if a person loses their job and, as a consequence, loses their home then, according to this logic, they do not “need” a home as their “demonstrated preference” (i.e., their actual choices in action) shows that
they genuinely value living under a bridge (assuming they gain the bridge owners agreement, of course).

As an aside, this obvious fact shows that the “Austrian” assertion that intervention in the market always reduces social utility cannot be supported. The argument that the market maximises utility is based on assuming a given allocation of resources before the process of free exchange begins. If someone does not have sufficient income to, say, buy food or essential medical treatment then this is not reflected in the market. If wealth is redistributed and then they get access to the goods in question, then (obviously) their utility has increased and it is a moot point whether social utility has decreased as the disutility of the millionaire who was taxed to achieve it cannot be compared to it. Significantly, those “Austrians” who have sought to prove that all intervention in the market reduces social utility have failed. For example, as one dissident “Austrian” economist notes, while Murray Rothbard “claimed he offered a purely deductive” argument that state intervention always reduced social utility “his case [was] logically flawed.” He simply assumed that social utility was reduced although he gave no reason for such an assumption as he admitted that interpersonal comparisons of utility were impossible. For someone “who asks that his claims be tested only by their logic”, his ultimate conclusions about state intervention “do not follow” and exhibit “a careless self-contradiction” [David L. Prychitko, Markets, Planning and Democracy, p. 189, p. 111 and p. 110]

In summary, then, in terms of feedback saying that if something made a profit then it was efficiently produced confuses efficiency and need with profitability and effective demand. Something can make a profit by imposing costs via externalities and lowering quality. Equally, a good may not make a profit in spite of there being a need for it simply because people cannot afford to pay for it.

As such, Mises was wrong to assert that “[b]etween production for profit and production for need, there is no contrast.” [Socialism, p. 143] In fact, it seems incredible that anyone claiming to be an

Unfortunately, we have to start where we are now, not where we hope to end up! Therefore our discussion will, by necessity, reflect the current society as this is the society we will be transforming. While, for some, this outlook may not be of a sufficient qualitative break with the world we now inhabit, it is essential. We need to offer and discuss suggestions for action in the here and now, not for some future pie in the sky world which can only possibly exist years, even decades, after a successful revolution.

For example, the ultimate goal of anarchism, we stress, is not the self-management of existing workplaces or industries within the same industrial structure produced by capitalism. However, a revolution will undoubtedly see the occupation and placing under self-management much of existing industry and we start our discussion assuming a similar set-up as exists today. This does not mean that an anarchist society will continue to be like this, we simply present the initial stages using examples we are all familiar with. It is simply the first stage of transforming industry into something more ecologically safe, socially integrated and individually and collectively empowering for people.

Some people seriously seem to think that after a social revolution working people will continue using the same technology, in the same old workplaces, in the same old ways and not change a single thing (except, perhaps, electing their managers). They simply transfer their own lack of imagination onto the rest of humanity. For anarchists, it is “certain, however, that, when they [the workers] find themselves their own masters, they will modify the old system to suit their convenience in a variety of ways ... as common sense is likely to suggest to free men [and women].” [Charlotte M. Wilson, Anarchist Essays, p. 23] So we have little doubt that working people will quickly transform their work, workplaces and society into one suitable for human beings, rejecting the legacy of capitalism and create a society we simply cannot predict. The occupying of workplaces is, we stress, simply the first stage of the process of transforming them and the rest of society. These words of the
class, becomes clearly undesirable and unnecessary. Thus the framework of the free society will be created by the very process of class struggle, as working class people create the organisations required to fight for improvements and change within capitalism (see section I.2.3).

Thus, the actual framework of an anarchist society and how it develops and shapes itself is dependent on the needs and desires of those who live in such a society or are trying to create one. This is why anarchists stress the need for mass assemblies in both the community and workplace and their federation from the bottom up to manage common affairs. Anarchy can only be created by the active participation of the mass of people. In the words of Malatesta, an anarchist society would be based on “decisions taken at popular assemblies and carried out by groups and individuals who have volunteered or are duly delegated.” The “success of the revolution” depends on “a large number of individuals with initiative and the ability to tackle practical tasks: by accustoming the masses not to leave the common cause in the hands of a few, and to delegate, when delegation is necessary, only for specific missions and for limited duration.” [Op. Cit., p. 129] This self-management would be the basis on which an anarchist society would change and develop, with the new society created by those who live within it. Thus Bakunin:

“revolution everywhere must be created by the people, and supreme control must always belong to people organised into a free federation of agricultural and industrial associations ... organised from the bottom upwards by means of revolutionary delegation.” [Michael Bakunin: Selected Writings, p. 172]

And, we must not forget that while we may be able to roughly guess the way an anarchist society could start initially, we cannot pretend to predict how it will develop in the long term. A social revolution is just the beginning of a process of social transformation. economist could make such a comment. As Proudhon and Marx (like Smith and Ricardo before them) made clear, a commodity in order to be exchanged must first have a use-value (utility) to others. Thus production for profit, by definition, means production for “use” — otherwise exchange would not happen. What socialists were highlighting by contrasting production for profit to need was, firstly, that need comes after profit and so without profit a good will not be produced no matter how many people need it. Secondly, it highlights the fact that during crises capitalism is marked by an over-production of goods reducing profits, so stopping production, while people who need those goods go without them. Thus capitalism is marked by homeless people living next to empty housing and hungry people seeing food exported or destroyed in order to maximise profit. Ultimately, if the capitalist does not make a profit then it is a bad investment — regardless of whether it could be used to meet people’s needs and so make their lives better. In other words, Mises ignores the very basis of capitalism (production for profit) and depicts it as production aiming at the direct satisfaction of consumers.

Equally, that something makes a profit does not mean that it is an efficient use of resources. If, for example, that profit is achieved by imposing pollution externalities or by market power then it cannot be said that society as a whole, rather than the capitalists, have benefited. Similarly, non-market based systems can be seen to be more efficient than market based ones in terms of outcome. For example, making health care available to all who need it rather than those who can afford it is economically “inefficient” in “Austrian” eyes but only an ideologue would claim that we should not do so because of this particularly as we can point to the awkward fact that the more privatised health care systems in the USA and Chile are more inefficient than the nationalised systems elsewhere in the world. Administration costs are higher and the societies in question pay far more for an equivalent level of treatment. Of course, it could be argued that the privatised systems are not truly private
but the awkward fact remains — the more market based system is worse, in terms of coverage of the population, cost for treatment, bureaucracy and health outcomes per pound spent.

In addition, in a highly unequal society costs are externalised to those at the bottom of the social hierarchy. The consequences are harmful, as suggested by the newspeak used to disguise this reality. For example, there is what is called “increasing flexibility of the labour market.” “Flexibility” sounds great: rigid structures are unappealing and hardly suitable for human growth. In reality, as Noam Chomsky points out “[f]lexibility means insecurity. It means you go to bed at night and don’t know if you have a job tomorrow morning. That’s called flexibility of the labour market, and any economist can explain that’s a good thing for the economy, where by ‘the economy’ now we understand profit-making. We don’t mean by ‘the economy’ the way people live. That’s good for the economy, and temporary jobs increase flexibility. Low wages also increase job insecurity. They keep inflation low. That’s good for people who have money, say, bondholders. So these all contribute to what’s called a ‘healthy economy,’ meaning one with very high profits. Profits are doing fine. Corporate profits are zooming. But for most of the population, very grim circumstances. And grim circumstances, without much prospect of a future, may lead to constructive social action, but where that’s lacking they express themselves in violence.” [Keeping the Rabble in Line, pp. 283–4] So it simply cannot be assumed that what is good for the economy (profits) equates to what is good for people (at least the working class).

Thus the “Austrians” prizes profitability above all and this assumption is at the root of the “Calculation Argument” against socialism, but this only makes sense only insofar as efficiency is confused with profit. The market will invest in coal if profits are higher and, in so doing, contribute to global warming. It will deny medical care to the sick (no profits and so it is inefficient) while contributing to, say, a housing bubble because it makes short-term profits by providing loans to people who really cannot afford it. It will

sation). These suggestions may be right or wrong and informed by Malatesta’s comments that:

“We do not boast that we possess absolute truth, on the contrary, we believe that social truth is not a fixed quantity, good for all times, universally applicable or determinable in advance, but that instead, once freedom has been secured, mankind will go forward discovering and acting gradually with the least number of upheavals and with a minimum of friction. Thus our solutions always leave the door open to different and, one hopes, better solutions.” [Op. Cit., p.21]

It is for this reason that anarchists, to quote Bakunin, think that the “revolution should not only be made for the people’s sake; it should also be made by the people.” [No Gods, No Masters, vol. 1, p. 141] Social problems will be solved in the interests of the working class only if working class people solve them themselves. This applies to a social revolution — it will only liberate the working class if working class people make it themselves, using their own organisations and power. Indeed, it is the course of struggling for social change, to correct social problems, by, say, strikes, occupations, demonstrations and other forms of direct action, that people can transform their assumptions about what is possible, necessary and desirable. The necessity of organising their struggles and their actions ensures the development of assemblies and other organs of popular power in order to manage their activity. These create, potentially, an alternative means by which society can be organised. As Kropotkin argued, “[a]ny strike trains the participants for a common management of affairs.” [quoted by Caroline Cahm, Kropotkin and the Rise of Revolutionary Anarchism, p. 233] The ability of people to manage their own lives, and so society, becomes increasingly apparent and the existence of hierarchical authority, the state, the boss or a ruling
way an attempt to determine exactly what a free society would be like, for such a free society will be the result of the actions of all of society, not just anarchists. As Malatesta argued:

“it is a question of freedom for everybody, freedom for each individual so long as he [or she] respects the equal freedom of others.”

“None can judge with certainty who is right and who is wrong, who is nearest to the truth, or which is the best way to achieve the greatest good for each and everyone. Freedom, coupled by experience, is the only way of discovering the truth and what is best; and there is no freedom if there is a denial of the freedom to err.” [Errico Malatesta: His Life and Ideas, p. 49]

And, of course, real life has a habit of over-turning even the most realistic sounding theories, ideas and ideologies. Marxism, Leninism, Monetarism, laissez-faire capitalism (among others) have proven time and time again that ideology applied to real life has effects not predicted by the theory before hand (although in all four cases, their negative effects where predicted by others; in the case of Marxism and Leninism by anarchists). Anarchists are aware of this, which is why we reject ideology in favour of theory and why we are hesitant to create blue-prints for the future. History has repeatedly proven Proudhon right when he stated that "every society declines the moment it falls into the hands of the ideologists." [System of Economical Contradictions, p. 115]

Only life, as Bakunin stressed, can create and so life must inform theory — and so if the theory is producing adverse results it is better to revise the theory than deny reality or justify the evil effects it creates on real people. Thus this section of the FAQ is not a blue print, rather it is a series of suggestions (suggestions drawn, we stress, from actual experiences of working class revolt and organi-
support all kinds of economic activity, regardless of the wider impact, and so “efficiency” (i.e., profits) can, and does, contradict both wisdom and ethics and so, ultimately, an efficient allocation of resources to meet people’s needs.

Lastly, our critique has so far ignored the periodic crises that hit capitalist economies which produce massive unemployment and social disruption — crises that are due to subjective and objective pressures on the operation of the price mechanism (see section C.7 for details). In the upswing, when expectations are buoyant, firms will invest and produce a mutually reinforcing expansion. However, the net effect of such decisions eventually leads to over-investment, excess capacity and over-production — mal-investment and the waste of the embodied resources. This leads to lower than expected profits, expectations change for the worse and the boom turns into bust, capital equipment is scrapped, workers are unemployed and resources are either wasted or left idle.

In a crisis we see the contradiction between use value and exchange value come to a head. Workers are no less productive than when the crisis started, the goods and services they create are no less needed than before. The means of production are just productive as they were. Both are just as capable as before of affording for everyone a decent standard of living. Even though people are homeless, housing stands empty. Even though people need goods, production is stopped. Even though people want jobs, workplaces are closed. Yet, according to the logic of “exact” “economic calculation”, production is now “inefficient” and should be closed-down, workers made unemployed and expected to find work by forcing down the wages of those lucky enough to remain employed in the hope that the owners of the means of life will find it profitable to exploit them as much as before (for when hard times arrive it is never long until somebody suggests that the return of prosperity requires sacrifices at the bottom of the heap and, needless to say, the “Austrian” economists are usually the first to do so).
This suggests that the efficient allocation of resources becomes meaningless if its reality is a cycle where consumers go without essential goods due to scarcity and high prices followed by businesses going bust because of over-production and low prices. This process ruins large numbers of people’s lives, not to mention wasting vast stocks of productive equipment and goods. There are always people who need the over-produced goods and so the market adds to uncertainty as there is a difference between the over-production of goods and the over-production of commodities. If more goods were produced in a communist society this may signify a waste of resources but it would not, as under capitalism, produce a crisis situation as well!

So in a real capitalist economy, there are numerous reasons for apparently rational investment decisions going wrong. Not that these investments produce goods which people do not need, simply that “exact” “economic calculation” indicates that they are not making a profit and so are an “inefficient” use of resources. However, it is question begging in the extreme to argue that if (thanks to a recession) workers can no longer buy food then is it an “efficient” allocation of resources that they starve. Similarly, during the Great Depression, the American government (under the New Deal) hired about 60% of the unemployed in public works and conservation projects. These saw a billion trees planted, the whooping crane saved, the modernisation of rural America, and the building of (among others) the Cathedral of Learning in Pittsburgh, the Montana state capitol, New York’s Lincoln Tunnel and Triborough Bridge complex, the Tennessee Valley Authority as well as building or renovating 2,500 hospitals, 45,000 schools, 13,000 parks and playgrounds, 7,800 bridges, 700,000 miles of roads, 1,000 airfields as well as employing 50,000 teachers and rebuilding the country’s entire rural school system. Can all these schemes really be considered a waste of resources simply because they would never have made a capitalist a profit?

Moreover, given the ways in which our own unfree society has shaped our ways of thinking, it is probably impossible for us to imagine what new forms will arise once humanity’s ingenuity and creativity is unleashed by the removal of its present authoritarian fetters. Thus any attempts to paint a detailed picture of the future will be doomed to failure. Ultimately, anarchists think that “the new society should be organised with the direct participation of all concerned, from the periphery to the centre, freely and spontaneously, at the prompting of the sentiment of solidarity and under pressure of the natural needs of society.” [E. Malatesta and A. Hamon, Op. Cit., vol. 2, p. 20]

Nevertheless, anarchists have been willing to specify some broad principles indicating the general framework within which they expect the institutions of the new society to grow. It is important to emphasise that these principles are not the arbitrary creations of intellectuals in ivory towers. Rather, they are based on the actual political, social and economic structures that have arisen spontaneously whenever working class people have attempted to throw off their chains during eras of heightened revolutionary activity, such as the Paris Commune, the Russian Revolution, the Spanish Revolution, and the Hungarian uprising of 1956, France in 1968, the Argentinean revolt against neo-liberalism in 2001, to name just a few. It is clear, from these examples, that federations of self-managed workers’ councils and community assemblies appear repeatedly in such popular revolts as people attempt to manage their own destinies directly, both economically and socially. While their names and specific organisational structures differ, these can be considered basic libertarian socialist forms, since they have appeared during all revolutionary periods. Ultimately, such organisations are the only alternatives to political, social and economic authority — unless we make our own decisions ourselves, someone else will.

So, when reading these sections, please remember that this is just an attempt to sketch the outline of a possible future. It is in no
So, our comments should not be regarded as a detailed plan but rather a series of suggestions based on what anarchists have traditionally advocated as an alternative to capitalism combined with what has been tried in various social revolutions. Anarchists have always been reticent about spelling out their vision of the future in too much detail for it would be contrary to anarchist principles to be dogmatic about the precise forms the new society must take. Free people will create their own alternative institutions in response to conditions specific to their area as well as their needs, desires and hopes and it would be presumptuous of us to attempt to set forth universal policies in advance. As Kropotkin argued, once expropriation of social wealth by the masses has been achieved “then, after a period of groping, there will necessarily arise a new system of organising production and exchange … and that system will be a lot more attuned to popular aspirations and the requirements of co-existence and mutual relations than any theory, however splendid, devised by the thinking and imagination of reformers”. This, however, did not stop him “predicting right now that” in some areas influenced by anarchists “the foundations of the new organisation will be the free federation of producers’ groups and the free federation of Communes and groups in independent Communes.” [No Gods, No Masters, vol. 1, p. 232]

This is because what we think now will influence the future just as real experience will influence and change how we think. Given the libertarian critique of the state and capitalism, certain kinds of social organisation are implied. Thus, our recognition that wage-labour creates authoritarian social relationships and exploitation suggests a workplace in a free society can only be based on associated and co-operative labour (i.e., self-management). Similarly, given that the state is a centralised body which delegates power upwards it is not hard to imagine that a free society would have communal institutions which were federal and organised from the bottom-up.

Of course, our discussion is affected by the fact that “actually existing” capitalism has various forms of state-intervention. Some of these “socialise” costs and risks, such as publicly funded creation of an infrastructure and Research and Development (R&D). Given that much R&D is conducted via state funding (via universities, military procurements, and so on) and (of course!) the profits of such research are then privatised, question arises would the initial research have gone ahead if the costs had not been “socialised”? Would Mises’ “exact” calculation have resulted in, say, the internet being developed? If, as seems likely, not, does not mean our current use of the World Wide Web is an inefficient use of resources? Then there are the numerous state interventions which exist to ensure that certain activities become “efficient” (i.e., profitable) such as specifying and defending intellectual property rights, the limited liability of corporations and enforcing capitalist property rights (in land, for example). While we take this activity for granted when evaluating capitalism, they are serious imperfections in the market and so what counts as an “efficient” use of resources. Other state interventions aim to reduce uncertainty and stabilise the market, such as welfare maintaining aggregate demand.

Removing these “imperfections” in the market would substantially affect the persuasiveness of Mises’ case. “What data we do have,” notes Doug Henwood, “don’t lend any support to the notion that the nineteenth century was more ‘stable’ than the twentieth … the price level bounced all over the place, with periods of inflation alternating with periods of deflation, and GDP growth in the last three decades … was similarly volatile. The busts were savage, resulting in massive bank failures and very lean times for workers and farmers.” [After the New Economy, p. 242] Looking at business cycle data for America, what becomes clear is that some of those regular nineteenth century slumps were extremely long: the Panic of 1873, for example, was followed by a recession that lasted 5 1/2 years. The New York Stock Exchange closed for ten days and 89 of the country’s 364 railroads went bankrupt. A total of 18,000 busi-
nesses failed between 1873 and 1875. Unemployment reached 14% by 1876, during a time which became known as the Long Depression. Construction work lagged, wages were cut, real estate values fell and corporate profits vanished.

Given this, given the tendency of capitalism to crisis and to ignore real needs in favour of effective demand, it is far better to be roughly right than precisely wrong. In other words, the economic calculation that Mises celebrates regularly leads to situations where people suffer because it precisely shows that workplaces should shut because, although nothing had changed in their productivity and the need of their products, they can no longer make a profit. Saying, in the middle of a crisis, that people should be without work, be homeless and go hungry because economic calculation proves they have no need for employment, homes and food shows the irrationality of glorifying “economic calculation” as the be all and end all of resource allocation.

In summary, then, not only is libertarian communism possible, capitalism itself makes economic calculation problematic and resource allocation inefficient. Given the systematic uncertainty which market dynamics imply and the tendencies to crisis inherent in the system, “economic calculation” ensures that resources are wasted. Using the profit criteria as the measure of “efficiency” is also problematic as it ensures that real needs are ignored and places society in frequent situations (crises) where “economic calculation” ensures that industries close, so ensuring that goods and services people need are no longer produced. As Proudhon put it, under capitalism there is “a miserable oscillation between usury and bankruptcy.” [Proudhon’s Solution of the Social Problem, p. 63] For anarchists, these drawbacks to capitalist allocation are obvious. Equally obvious is the reason why Mises failed to discuss them: ultimately, like neo-classical economics, the “Austrian” school seeks to eulogise capitalism rather than to understand it.

I.2 Is this a blueprint for an anarchist society?

No, far from it. There can be no such thing as a “blueprint” for a free society. “Anarchism”, as Rocker correctly stressed, “is no patent solution for all human problems, no Utopia of a perfect social order, as it has so often been called, since on principle it rejects all absolute schemes and concepts. It does not believe in any absolute truth, or in definite final goals for human development, but in an unlimited perfectibility of social arrangements and human living conditions, which are always straining after higher forms of expression, and to which for this reason one can assign no definite terminus nor set any fixed goal.” [Anarcho-Syndicalism, p. 15]

All we can do here is indicate those general features that we believe a free society must have in order to qualify as truly libertarian. For example, a society based on hierarchical management in the workplace (like capitalism) would not be libertarian and would soon see private or public states developing to protect the power of those at the top hierarchical positions. Beyond such general considerations, however, the specifics of how to structure a non-hierarchical society must remain open for discussion and experimentation:

“Anarchism, meaning Liberty, is compatible with the most diverse economic [and social] conditions, on the premise that these cannot imply, as under capitalist monopoly, the negation of liberty.” [D. A. de Santillan, After the Revolution, p. 95]
sociation? For what does man require more time than is necessary to refresh his wearied powers of labour? Here Communism is silent.” He then answers his own question by arguing it is gained for the individual “[t]o take comfort in himself as unique, after he has done his part as man!” [Max Stirner, The Ego and Its Own, p. 268 and p. 269] Which is exactly what libertarian communists argue:

"[We] recognise that man [sic!] has other needs besides food, and as the strength of Anarchy lies precisely in that it understands all human faculties and all passions, and ignores none, we shall … contrive to satisfy all his intellectual and artistic needs … the man [or woman] who will have done the four or five hours of … work that are necessary for his existence, will have before him five or six hours which his will seek to employ according to tastes …

“He will discharge his task in the field, the factory, and so on, which he owes to society as his contribution to the general production. And he will employ the second half of his day, his week, or his year, to satisfy his artistic or scientific needs, or his hobbies.” [Kropotkin, Conquest of Bread, pp. 110–1]

Thus, while authoritarian Communism ignores the unique individual (and that was the only kind of Communism existing when Stirner wrote his classic book) libertarian communists agree with Stirner and are not silent. Like him, they consider the whole point of organising labour is to provide the means of providing the individual with the time and resources required to express their individuality. In other words, to pursue “labours of a unique person.” Thus all anarchists base their arguments for a free society on how it will benefit actual individuals, rather than abstracts or amorphous collectives (such as “society”). Hence chapter 9 of The Conquest

cation, mutual protection, defence of the territory, and so on; and, on the other side, for the satisfaction of an ever-increasing number of scientific, artistic, literary and sociable needs.

“Moreover, such a society would represent nothing immutable. On the contrary — as is seen in organic life at large — harmony would (it is contended) result from an ever-changing adjustment and readjustment of equilibrium between the multitudes of forces and influences, and this adjustment would be the easier to obtain as none of the forces would enjoy a special protection from the State.” [Anarchism, p. 284]

If this type of system sounds “utopian” it should be kept in mind that it was actually implemented and worked quite well in the collectivist economy organised during the Spanish Revolution of 1936, despite the enormous obstacles presented by an ongoing civil war as well as the relentless (and eventually successful) efforts of Republicans, Stalinists and Fascists to crush it (see section I.8 for an introduction).

As well as this (and other) examples of “anarchy in action” there have been other libertarian socialist economic systems described in writing. All share the common features of workers’ self-management, co-operation and so on we discuss here and in section I.4. These texts include Syndicalism by Tom Brown, The Program of Anarcho-Syndicalism by G.P. Maximoff, Guild Socialism Restated and Self-Government in Industry by G.D.H. Cole, After the Revolution by Diego Abad de Santillan, Anarchist Economics and Principles of Libertarian Economy by Abraham Guillen, Workers Councils and the Economics of a Self-Managed Society by Cornelius Castoriadis among others. A short summary of Spanish Anarchist visions of the free society can be found in chapter 3 of Robert Alexander’s The Anarchists in the Spanish Civil War (vol. 1). Some anarchists support what
is called “Participatory Economics” (Parecon, for short) and The Political Economy of Participatory Economics and Looking Forward: Participatory Economics for the Twenty First Century by Michael Albert and Robin Hahnel are worth reading as they contain good introductions to that project.

Fictional accounts include William Morris’ News from Nowhere, the excellent The Dispossessed by Ursula Le Guin, Women on the Edge of Time by Marge Piercy and The Last Capitalist by Steve Cullen. Iain M. Banks Culture novels are about an anarcho-communist society, but as they are so technologically advanced they can only give an insight into the aims of libertarian socialism and the mentality of people living in freedom (The State of the Art and The Player of Games contrast the Culture with hierarchical societies, the Earth in 1977 in the case of the former).

I.3.1 What is a “syndicate”??

As we will use the term, a “syndicate” (also called a “producer co-operative”, or “co-operative”, for short, sometimes a “collective”, “producers’ commune”, “association of producers”, “guild factory” or “guild workplace”) is a democratically self-managed productive enterprise whose assets are controlled by its workers. It is a useful generic term to describe the situation aimed at by anarchists where “associations of men and women who … work on the land, in the factories, in the mines, and so on, [are] themselves the managers of production.” [Kropotkin, Evolution and Environment, p. 78]

This means that where labour is collective, “the ownership of production should also be collective.” “Each workshop, each factory,” correctly suggested James Guillaume, “will organise itself into an association of workers who will be free to administer production and organise their work as they think best, provided that the rights of each worker are safeguarded and the principles of equality and justice are of free communities there will be afforded every opportunity.” [Anarcho-Syndicalism, p. 9]

So given the common ideals and aims of anarchists, it is unsurprising that the economic systems we suggest has common features such as workers’ self-management, federation, free agreement and so on (as discussed in last section). For all anarchists, “[t]he task for a modern industrial society is to achieve what is now technically realisable, namely, a society which is really based on free voluntary participation of people who produce and create, live their lives freely within institutions they control, and with limited hierarchical structures, possibly none at all.” [Noam Chomsky, quoted by Albert and Hahnel, Looking Forward, p. 62]

This achieved by means of “voluntary association that will organise labour, and be the manufacturer and distributor of necessary commodities” and this “is to make what is useful. The individual is to make what is beautiful.” [Oscar Wilde, The Soul of Man Under Socialism, p. 1183] For example, the machine “will supersede hand-work in the manufacture of plain goods. But at the same time, hand-work very probably will extend its domain in the artistic finishing of many things which are made entirely in the factory.” [Peter Kropotkin, Fields, Factories and Workplaces Tomorrow, p. 152] Murray Bookchin, decades later, argued for the same idea: “the machine will remove the toil from the productive process, leaving its artistic completion to man.” [Post-Scarcity Anarchism, p. 134]

The aim would be to maximise the time available for individuals to express and development their individuality, including in production. As Stirner put it, the “organisation of labour touches only such labours as others can do for us… the rest remain egoistic, because no one can in your stead elaborate your musical compositions, carry out your projects of painting, etc.; nobody can replace Raphael’s labours. The latter are labours of a unique person, which only he is competent to achieve.” Criticising the authoritarian socialists of his time, Stirner went on to ask “for whom is time to be gained [by as-
I.4 How could an anarchist economy function?

This is an important question facing all opponents of a given system — what will you replace it with? We can say, of course, that it is pointless to make blueprints of how a future anarchist society will work as the future will be created by everyone, not just the few anarchists and libertarian socialists who write books and FAQs. This is very true, we cannot predict what a free society will actually be like or develop and we have no intention to do so here. However, this reply (whatever its other merits) ignores a key point, people need to have some idea of what anarchism aims for before they decide to spend their lives trying to create it.

So, how would an anarchist system function? That depends on the economic ideas people have. A mutualist economy will function differently than a communist one, for example, but they will have similar features. As Rudolf Rocker put it:

“Common to all Anarchists is the desire to free society of all political and social coercive institutions which stand in the way of development of a free humanity. In this sense Mutualism, Collectivism and Communism are not to be regarded as closed systems permitting no further development, but merely as economic assumptions as to the means of safeguarding a free community. There will even probably be in society of the future different forms of economic co-operation operating side by side, since any social progress must be associated with that free experiment and practical testing out for which in a society observed.” This applies to the land as well, for anarchism aims to answer “the question of how best to work the land and what form of possession is best.” It does not matter whether peasants “keep their plots of land and continue to cultivate it with the help of their families” or whether they “take collective possession of the vast tracts of land and work them in common” as “the main purpose of the Revolution” has been achieved, namely that “the land is now the property of those who cultivate it, and the peasants no longer work for the profit of an idle exploiter who lives by their sweat.” Any “former hired hands” will become “partners and share … the products which their common labour extracts from the land” as “the Revolution will have abolished agricultural wage slavery and peonage and the agricultural proletariat will consist only of free workers living in peace and plenty.” As with industrial workplaces, the “internal organisation … need not necessarily be identical; organisational forms and procedures will vary greatly according to the preferences of the associated workers.” The “administration of the community” could be “entrusted either to an individual or to a commission of many members,” for example, but would always be “elected by all the members.” [“On Building the New Social Order”, pp. 356–79, Bakunin on Anarchism, p. 363, p. 359, p. 360 and p. 361]

It must be noted that this libertarian goal of abolishing the hierarchical capitalist workplace and ending wage labour by associating and democratising industry is as old as anarchism itself. Thus we find Proudhon arguing in 1840 that the aim was a society of “possessors without masters” (rather than wage-labourers and tenants “controlled by proprietors”) with “leaders, instructors, superintendents” and so forth being “chosen from the labourers by the labourers themselves.” [What is Property?, p. 167 and p. 137]

“Mutuality, reciprocity exists,” Proudhon argued, “when all the workers in an industry, instead of working for an entrepreneur who pays them and keeps their products, work for one another and thus collaborate in the making of a common product whose profits they share amongst themselves. Extend the principle of reciprocity as uniting the
work of every group, to the Workers’ Societies as units, and you have
created a form of civilisation which from all points of view — polit-
ical, economic and aesthetic — is radically different from all earlier
civilisations.” In summary: “All associated and all free”. [quoted by
Martin Buber, Paths in Utopia, pp. 29–30 and p. 30]

Nor was this idea invented by Proudhon and other anarchists.
Rather, it was first raised by workers themselves and subsequently
taken up by the likes of Proudhon and Bakunin. So working class
people came up with this fundamental libertarian socialist idea by
themselves. The idea that wage labour would be replaced by asso-
ciated labour was raised in many different countries in the 19th
century. In France, it was during the wave of strikes and protests
unleashed by the 1830 revolution. That year saw Parisian printers,
for example, producing a newspaper (L’Artisan: Journal de la
classes ouvriere) which suggested that the only way to stop be-
ing exploited by a master was for workers to form co-operatives.
During the strikes of 1833, this was echoed by other skilled work-
ers and so co-operatives were seen by many workers as a method
e of emancipation from wage labour. Proudhon even picked up the
term Mutualisme from the workers in Lyon in the early 1840s and
their ideas of co-operative credit, exchange and production influ-
enced him as surely as he influenced them. In America, as Chom-
sky notes, “[i]f we go back to the labour activism from the early days
of the industrial revolution, to the working class press in 1850s, and
so on, it’s got a real anarchist strain to it. They never heard of Euro-
pean anarchism ... It was spontaneous. They took for granted wage
labour is little different from slavery, that workers should own the
mills” [Anarchism Interview] As we noted in section F.8.6, this
was a commonplace response for working class people facing the
rise of capitalism.

In many ways a syndicate is similar to a co-operative under capi-
talism. Indeed, Proudhon pointed to such experiments as examples
of what he desired, with “co-operative associations” being a key part
of his “general liquidation” of capitalist society. [General Idea of

anarchists see production as being geared to whatever makes most
social, economic and ecological sense. Some production and work-
places will be geared to the local commune, some will be geared to
the district federation, some to the regional federation, and so on.
It is for this reason anarchists support the federation of workers’
associations as the means of combining local autonomy with the
needs for co-ordination and joint activity. To claim otherwise is
simply to misrepresent anarchist theory.

Finally, it must be psychologically significant that Leninists
continually go on about anarchists advocating “small” and “tiny”
workplaces. Apparently size does matter and Leninists think
their productive units are much, much bigger than anarchist ones.
As has been proven, anarchists advocate appropriately sized
workplaces and are not hung-up about their size. Why Leninists
are could be a fruitful area of research...
Anarchism rejects the idea of small-scale production and isolated communes and, as we discussed in section H.2.3, it does not look backwards for its ideal. The same applies to other forms of libertarian socialism with, for example, G.D.H. Cole arguing that we “cannot go back to ‘town economy’, a general regime of handicraft and master-craftsmanship, tiny-scale production. We can neither pull up our railways, fill our mines, and dismantle our factories nor conduct our large-scale enterprises under a system developed to fit the needs of a local market and a narrowly-restricted production.” The aim is “to reintroduce into industry the communal spirit, by refashioning industrialism in such a way as to set the communal motives free to co-operate.” [Guild Socialism Reststed, pp. 45–6 and p. 46]

The obvious implication of Leninist comments against anarchist ideas on industrial transformation after a revolution is that they think that a socialist society will basically be the same as capitalism, using the technology, industry and industrial structure developed under class society without change (as noted in section H.3.12, Lenin did suggest that was the case). Needless to say, capitalist industry, as Kropotkin was aware, has not developed neutrally nor purely because of technical needs. Rather it has been distorted by the twin requirements to maintain capitalist profits and power. One of the first tasks of a social revolution will be to transform the industrial structure, not keep it as it is. You cannot use capitalist means for socialist ends. So while we will “inherent” an industrial structure from capitalism it would be the greatest possible error to leave it unchanged and an even worse one to accelerate the processes by which capitalists maintain and increase their power (i.e. centralisation and concentration) in the name of “socialism.”

We are sorry to have laboured this point, but this issue is one which arises with depressing frequency in Marxist accounts of anarchism. It is best that we indicate that those who make the claim that anarchists seek “small scale” production geared for “small au-

the Revolution, p. 203] Bakunin, likewise, argued that anarchists are “convincing that the co-operative will be the preponderant form of social organisation in the future, in every branch of labour and science.” [Basic Bakunin, p. 153] Therefore, even from the limited examples of co-operatives functioning in the capitalist market, the essential features of a libertarian socialist economy can be seen. The basic economic element, the workplace, will be a free association of individuals who will organise their joint work as equals. To quote Bakunin again, “only associated labour, that is, labour organised upon the principles of reciprocity and co-operation, is adequate to the task of maintaining … civilised society.” [The Political Philosophy of Bakunin, p. 341]

Co-operation in this context means that the policy decisions related to their association will be based on the principle of “one member, one vote,” with administrative staff elected and held accountable to the workplace as a whole. In the words of economist David Ellerman: “Every enterprise should be legally reconstructed as a partnership of all who work in the enterprise. Every enterprise should be a democratic worker-owned firm.” [The Democratic Worker-Owned Firm, p. 43] Anarchists, unsurprisingly, reject the Leninist idea that state property means the end of capitalism as simplistic and confused. Ownership is a juridical relationship. The real issue is one of management. Do the users of a resource manage it? If so, then we have a real (i.e. libertarian) socialist society. If not, we have some form of class society (for example, in the Soviet Union the state replaced the capitalist class but workers still had no official control over their labour or the product of that labour).

Workplace self-management does not mean, as some apologists of capitalism suggest, that knowledge and skill will be ignored and all decisions made by everyone. This is an obvious fallacy, since engineers, for example, have a greater understanding of their work than non-engineers and under workers’ self-management will control it directly:
“we must understand clearly wherein this Guild democracy consists, and especially how it bears on relations between different classes of workers included in a single Guild. For since a Guild includes all the workers by hand and brain engaged in a common service, it is clear that there will be among its members very wide divergences of function, of technical skill, and of administrative authority. Neither the Guild as a whole nor the Guild factory can determine all issues by the expedient of the mass vote, nor can Guild democracy mean that, on all questions, each member is to count as one and none more than one. A mass vote on a matter of technique understood only by a few experts would be a manifest absurdity, and, even if the element of technique is left out of account, a factory administered by constant mass votes would be neither efficient nor at all a pleasant place to work in. There will be in the Guilds technicians occupying special positions by virtue of their knowledge, and there will be administrators possessing special authority by virtue both of skill and ability and of personal qualifications.” [G.D.H. Cole, Guild Socialism Restated, pp. 50–51]

The fact that some decision-making has been delegated in this manner sometimes leads people to ask whether a syndicate would not just be another form of hierarchy. The answer is that it would not be hierarchical because the workers’ assemblies and their councils, open to all workers, would decide what types of decision-making to delegate, thus ensuring that ultimate power rests at the base. Moreover, power would not be delegated. Malatesta clearly indicates the difference between administrative decisions and policy decisions:

“Of course in every large collective undertaking, a division of labour, technical management, administration, interests of the few — by no means those of the nation.” Kropotkin made a clear division between economic tendencies which existed to aid the capitalist to dominate the market and enhance their profits and power and those which indicated a different kind of future. Once we consider the “moral and physical advantages which man would derive from dividing his work between field and the workshop” we must automatically evaluate the structure of modern industry with the criteria of what is best for the worker (and society and the environment) rather than what was best for capitalist profits and power. [Op. Cit., p. 153, p. 147 and p. 153]

Clearly, Leninist summaries of Kropotkin’s ideas on this subject are nonsense. Rather than seeing “small-scale” production as the basis of his vision of a free society, he saw production as being geared around the economic unit of a nation or region: “Each region will become its own producer and its own consumer of manufactured goods … and its own producer and consumer of agricultural produce.” Industry would come to the village “not in its present shape of a capitalist factory” but “in the shape of a socially organised industrial production, with the full aid of machinery and technical knowledge.” [Op. Cit., p. 40 and p. 151]

Industry would be decentralised and integrated with agriculture and based around communes, but these communes would be part of a federation and so production would be based around meeting the needs of these federations. A system of rational decentralisation would be the basis of Kropotkin’s communist-anarchism, with productive activity and a free society’s workplaces geared to the appropriate level. For those forms of industry which would be best organised on a large-scale would continue to be so organised, but for those whose current (i.e., capitalist) structure had no objective need to be centralised would be broken up to allow the transformation of work for the benefit of both workers and society. Thus we would see a system of workplaces geared to local and district needs complementing larger factories which would meet regional and wider needs.
with manufacture — the work in the field with a decentralised industry.” Moreover, he recognised that the "geographical distribution of industries in a given country depends ... to a great extent upon a complexus of natural conditions; it is obvious that there are spots which are best suited for the development of certain industries ... The[se] industries always find some advantages in being grouped, to some extent, according to the natural features of separate regions.” [Op. Cit., p. 26, p. 27 and pp. 154–5]

Kropotkin stressed that agriculture "cannot develop without the aid of machinery and the use of a perfect machinery cannot be generalised without industrial surroundings ... The village smith would not do.” He supported the integration of agriculture and industry, with "the factory and workshop at the gates of your fields and gardens” in which a “variety of agricultural, industrial and intellectual pursuits are combined in each community” to ensure “the greatest sum total of well-being.” He thought that “large establishments” would still exist, but these would be “better placed at certain spots indicated by Nature.” He stressed that it “would be a great mistake to imagine industry ought to return to its hand-work stage in order to be combined with agriculture. Whenever a saving of human labour can be obtained by means of a machine, the machine is welcome and will be resorted to; and there is hardly one single branch of industry into which machinery work could not be introduced with great advantage, at least at some of the stages of the manufacture.” [Op. Cit., p. 156, p. 197, p. 18, pp. 154–5 and pp. 151–2]

Clearly Kropotkin was not opposed to large-scale industry for “if we analyse the modern industries, we soon discover that for some of them the co-operation of hundred, even thousands, of workers gathered at the same spot is really necessary. The great iron works and mining enterprises decidedly belong to that category; oceanic steamers cannot be built in village factories.” However, he stressed that this objective necessity was not the case in many other industries and centralised production existed in these purely to allow capitalists “to hold command of the market” and "to suit the temporary etc. is necessary. But authoritarians clumsily play on words to produce a raison d’être for government out of the very real need for the organisation of work. Government, it is well to repeat, is the concourse of individuals who have had, or seized, the right and the means to make laws and to oblige people to obey; the administrator, the engineer, etc., instead are people who are appointed or assume the responsibility to carry out a particular job and so on. Government means the delegation of power, that is the abdication of initiative and sovereignty of all into the hands of a few; administration means the delegation of work, that is tasks given and received, free exchange of services based on free agreement ... Let one not confuse the function of government with that of an administration, for they are essentially different, and if today the two are often confused, it is only because of economic and political privilege.” [Anarchy, pp. 41–2]

Given that power remains in the hands of the workplace assembly, it is clear that the organisation required for every collective endeavour cannot be equated with government. Also, never forget that administrative staff are elected by and accountable to the rest of an association. If, for example, it turned out that a certain type of delegated decision-making activity was being abused, it could be revoked by the whole workforce. Because of this grassroots control, there is every reason to think that crucial types of decision-making activity which could become a source of power (and so with the potential for seriously affecting all workers’ lives) would not be delegated but would remain with the workers’ assemblies. For example, powers that are now exercised in an authoritarian manner by managers under capitalism, such as those of hiring and firing, introducing new production methods or technologies, changing product lines, relocating production facilities, determining the nature, pace and rhythm of productive activity and so on
would remain in the hands of the associated producers and not be
delegated to anyone.
New syndicates will be created upon the initiative of individu-
als within communities. These may be the initiative of workers in
an existing syndicate who desire to expand production, or mem-
ers of the local community who see that the current syndicates
are not providing adequately in a specific area of life. Either way,
the syndicate will be a voluntary association for producing useful
goods or services and would spring up and disappear as required.
Therefore, an anarchist society would see syndicates developing
spontaneously as individuals freely associate to meet their needs,
with both local and confederal initiatives taking place.

While having a common basis in co-operative workplaces, dif-
ferent forms of anarchism see them work in different ways. Under
mutualism, workers organise themselves into syndicates and share
in its gains and losses. This means that in “the labour-managed firm
there is no profit, only income to be divided among members. Without
employees the labour-managed firm does not have a wage bill, and
labour costs are not counted among the expenses to the subtracted
from profit, as they are in the capitalist firm.” The “labour-managed
firm does not hire labour. It is a collective of workers that hires cap-
ital and necessary materials.” [Christopher Eaton Gunn, Work-
ers’ Self-Management in the United States, pp. 41–2] In this
way, Proudhon and his followers argued, exploitation would end
and workers would receive the full-product of their labour. This,
it should be noted, does not mean that workers consume all the
proceeds of sales in personal consumption (i.e., no investment). It
means that labour controls what to do with the sales income, i.e.,
how much to invest and how much to allocate to consumption:

“If Labour appropriated the whole product, that would
include appropriating the liabilities for the property used
up in the production process in addition to appropriating
the produced outputs. Present Labour would have to pay

Nor can such a vision be attributed to Kropotkin. While, of
course, supporting decentralisation of power and decision making
as did Proudhon and Bakunin, he did not reject the necessity of
federations to co-ordinate activity. As he put it, the “commune of
tomorrow will know that it cannot admit any higher authority; above
it there can only be the interests of the Federation, freely accepted by
itself as well as the other communes”/ For anarchists the commune
“no longer means a territorial agglomeration; it is rather a generic
name, a synonym for the grouping of equals which knows neither
frontiers nor walls … Each group in the Commune will necessarily
be drawn towards similar groups in other communes; they will come
together and the links that federate them will be as solid as those that
attach them to their fellow citizens.” [Words of a Rebel, p. 83 and
p. 88] Nor did he reject industry or machinery, stating he “under-
stood the poetry of machinery” and that while in “our present fac-
tories, machinery work is killing for the worker” this was “a matter
of bad organisation, and has nothing to do with the machine itself.”
[Memiors of a Revolutionist, p. 111]

Kropotkin’s vision was one of federations of decentralised com-
munities in which production would be based on the “scattering
of industries over the country — so as to bring the factory amidst the
fields ... agriculture ... combined with industry ... to produce a com-
binination of industrial with agricultural work.” He considered this as
“surely the next step to be made, as soon as a reorganisation of our
present conditions is possible” and “is imposed by the very necessity
of producing for the producers themselves.” [Fields, Factories
and Workshops Tomorrow, pp. 157–8] He based this vision on
a detailed analysis of current economic statistics and trends.

Kropotkin did not see such an anarchist economy as being based
around the small community, taking the basic unit of a free society
as one “large enough to dispose of a certain variety of natural re-
sources — it may be a nation, or rather a region — produces and itself
consumes most of its own agricultural and manufactured produce.”
Such a region would “find the best means of combining agriculture
manise such production, to socialise it so that the worker would not be the mere appendage to a machine. Such a humanisation of large industries would result, according to Proudhon, from the introduction of strong workers’ associations. These associations would enable the workers to determine jointly by election how the enterprise was to be directed and operated on a day-to-day basis.” [Op. Cit., p. 156]

Moreover, Proudhon did not see an anarchist society as one of isolated communities or workplaces. Like other anarchists, as we discussed in section I.3.4, Proudhon saw a free society’s productive activity centred around federations of syndicates.

This vision of a federation of workplaces can also be found in Bakunin’s writings: “The future organisation of society must proceed from the bottom up only, through free association or federations of the workers, into their associations to begin with, then into communes, regions, nations and, finally, into a great international and universal federation.” [No Gods, No Masters, vol. 1, p. 176]

Like Proudhon, Bakunin also explicitly rejected the idea of seeking small-scale production, arguing that “if [the workers] tried to divide among themselves the capital that exists, they would ... reduce to a large decree its productive power.” Therefore the need was for “the collective property of capital” to ensure “the emancipation of labour and of the workers.” [The Basic Bakunin, p. 91] Bakunin, again like Proudhon, considered that “[i]ntelligent free labour will necessarily be associated labour” as under capitalism the worker “works for others” and her labour is “bereft of liberty, leisure and intelligence.” Under anarchism, “the free productive associations” would become “their own masters and the owners of the necessary capital” and “amalgamate among themselves” and “sooner or later” will “expand beyond national frontiers” and “form one vast economic federation.” [Michael Bakunin: Selected Writings, pp. 81–3]

So under mutualism, surpluses (profits) would be either equally divided between all members of the co-operative or divided unequally on the basis of the type of work done, with the percentages allotted to each type being decided by democratic vote, on the principle of one worker, one vote. Worker co-operatives of this type do have the virtue of preventing the exploitation and oppression of labour by capital, since workers are not hired for wages but, in effect, become partners in the firm. This means that the workers control both the product of their labour (so that the value-added that they produce is not appropriated by a privileged elite) and the work process itself (and so they no longer sell their liberty to others). However, such a limited form of co-operation is rejected by most anarchists. Non-mutualist anarchists argue that this, at best, is but a step in the right direction and the ultimate aim is distribution according to need.

Production for use rather than profit/money is the key concept that distinguishes collectivist and communist forms of anarchism from the competitive mutualism advocated by Proudhon. This is for two reasons. First, because of the harmful effects of markets we indicated in section I.1.3 could make co-operatives become, in effect, “collective capitalists” and compete against each other in the market as ferociously as actual capitalists. As Kropotkin put it, while co-operation had “at its origin ... an essentially mutual aid character”, it “is often described as ‘joint-stock individualism’” and “such as it is now, it undoubtedly tends to breed a co-operative egoism, not only towards the community at large, but also among the co-operators themselves.” [Mutual Aid, p. 214] While he was discussing co-operatives under capitalism, his worries are equally applicable to a mutualist system of competing syndicates. This would also lead to a situation where market forces ensured that the workers involved made irrational decisions (from both a social and indi-
individual point of view) in order to survive in the market. For mutualists, this “irrationality of rationality” is the price to be paid to ensure workers receive the full product of their labour and, moreover, any attempt to overcome this problem holds numerous dangers to freedom. Other social anarchists disagree. They think co-operation between workplaces can increase, not reduce, freedom. Second, as discussed in section I.1.4, distribution according to work does not take into account the different needs of the workers (nor non-workers like the ill, the young and the old). As such, mutualism does not produce what most anarchists would consider a decent society, one where people co-operate to make a decent life for all.

What about entry into a syndicate? In the words of Cole, guilds (syndicates) are “open associations which any man [or woman] may join” but “this does not mean, of course, that any person will be able to claim admission, as an absolute right, into the guild of his choice.” This means that there may be training requirements (for example) and obviously “a man [or woman] clearly cannot get into a Guild unless it needs fresh recruits for its work. [The worker] will have free choice, but only of the available openings.” [Op. Cit., p. 75] As David Ellerman notes, it is important to remember that “the labour market would not exist” in a self-managed economy as labour would “always be the residual claimant.” This means that capital would not be hiring labour as under capitalism, rather workers would be seeking out associations to join. “There would be a job market in the sense of people looking for firms they could join,” Ellerman continues, “but it would not be a labour market in the sense of the selling of labour in the employment contract.” [Op. Cit., p. 91]

All schools of social anarchism, therefore, are based on the use rights resting in the specific syndicate while ownership would be socialised rather than limited to the syndicate’s workers. This would ensure free access to the means of production as new members of a syndicate would have the same rights and power as existing members. If this were not the case, then the new members would be the wage slaves of existing ones and it is precisely to

So what do anarchists make of the assertion that we aim for “small autonomous communities, devoted to small scale production”? Simply put, we think it is nonsense (as would be quickly obvious from reading anarchist theory). Indeed, it is hard to know where this particular anarchist “vision” comes from. As Luigi Fabbrri noted, in his reply to an identical assertion by the leading Bolshevik Nikolai Bukharin, “[i]t would be interesting to learn in what anarchist book, pamphlet or programme such an ‘ideal’ is set out, or even such a hard and fast rule!” [“Anarchy and ‘Scientific’ Communism”, pp. 13–49, The Poverty of Statism, Albert Meltzer (ed.), p. 21]

If we look at, say, Proudhon, we soon see no such argument for “small scale” production. For Proudhon, “[l]arge industry ... come to us by big monopoly and big property: it is necessary in the future to make them rise from the [workers] association.” [quoted by K. Steven Vincent, Proudhon and the Rise of French Republican Socialism, p. 156] In fact, The Frenchman explicitly rejected the position Stack inflicts on him by arguing that it “would be to retrograde” and “impossible” to wish “the division of labour, with machinery and manufactures, to be abandoned, and each family to return to the system of primitive indivision, — that is, to each one by himself, each one for himself, in the most literal meaning of the words.” [System of Economic Contradictions, p. 206] As historian K. Steven Vincent correctly summarises:

“On this issue, it is necessary to emphasise that, contrary to the general image given in the secondary literature, Proudhon was not hostile to large industry. Clearly, he objected to many aspects of what these large enterprises had introduced into society. For example, Proudhon strenuously opposed the degrading character of ... work which required an individual to repeat one minor function continuously. But he was not opposed in principle to large-scale production. What he desired was to hu-
propriating them in fact in order to put ... all the means of production at the disposal of those who do the work.” [Malatesta, Op. Cit., p. 103] Such freedom to work independently or associate as desired does not imply any support for private property (as discussed in section I.6.2). Thus any individual in a libertarian socialist economy “always has the liberty to isolate himself and work alone, without being considered a bad citizen or a suspect.” [Proudhon, quoted by K. Steven Vincent, Pierre-Joseph Proudhon and the Rise of French Republican Socialism, p. 145]

In summary, in a free society people need not join syndicates nor does a co-operative need to confederate with others. Given we have discussed the issue of freedom of economic arrangements at length in section G.2.1 we will leave this discussion here.

I.3.8 Do anarchists seek “small autonomous communities, devoted to small scale production”?

No. The idea that anarchism aims for small, self-sufficient, communes is a Leninist slander. They misrepresent anarchist ideas on this matter, suggesting that anarchists seriously want society based on “small autonomous communities, devoted to small scale production.” In particular, they point to Kropotkin, arguing that he “looked backwards for change” and “witnessed such communities among Siberian peasants and watchmakers in the Swiss mountains.” [Pat Stack, “Anarchy in the UK?”, Socialist Review, no. 246] Another Leninist, Donny Gluckstein, makes a similar assertion about Proudhon wanting a federation of “tiny economic units”. [The Paris Commune, p. 75]

While it may be better to cover this issue in section H.2, we discuss it here simply because it relates directly to what an anarchist society could look like and so it allows us to that more fully.

avoid this that anarchists argue for socialisation (see section I.3.3). With socialisation, free access is guaranteed and so all workers are in the same position so ensuring self-management and no return to workplace hierarchy.

Obviously, as in any society, an individual may not be able to pursue the work they are most interested in (although given the nature of an anarchist society they would have the free time to pursue it as a hobby). However, we can imagine that an anarchist society would take an interest in ensuring a fair distribution of work and so would try to arrange work sharing if a given work placement is popular (see section I.4.13 on the question of who will do unpleasant work, and for more on work allocation generally, in an anarchist society).

Of course there may be the danger of a syndicate or guild trying to restrict entry from an ulterior motive, as such the exploitation of monopoly power vis-à-vis other groups in society. However, in an anarchist society individuals would be free to form their own syndicates and this would ensure that such activity is self-defeating. In addition, in a non-individualist anarchist system, syndicates would be part of a confederation (see section I.3.4). It is a responsibility of the inter-syndicate congresses to assure that membership and employment in the syndicates is not restricted in any anti-social way. If an individual or group of individuals felt that they had been unfairly excluded from a syndicate then an investigation into the case would be organised at the congress. In this way any attempts to restrict entry would be reduced (assuming they occurred to begin with). And, of course, individuals are free to form new syndicates or leave the confederation if they so desire.

With the question of entry into syndicates comes the question of whether there would be enough places for those seeking to work (what could be termed “unemployment”). Ultimately, there are always an objective number of places available in a workplace: there is little point having people join a syndicate if there are no machines or materials for them to work on! Would a self-managed
Perhaps unsurprisingly, neo-classical economics says no and equally unsurprisingly this conclusion is based not on empirical evidence of real co-operatives but rather on an abstract model developed in 1958. The model is based on deducing the implications of assuming that a labour-managed (“Illyrian”) firm will seek to maximise net income per worker rather than, in a capitalist firm, maximising net profit. This results in various perverse results compared to a capitalist firm. This makes a co-operative-based economy extremely unstable and inefficient, as well as leading to co-operatives firing workers when prices rise as this maximises income per (remaining) worker. Thus a co-operative system ends in “producing less output and using less labour than its capitalist counterpart.” [Benjamin Ward, “The Firm in Illyria: Market Syndicalism”, pp. 566–589, The American Economic Review, Vol. 48, No. 4, p. 580]

Of course, it would be churlish to note that, unlike the theory, actual capitalism is marked by extensive unemployment (as noted in section C.1.5, this is not surprising as it is required to secure bosses’ power over their wage slaves). It would be equally churlish to note that, to quote one Yugoslav economist, this is “a theory whose predictions have absolutely nothing to do with the observed facts.” [Branko Horvat, “The Theory of the Worker-Managed Firm Revisited”, pp. 9–25, Journal of Comparative Economics, vol. 10, no. 1, p. 9] As David Ellerman summarises:

“It might be noted parenthetically that there is a whole academic literature on what is called the ‘Illyrian firm’... The main peculiarity of this model is that it assumes the firm would expel members when that would increase the net income of the surviving members. The resulting short-run perversities have endeared the model to capitalist economists. Yet the Illyrian model had been

and non-oppressive individuals and groups. Malatesta stressed this when he argued that in an anarchist revolution “what has to be destroyed at once ... is capitalistic property, that is, the fact that a few control the natural wealth and the instruments of production and can thus oblige others to work for them” but one must have a “right and the possibility to live in a different regime, collectivist, mutualist, individualist — as one wishes, always on the condition that there is no oppression or exploitation of others.” [Errico Malatesta: Life and Ideas, p. 102] In other words, different forms of social life will be experimented with, depending on what people desire.

Of course some people ask how anarchists can reconcile individual freedom with expropriation of capital. All we can say is that these critics subscribe to the idea that one should not interfere with the “individual freedom” of those in positions of authority to oppress others, and that this premise turns the concept of individual freedom on its head, making oppression a “right” and the denial of freedom a form of it!

However, it is a valid question to ask if anarchism would result in self-employed people being forced into syndicates as the result of a popular movement. The answer is no. This is because the destruction of title deeds would not harm the independent worker, whose real title is possession and the work done. What anarchists want to eliminate is not possession but capitalist property. Thus such workers “may prefer to work alone in his own small shop” rather than join an association or a federation. [James Guillaume, “On Building the New Social Order”, pp. 356–79, Bakunin on Anarchism, p. 362]

This means that independent producers will still exist within an anarchist society, and some workplaces — perhaps whole areas — will not be part of a confederation. This is natural in a free society, for different people have different ideas and ideals. Nor does such independent producers imply a contradiction with libertarian socialism, for “[w]hat we concerned with is the destruction of the titles of proprietors who exploit the labour of others and, above all, of e-
Moreover, given the experience of the neo-liberal period from the 1980s onwards (with rising inequality marked by falling growth, lower wage growth, rising unemployment and increased economic instability) the impact of increased competition and inequality harms the vast majority. It is doubtful that people aware of these tendencies (and that, as we argued in section F.3, “free exchange” in an unequal society tends to increase, not decrease, inequality) would create such a regime.

Unsurprisingly, examples of anarchism in action show that there is working together to reduce the dangers of isolation and competition. One thing to remember is that anarchy will not be created “overnight” and so potential problems will be worked out over time. Underlying all these kinds of objections is the assumption that co-operation will not be more beneficial to all involved than competition. However, in terms of quality of life, co-operation will soon be seen to be the better system, even by the most highly paid workers. There is far more to life than the size of one’s pay packet, and anarchism exists in order to ensure that life is far more than the weekly grind of boring work and the few hours of hectic consumption in which people attempt to fill the “spiritual hole” created by a way of life which places profits above people.

I.3.7 What about people who do not want to join a syndicate?

In this case, they are free to work alone, by their own labour. Anarchists have no desire to force people to join a syndicate. Emma Goldman spoke for all anarchists when she stated that “[w]e believe in every person living his own life in his own way and not in coercing others to follow any one’s dictation.” [A Documentary History of the American Years, vol. 2, p. 324]

Therefore, the decision to join a syndicate will be a free one, with the potential for living outside it guaranteed for non-exploitative

an academic toy in the grand tradition of much of modern economics. The predicted short-run behaviour has not been observed in Yugoslavia or elsewhere, and worker-managed firms such as the Mondragon co-operatives take membership as a short-run fixed factor ... Hence we will continue to treat the Illyrian model with its much-deserved neglect.” [Op. Cit., p. 150]

The experience of self-managed collectives during the Spanish Revolution also confirms this, with collectives sharing work equitably in order to avoid laying people off during the harsh economic conditions caused by the Civil War (for example, one collective “adopted a three-day workweek, dividing available work among all those who had worked at the plant — thereby avoiding unemployment — and continued to pay everyone his or her basic salary” [Martha A. Ackelsberg, Free Women of Spain, p. 101]).

We need, therefore, to “appeal to empirical reality and common sense” when evaluating the claim of neo-classical economics on the issue of co-operatives. The “empirical evidence supports” the argument that this model is flawed. There “has been no tendency for workers to lay off co-workers when times are good, neither in Mondragon nor in Yugoslavia. Even in bad times, layoffs are rare.” Unsurprisingly, “in the short run, a worker-managed firm responds in the same fashion as a capitalist firm” and workers are added to the collective to meet increases in demand. [David Schweickart, Against Capitalism, p. 91, p. 92 and p. 93] A conclusion shared by economist Geoffrey M. Hodgson:

“Much of the evidence we do have about the behaviour of real-world worker co-operatives is that they respond to changes in market prices in a similar manner to the capitalist firm ... Accordingly, the basic assumptions in the model are questioned by the evidence.” [Economics and Utopia, pp. 223–4]
So, as Branko Horvat observes, in spite of the neo-classical analysis producing specific predictions the “mere fact that nothing of the kind has ever been observed in real-world economies leaves them undisturbed.” At most they would say that a “self-managed firm may not behave as the theory predicts, but this is because it behaves irrationally. If something is wrong, it is not the theory but the reality.” Interestingly, though, if you assume that capitalist firms “maximise the rate of profit, profit per unit invested” rather than total profit then neo-classical theory “generates equally absurd results.” That is why the distinction between short and long runs was invented, so that in the short run the amount of capital is fixed. If this is applied to a co-operative, so that “in the short run, the work force is fixed” then the alleged problems with labour-managed workplaces disappear. Needless to say, a real co-operative acts on the assumption that the work force is fixed and as “the workers are no longer hired” this means that the worker-managers “do not fire their colleagues when business is slack; they reduce work time or work for inventories. When the demand temporarily increases, they work overtime or contract outside work.” [Op. Cit., pp. 11–13]

In summary, the neo-classical theory of the labour-managed firm has as much relation to a real co-operative as neo-classical economics generally does to capitalism. Significantly, “Austrian” economists generally accept the neo-classical theory of co-operatives (in part, undoubtedly, as it confirms their dislike of all forms of socialism). Even one as sympathetic to self-management as David L. Prychitko accepts it, simply criticising because it “reduces the firm to a short-run objective function” and “as long as market entry is allowed, the labour-managed market sheds any possible instability problem.” [Markets, Planning and Democracy, p. 81] While correct, this criticism totally misses the point. Yes, in the long run other co-operatives would be set up and this would increase supply of goods, increase employment and so forth, yet this should not blind us to the limitations of the assumptions which drives the neo-classical theory.
Secondly, having no means of unearned income (such as rent, interest and intellectual property rights), anarchism will reduce income differentials substantially.

Thirdly, management positions would be rotated, ensuring that everyone gets experience of the work, thus reducing the artificial scarcity created by the division of labour. Also, education would be extensive, ensuring that engineers, doctors, and other skilled workers would do the work because they enjoyed doing it and not for financial reward.

Fourthly, we should like to point out that people work for many reasons, not just for high wages. Feelings of solidarity, empathy, friendship with their fellow workers would also help reduce competition between syndicates.

Of course, the “competition” objection assumes that syndicates and members of syndicates will place financial considerations above all else. This is not the case, and few individuals are the economic robots assumed in capitalist dogma. Indeed, the evidence from co-operatives refutes such claims (ignoring, for the moment, the vast evidence of our own senses and experiences with real people rather than the insane “economic man” of capitalist economic ideology). As noted in section I.3.1 neo-classical economic theory, deducing from its basic assumptions, argues that members of co-operatives will aim to maximise profit per worker and so, perversely, fire their members during good times. Reality contradicts these claims. In other words, the underlying assumption that people are economic robots cannot be maintained — there is extensive evidence pointing to the fact that different forms of social organisation produce different considerations which motivate people accordingly.

So, while recognising that competition could exist, anarchists think there are plenty of reasons not to worry about massive economic inequality being created, which in turn would re-create the state. The apologists for capitalism who put forward this argument forget that the pursuit of self-interest is universal, meaning that ev-

To sum up, syndicates are voluntary associations of workers who manage their workplace and their own work. Within the syndicate, the decisions which affect how the workplace develops and changes are in the hands of those who work there. In addition, it means that each section of the workforce manages its own activity and sections and that all workers placed in administration tasks (i.e. “management”) are subject to election and recall by those who are affected by their decisions. The workers’ self-management is discussed in the next section.

Finally, two things. First, as noted in section G.1.3 a few individualist anarchists, although not all, were not opposed to (non-exploitative) wage labour and so did not place co-operatives at the centre of their ideas. This position is very much a minority in the anarchist tradition as it is not consistent with libertarian principles nor likely to end the exploitation of labour (see section G.4.1), so making most anarchists think such individualism is inconsistent anarchism (see section G.4.2). Secondly, it is important to note that individuals who do not wish to join syndicates will be able to work for themselves. There is no “forced collectivisation” under any form of libertarian socialism, because coercing people is incompatible with the basic principles of anarchism. Those who wish to be self-employed will have free access to the productive assets they need, provided that they neither attempt to monopolise more of those assets than they and their families can use by themselves nor attempt to employ others for wages (see section I.3.7).

I.3.2 What is workers’ self-management?

Quite simply, workers’ self-management (sometimes called “workers’ control”) means that all workers affected by a decision have an equal voice in making it, on the principle of “one worker, one vote.” Thus “revolution has launched us on the path of industrial democracy.” [Selected Writings of Pierre-Joseph Proudhon, p.
That is, workers “ought to be the real managers of industries.” [Peter Kropotkin, *Fields, Factories and Workshops Tomorrow*, p. 157] This is essential to ensure “a society of equals, who will not be compelled to sell their hands and their brains to those who choose to employ them.. . . but who will be able to apply their knowledge and capacities to production, in an organism so constructed as to combine all the efforts for procuring the greatest possible well-being for all, while full, free scope will be left for every individual initiative.” [Kropotkin, *Kropotkin: Selections from his Writings*, pp. 113–4]

As Chomsky put it:

“Compassion, solidarity, friendship are also human needs. They are driving needs, no less than the desire to increase one’s share of commodities or to improve working conditions. Beyond this, I do not doubt that it is a fundamental human need to take an active part in the democratic control of social institutions. If this is so, then the demand for industrial democracy should become a central goal of any revitalised left with a working-class base.” [Radical Priorities, p. 191]

As noted earlier, however, we need to be careful when using the term “workers’ control,” as others use it and give it an entirely different meaning from the one intended by anarchists. Like the terms “anarchist” and “libertarian,” it has been co-opted by others to describe less than libertarian schemes.

The first to do so were the Leninists, starting with Lenin, who have used the term “workers’ control” to describe a situation were workers have a limited supervision over either the capitalists or the appointed managers of the so-called workers’ state. These do not equate to what anarchists aim for and, moreover, such limited experiments have not lasted long (see section H.3.14). More recently, “workers’ control” have been used by capitalists to describe schemes in which workers’ have more say in how their workplaces

This can be seen from the experience of the Mondragon cooperatives, where the wage difference between the highest paid and lowest paid worker was 4 to 1. This was only increased when they had to compete with large capitalist companies, and even then the new ratio of 9 to 1 is far smaller than those in capitalist companies (in America the ratio is 200 to 1 and beyond!). Thus, even under capitalism, “[t]here is evidence that the methods of distribution chosen by worker-controlled or self-managed firms are more egalitarian than distribution according to market precepts.” [Christopher Eaton Gunn, *Workers’ Self-Management in the United States*, p. 45] Given that market precepts fail to take into account power differences, this is unsurprising. Thus we can predict that a fully self-managed economy would be just, if not, more egalitarian as differences in power would be eliminated, as would unemployment (James K. Galbraith, in his book *Created Unequal*, has presented extensive evidence that unemployment increases inequality, as would be expected).

It is a common myth that managers, executives and so on are paid so highly because of their unique abilities. Actually, they are so highly paid because they are bureaucrats in command of large hierarchical institutions. It is the hierarchical nature of the capitalist firm that ensures inequality, not exceptional skills. Even enthusiastic supporters of capitalism provide evidence to support this claim. In the 1940s Peter Drucker, a supporter of capitalism, brushed away the claim that corporate organisation brings managers with exceptional ability to the top when he noted that “[n]o institution can possibly survive if it needs geniuses or supermen to manage it. It must be organised in such a way as to be able to get along under a leadership of average human beings.” For Drucker, “the things that really count are not the individual members but the relations of command and responsibility among them.” [Concept of the Corporation, p. 35 and p. 34] Little has changed, beyond the power of PR to personalise the bureaucratic structures of corporations.
thus increase the pool of skilled workers who will be happy working in conditions of liberty and equality. This will ensure that differentials between workers can be minimised. In the long run, however, popularisation of non-authoritarian methods of child-rearing and education (see section J.6) are particularly important because, as we suggested in section B.1.5, secondary drives such as greed and the desire the exercise power over others are products of authoritarian upbringing based on punishments and fear. Only if the prevalence of such drives is reduced among the general population can we be sure that an anarchist revolution will not degenerate into some new form of domination and exploitation.

However, there are other reasons why economic inequality — say, in differences of income levels or working conditions, which may arise from competition for “better” workers — would be far less severe under any form of anarchist society than it is under capitalism.

Firstly, the syndicates would be democratically managed. This would result in much smaller wage differentials, because there is no board of wealthy directors setting wage levels for their own gain. So without hierarchies in the workplace no one would be in a position to monopolise the work of others and grow rich as a result:

“Poverty is the symptom: slavery the disease. The extremes of riches and destitution follow inevitably upon the extremes of license and bondage. The many are not enslaved because they are poor, they are poor because they are enslaved. Yet Socialists have all too often fixed their eyes upon the material misery of the poor without realising that it rests upon the spiritual degradation of the slave.” [G.D.H. Cole, Self-Government in Industry, p. 41]

Empirical evidence supports anarchist claims as co-operatives have a far more egalitarian wage structure than capitalist firms.

are run while maintaining wage slavery (i.e. capitalist ownership, power and ultimate control). So, in the hands of capitalists, “workers’ control” is now referred to by such terms as “participation”, “co-determination”, “consensus”, “empowerment”, “Japanese-style management,” etc. “For those whose function it is solve the new problems of boredom and alienation in the workplace in advanced industrial capitalism, workers’ control is seen as a hopeful solution”, Sam Dolgoff noted, “a solution in which workers are given a modicum of influence, a strictly limited area of decision-making power, a voice at best secondary in the control of conditions of the workplace. Workers’ control, in a limited form sanctioned by the capitalists, is held to be the answer to the growing non-economic demands of the workers.” [The Anarchist Collectives, p. 81]

The new managerial fad of “quality circles” — meetings where workers are encouraged to contribute their ideas on how to improve the company’s product and increase the efficiency with which it is made — is an example of “workers’ control” as conceived by capitalists. However, when it comes to questions such as what products to make, where to make them, and (especially) how revenues from sales should be divided, capitalists and managers do not ask for or listen to workers’ “input.” So much for “democratisation,” “empowerment,” and “participation”! In reality, capitalist “workers control” is merely another insidious attempt to make workers more willing and “co-operative” partners in their own exploitation. Needless to say, such schemes are phoney as they never place real power in the hands of workers. In the end, the owners and their managers have the final say (and so hierarchy remains) and, of course, profits are still extracted from the workforce.

Hence anarchists prefer the term workers’ self-management, a concept which refers to the exercise of workers’ power through collectivisation and federation. It means “a transition from private to collective ownership” which, in turn, “call[s] for new relationships among the members of the working community.” [Abel Paz, The
Self-management in this sense “is not a new form of mediation between the workers and their capitalist bosses, but instead refers to the very process by which the workers themselves overthrow their managers and take on their own management and the management of production in their own workplace. Self-management means the organisation of all workers ... into a workers’ council or factory committee (or agricultural syndicate), which makes all the decisions formerly made by the owners and managers.” [Dolgoff, Op. Cit., p. 81] Self-management means the end of hierarchy and authoritarian social relationships in workplace and their replacement by free agreement, collective decision-making, direct democracy, social equality and libertarian social relationships.

As anarchists use the term, workers’ self-management means collective worker ownership, control and direction of all aspects of production, distribution and investment. This is achieved through participatory-democratic workers’ assemblies, councils and federations, in both agriculture and industry. These bodies would perform all the functions formerly reserved for capitalist owners, managers, executives and financiers where these activities actually relate to productive activity rather than the needs to maximise minority profits and power (in which case they would disappear along with hierarchical management). These workplace assemblies will be complemented by people’s financial institutions or federations of syndicates which perform all functions formerly reserved for capitalist owners, executives, and financiers in terms of allocating investment funds or resources.

Workers’ self-management is based around general meetings of the whole workforce, held regularly in every industrial or agricultural syndicate. These are the source of and final authority over decisions affecting policy within the workplace as well as relations with other syndicates. These meeting elect workplace councils whose job is to implement the decisions of these assemblies and to make the day to day administration decisions that will crop up. These councils are directly accountable to the workforce and its ers the link between wealth and power. Moreover, when labour becomes free in a society of rebels (and, surely, an anarchist society could be nothing but) few would tolerate relatively minor income inequalities becoming a source of power.

Thirdly, anarchists do not pretend that an anarchist society will be perfect. Hence there may be periods, particularly just after capitalism has been replaced by self-management, when differences in skill, etc., leads to some people exploiting their position and getting more wages, better hours and conditions, and so forth. This problem existed in the industrial collectives in the Spanish Revolution. As Kropotkin pointed out, “[b]ut, when all is said and done, some inequalities, some inevitable injustice, undoubtedly will remain. There are individuals in our societies whom no great crisis can lift out of the deep mire of egoism in which they are sunk. The question, however, is not whether there will be injustices or no, but rather how to limit the number of them.” [The Conquest of Bread, p. 94]

In other words, these problems will exist, but there are a number of things that anarchists can do to minimise their impact. There will be a “gestation period” before the birth of an anarchist society, in which social struggle, new forms of education and child-rearing, and other methods of consciousness-raising increase the number of anarchists and decrease the number of authoritarians.

The most important element in this gestation period is social struggle. Such self-activity will have a major impact on those involved in it (see section J.2). By direct action and solidarity, those involved develop bounds of friendship and support with others, develop new forms of ethics and new ideas and ideal. This radicalisation process will help to ensure that any differences in education and skill do not develop into differences in power in an anarchist society by making people less likely to exploit their advantages nor, more importantly, for others to tolerate them doing so!

In addition, education within the anarchist movement should aim, among other things, to give its members familiarity with technological skills so that they are not dependent on “experts” and can
“But should competition some day disappear, because concerted effort will have been acknowledged as more beneficial than isolation, then will not every single individual inside the associations be equally egoistic and out for his own interests?” [No Gods, No Masters, vol. 1, p. 22]

Now to the “competition” objection, which we’ll begin to answer by noting that it ignores a few key points.

Firstly, the assumption that a libertarian society would “become capitalist” in the absence of a state is obviously false. If competition did occur between collectives and did lead to massive wealth inequalities, then the newly rich would have to create a state to protect their private property against the dispossessed. So inequality, not equality, leads to the creation of states. It is no coincidence that the anarchic communities that existed for millennia were also egalitarian.

Secondly, as noted in section A.2.5, anarchists do not consider “equal” to mean “identical.” Therefore, to claim that wage differences mean the end of anarchism makes sense only if one thinks that “equality” means everyone getting exactly equal shares. As anarchists do not hold such an idea, wage differences in an otherwise anarchistically organised syndicate do not indicate a lack of equality. How the syndicate is run is of far more importance, because the most pernicious type of inequality from the anarchist standpoint is inequality of power, i.e. unequal influence on political and economic decision making.

Under capitalism, wealth inequality translates into such an inequality of power, and vice versa, because wealth can buy private property (and state protection of it), which gives owners authority over that property and those hired to produce with it; but under libertarian socialism, minor or even moderate differences in income among otherwise equal workers would not lead to this kind of power inequality, because self-management and socialisation sev-

members subject to re-election and instant recall. It is also likely that membership of these councils will be rotated between all members of the syndicate to ensure that no one monopolises an administrative position. In addition, smaller councils and assemblies would be organised for divisions, units and work teams as circumstances dictate.

In this way, workers would manage their own collective affairs together, as free and equal individuals. They would associate together to co-operate without subjecting themselves to an authority over themselves. Their collective decisions would remain under their control and power. This means that self-management creates “an organisation so constituted that by affording everyone the fullest enjoyment of his [or her] liberty, it does not permit anyone to rise above the others nor dominate them in any way but through the natural influence of the intellectual and moral qualities which he [or she] possesses, without this influence ever being imposed as a right and without leaning upon any political institution whatever.” [The Political Philosophy of Bakunin, p. 271] Only by convincing your fellow associates of the soundness of your ideas can those ideas become the agreed plan of the syndicate. No one is in a position to impose their ideas simply because of the post they hold or the work they do.

Most anarchists think that it is likely that purely administrative tasks and decisions would be delegated to elected individuals in this way, freeing workers and assemblies to concentrate on important activities and decisions rather than being bogged down in trivial details. As Bakunin put it:

"Is not administrative work just as necessary to production as is manual labour — if not more so? Of course, production would be badly crippled, if not altogether suspended, without efficient and intelligent management. But from the standpoint of elementary justice and even efficiency, the management of production need not be ex-
clusively monopolised by one or several individuals. And managers are not at all entitled to more pay. The cooperative workers associations have demonstrated that the workers themselves, choosing administrators from their own ranks, receiving the same pay, can efficiency control and operate industry. The monopoly of administration, far from promoting the efficiency of production, on the contrary only enhances the power and privileges of the owners and their managers.” [Bakunin on Anarchism, p. 424]

What is important is that what is considered as important or trivial, policy or administration rests with the people affected by the decisions and subject to their continual approval. Anarchists do not make a fetish of direct democracy and recognise that there is more important things in life than meetings and voting! While workers’ assemblies play the key role in self-management, it is not the focal point of all decisions. Rather it is the place where all the important policy decisions are made, administrative decisions are ratified or rejected and what counts as a major decision determined. Needless to say, what is considered as important issues will be decided upon by the workers themselves in their assemblies.

Unsurprisingly, anarchists argue that, as well as being more free, workers self-management is more efficient and productive than the hierarchical capitalist firm (efficiency here means accomplishing goals without wasting valued assets). Capitalist firms fail to tap humanity’s vast reservoir of practical knowledge, indeed they block it as any application of that knowledge is used to enrich the owners rather than those who generate and use it. Thus the hierarchical firm disenfranchises employees and reduces them to the level of order-takers with an obvious loss of information, knowledge and insight (as discussed in section I.1.1). With self-management, that vast source of knowledge and creativity can be expressed. Thus, self-management and worker ownership “should also reap other re-

individualistic pursuit to material wealth at the expense of all other goals. Ultimately, what use would it be to gain the world and loose what makes life worth living?

Of course, such a society would not be based on exactly equal shares of everything. Rather, it would mean equal opportunity and free, or equal, access to resources (for example, that only ill people use medical resources is unproblematic for egalitarians!). So a society with unequal distributions of resources is not automatically a non-anarchist one. What is against anarchist principles is centralised power, oppression, and exploitation, all of which flow from large inequalities of income and private property. This is the source of anarchist concern about equality — concern that is not based on some sort of “politics of envy.” Anarchists oppose inequality because it soon leads to the few oppressing the many (a relationship which distorts the individuality and liberty of all involved as well as the health and very lives of the oppressed).

Anarchists desire to create a society in which such relationships are impossible, believing that the most effective way to do this is by empowering all, by creating an egoistic concern for liberty and equality among the oppressed, and by developing social organisations which encourage self-management. As for individuals’ trying to improve their lot, anarchists maintain that co-operation is the best means to do so, not competition. And there is substantial evidence to support this claim (see, for example, Alfie Kohn’s No Contest: The Case Against Competition and Robert Axelrod’s The Evolution of Co-operation present abundant evidence that co-operation is in our long term interests and provides better results than short term competition). This suggests that, as Kropotkin argued, mutual aid, not mutual struggle, will be in an individual’s self-interest and so competition in a free, sane society would be minimised and reduced to sports and other individual pastimes. As Stirner argued, co-operation is just as egoistic as competition (a fact sometimes lost on many due to the obvious ethical superiority of co-operation):
be more than offset by its negative effects, which are outlined in section I.1.3. It is to these anarchists that the question is usually asked.

Before continuing, we would like to point out that individuals trying to improve their lot in life is not against anarchist principles. How could it be? “Selfish is not a crime,” John Most and Emma Goldman noted, “it only becomes a crime when conditions are such as to give an individual the opportunity to satisfy his selfishness to the detriment of others. In an anarchistic society everyone will seek to satisfy his ego” but in order to do so he “will extend his aid to those who will aid him, and then selfishness will no more be a curse but a blessing.” [“Talking about Anarchy”, Black Flag, no. 228, p. 28]

Thus anarchists see co-operation and mutual aid as an expression of “self-interest”, in that working with people as equals is in our joint benefit. In the words of John O’Neill:

"[F]or it is the institutions themselves that define what counts as one’s interests. In particular, the market encourages egoism, not primarily because it encourages an individual to be ‘self-interested’ — it would be unrealistic not to expect individuals to act for the greater part in a ‘self-interested’ manner — but rather because it defines an individual’s interests in a particularly narrow fashion, most notably in terms of possession of certain material goods. In consequence, where market mechanism enter a particular sphere of life, the pursuit of goods outside this narrow range of market goods is institutionally defined as an act of altruism.” [The Market, p. 158]

As such, anarchists would suggest that we should not confuse competition with self-interest and that a co-operative society would tend to promote institutions and customs which would ensure that people recognised that co-operation between equals maximises individual freedom and self-interest far more than
Therefore anarchists have strong evidence to support Herbert Read’s comment that libertarian socialism would “provide a standard of living far higher than that realised under any previous form of social organisation.” [Anarchy and Order, p. 49] It confirms Cole’s comment that the “key to real efficiency is self-government; and any system that is not based upon self-government is not only servile, but also inefficient. Just as the labour of the wage-slave is better than the labour of the chattel-slave, so... will the labour of the free man [and woman] be better than either.” [Self-Government in Industry, p. 157] Yet it is important to remember, as important as this evidence is, real social change comes not from “efficiency” concerns but from ideals and principles. While anarchists are confident that workers’ self-management will be more efficient and productive than capitalism, this is a welcome side-effect of the deeper goal of increasing freedom. The evidence confirms that freedom is the best solution for social problems but if, for example, slavery or wage-labour proved to be more productive than free, associated, labour it does not make them more desirable!

A self-managed workplace, like a self-managed society in general, does not mean that specialised knowledge (where it is meaningful) will be neglected or not taken into account. Quite the opposite. Specialists (i.e. workers who are interested in a given area of work and gain an extensive understanding of it) are part of the assembly of the workplace, just like other workers. They can and have to be listened to, like anyone else, and their expert advice included in the decision making process. Anarchists do not reject the idea of expertise nor the rational authority associated with it. As we indicated in section B.1, anarchists recognise the difference between being an authority (i.e. having knowledge of a given subject) and being in authority (i.e. having power over someone else). As discussed in section H.4, we reject the latter and respect the former.

Such specialisation does not imply the end of self-management, but rather the opposite. “The greatest intelligence,” Bakunin argued, This information can be processed into energy use and labour time per product (for example), in order to give an idea of how efficient production is and how it is changing over time. For confederations, the output of individual syndicates can be aggregated and local and other averages can be calculated. In addition, changes in demand can be identified by this aggregation process and used to identify when investment will be needed or plants closed down. In this way the chronic slumps and booms of capitalism can be avoided without creating a system which is even more centralised than capitalism.

I.3.6 What about competition between syndicates?

This is a common question, particularly from defenders of capitalism. They argue that syndicates will not co-operate together unless forced to do so, and will compete against each other for raw materials, skilled workers, and so on. The result of this process, it is claimed, will be rich and poor syndicates, inequality within society and within the workplace, and (possibly) a class of unemployed workers from unsuccessful syndicates who are hired by successful ones. In other words, they argue that libertarian socialism will need to become authoritarian to prevent competition, and that if it does not do so it will become capitalist very quickly.

For individualist anarchists and mutualists, competition is not viewed as a problem. They think that competition, based around co-operatives and mutual banks, would minimise economic inequality, as the new economic structure based around free credit and cooperation would eliminate non-labour (i.e. unearned) income such as profit, interest and rent and give workers enough bargaining power to eliminate exploitation. For these anarchists it is a case of capitalism perverting competition and so are not against competition itself. Other anarchists think that whatever gains might accrue from competition (assuming there are, in fact, any) would
termine how an industry is developing. This does not imply bureaucracy or centralised control at the top. Taking the issue of centralisation first, the confederation is run by delegate assemblies, meaning that any officers elected at a congress only implement the decisions made by the delegates of the relevant syndicates. It is in the congresses and plenums of the confederation that new investment decisions, for example, are made. The key point to remember is that the confederation exists purely to co-ordinate joint activity and share information, it does not take an interest in how a workplace is run or what orders from consumers it fills. (Of course, if a given workplace introduces policies which other syndicates disapprove of, it can be expelled). As the delegates to these congresses and plenums are mandated and their decisions subject to rejection and modification by each productive unit, the confederation is not centralised.

As far as bureaucracy goes, the collecting and processing of information does necessitate an administrative staff to do the work. However, this problem affects capitalist firms as well; and since syndicates are based on bottom-up decision making, it’s clear that, unlike a centralised capitalist corporation, administration would be smaller. In fact, it is likely that a fixed administration staff for the confederation would not exist in the first place! At the regular congresses, a particular syndicate may be selected to do the confederation’s information processing, with this job being rotated regularly around different syndicates. In this way, a specific administrative body and equipment can be avoided and the task of collating information placed directly in the hands of ordinary workers. Further, it prevents the development of a bureaucratic elite by ensuring that all participants are versed in information-processing procedures.

Lastly, what information would be collected? That depends on the context. Individual syndicates would record inputs and outputs, producing summary sheets of information. For example, total energy input, in kilowatts and by type, raw material inputs, labour hours spent, orders received, orders accepted, output, and so forth. “would not be equal to a comprehension of the whole. Thence results, for science as well as industry, the necessity of the division and association of labour.” [God and the State, p. 33] Thus specialised knowledge is part of the associated workers and not placed above them in positions of power. The other workers in a syndicate can compliment the knowledge of the specialists with the knowledge of the work process they have gained by working and so enrich the decision. Knowledge is distributed throughout society and only a society of free individuals associated as equals and managing their own activity can ensure that it is applied effectively (part of the inefficiency of capitalism results from the barriers to knowledge and information flow created by its hierarchical workplace).

A workplace assembly is perfectly able to listen to an engineer, for example, who suggests various ways of reaching various goals (i.e. if you want X, you would have to do A or B. If you do A, then C, D and E is required. If B is decided upon, then F, G, H and I are entailed). But it is the assembly, not the engineer, that decides what goals and methods to be implemented. As Cornelius Castoriadis put it: “We are not saying: people will have to decide what to do, and then technicians will tell them how to do it. We say: after listening to technicians, people will decide what to do and how to do it. For the how is not neutral — and the what is not disembodied. What and how are neither identical, nor external to each other. A ‘neutral’ technique is, of course, an illusion. A conveyor belt is linked to a type of product and a type of producer — and vice versa.” [Social and Political Writings, vol. 3, p. 265]

However, we must stress that while an anarchist society would “inherit” a diverse level of expertise and specialisation from class society, it would not take this as unchangeable. Anarchists argue for “all-round” (or integral) education as a means of ensuring that everyone has a basic knowledge or understanding of science, engineering and other specialised tasks. As Bakunin argued, “in the interests of both labour and science … there should no longer be either workers or scholars but only human beings.” Education must “pre-
pare every child of each sex for the life of thought as well as for the life of labour.” [The Basic Bakunin, p. 116 and p. 119] This does not imply the end of all specialisation (individuals will, of course, express their individuality and know more about certain subjects than others) but it does imply the end of the artificial specialisation developed under capitalism which tries to deskill and disempower the wage worker by concentrating knowledge into hands of management.

And, just to state the obvious, self-management does not imply that the mass of workers decide on the application of specialised tasks. Self-management implies the autonomy of those who do the work as well as collective decision making on collective issues. For example, in a self-managed hospital the cleaning staff would not have a say in the doctors’ treatment of patients just as the doctors would not tell the cleaners how to do their work (of course, it is likely that an anarchist society will not have people whose work is simply to clean and nothing else, we just use this as an example people will understand). All members of a syndicate would have a say in what happens in the workplace as it affects them collectively, but individual workers and groups of workers would manage their own activity within that collective.

Needless to say, self-management abolishes the division of labour inherent in capitalism between order takers and order givers. It integrates (to use Kropotkin’s words) brain work and manual work by ensuring that those who do the work also manage it and that a workplace is managed by those who use it. Such an integration of labour will, undoubtedly, have a massive impact in terms of productivity, innovation and efficiency. As Kropotkin argued, the capitalist firm has a negative impact on those subject to its hierarchical and alienating structures:

“The worker whose task has been specialised by the permanent division of labour has lost the intellectual interest in his [or her] labour, and it is especially coming from above. This is incorrect, for any decisions concerning an industry or plant are under the direct control of those involved. For example, the steel industry confederation may decide to rationalise itself at one of its congresses. Murray Bookchin sketches the response to this situation as follows:

“[L]et us suppose that a board of highly qualified technicians is established [by this congress] to propose changes in the steel industry. This board ... advances proposals to rationalise the industry by closing down some plants and expanding the operation of others ... Is this a ‘centralised’ body or not? The answer is both yes and no. Yes, only in the sense that the board is dealing with problems that concern the country as a whole; no, because it can make no decision that must be executed for the country as a whole. The board’s plan must be examined by all the workers in the plants [that are affected] ... The board itself has no power to enforce ‘decisions’; it merely makes recommendations. Additionally, its personnel are controlled by the plant in which they work and the locality in which they live ... they would have no decision-making powers. The adoption, modification or rejection of their plans would rest entirely with ... [those] involved.” [Post Scarcity Anarchism, p. 180]

Therefore, confederations would not be in positions of power over the individual syndicates. No attempt is made to determine which plants produce which steel for which customers in which manner. Thus, the confederations of syndicates ensure a decentralised, spontaneous economic order without the negative side-effects of capitalism (namely power concentrations within firms and in the market, periodic crises, etc.).

As one can imagine, an essential feature of these confederations will be the collection and processing of information in order to de-
Workers’ self-management does not automatically mean that all forms of economic domination and exploitation would be eliminated. After all, in a market economy firms can accrue super-profits simply because of their size or control over a specific technology or resource. Hence Proudhon’s suggestion that “advocates of mutualism” would “regulate the market” to ensure “an honest breakdown of cost prices”, fix “after amicable discussion of a maximum and minimum profit margin” and “the organising of regulating societies.” [Selected Writings of Pierre-Joseph Proudhon, p. 70] It seems likely that the agro-industrial federation would be the body which ensures that. Similarly, the federation would be the means by which to air, and deal with, suggestions that syndicates are monopolising their resources, i.e., treating them as private property rather than socialised possessions. Thus the federation would unite workers “to guarantee the mutual use of the tools of production” which are, “by a reciprocal contract”, the “collective property of the whole.” [James Guillaume, “On Building the New Social Order”, pp. 356–79, Bakunin on Anarchism, p. 376]

The inter-industry confederations help ensure that when the members of a syndicate change work to another syndicate in another (or the same) branch of industry, they have the same rights as the members of their new syndicate. In other words, by being part of the confederation, a worker ensures that s/he has the same rights and an equal say in whatever workplace is joined. This is essential to ensure that a co-operative society remains co-operative, as the system is based on the principle of “one person, one vote” by all those involved the work process. If specific syndicates are restricting access and so producing wage-labour, monopolising resources and so charging monopoly prices, the federation would be forum to publicly shame such syndicates and organise boycotts of them. Such anti-social activity is unlikely to be tolerated by a free people seeking to protect that freedom.

However, it could again be argued that these confederations are still centralised and that workers would still be following orders so in the great industries; he has lost his inventive powers. Formerly, he [or she] invented very much ... But since the great factory has been enthroned, the worker, depressed by the monotony of his [or her] work, invents no more.” [Fields, Factories and Workshops Tomorrow, p. 171]

Must all the skills, experience and intelligence that very one has be swept away or crushed by hierarchy? Or could it not become a new fertile source of progress under a better organisation of production? Self-management would ensure that the independence, initiative and inventiveness of workers (which disappears under wage slavery) comes to the fore and is applied. Combined with the principles of “all-round” (or integral) education (see section J.5.13) who can deny that working people could transform the current economic system to ensure “well-being for all”? And we must stress that by “well-being” we mean well-being in terms of meaningful, productive activity in humane surroundings and using appropriate technology, in terms of goods of utility and beauty to help create strong, healthy bodies and in terms of surroundings which are inspiring to live in and ecologically integrated.

Little wonder Kropotkin argued that self-management and the “erasing [of] the present distinction between the brain workers and manual worker” would see “social benefits” arising from “the concordance of interest and harmony so much wanted in our times of social struggles” and “the fullness of life which would result for each separate individual, if he [or she] were enabled to enjoy the use of both ... mental and bodily powers.” This is in addition to the “increase of wealth which would result from having ... educated and well-trained producers.” [Op. Cit., p. 180]

Let us not forget that today workers do manage their own working time to a considerable extent. The capitalist may buy a hour of a workers’ time but they have to ensure that the worker follows their orders during that time. Workers resist this imposition and
this results in considerable shop-floor conflict. Frederick Taylor, for example, introduced his system of “scientific management” in part to try and stop workers managing their own working activity. As David Noble notes, workers “paced themselves for many reason: to keep time for themselves, to avoid exhaustion, to exercise authority over their work, to avoid killing so-called gravy piece-rate jobs by overproducing and risking a pay cut, to stretch out available work for fear of layoffs, to exercise their creativity, and, last but not least, to express their solidarity and their hostility to management.” These were “[c]oupled with collective co-operation with their fellows on the floor” and “labour-prescribed norms of behaviour” to achieve “shop floor control over production.” [Forces of Production, p. 33] This is why working to rule” is such an efficient weapon in the class struggle (see section H.4.4) In other words, workers naturally tend towards self-management anyway and it is this natural movement towards liberty during work hours which is combated by bosses (who wins, of course, depends on objective and subjective pressures which swing the balance of power towards labour or capital).

Self-management will built upon this already existing unofficial workers control over production and, of course, our knowledge of the working process which actually doing it creates. The conflict over who controls the shop floor — either those who do the work or those who give the orders — not only shows that self-management is possible but also show how it can come about as it brings to the fore the awkward fact that while the bosses need us, we do not need them!

I.3.3 What does socialisation mean?

A key aspect of anarchism is the socialisation of the means of life. This means that the land, housing, workplaces and so forth become common property, usable by all who need them. Thus Emma Goldman’s summary:

“Many arguments are used against the idea of socialisation; one of these — the most delightful — says that by socialising an industry we simply take it over and run it with the consequence that we have flourishing industries where the workers are privileged, and unfortunate industries where the workers get less benefits but have to work harder than workers elsewhere … There are differences between the workers in prosperous industries and those which barely survive… Such anomalies, which we don’t deny exist, are attributed to the attempts at socialisation. We firmly assert that the opposite is true; such anomalies are the logical result of the absence of socialisation.

“The socialisation which we propose will resolve these problems which are used to attack it. Were Catalan industry socialised, everything would be organically linked — industry, agriculture, and the trade union organisations, in accordance with the council for the economy. They would become normalised, the working day would become more equal or what comes to the same thing, the differences between workers of different activities would end …

“Socialisation is — and let its detractors hear it — the genuine authentic organisation of the economy. Undoubtedly the economy has to be organised; but not according to the old methods, which are precisely those which we are destroying, but in accordance with new norms which will make our people become an example to the world proletariat.” [Solidaridad Obrera, 30 April 1937, p. 12]
tracts of land, as well as accidents of culture.” [General Idea of the Revolution, p. 209 and p. 200]

By federating together, workers can ensure that “the earth will be an economic domain available to everyone, the riches of which will be enjoyed by all human beings.” [Malatesta, Errico Malatesta: His Life and Ideas, p. 93] Local deficiencies of raw materials, in the quality of land, and, therefore, supplies would be compensated from outside, by the socialisation of production and consumption. This would allow all of humanity to share and benefit from economic activity, so ensuring that well-being for all is possible.

Federation would eliminate the possibility of rich and poor collectives and syndicates co-existing side by side. As Kropotkin argued, “[c]ommon possession of the necessities for production implies the common enjoyment of the fruits of common production … when everybody, contributing for the common well-being to the full extent of his [or her] capacities, shall enjoy also from the common stock of society to the fullest possible extent of his [or her] needs.” [Anarchism, p. 59] Hence we find the CNT arguing in its 1936 resolution on libertarian communism that “[a]s far as the interchange of produce between communes is concerned, the communal councils are to liaise with the regional federations of communes and with the confederal council of production and distribution, applying for whatever they may need and [giving] any available surplus stocks.” [quoted by Jose Peirats, The CNT in the Spanish Revolution, vol. 1, p. 107] This clearly followed Kropotkin’s comments that the “socialising of production, consumption, and exchange” would be based on workplaces “belong[ing] to federated Communes.” [The Conquest of Bread, p. 136]

The legacy of capitalism, with its rich and poor areas, its rich and poor workplaces, will be a problem any revolution will face. The inequalities produced by centuries of class society will take time to change. This is one of the tasks of the confederation, to ensure the socialisation of both production and consumption so that people are not penalised for the accidents of history and that “That each and every individual is and ought to be free to own himself and to enjoy the full fruit of his labour; that man is absolved from all allegiance to the kings of authority and capital; that he has, by the very fact of his being, free access to the land and all means of production, and entire liberty of disposing of the fruits of his efforts; that each and every individual has the unquestionable right of free and voluntary association with other equally sovereign individuals for economic, political, social, and other purposes, and that to achieve this end man must emancipate himself from the sacredness of property, the respect for man-made law, the fear of the Church, the cowardice of public opinion, the stupid arrogance of national, racial, religious, and sex superiority, and from the narrow puritanical conception of human life.” [A Documentary History of the American Years, vol. 2, pp. 450–1]

This is required because private ownership of collectively used “property” (such as workplaces and land) results in a situation where the many have to sell their labour (i.e., liberty) to the few who own it. This creates hierarchical and authoritarian social relationships as well as economic classes. For anarchists, society cannot be divided into “a possessing and a non-possessing” class system as this is “a condition of social injustice” as well as making the state “indispensable to the possessing minority for the protection of its privileges.” [Rudolf Rocker, Anarcho-Syndicalism, p. 11] In other words, “as long as land and capital are unappropriated, the workers are free, and that, when these have a master, the workers also are slaves.” [Charlotte M. Wilson, Anarchist Essays, p. 21]

While there is a tendency by state socialists and the right to equate socialisation with nationalisation, there are key differences which the different names signify. Nationalisation, in practice and usually in theory, means that the means of life become state prop-
erty. This means that rather than those who need and use a specific part of the co-operative commonwealth deciding what to do with it, the government does. As we discussed in section B.3.5 this would just be state capitalism, with the state replacing the current capitalist and landlords.

As Emma Goldman argued, there is a clear difference between socialisation and nationalisation. "The first requirement of Communism," she argued, "is the socialisation of the land and of the machinery of production and distribution. Socialised land and machinery belong to the people, to be settled upon and used by individuals and groups according to their needs." Nationalisation, on the other hand, means that a resource "belongs to the state; that is, the government has control of it and may dispose of it according to its wishes and views." She stressed that "when a thing is socialised, every individual has free access to it and may use it without interference from anyone." When the state owned property, "such a state of affairs may be called state capitalism, but it would be fantastic to consider it in any sense communistic." [Red Emma Speaks, pp. 406–7]

Socialisation aims at replacing property rights by use rights. The key to understanding socialisation is to remember that it is about free access. In other words, that every one has the same rights to the means of life as everyone else, that no one is exploited or oppressed by those who own the means of life. In the words of Herbert Read:

"The essential principle of anarchism is that mankind has reached a stage of development at which it is possible to abolish the old relationship of master-man (capitalist-proletarian) and substitute a relationship of egalitarian co-operation. This principle is based, not only on ethical ground, but also on economic grounds." [Anarchy and Order, p. 92]

This implies two things. Firstly, that the means of life are common property, without an owning class. Secondly, there is free as-

The exact nature of any confederal responsibilities will vary, although we "prefer decentralised management; but ultimately, in practical and technical problems, we defer to free experience." [Luigi Fabbri, Op. Cit., p. 24] The specific form of organisation will obviously vary as required from industry to industry, area to area, but the underlying ideas of self-management and free association will be the same. Moreover, the "essential thing ... is that its [the confederation or guild] function should be kept down to the minimum possible for each industry." [Cole, Op. Cit., p. 61]

Another important role for inter-syndicate federations is to even-out inequalities. After all, each area will not be identical in terms of natural resources, quality of land, situation, accessibility, and so on. Simply put, social anarchists "believe that because of natural differences in fertility, health and location of the soil it would be impossible to ensure that every individual enjoyed equal working conditions." Under such circumstances, it would be "impossible to achieve a state of equality from the beginning" and so "justice and equity are, for natural reasons, impossible to achieve ... and that freedom would thus also be unachievable." [Malatesta, The Anarchist Revolution, p. 16 and p. 21]

This was recognised by Proudhon, who saw the need for economic federation due to differences in raw materials, quality of land and so on, and as such argued that a portion of income from agricultural produce be paid into a central fund which would be used to make equalisation payments to compensate farmers with less favourably situated or less fertile land. As he put it, economic rent "in agriculture has no other cause than the inequality in the quality of land ... if anyone has a claim on account of this inequality ... [it is] the other land workers who hold inferior land. That is why in our scheme for liquidation [of capitalism] we stipulated that every variety of cultivation should pay a proportional contribution, destined to accomplish a balancing of returns among farm workers and an assurance of products." In addition, "all the towns of the Republic shall come to an understanding for equalising among them the quality of
federation can ensure that resources are not wasted by individual syndicates over-producing goods or over-investing in response to changes in production. By communicating across workplaces, people can overcome the barriers to co-ordinating their plans which one finds in market systems (see section C.7.2) and so avoid the economic and social disruptions associated with them.

Thus, major investment decisions would be made at congresses and plenums of the industry’s syndicates, by a process of horizontal, negotiated co-ordination. Major investment decisions are co-ordinated at an appropriate level, with each unit in the confederation being autonomous, deciding what to do with its own productive capacity in order to meet social demand. Thus we have self-governing production units co-ordinated by confederations (horizontal negotiation), which ensures local initiative (a vital source of flexibility, creativity, and diversity) and a rational response to changes in social demand. As links between syndicates are non-hierarchical, each syndicate remains self-governing. This ensures decentralisation of power and direct control, initiative, and experimentation by those involved in doing the work.

It should be noted that during the Spanish Revolution successfully federated in different ways. Gaston Leval noted that these forms of confederation did not harm the libertarian nature of self-management:

> “Everything was controlled by the syndicates. But it must not therefore be assumed that everything was decided by a few higher bureaucratic committees without consulting the rank and file members of the union. Here libertarian democracy was practised. As in the C.N.T. there was a reciprocal double structure; from the grass roots at the base ... upwards, and in the other direction a reciprocal influence from the federation of these same local units at all levels downwards, from the source back to the source.” [The Anarchist Collectives, p. 105]

This has been an anarchist position as long as anarchism has been called anarchism. Thus we find Proudhon arguing in 1840 that “the land is indispensable to our existence” and “consequently a common thing, consequently insusceptible of appropriation” and that “all accumulated capital being social property, no one can be its exclusive proprietor.” This means “the farmer does not appropriate the field which he sows” and “all capital ... being the result of collective labour” is “collective property.” Without this there is inequality and a restriction of freedom as “the working-man holds his labour by the condescension and necessities of the master and proprietor.” The “civilised labourer who bakes a loaf that he may eat a slice of bread . .. is not free. His employer ... is his enemy.” In fact, “neither a commercial, nor an industrial, nor an agricultural association can be conceived of in the absence of equality.” The aim was a society of “possessors without masters” rather than wage-labourers and tenants “controlled by proprietors.” Within any economic association there would be democracy, with “leaders, instructors, superintendents” and so forth being “chosen from the labourers by the labourers themselves, and must fulfil the conditions of eligibility. It is the same with all public functions, whether of administration or instruction.” [What is Property?, p. 107, p. 130, p. 153, p. 128, p. 142, p. 227, p. 167 and p. 137]

This meant “democratically organised workers associations” and “[u]nder the law of association, transmission of wealth does not apply to the instruments of labour, so cannot become a cause of inequality.” [Proudhon, No Gods, No Masters, vol. 1., p. 62] Thus workplaces “are the common and undivided property of all those who take part therein” rather than “companies of stockholders who plunder the bodies and souls of the wage workers.” This meant free access, with “every individual employed in the association” having “an undivided share in the property of the company” and has “a right to fill any position” as “all positions are elective, and the by-laws subject to the ap-
proval of the members.” Each member “shall participate in the gains and in the losses of the company, in proportion to his [or her] services.” [Proudhon, General Idea of the Revolution, p. 219 and p. 222] Proudhon’s idea of free credit from a People’s Bank, it should be noted, is another example of free access, of socialisation. Needless to say, anarchists like Bakunin and Kropotkin based their arguments for socialisation on this vision of self-managed workplaces and free access to the means of life. For Bakunin, for example, “the land, the instruments of work and all other capital may become the collective property of the whole of society and be utilised only by the workers, on other words, by the agricultural and industrial associations.” [Michael Bakunin: Selected Writings, p. 174]

So the means of production are socialised in the mutualism, collectivism and communism and all rest on the same principle of equal access. So when someone joins an existing workers association they become full members of the co-operative, with the same rights and duties as existing members. In other words, they participate in the decisions on a basis of one person, one vote. How the products of that association are distributed vary in different types of anarchism, but the associations that create them are rooted in the free association of equals. In contrast, a capitalist society places the owner in the dominant position and new members of the workforce are employees and so subordinate members of an organisation which they have no say in (see section B.1).

Socialisation would mean that workplaces would become “little republics of workingmen.” [Proudhon, quoted by Dorothy W. Douglas, “Proudhon: A Prophet of 1848: Part II”, pp. 35–59, The American Journal of Sociology, Vol. 35, No. 1, p. 45] As economist David Ellerman explains, the democratic workplace “is a social community, a community of work rather than a community residence. It is a republic, or res publica of the workplace. The ultimate governance rights are assigned as personal rights ... to the people who work in the firm ... This analysis shows how a firm can be socialised and yet remain ‘private’ in the sense of not being government-owned.” As successful co-operative system in the world. The “agro-industrial federation” exists precisely for these reasons.

Under collectivist and communist anarchism, the federations would have addition tasks. There are two key roles. Firstly, the sharing and co-ordination of information produced by the syndicates and, secondly, determining the response to the changes in production and consumption indicated by this information.

Confederations (negotiated-co-ordination bodies) would be responsible for clearly defined branches of production, and in general, production units would operate in only one branch of production. These confederations would have direct links to other confederations and the relevant communal confederations, which supply the syndicates with guidelines for decision making (see section I.4.4) and ensure that common problems can be highlighted and discussed. These confederations exist to ensure that information is spread between workplaces and to ensure that the industry responds to changes in social demand. In other words, these confederations exist to co-ordinate major new investment decisions (i.e. if demand exceeds supply) and to determine how to respond if there is excess capacity (i.e. if supply exceeds demand).

It should be pointed out that these confederated investment decisions will exist along with the investments associated with the creation of new syndicates, plus internal syndicate investment decisions. We are not suggesting that every investment decision is to be made by the confederations. (This would be particularly impossible for new industries, for which a confederation would not exist!) Therefore, in addition to co-ordinated production units, an anarchist society would see numerous small-scale, local activities which would ensure creativity, diversity, and flexibility. Only after these activities had spread across society would confederal co-ordination become necessary. So while production will be based on autonomous networking, the investment response to consumer actions would, to some degree, be co-ordinated by a confederation of syndicates in that branch of production. By such means, the con-
credit syndicate). Such syndicates would exist to provide interest-free credit for self-management, new syndicate expansion and so on. And if the experience of capitalism is anything to go by, mutual banks will also reduce the business cycle as “countries like Japan and Germany that are usually classified as bank-centred — because banks provide more outside finance than markets, and because more firms have long-term relationships with their banks — show greater growth in and stability of investment over time than the market-centred ones, like the US and Britain … Further, studies comparing German and Japanese firms with tight bank ties to those without them also show that firms with bank ties exhibit greater stability in investment over the business cycle.” [Doug Henwood, Wall Street, pp. 174–5]

One argument against co-operatives is that they do not allow the diversification of risk (all the worker’s eggs are on one basket). Ignoring the obvious point that most workers today do not have shares and are dependent on their job to survive, this objection can be addressed by means of “the horizontal association or grouping of enterprises to pool their business risk. The Mondragon co-operatives are associated together in a number of regional groups that pool their profits in varying degrees. Instead of a worker diversifying his or her capital in six companies, six companies partially pool their profits in a group or federation and accomplish the same risk-reduction purpose without transferable equity capital.” Thus “risk-pooling in federations of co-operatives” ensure that “transferable equity capital is not necessary to obtain risk diversification in the flow of annual worker income.” [David Ellerman, The Democratic Worker-Owned Firm, p. 104] Moreover, as the example of many isolated co-operatives under capitalism have shown, support networks are essential for co-operatives to survive. It is no co-incidence that the Mondragon co-operative complex in the Basque region of Spain has a credit union and mutual support networks between its co-operatives and is by far the most noted in section I.3.1, this means the end of the labour market as there would be free access to workplaces and so workers would not be wage-labourers employed by bosses. Instead, there would be a people seeking associations to join and associations seeking new associates to work with. “Instead of abolishing the employment relation,” Ellerman argues, “state socialism nationalised it … Only the democratic firm — where the workers are jointly self-employed – is a genuine alternatives to private or public employment.” [The Democratic Worker-Owned Firm, p. 76 and p. 209]

So libertarian socialism is based on decentralised decision making within the framework of socially-owned but independently-run and worker-self-managed syndicates. The importance of socialisation should not be downplayed. This is because the self-management of work is not sufficient in and of itself to ensure an anarchist society. Under feudalism, the peasants managed their own labour but such a regime was hardly libertarian for, at a minimum, the peasants paid the landlord rent. An industrial equivalent can be imagined, where workers hire workplaces and land from capitalists and landlords. As left-wing economist Geoffrey M. Hodgson suggests:

“Assume that the workers are self-employed but do not own all the means of production. In this case there still may be powerful owners of factories, offices and machines … the owners of the means of production would still receive an income, emanating from that ownership. In bargaining with these owners, the workers would be required to concede the claim of these owners to an income, as they would be unable to produce without making use of the means of production owned by others. Hence the workers would still be deprived of … ‘surplus value’. Profits would still derive from ownership of the means of production.” [Economics and Utopia, p. 168]
This would not be (libertarian) socialism (as workers would still be exploited) nor would it be capitalism (as there is no wage labour as such, although there would be a proletariat). Thus genuine anarchism requires socialisation of the means of life, which ensures free access (no usury). In other words, self-management (while an essential part of anarchism) is not sufficient to make a society anarchistic. Without socialism (free access to the means of life) it would be yet another class system and rooted in exploitation. To eliminate all exploitation, social anarchists propose that productive assets such as workplaces and land be owned by society as a whole and run by syndicates and self-employed individuals. Thus Kropotkin: “Free workers, on free land, with free machinery, and freely using all the powers given to man by science.” [Act for Yourselves, p. 102]

This vision of socialisation, of free access, also applies to housing. Proudhon, for example, suggested that payments of rent in housing under capitalism would be “carried over to the account of the purchase of the property” and once paid for the house “shall pass under the control of the town administration… in the name of all the tenants, and shall guarantee them all a domicile, in perpetuity, at the cost of the building.” Rented farm land would be the same and would, once paid for, “revert immediately to the town, which shall take the place of the former proprietor.” Provision “shall be made for the supervision of the towns, for the installation of cultivators, and for the fixing of the boundaries of possessions.” [General Idea of the Revolution, p. 194 and p. 199] Kropotkin had a similar end in mind, namely “the abolition of rent”, but by different means, namely by “the expropriation of houses” during a social revolution. This would be “the communalising of houses and the right of each family to a decent dwelling.” [The Conquest of Bread, p. 91 and p. 95]

It is important to note here that while anarchists tend to stress communes (see section I.5) this does not imply communal living in the sense of one-big family. As Kropotkin, for example, was federations which cover wide areas to plan large-scale projects in any detail and so would be, in practice, more forums for agreeing guidelines and priorities than planning actual specific projects or economies. As Russian anarcho-syndicalist G.P. Maximov put it, the aim “was to co-ordinate all activity, all local interest, to create a centre but not a centre of decrees and ordinances but a centre of regulation, of guidance — and only through such a centre to organise the industrial life of the country.” [quoted by M. Brinton, For Workers’ Power, p. 330]

So this is a decentralised system, as the workers’ assemblies and councils at the base having the final say on all policy decisions, being able to revoke policies made by those with delegated decision-making power and to recall those who made them:

“When it comes to the material and technical method of production, anarchists have no preconceived solutions or absolute prescriptions, and bow to what experience and conditions in a free society recommend and prescribe. What matters is that, whatever the type of production adopted, it should be the free choice of the producers themselves, and cannot possibly be imposed, any more than any form is possible of exploitations of another’s labour… Anarchists do not a priori exclude any practical solution and likewise concede that there may be a number of different solutions at different times.” [Luigi Fabbri, ‘Anarchy and ‘Scientific’ Communism”, pp. 13–49, The Poverty of Statism, Albert Meltzer (ed.), p. 22]

Confederations would exist for specific reasons. Mutualists, as can be seen from Proudhon, are aware of the dangers associated with even a self-managed, socialistic market and create support structures to defend workers’ self-management. Moreover, it is likely that industrial syndicates would be linked to mutual banks (a
Both would operate at different levels, meaning there would be confederations for both industrial and inter-industrial associations at the local and regional levels and beyond. The basic aim of this inter-industry and cross-industry networking is to ensure that the relevant information is spread across the various parts of the economy so that each can effectively co-ordinate its plans with the others in a way which minimises ecological and social harm. Thus there would be a railway workers confederation to manage the rail network but the local, regional and national depots and stations would send a delegate to meet regularly with the other syndicates in the same geographical area to discuss general economic issues.

However, it is essential to remember that each syndicate within the confederation is autonomous. The confederations seek to co-ordinate activities of joint interest (in particular investment decisions for new plant and the rationalisation of existing plant in light of reduced demand). They do not determine what work a syndicate does or how they do it:

"With the factory thus largely conducting its own concerns, the duties of the larger Guild organisations [i.e. confederations] would be mainly those of co-ordination, or regulation, and of representing the Guild in its external relations. They would, where it was necessary, co-ordinate the production of various factories, so as to make supply coincide with demand... they would organise research... This large Guild organisation... must be based directly on the various factories included in the Guild." [Cole, *Guild Socialism Restated*, pp. 59–60]

So it is important to note that the lowest units of confederation — the workers’ assemblies — will control the higher levels, through their power to elect mandated and recallable delegates to meetings of higher confederal units. It would be fair to make the assumption that the “higher” up the federation a decision is made, the more general it will be. Due to the complexity of life it would be difficult for at pains to stress such continual communal living is “repugnant to millions of human beings. The most reserved man [and woman] certainly feels the necessity of meeting his [or her] fellows for the pursuit of common work... But it is not so for the hours of leisure, reserved for rest and intimacy.” Communal living in the sense of a human beehive “can please some, and even all at a certain period of their life, but the great mass prefers family life (family life of the future, be it understood). They prefer isolated apartments.” A community living together under one roof “would be hateful, were it the general rule. Isolation, alternating with time spent in society, is the normal desire of human nature.” [Op. Cit., pp. 123–4] Thus the aim is “Communism, but not the monastic or barrack-room Communism formerly advocated [by state socialists], but the free Communism which places the products reaped or manufactured at the disposal of all, leaving to each the liberty to consume them as he pleases in his [or her] own home.” [The Place of Anarchism in the Evolution of Socialist Thought, p. 7] Needless to say, each household, like each workplace, would be under the control of its users and socialisation exists to ensure that remains the case (i.e., that people cannot become tenants/subjects of landlords).

See section I.6 for a discussion of how socialisation and free access could work.

Beyond this basic vision of self-management and socialisation, the schools of anarchism vary. Mutualism eliminates wage labour and unites workers with the means of production they use. Such a system is socialist as it is based on self-management and workers’ control/ownership of the means of production. However, other social anarchists argue that such a system is little more than “petit-bourgeois co-operativism” in which the worker-owners of the co-operatives compete in the marketplace with other co-operatives for customers, profits, raw materials, etc. — a situation that could result in many of the same problems that arise under capitalism or even a return to capitalism (see section I.1.3). Some Mutualists recognise this danger. Proudhon, as discussed in section I.3.5,
advocated an agro-industrial federation to combat the effects of market forces in generating inequality and wage labour. In addition, supporters of mutualism can point to the fact that existing co-operatives rarely fire their members and are far more egalitarian in nature than corresponding capitalist firms. This they argue will ensure that mutualism will remain socialist, with easy credit available to those who are made unemployed to start their own co-operatives again.

In contrast, within anarcho-collectivism and anarcho-communism society as a whole owns the means of life, which allows for the elimination of both competition for survival and the tendency for workers to develop a proprietary interest the enterprises in which they work. As Kropotkin argued, "[t]here is no reason why the factory ... should not belong to the community ... It is evident that now, under the capitalist system, the factory is the curse of the village, as it comes to overwork children and to make paupers of its male inhabitants; and it is quite natural that it should be opposed by all means by the workers ... But under a more rational social organisation, the factory would find no such obstacles; it would be a boon to the village." Needless to say, such a workplace would be based on workers’ self-management, as “the workers ... ought to be the real managers of industries.” [Fields, Factories and Workshops Tomorrow, p. 152 and p. 157] This “socially organised industrial production” (to use Kropotkin’s term) would ensure a decent standard of living without the problems associated with a market, even a non-capitalist one.

In other words, the economy is communalised, with land and the means of production being turned into common “property”. The community determines the social and ecological framework for production while the workforce makes the day-to-day decisions about what to produce and how to do it. This is because a system based purely on workplace assemblies effectively disenfranchises those individuals who do not work but live with the effects of production (e.g., ecological disruption). In Murray Bookchin’s words, ... it will not survive if economic factors tend persistently to dissolve it. In other words, political right requires to be buttressed by economic right”. A free society could not survive if “capital and commerce” existed, as it would be “divided into two classes — one of landlords, capitalists, and entrepreneurs, the other of wage-earning proletarians, one rich, the other poor.” Thus “in an economic context, confederation may be intended to provide reciprocal security in commerce and industry ... The purpose of such specific federal arrangements is to protect the citizens ... from capitalist and financial exploitation, both from within and from the outside; in their aggregate they form ... an agro-industrial federation” [The Principle of Federation, p. 74, p. 67 and p. 70]

While capitalism results in “interest on capital” and “wage-labour or economic servitude, in short inequality of condition”, the “agro-industrial federation ... will tend to foster increasing equality ... through mutualism in credit and insurance ... guaranteeing the right to work and to education, and an organisation of work which allows each labourer to become a skilled worker and an artist, each wage-earner to become his own master.” The “industrial federation” will apply “on the largest scale” the “principles of mutualism” and “economic solidarity”. As “industries are sisters”, they “are parts of the same body” and “one cannot suffer without the others sharing in its suffering. They should therefore federate ... in order to guarantee the conditions of common prosperity, upon which no one has an exclusive claim.” Thus mutualism sees “all industries guaranteeing one another mutually” as well as “organising all public services in an economical fashion and in hands other than the state’s.” [Op. Cit., p. 70, p. 71, p. 72 and p. 70]

Later anarchists took up, built upon and clarified these ideas of economic federation. There are two basic kinds of confederation: an industrial one (i.e., a federation of all workplaces of a certain type) and a regional one (i.e. a federation of all syndicates within a given economic area). Thus there would be a federation for each industry and a federation of all syndicates in a geographical area.
I.3.5 What would confederations of syndicates do?

Voluntary confederation among syndicates is considered necessary by social anarchists for numerous reasons but mostly in order to decide on the policies governing relations between syndicates and to co-ordinate their activities. This could vary from agreeing technical standards, to producing guidelines and policies on specific issues, to agreeing major investment decisions or prioritising certain large-scale economic projects or areas of research. In addition, they would be the means by which disputes could be solved and any tendencies back towards capitalism or some other class society identified and acted upon.

This can be seen from Proudhon, who was the first to suggest the need for such federations. “All my economic ideas developed over the last twenty-five years,” he stated, “can be defined in three words: Agro-industrial federation”. This was required because “[h]owever impeccable in its basic logic the federal principle may be the aim would be to advance “a holistic approach to an ecologically oriented economy” with key policy decisions “made by citizens in face-to-face assemblies — as citizens, not simply as workers, farmers, or professionals … As citizens, they would function in such assemblies by their highest level — their human level — rather than as socially ghettoised beings. They would express their general human interests, not their particular status interests.” These communalised economies would join with others “into a regional confederal system. Land, factories, and workshops would be controlled by the popular assemblies of free communities, not by a nation-state or by worker-producers who might very well develop a proprietary interest in them.” [Remaking Society, p. 194]

An important difference between workplace and community assemblies is that the former can be narrow in focus while the latter can give a hearing to solutions that bring out the common ground of people as people rather than as workers in a specific workplace or industry. This would be in the context of communal participation, through face-to-face voting of the whole community in local neighbourhood and confederal assemblies, which will be linked together through voluntary federations. It does not mean that the state owns the means of production, as under Marxism-Leninism or social democracy, because there is no state under libertarian socialism (for more on community assemblies, see section I.5).

This means that when a workplace is communalised workers’ self-management is placed within the broader context of the community, becoming an aspect of community control. This does not mean that workers’ do not control what they do or how they do it. Rather, it means that the framework within which they make their decisions is determined by the community. For example, the local community may decide that production should maximise recycling and minimise pollution, and workers informed of this decision make investment and production decisions accordingly. In addition, consumer groups and co-operatives may be given a voice in the confederal congresses of syndicates or even in the individual
workplaces (although it would be up to local communities to decide whether this would be practical or not). In these ways, consumers could have a say in the administration of production and the type and quality of the product, adding their voice and interests in the creation as well as the consumption of a product.

Given the general principle of social ownership and the absence of a state, there is considerable leeway regarding the specific forms that collectivisation might take — for example, in regard to methods of distribution, the use or non-use of money, etc. — as can be seen by the different systems worked out in various areas of Spain during the Revolution of 1936–39. Nevertheless, freedom is undermined when some communities are poor while others are wealthy. Therefore the method of surplus distribution must insure that all communities have an adequate share of pooled revenues and resources held at higher levels of confederation as well as guaranteed minimum levels of public services and provisions to meet basic human needs. That is why anarchists have supported the need for syndicates and communities to federate (see next section).

Finally, one key area of disagreement between anarchist schools is how far socialisation should go. Mutualists think that it should only include the means of production while communist-anarchists argue that socialisation, to be consistent, must embrace what is produced as well as what produced it. Collectivist-anarchists tend to agree with mutualists on this, although many think that, over time, the economy would evolve into communism as the legacies of capitalism and scarcity are overcome. Proudhon spoke for the mutualists:

“This, then, is the first point settled: property in product, if we grant so much, does not carry with it property in the means of production; that seems to me to need no further demonstration ... all ... are proprietors of their products — not one is proprietor of the means of production. The right to product is exclusive — jus in re; the right to want to do. It would not be the case of workplaces simply being allocated tasks by some central body and expected to fulfil them (a task which, ignoring the real issues of bureaucracy and freedom, would be difficult to implement in any large and complex economy). Rather, workplaces would have the power to select tasks submitted to them by other associations (economic and communal) and control how the work required to achieve them was done. In this type of economic system, workers’ assemblies and councils would be the focal point, formulating policies for their individual workplaces and deliberating on industry-wide or economy-wide issues through general meetings of the whole workforce in which everyone would participate in decision making. Voting in the councils would be direct, whereas in larger confederal bodies, voting would be carried out by temporary, unpaid, mandated, and instantly recallable delegates, who would resume their status as ordinary workers as soon as their mandate had been carried out.

Mandated here means that the delegates from workers’ assemblies and councils to meetings of higher confederal bodies would be instructed, at every level of confederation, by the workers who elected them on how to deal with any issue. They would be delegates, not representatives, and so would attend any confederal meeting with specific instructions on how to vote on a particular issue. Recallable means that if they do not vote according to that mandate they will be replaced and the results of the vote nullified. The delegates, in other words, would be given imperative mandates (binding instructions) that committed them to a framework of policies within which they would have to act, and they could be recalled and their decisions revoked at any time for failing to carry out the mandates they were given (this support for mandated delegates has existed in anarchist theory since at least 1848, when Proudhon argued that it was “a consequence of universal suffrage” to ensure that “the people ... do not ... abjure their sovereignty.” [No Gods, No Masters, vol. 1, p. 63]). Because of this right of mandating and recalling their delegates, the workers’ assemblies at the
the regional confederations can be formed, modified, added to or reformed according to local conditions and changing circumstances.”

[Syndicalism, p. 58]

As would be imagined, these confederations are voluntary associations and "[just as factory autonomy is vital in order to keep the Guild system alive and vigorous, the existence of varying democratic types of factories in independence of the National Guilds may also be a means of valuable experiment and fruitful initiative of individual minds. In insistently refusing to carry their theory to its last ‘logical’ conclusion, the Guildsmen [and anarchists] are true to their love of freedom and varied social enterprise.” [G.D.H. Cole, Op. Cit., p. 65]

This, it must be stressed does not mean centralised control from the top:

“But when we say that ownership of the tools of production, including the factory itself, should revert to the corporation [i.e. confederation] we do not mean that the workers in the individual workshops will be ruled by any kind of industrial government having power to do what it pleases with the tools of production. No, the workers in the various factories have not the slightest intention of handing over their hard-won control ... to a superior power ... What they will do is ... to guarantee reciprocal use of their tools of production and accord their fellow workers in other factories the right to share their facilities, receiving in exchange the same right to share the facilities of the fellow workers with whom they have contracted the pact of solidarity.” [James Guillaume, “On Building the New Social Order”, pp. 356–79, Bakunin on Anarchism, pp. 363–364]

So collectivist and communist anarchism, like mutualism, is rooted in self-management in the workplace. This implies the ability of workers to pick the kinds of productive tasks they

means is common — jus ad rem.” [What is Property?, pp. 120–1]

For libertarian communists, socialisation should be extended to the products of labour as well. This means that as well as having free access to the means of production, people would also have free access to the goods and services produced by them. Again, this does not imply people having to share the possessions they use. Rather it means that instead of having to buy the goods in question they are distributed freely, according to need. To maintain socialisation of the means of product but not in goods means basing society “on two absolutely opposed principles, two principles that contradict one another continually.” [Kropotkin, The Conquest of Bread, p. 163] The need is to go beyond the abolition of wage labour into the abolition of money (the wages system). This is because any attempt at measuring a person’s contribution to society will be flawed and, more importantly, people “differ from one another by the amount of their needs. There is the young unmarried woman and the mother of a family of five or six children. For the employer of our days there is no consideration of the needs of” each and “the labour cheque ... acts in the same way.” [Kropotkin, Act For Yourselves, pp. 108–9]

Regardless of precisely which mode of distribution specific individuals, workplaces, communes or areas picks, socialisation would be underlying all. Free access to the means of production will ensure free individuals, including the freedom to experiment with different anarchistic economic systems.

I.3.4 What relations would exist between individual syndicates?

Just as individuals associate together to work on and overcome common problems, so would syndicates. Few, if any, workplaces
are totally independent of others. They require raw materials as inputs and consumers for their products. Therefore there will be links between different syndicates. These links are twofold: firstly, free agreements between individual syndicates; secondly, confederations of syndicates (within branches of industry and regionally).

Combined with this desire for free co-operation is a desire to end centralised systems. The opposition to centralisation is often framed in a distinctly false manner. This can be seen when Alex Nove, a leading market socialist, argued that ‘there are horizontal links (market), there are vertical links (hierarchy). What other dimension is there?’ [The Economics of Feasible Socialism, p. 226] In other words, to oppose central planning means to embrace the market. This is not true: horizontal links need not be market based any more than vertical links need be hierarchical. An anarchist society must be based essentially on horizontal links between individuals and associations, freely co-operating together as they (not a central body) sees fit. This co-operation will be source of many links in an anarchist economy. When a group of individuals or associations meet together and discuss common interests and make common decisions they will be bound by their own decisions. This is radically different from a central body giving out orders because those affected will determine the content of these decisions. In other words, instead of decisions being handed down from the top, they will be created from the bottom up.

Let us consider free agreement. Anarchists recognise the importance of letting people organise their own lives. This means that they reject central planning and instead urge direct links between workers’ associations. In the words of Kropotkin, ‘[f]ree workers would require a free organisation, and this cannot have any other basis than free agreement and free co-operation, without sacrificing the autonomy of the individual.’ Those directly involved in production (and in consumption) know their needs far better than any bureaucrat. Thus voluntary agreement is the basis of a free economy, such agreements being “entered by free consent, as a free choice be-

“The general principle is clear: each industry forms itself into a federation of self-governing collectives; the control of each industry is wholly in the hands of the workers in that industry, and these collectives administer the whole economic life of the country.” [Anarchy and Order, p. 49]

Kropotkin’s comments on federalism between communes indicate this (a syndicate can be considered as a producers’ commune). “The Commune of tomorrow,” he argued “will know that it cannot admit any higher authority; above it there can only be the interests of the Federation, freely accepted by itself as well as other communes.” So federalism need not conflict with autonomy, as each member would have extensive freedom of action within its boundaries and so each “Commune will be absolutely free to adopt all the institutions it wishes and to make all the reforms and revolutions it finds necessary.” [Words of a Rebel, p. 83] Moreover, these federations would be diverse and functional. Economic federation would a produce a complex inter-networking between associations and federations:

“Our needs are in fact so various, and they emerge with such rapidity, that soon a single federation will not be sufficient to satisfy them all. The Commune will then feel the need to contract other alliances, to enter into other federations. Belonging to one group for the acquisition of food supplies, it will have to join a second group to obtain other goods, such as metals, and then a third and a fourth group for textiles and works of art.” [Op. Cit., p. 87]

Therefore, a confederation of syndicates would be adaptive to its members needs. As Tom Brown argued, the “syndicalist mode of organisation is extremely elastic, therein is its chief strength, and
“Anarchists are strenuously opposed to the authoritarian, centralist spirit ... So they picture a future social life in the basis of federalism, from the individual to the municipality, to the commune, to the region, to the nation, to the international, on the basis of solidarity and free agreement. And it is natural that this ideal should be reflected also in the organisation of production, giving preference as far as possible, to a decentralised sort of organisation; but this does not take the form of an absolute rule to be applied in every instance. A libertarian order would be in itself ... rule out the possibility of imposing such a unilateral solution.” [Luigi Fabbri, “Anarchy and ‘Scientific Communism’”, pp. 13–49, The Poverty of Statism, Albert Meltzer (ed.), p. 23]

A confederation of syndicates (called a “guild” by some libertarian socialists, or “industrial union” by others) works on two levels: within an industry and across industries. The basic operating principle of these confederations is the same as that of the syndicate itself — voluntary co-operation between equals in order to meet common needs. In other words, each syndicate in the confederation is linked by horizontal agreements with the others, and none owe any obligations to a separate entity above the group (see section A.2.11 for more on the nature of anarchist confederation). As Herbert Read summarised:

tween different courses equally open to each of the agreeing parties.” [Anarchism, p. 52 and p. 69] Without the concentration of wealth and power associated with capitalism, free agreement will become real and no longer a mask for hierarchy.

The anarchist economy “starts from below, not from above. Like an organism, this free society grows into being from the simple unit up to the complex structure. The need for ... the individual struggle for life” is “sufficient to set the whole complex social machinery in motion. Society is the result of the individual struggle for existence; it is not, as many suppose, opposed to it.” So anarchists think that “[i]n the same way that each free individual has associated with his brothers [and sisters!] to produce ... all that was necessary for life, driven by no other force than his [or her] desire for the full enjoyment of life, so each institution is free and self-contained, and co-operates and enters into agreements with others because by so doing it extends its own possibilities.” This suggests a decentralised economy — even more decentralised than capitalism (which is decentralised only in capitalist mythology, as shown by big business and transnational corporations, for example) — one “growing ever more closely bound together and interwoven by free and mutual agreements.” [George Barrett, The Anarchist Revolution, p. 18]

An anarchist economy would be based on spontaneous order as workers practised mutual aid and free association. For communist anarchists, this would take the form of “free exchange without the medium of money and without profit, on the basis of requirement and the supply at hand.” [Alexander Berkman, What is Anarchism?, p. 217] “Anarchists”, summarised Rocker, “desire a federation of free communities which shall be bound to one another by their common economic and social interest and shall arrange their affairs by mutual agreement and free contract.” [Anarcho-Syndicalism, p. 1] An example of one such agreement would be orders for products and services:
“This factory of ours is, then, to the fullest extent consistent with the character of its service, a self-governing unit, managing its own productive operations, and free to experiment to the heart’s content in new methods, to develop new styles and products... This autonomy of the factory is the safeguard... against the dead level of mediocrity, the more than adequate substitute for the variety which the competitive motive was once supposed to stimulate, the guarantee of liveliness, and of individual work and workmanship.” [G.D.H. Cole, *Guild Socialism Restated*, p. 59]

This means that free agreement will ensure that customers would be able to choose their own suppliers, meaning that production units would know whether they were producing what their customers wanted, when they wanted it (i.e., whether they were meeting individual and social needs). If they were not, customers would go elsewhere, to other production units within the same branch of production. We should stress that in addition to this negative check (i.e. “exit” by consumers) it is likely, via consumer groups and co-operatives as well as communes, that workplaces will be subject to positive checks on what they produced. Consumer groups, by formulating and communicating needs to producer groups, will have a key role in ensuring the quality of production and goods and that it satisfies their needs (see section I.4.7 for more details of this).

These direct horizontal links between syndicates are essential to ensure that goods are produced which meet the needs of those who requested them. Without specific syndicates requesting specific goods at specific times to meet specific requirements, an economy will not meet people’s needs. A central plan, for example, which states that 1 million tonnes of steel or 25 million shirts need to be produced in a year says nothing about what specifically needs to be produced and when, which depends on how it will be used and the needs of those using it. As Malatesta argued, “it would be an absurd waste of energy to produce blindly for all possible needs, rather than calculating the actual needs and organising to satisfy them with as little effort as possible... the solution lies in accord between people and in the agreements ... that will come about” between them. [At the Café, pp. 62–3] Hence the pressing need for the classic anarchist ideas on free association, free agreement and mutual aid! These direct links between producer and consumer can communicate the information required to produce the right thing at the right time! As Kropotkin argued (based on his firsthand experience of state capitalism in Russia under Lenin):

> “production and exchange represent an undertaking so complicated that the plans of the state socialists... would prove to be absolutely ineffective as soon as they were applied to life. No government would be able to organise production if the workers themselves through their unions did not do it in each branch of industry; for in all production there arise daily thousands of difficulties which no government can solve or foresee. It is certainly impossible to foresee everything. Only the efforts of thousands of intelligences working on the problems can cooperate in the development of a new social system and find the best solutions for the thousands of local needs.” [Anarchism, pp. 76–77]

This brings us to the second form of relationships between syndicates, namely confederations of syndicates in the same industry or geographical area. It should be noted that inter-workplace federations are not limited to collectivist, syndicalist and communist anarchists. The idea of federations of syndicates goes back to Proudhon’s agro-industrial federation, first raised during the 1848 revolution and named as such in his 1863 book, *The Principle of Federation*. The French mutualist suggested an “agro-industrial
I.4.10 What would be the advantage of a wide basis of surplus distribution?

We noted earlier (in section I.3.1) that competition between syndicates could lead to “co-operative egotism” (to use Kropotkin’s term) and that to eliminate this problem, the basis of collectivisation needs to be widened so that production is based on need and, as a result, surpluses are distributed society-wide. The advantage of a wide surplus distribution is that it allows all to have a decent life and stop market forces making people work harder and longer to survive in the economy (see section I.1.3). The consolidation of syndicates that would otherwise compete will, it is hoped, lead to a more efficient allocation of resources and technical improvements so allowing the transformation of work and reduction of the time we need to spend in production. We will back up this claim with illustrations from the Spanish Revolution as well as from today’s system.

Collectivisation in Catalonia embraced not only major industries like municipal transportation and utilities, but smaller establishments as well: small factories, artisan workshops, service and repair shops, etc. Augustin Souchy describes the process as follows:

“The artisans and small workshop owners, together with their employees and apprentices, often joined the union of their trade. By consolidating their efforts and pooling their resources on a fraternal basis, the shops were able to undertake very big projects and provide services on a much wider scale ... The collectivisation of the hairdressing shops provides an excellent example of how the transition of a small-scale manufacturing and service industry from capitalism to socialism was achieved ... Before July 19th, 1936 [the date of the Revolution], there were 1,100 hairdressing parlours in Barcelona, most of them owned by poor wretches living from hand to mouth.

I confess I am not charmed with an ideal of life held out by those who think that the normal state of human
beings is that of struggling to get on; that the trampling, crushing, elbowing, and treading on each other's heels, which form the existing type of social life, are the most desirable lot of human kind, or anything but the disagreeable symptoms of one of the phases of industrial progress.” [Collected Works, vol. III, p. 754]

The aim of anarchism is far more than the end of inequality. Hence Proudhon’s comment that socialism’s “underlying dogma” is that the “objective of socialism is the emancipation of the proletariat and the eradication of poverty.” This emancipation would be achieved by ending “wage slavery” via “democratically organised workers’ associations.” [No Gods, No Masters, vol. 1, p. 57 and p. 62] Or, to use Kropotkin’s expression, “well-being for all” — physical, mental, emotional and ethical! Indeed, by concentrating on just poverty and ignoring the emancipation of the proletariat, the real aims of socialism are obscured:

“The 'right to well-being' means the possibility of living like human beings, and of bringing up children to be members of a society better than ours, whilst the 'right to work' only means the right to be a wage-slave, a drudge, ruled over and exploited by the middle class of the future. The right to well-being is the Social Revolution, the right to work means nothing but the Treadmill of Commercialism. It is high time for the worker to assert his right to the common inheritance, and to enter into possession of it.” [Kropotkin, Op. Cit., p. 44]

So, while refusing to define exactly how an anarchist system will work, we will explore the implications of how the anarchist principles and ideals outlined above could be put into practice. Bear in mind that this is just a possible framework for a system which has few historical examples to draw upon. This means that we development is not inherently anti-anarchist. A non-oppressive, non-exploitative, ecological society will develop non-oppressive, non-exploitative, ecological technology just as capitalism has developed technology which facilitates exploitation, oppression and environmental destruction. Thus an anarchist questions technology: The best technology? Best for whom? Best for what? Best according to what criteria, what visions, according to whose criteria and whose visions?

Needless to say, different communities and different regions would choose different priorities and different lifestyles. As the CNT’s Zaragoza resolution on libertarian communism made clear, “those communes which reject industrialisation … may agree upon a different model of co-existence.” Using the example of “naturists and nudists,” it argued that they “will be entitled to an autonomous administration released from the general commitments” agreed by the communes and their federations and “their delegates to congresses of the … Confederation of Autonomous Libertarian Communes will be empowered to enter into economic contacts with other agricultural and industrial Communes.” [quoted by Jose Peirats, The CNT in the Spanish Revolution, vol. 1, p. 106]

For most anarchists, though, technological advancement is important in a free society in order to maximise the free time available for everyone and replace mindless toil with meaningful work. The means of doing so is the use of appropriate technology (and not the worship of technology as such). Only by critically evaluating technology and introducing such forms which empower, are understandable and are controllable by individuals and communities as well as minimising ecological distribution can this be achieved. Only this critical approach to technology can do justice to the power of the human mind and reflect the creative powers which developed the technology in the first place. Unquestioning acceptance of technological progress is just as bad as being unquestioningly anti-technology.
"Technological determinism, the view that machines make history rather than people, is not correct ... If social changes now upon us seem necessary, it is because they follow not from any disembodied technological logic, but form a social logic.” Technology conforms to “the interests of power” but as “technological process is a social process” then “it is, like all social processes, marked by conflict and struggle, and the outcome, therefore, is always ultimately indeterminate.” Viewing technological development “as a social process rather than as an autonomous, transcendent, and deterministic force can be liberating ... because it opens up a realm of freedom too long denied. It restores people once again to their proper role as subjects of the story, rather than mere pawns of technology ... And technological development itself, now seen as a social construct, becomes a new variable rather than a first cause, consisting of a range of possibilities and promising a multiplicity of futures.” [Forces of Production, pp. 324–5]

This does not mean that we have to reject all technology and industry because it has been shaped by, or developed within, class society. Certain technologies are, of course, so insanely dangerous that they will no doubt be brought to a prompt halt in any sane society. Similarly, certain forms of technology and industrial process will be impossible to transform as they are inherently designed for oppressive ends. Many other industries which produce absurd, obsolete or superfluous commodities will, of course, cease automatically with the disappearance of their commercial or social rationales. But many technologies, however they may presently be misused, have few if any inherent drawbacks. They could be easily adapted to other uses. When people free themselves from domination, they will have no trouble rejecting those technologies that are harmful while adapting others to beneficial uses.

Change society and the technology introduced and utilised will likewise change. By viewing technological progress as a new variable, dependent on those who make the decisions and the type of society they live in, allows us to see that technological devel-

"When considering the feasibility of the social system advocated by the pure anarchists, we need to be clear about the criteria against which it should be measured. It would, for example, be unreasonable to demand that it be assessed against such yardsticks of a capitalist economy as annual rate of growth, balance of trade and
so forth ... evaluating anarchist communism by means of the criteria which have been devised to measure capitalism’s performance does not make sense ... capitalism would be ... baffled if it were demanded that it assess its operations against the performance indicators to which pure anarchists attached most importance, such as personal liberty, communal solidarity and the individual’s unconditional right to free consumption. Faced with such demands, capitalism would either admit that these were not yardsticks against which it could sensibly measure itself or it would have to resort to the type of grotesque ideological subterfuges which it often employs, such as identifying human liberty with the market and therefore with wage slavery ... The pure anarchists’ confidence in the alternative society they advocated derived not from an expectation that it would quantitatively outperform capitalism in terms of GNP, productivity or similar capitalist criteria. On the contrary, their enthusiasm for anarchist communism flowed from their understanding that it would qualitatively differ from capitalism. Of course, this is not to say that the pure anarchists were indifferent to questions of production and distribution ... they certainly believed that anarchist communism would provide economic well-being for all. But neither were they prepared to give priority to narrowly conceived economic expansion, to neglect individual liberty and communal solidarity, as capitalism regularly does.” [Hatta Shuzo and Pure Anarchism in Interwar Japan, pp. 191–3]

Finally, anarchists are well aware that transforming how an economy works does not happen overnight. As discussed in section I.2.2, we have long rejected the idea of instantaneous social intelligence, the increasing of the inventive spirit tenfold, a hundredfold; it is the dawn of a new science ... It is a revolution in the minds of men, as deep, and deeper still, than in their institutions ... the sole fact of having laid hands on middle-class property will imply the necessity of completely re-organising the whole of economic life in the workplaces, the dockyards, the factories.” [Op. Cit., p. 192]

And some think that industry and technology will remain unchanged by such a process and that workers will continue doing the same sort of work, in the same way, using the same methods!

For Kropotkin “all production has taken a wrong direction, as it is not carried on with a view to securing well-being for all” under capitalism. [Op. Cit., p. 101] Well-being for all obviously includes those who do the producing and so covers the structure of industry and the technological processes used. Similarly, well-being also includes a person’s environment and surroundings and so technology and industry must be evaluated on an ecological basis. Technological progress in an anarchist society, needless to say, will have to take into account these factors as well as others people think are relevant, otherwise the ideal of “well-being for all” is rejected (see section I.4.15 for a discussion of what the workplace of the future could look like).

So, technology always partakes of and expresses the basic values of the social system in which it is embedded. If you have a system (capitalism) that alienates everything, it will naturally produce alienated forms of technology and it will orient those technologies so as to reinforce itself. Capitalists will select technology which reinforces their power and profits and skew technological change in that direction rather than in those which empower individuals and make the workplace more egalitarian.

All this suggests that technological progress is not neutral but dependent on who makes the decisions. As David Noble argues,
revolution implies the transformation of technology and industry, just as it implies the transformation of society.

This process of transforming work can be seen from the Spanish Revolution. Immediately after taking over the means of production, the Spanish workers started to transform it. They eliminated unsafe and unhygienic working conditions and workplaces and created new workplaces based on safe and hygienic working conditions. Working practices were transformed as those who did the work (and so understood it) managed it. Many workplaces were transformed to create products required by the war effort (such as weapons, ammunition, tanks and so on) and to produce consumer goods to meet the needs of the local population as the normal sources of such goods, as Kropotkin predicted, were unavailable due to economic disruption and isolation. Needless to say, these were only the beginnings of the process but they clearly point the way any libertarian social revolution would progress, namely the total transformation of work, industry and technology. Technological change would develop along new lines, ones which will take into account human and ecological needs rather the power and profits of a minority.

Explicit in anarchism is the belief that capitalist and statist methods cannot be used for socialist and libertarian ends. In our struggle for workers’ and community self-management is the awareness that workplaces are not merely sites of production — they are also sites of reproduction, the reproduction of certain social relationships based on specific relations of authority between those who give orders and those who take them. The battle to democratise the workplace, to place the collective initiative of the direct producers at the centre of any productive activity, is clearly a battle to transform the workplace, the nature of work and, by necessity, technology as well. As Kropotkin argued:

“revolution is more than a mere change of the prevailing political system. It implies the awakening of human in-

I.4.1 What is the point of economic activity in anarchy?

The basic point of economic activity is an anarchist society is to ensure, to use Kropotkin’s expression, “well-being for all”. Rather than toil to make the rich richer, people in a free society would work together to “ensure to society as a whole its life and further development.” Such an economy would be based upon “giving society the greatest amount of useful products with the least waste of human energy”, to meet “the needs of mankind”. [The Conquest of Bread, p. 43, p. 144 and p. 175] Needless to say, today we must also add: with the least disruption of nature.

In terms of needs, it should be stressed that these are not limited to just material goods (important as they may be, particularly
to those currently living in poverty). Needs also extend to having meaningful work which you control, pleasant and ecologically viable surroundings, the ability to express oneself freely within and outwith work, and a host of other things associated with the quality of life rather than merely survival. Anarchism seeks to transform economic activity rather than merely liberate it by self-management (important as that is).

Therefore, for anarchists, “[r]eal wealth consists of things of utility and beauty, in things that help create strong, beautiful bodies and surroundings inspiring to live in.” Anarchism’s “goal is the freest possible expression of all the latent powers of the individual” and this “is only possible in a state of society where man [sec!] is free to choose the mode of work, the conditions of work, and the freedom to work. One whom making a table, the building of a house, or the tilling of the soil is what the painting is to the artist and the discovery to the scientist — the result of inspiration, of intense longing, and deep interest in work as a creative force.” [Emma Goldman, *Red Emma Speaks*, p. 67 and p. 68]

So the point of economic activity in an anarchist society is to produce as and when required and not, as under capitalism, to organise production for the sake of production in order to make profits for the few. Production, to use Kropotkin’s words, is to become “the mere servant of consumption; it must mould itself on the wants of the consumer, not dictate to him [or her] conditions.” [Act For Yourselves, p. 57] This should not be taken to imply that anarchism seeks production for the sake of production in order to meet all the needs of all. Far from it, as such a regime would, to quote Malatesta, involve “employing all of one’s strength in producing things, because taken literally, this would mean working until one is exhausted, which would mean that by maximising the satisfaction of human needs we destroy humanity.” In other words, a free society would take into account the wants of the producers (and the planet we live on) when meeting the wants of consumers. Thus, there would be a balance sought. “What we would like,” continued

struments of labour ... would be to condemn all humanity — which is infinity too numerous today to exist ... on the simple gifts of nature ... — to ... death by starvation.” His solution to the question of technology was, like Kropotkin’s, to place it at the service of those who use it, to create “the intimate and complete union of capital and labour” so that it would “not... remain concentrated in the hands of a separate, exploiting class.” Only this could “smash the tyranny of capital.” [The Basic Bakunin, pp. 90–1] So most anarchists seek to transform rather then eliminate technology and to do that we need to be in possession of the means of production before we can decide what to keep, what to change and what to throw away as inhuman. In other words, it is not enough to get rid of the boss, although this is a necessary first step!

Anarchists of all types recognise the importance of critically evaluating technology, industry and so on. The first step of any revolution will be the seizing of the means of production. The second immediate step will be the start of their radical transformation by those who use them and are affected by them (i.e. communities, those who use the products they produce and so on). Few, if any, anarchists seek to maintain the current industrial set-up or apply, unchanged, capitalist technology. We doubt that many of the workers who use that technology and work in industry will leave either unchanged. Rather, they will seek to liberate the technology they use from the influences of capitalism, just as they liberated themselves.

This will, of course, involve the shutting down (perhaps instantly or over a period of time) of many branches of industry and the abandonment of such technology which cannot be transformed into something more suitable for use by free individuals. And, of course, many workplaces will be transformed to produce new goods required to meet the needs of the revolutionary people or close due to necessity as a social revolution will disrupt the market for their goods — such as producers of luxury export goods or suppliers of repressive equipment for state security forces. Altogether, a social
be to make them aware of this and point to the only alternative, which, in broad terms, is that the producers of wealth must control it for the benefit of all.” [Why Work?, Vernon Richards (ed.), p. 206]

This means that in an anarchist society, technology would have to be transformed and/or developed which empowered those who used it, so reducing any oppressive aspects associated with it. As Kropotkin argued, we are (potentially) in a good position, because “for the first time in the history of civilisation, mankind has reached a point where the means of satisfying its needs are in excess of the needs themselves. To impose, therefore, as hitherto been done, the curse of misery and degradation upon vast divisions of mankind, in order to secure well-being and further development for the few, is needed no more: well-being can be secured for all, without placing on anyone the burden of oppressive, degrading toil and humanity can at last build its entire social life on the basis of justice.” [Op. Cit., p. 2] The question is, for most anarchists, how can we humanise and modify this technology and make it socially and individually liberatory, rather than destroying it (where applicable, of course, certain forms of technology and industry will be eliminated due to their inherently destructive nature).

For Kropotkin, like most anarchists, the way to humanise technology and industry was for “the workers [to] lay hands on factories, houses and banks” and so “present production would be completely revolutionised by this simple fact.” This would be the start of a process which would integrate industry and agriculture, as it was “essential that work-shops, foundries and factories develop within the reach of the fields.” [The Conquest of Bread, p. 190] Such a process would obviously involve the transformation of both the structure and technology of capitalism rather than its simple and unthinking application. As discussed in section A.3.9, while a few anarchists do seek to eliminate all forms of technology, most would agree with Bakunin when he argued that “to destroy ... all the in-

Malatesta, “is for everybody to live in the best possible way: so that everybody with a minimum amount of effort will obtain maximum satisfaction.” [At the Café, p. 61]

So while the basic aim of economic activity in an anarchist society is, obviously, producing wealth — i.e., satisfying individual needs — without enriching capitalists or other parasites in the process, it is far more than that. Yes, an anarchist society will aim to create society in which everyone will have a standard of living suitable for a fully human life. Yes, it will aim to eliminate poverty, inequality, individual want and social waste and squalor, but it aims for far more than that. It aims to create free individuals who express their individuality within and outwith “work.” After all, what is the most important thing that comes out of a workplace? Pro-capitalists may say profits, others the finished commodity or good. In fact, the most important thing that comes out of a workplace is the worker. What happens to us in the workplace will have an impact on all aspects of our life and so cannot be ignored.

To value “efficiency” above all else, as capitalism says it does (it, in fact, values profits above all else and hinders developments like workers’ control which increase efficiency but harm power and profits), is to deny our own humanity and individuality. Without an appreciation for grace and beauty there is no pleasure in creating things and no pleasure in having them. Our lives are made drearier rather than richer by “progress.” How can a person take pride in their work when skill and care are considered luxuries (if not harmful to “efficiency” and, under capitalism, the profits and power of the capitalist and manager)? We are not machines. We have a need for craftpersonship and anarchism recognises this and takes it into account in its vision of a free society. This means that, in an anarchist society, economic activity is the process by which we produce what is useful but, in addition, is also beautiful (to use Oscar Wilde’s words) in a way that empowers the individual. We anarchists charge capitalism with wasting human energy and time due to its irrational nature and workings, energy that could
be spent creating what is beautiful (both in terms of individualities
and products of labour). Under capitalism we are “toiling to live,
that we may live to toil.” [William Morris, *Useful Work Versus
Useless Toil*, p. 37]

In addition, we must stress that the aim of economic activity
within an anarchist society is **not** to create equality of outcome
— i.e. everyone getting exactly the same goods. As we noted in
section A.2.5, such a “vision” of “equality” attributed to socialists
by pro-capitalists indicates more the poverty of imagination and
ethics of the critics of socialism than a true account of socialist
ideas. Anarchists, like other genuine socialists, support **social**
equality in order to maximise freedom, including the freedom to
choose between options to satisfy ones needs. To treat people
equally, as equals, means to respect their desires and interests, to
acknowledge their right to equal liberty. To make people consume
the same as everyone else does not respect the equality of all to
develop ones abilities as one sees fit. Socialism means equality
of opportunity to satisfy desires and interests, not the imposition
of an abstract minimum (or maximum) on unique individuals.
To treat unique individuals equally means to acknowledge that
uniqueness, not to deny it.

Thus the **real** aim of economic activity within an anarchy is to
ensure “that every human being should have the material and moral
means to develop his humanity.” [Michael Bakunin, *The Political
Philosophy of Bakunin*, p. 295] And you cannot develop your
humanity if you cannot express yourself freely. Needless to say, to
treat unique people “equally” (i.e. identically) is simply evil. You
cannot, say, have a 70 year old woman do the same work in order
to receive the same income as a 20 year old man. No, anarchists do
not subscribe to such “equality,” which is a product of the “ethics
of mathematics” of capitalism and **not** of anarchist ideals. Such a
scheme is alien to a free society. The equality anarchists desire is a
social equality, based on control over the decisions that affect you.
The aim of anarchist economic activity, therefore, is to provide the
and anarchism. Some, such as Peter Kropotkin, were themselves
scientists and saw great potential for the use of advanced technol-
gy to expand human freedom. Others have held technology at
arm’s length, concerned about its oppressive uses, and a few have
rejected science and technology completely. All of these are, of
course, possible anarchist positions. But most anarchists support
Kropotkin’s viewpoint, but with a healthy dose of practical Lud-
dism when viewing how technology is (ab)used in capitalism (“The
worker will only respect machinery **in the day** when it becomes his
friend, shortening his work, rather than as **today**, his enemy, taking
away jobs, killing workers.” [Emile Pouget quoted by David Noble,
*Op. Cit.*, p. 15]). Vernon Richards stated the obvious:

> “We maintain that the term ‘productivity’ has meaning,
or is socially important, only when all production serves
a public need ...

> “Productivity has meaning if it results both in a raising
of living standards and an increase of leisure for all.

> “‘Productivity’ in the society we live in, because it is not
a means to a social end, but is the means whereby indus-
trialists hope to make greater profits for themselves and
their shareholders, should be resolutely resisted by the
working people, for it brings them neither greater leisure
nor liberation from wage-slavery. Indeed for many it
means unemployment ...”

> “The attempts by managers and the technocrats to
streamline industry are resisted intuitively by most
work people even if they haven’t two political ideas
in their heads to knock together, not because they are
resistant to change **per se** but because they cannot see
that ‘change’ will do them any good. And of course they
are right! Such an attitude is nevertheless a negative
one, and the task of anarchist propagandists should
person, per week is spent on baking bread. Now, what happens if the introduction of automation, as desired, planned and organised by the workers themselves, reduces the amount of labour required for bread production to 15 person-hours per week? Clearly, no one stands to lose — even if someone’s work is “displaced” that person will continue to receive the same access to the means of life as before — and they might even gain. This last is due to the fact that 5 person-hours have been freed up from the task of bread production, and those person-hours may now be used elsewhere or converted to leisure, either way increasing each person’s standard of living.

Obviously, this happy outcome derives not only from the technology used, but also (and critically) from its use in an equitable economic and social system: in the end, there is no reason why the use of technology cannot be used to empower people and increase their freedom!

Of course technology can be used for oppressive ends. Human knowledge, like all things, can be used to increase freedom or to decrease it, to promote inequality or reduce it, to aid the worker or to subjugate them, and so on. Technology, as we argued in section D.10, cannot be considered in isolation from the society it is created and used in. Most anarchists are aware that, to quote expert David Noble, “Capital invested in machines that would re-enforce the system of domination [within the capitalist workplace], and this decision to invest, which might in the long run render the chosen technology economical, was not itself an economical decision but a political one, with cultural sanction.” [Progress Without People, p. 6] In a hierarchical society, technology will be introduced that serves the interests of the powerful and helps marginalise and disempower the majority (“technology is political,” to use Noble’s expression). It does not evolve in isolation from human beings and the social relationships and power structures between them.

It is for these reasons that anarchists have held a wide range of opinions concerning the relationship between human knowledge goods required for “equal freedom for all, an equality of conditions such as to allow everyone to do as they wish.” [Errico Malatesta, Errico Malatesta: His Life and Ideas, p. 49] Thus anarchists “demand not natural but social equality of individuals as the condition for justice and the foundations of morality.” [Bakunin, Op. Cit., p. 249]

Under capitalism, instead of humans controlling production, production controls them. Anarchists want to change this and desire to create an economic network which will allow the maximisation of an individual’s free time in order for them to express and develop their individuality (while creating what is beautiful). So instead of aiming just to produce because the economy will collapse if we did not, anarchists want to ensure that we produce what is useful in a manner which liberates the individual and empowers them in all aspects of their lives.

This desire means that anarchists reject the capitalist definition of “efficiency.” Anarchists would agree with Albert and Hahnel when they argue that “since people are conscious agents whose characteristics and therefore preferences develop over time, to access long-term efficiency we must access the impact of economic institutions on people’s development.” Capitalism, as we have explained before, is highly inefficient in this light due to the effects of hierarchy and the resulting marginalisation and disempowerment of the majority of society. As Albert and Hahnel go on to note, “self-management, solidarity, and variety are all legitimate valuative criteria for judging economic institutions ... Asking whether particular institutions help people attain self-management, variety, and solidarity is sensible.” [The Political Economy of Participatory Economics, p. 9]

In other words, anarchists think that any economic activity in a free society is to do useful things in such a way that gives those doing it as much pleasure as possible. The point of such activity is to express the individuality of those doing it, and for that to happen they must control the work process itself. Only by self-
management can work become a means of empowering the individual and developing his or her powers.

In a nutshell, to use the words of William Morris, useful work will replace useless toil in an anarchist society.

I.4.2 Why do anarchists desire to abolish work?

Anarchists desire to see humanity liberate itself from work. This may come as a shock for many people and will do much to “prove” that anarchism is essentially utopian. However, we think that such an abolition is not only necessary, it is possible. This is because work as we know it today is one of the major dangers to freedom we face.

If by freedom we mean self-government, then it is clear that being subjected to hierarchy in the workplace subverts our abilities to think and judge for ourselves. Like any skill, critical analysis and independent thought have to be practised continually in order to remain at their full potential. So a workplace environment with power structures undermines these abilities. This was recognised by Adam Smith who argued that the “understandings of the greater part of men are necessarily formed by their ordinary employments.” That being so, “the man whose life is spent in performing a few simple operations, of which the effects too are, perhaps, always the same, or nearly the same, has no occasion to extend his understanding ... and generally becomes as stupid and ignorant as it is possible for a human creature to be ... But in every improved and civilised society this is the state into which the labouring poor, that is the great body of the people, must necessarily fall, unless government takes pains to prevent it.” [quoted by Noam Chomsky, Year 501, p. 18]

Smith’s argument (usually ignored by those who claim to follow his ideas) is backed up by extensive evidence. Different types of authority structures and different technologies have different effects on human thought and understanding. For example, increased productivity under capitalism usually leads to further exploitation and domination, displaced workers, economic crisis, etc. However, it does not have to so in an anarchist world. By way of example, consider a commune in which 5 people desire to be bakers (or 5 people are needed to work the communal bakery) and 20 hours of production per
ysis (as outlined in section I.4.4) and would show when it would make economic, social and ecological sense to switch industrial techniques to more efficient and/or more empowering and/or more ecologically sound methods. Such an evaluation would indicate levels of inputs and compare them to the likely outputs. For example, if a new production technique reduced the number of hours worked in total (comparing the hours worked to produce the machinery with that reduced in using it) as well as reducing waste products for a similar output, then such a technique would be implemented.

Similarly with communities. A commune will obviously have to decide upon and plan civic investment (e.g. new parks, housing and so forth). They will also have the deciding say in industrial developments in their area as it would be unfair for syndicate to just decide to build a cement factory next to a housing co-operative if they did not want it. There is a case for arguing that the local commune will decide on investment decisions for syndicates in its area (for example, a syndicate may produce X plans which will be discussed in the local commune and one plan finalised from the debate). Regional decisions (for example, a new hospital) could be decided at the appropriate level, with information fed from the health syndicate and consumer co-operatives. The actual location for investment decisions will be worked out by those involved. However, local syndicates must be the focal point for developing new products and investment plans in order to encourage innovation.

Therefore, under anarchism no capital market is required to determine whether investment is required and what form it would take. The work that apologists for capitalism claim currently is done by the stock market can be replaced by co-operation and communication between workplaces in a decentralised, confederated network. The relative needs of different consumers of a product can be evaluated by the producers and an informed decision reached on where it would best be used. Without private property, housing, schools, hospitals, workplaces and so on will no longer on those who work within them. Carole Pateman notes that the evidence suggests that "[o]nly certain work situations were found to be conducive to the development of the psychological characteristics suitable for freedom, such as "the feelings of personal confidence and efficacy that underlay the sense of political efficacy." [Participation and Democratic Theory, p. 51] She quotes one expert who argues that within capitalist companies based upon a highly rationalised work environment and extensive division of labour, the worker has no control over the pace or technique of his work, no room to exercise skill or leadership and so they “have practically no opportunity to solve problems and contribute their own ideas.” The worker, according to a psychological study, is “resigned to his lot ... more dependent than independent ... he lacks confidence in himself ... he is humble ... the most prevalent feeling states ... seem to be fear and anxiety.” [quoted by Pateman, Op. Cit., p. 51 and p. 52]

The evidence Pateman summarises shows that an individual’s “attitudes will depend to a large degree on the authority structure of his [or her] work environment”, with workplaces which are more autocratic and with a higher division of labour being worse for an individual’s sense of self-esteem, feelings of self-worth and autonomy. In workplaces where “the worker has a high degree of personal control over his [or her] work ... and a very large degree of freedom from external control” or is based on the “collective responsibility of a crew of employees” who “had control over the pace and method of getting the work done, and the work crews were largely internally self-disciplining” a different social character is seen. [Pateman, Op. Cit., pp. 52–3] This was characterised by “a strong sense of individualism and autonomy, and a solid acceptance of citizenship in the large society” and “a highly developed feeling of self-esteem and a sense of self-worth and is therefore ready to participate in the social and political institutions of the community.” Thus the “nature of a man’s work affects his social character and personality” and that an “industrial environment tends to breed a distinct social type.” [R. Blauner, quoted by Pateman, Op. Cit., p. 52]
Thus, to quote Bob Black (who notes that Smith’s comments against the division of labour are his “critique of work”), the capitalist workplace turns us into “stultified submissives” and places us “under the sort of surveillance that ensures servility.” For this reason anarchists desire, to use Bob Black’s phrase, “the abolition of work.” [The Abolition of Work and other essays, p. 26, p. 22 and p. 19]

Work, in this context, does not mean any form of productive activity. Far from it. Work (in the sense of doing necessary things or productive activity) will always be with us. There is no getting away from it; crops need to be grown, schools built, homes fixed, and so on. No, work in this context means any form of labour in which the worker does not control his or her own activity. In other words, wage labour in all its many forms.

A society based upon hierarchical relations in production will result in a society within which the typical worker uses few of their abilities, exercise little or no control over their work because they are governed by a boss during working hours. This has been proved to lower the individual’s self-esteem and feelings of self-worth, as would be expected in any social relationship that denied self-government. Capitalism is marked by an extreme division of labour, particularly between mental and physical labour. It reduces the worker to a mere machine operator, following the orders of his or her boss. Therefore, a libertarian that does not support economic liberty (i.e. self-management) is no libertarian at all.

Capitalism bases its rationale for itself on consumption and this results in a viewpoint which minimises the importance of the time we spend in productive activity. Anarchists consider that it is essential for individual’s to use and develop their unique attributes and capacities in all walks of life, to maximise their powers. Therefore, the idea that “work” should be ignored in favour of consumption is totally mad. Productive activity is an important way of developing our inner-powers and express ourselves; in other words, be creative. Capitalism’s emphasis on

As a rule of thumb, syndicates that produce investment goods would be inclined to supply other syndicates who are experiencing excess demand before others, all other things being equal. Because of such guidelines and communication between producers, investment would go to those industries that actually required them. In other words, customer choice (as indicated by individuals choosing between the output of different syndicates) would generate information that is relevant to investment decisions.

As production would be decentralised as far as it is sensible and rational to do so, each locality/region would be able to understand its own requirements and apply them as it sees fit. This means that large-scale planning would not be conducted (assuming that it could work in practice, of course) simply because it would not be needed. This, combined with an extensive communications network, would ensure that investment not only did not duplicate unused plant within the economy but that investments take into account the specific problems and opportunities each locality has. Of course, collectives would experiment with new lines and technology as well as existing lines and so invest in new technologies and products. As occurs under capitalism, extensive consumer testing would occur before dedicating major investment decisions to new products.

In addition, investment decisions would also require information which showed the different outcomes of different options. By this we simply mean an analysis of how different investment projects relate to each other in terms of inputs and outputs, compared to the existing techniques. This would be in the form of cost-benefit anal-
willing to do that work. This would be applicable for small scale investment decisions or those which other communes/syndicates do not think of as essential.

This we have two inter-related investment strategies. A communist-anarchist society would prioritise certain forms of investment by the use of “necessary” and “optional” investment projects. This socialisation of investment will allow a free society to ensure that social needs are meet while maintaining a decentralised and dynamic economy. Major projects to meet social needs will be organised effectively, but with diversity for minor projects. The tasks of ensuring investment production, making orders for specific goods and so forth, would be as decentralised as other aspects of a free economy and so anarchism “proposes ... [t]hat usufruct of instruments of production — land included — should be free to all workers, or groups of workers”, that “workers should group themselves, and arrange their work as their reason and inclination prompt” and that “the necessary connections between the various industries ... should be managed on the same voluntary principle.” [Charlotte M. Wilson, Anarchist Essays, p. 21]

As for when investment is needed, it is clear that this will be based on the changes in demand for goods in both collectivist and communist anarchism. As Guillaume put it: “By means of statistics gathered from all the communes in a region, it will be possible to scientifically balance production and consumption. In line with these statistics, it will also be possible to add more help in industries where production is insufficient and reduce the number of men where there is a surplus of production.” [“On Building the New Social Order”, pp. 356–79, Bakunin on Anarchism, p. 370] Obviously, investment in branches of production with a high demand would be essential and this would be easily seen from the statistics generated by the collectives and communes. Tom Brown made this obvious point:

“Goods, as now, will be produced in greater variety, for workers like producing different kinds, and new models, consumption shows the poverty of that system. As Alexander Berkman argued:

“We do not live by bread alone. True, existence is not possible without opportunity to satisfy our physical needs. But the gratification of these by no means constitutes all of life. Our present system of disinheriting millions, made the belly the centre of the universe, so to speak. But in a sensible society ... [t]he feelings of human sympathy, of justice and right would have a chance to develop, to be satisfied, to broaden and grow” [What is Anarchism?, pp. 152–3]

Therefore, capitalism is based on a constant process of alienated consumption, as workers try to find the happiness associated within productive, creative, self-managed activity in a place it does not exist – on the shop shelves. This can partly explain the rise of both mindless consumerism and the continuation of religions, as individuals try to find meaning for their lives and happiness, a meaning and happiness frustrated in wage labour and other hierarchies.

Capitalism’s impoverishment of the individual’s spirit is hardly surprising. As William Godwin argued, “[t]he spirit of oppression, the spirit of servility, and the spirit of fraud, these are the immediate growth of the established administration of property. They are alike hostile to intellectual and moral improvement.” [The Anarchist Reader, p. 131] Any system based on hierarchical relationships in work will result in a deadening of the individual and in a willingness to defer to economic masters. Which is why Anarchists desire to change this and create a society based upon freedom in all aspects of life. Hence anarchists desire to abolish work, simply because it restricts the liberty and distorts the individuality of those who have to do it. To quote Emma Goldman:
“Anarchism aims to strip labour of its deadening, dulling aspect, of its gloom and compulsion. It aims to make work an instrument of joy, of strength, of colour, of real harmony, so that the poorest sort of a man should find in work both recreation and hope.” [Anarchism and Other Essays, p. 61]

Anarchists do not think that by getting rid of work we will not have to produce necessary goods. Far from it. An anarchist society “doesn’t mean we have to stop doing things. It does mean creating a new way of life based on play; in other words, a ludic revolution ... a collective adventure in generalised joy and freely interdependent exuberance. Play isn’t passive.” The aim is “to abolish work and replace it, insofar as it serves useful purposes, with a multitude of new kinds of free activities. To abolish work requires going at it from two directions, quantitative and qualitative.” In terms of the first, “we need to cut down massively the amount of working being done” (luckily, “most work is useless or worse and we should simply get rid of it”). For the second, “we have to take what useful work remains and transform it into a pleasing variety of game-like and craft-like pastimes, indistinguishable from other pleasurable pastimes, except that the happen to yield useful end-products.” [Bob Black, Op. Cit., p. 17 and p. 28]

This means that in an anarchist society every effort would be made to reduce boring, unpleasant activity to a minimum and ensure that whatever productive activity is required to be done is as pleasant as possible and based upon voluntary labour. However, it is important to remember Cornelius Castoriadis point: “Socialist society will be able to reduce the length of the working day, and will have to do so, but this will not be the fundamental preoccupation. Its first task will be to ... transform the very nature of work. The problem is not to leave more and more ‘free’ time to individuals — which might well be empty time — so that they may fill it at will with ‘poetry’ or the carving of wood. The problem is to make all time a time of liberty

This would involve, possibly, dividing investment into two groups — necessary and optional – and using statistical techniques to consider the impact of an investment decision (for example, the use of input-output tables could be used to see if a given investment decision in, say, the steel industry would require investment in energy production). In this way social needs and social costs would be taken into account and ensure that investment decisions are not taken in isolation from one another, so causing bottle-necks and insufficient production due to lack of inputs from other industries.

Necessary investments are those which have been agreed upon by the appropriate confederation. It means that resources and productive capacity are prioritised towards them, as indicated in the agreed investment project. It will not be required to determine precisely which syndicates will provide the necessary goods for a given investment project, just that it has priority over other requests. Under capitalism, when a bank gives a company credit, it rarely asks exactly which companies will be contracted with when the money is spent but, rather, it gives the company the power to command the labour of other workers by supplying them with credit/money. Similarly in an anarcho-communist society, except that the other workers have agreed to supply their labour for the project in question by designating it a “necessary investment”. This means when a request arrives at a syndicate for a “necessary investment” a syndicate must try and meet it (i.e. it must place the request into its production schedule before “optional” requests, assuming that it has the capacity to meet it). A list of necessary investment projects, including what they require and if they have been ordered, will be available to all syndicates to ensure such a request is a real one.

Optional investment is simply investment projects which have not been agreed to by a confederation. This means when a syndicate or commune places orders with a syndicate they may not be met or take longer to arrive. The project may go ahead, but it depends on whether the syndicate or commune can find workers
the economy would grind to a halt). Nor does the interest rate reflect a preference for future goods (as discussed in section C.2.6 interest rates reflect market power, the degree of monopoly in the credit industry, the social and class position of individuals and a host of other factors). Moreover, a developed economy replaces a process in time with a process in space. In peasant and tribal societies, individuals usually did have to spend time and energy making their own tools (the hunter had to stop hunting in order to create a new improved bow or spear). However, with a reasonably developed division of work then different people produce the tools others use and can do so at the same time as the others produce. If workers producing investment goods had to wait until sufficient savings had been gathered before starting work then it is doubtful that any developed economy could function. Thus the notion that “investment” needs saving is somewhat inappropriate, as different workplaces produce consumption goods and others produce investment goods. The issue becomes one of ensuring that enough people and resources go towards both activities.

How would this work? Obviously investment decisions have implications for society as a whole. The implementation of these decisions require the use of existing capacity and so must be the responsibility of the appropriate level of the confederation in question. Investment decisions taken at levels above the production unit become effective in the form of demand for the current output of the syndicates which have the capacity to produce the goods required. This would require each syndicate to “prepare a budget, showing its estimate of requirements both of goods or services for immediate use, and of extensions and improvements.” [Cole, Op. Cit., p. 145] These budgets and investment projects would be discussed at the appropriate level of the confederation (in this, communist-anarchism would be similar to collectivist anarchism).

The confederation of syndicates/communes would be the ideal forum to discuss (communicate) the various investment plans required — and to allocate scarce resources between different ends.

and to allow concrete freedom to find expression in creative activity.” Essentially, the “problem is to put poetry into work.” [Political and Social Writings, vol. 2, p. 107]

This is why anarchists desire to abolish “work” (i.e., productive activity not under control of the people doing it), to ensure that whatever productive economic activity is required to be done is managed by those who do it. In this way it can be liberated, transformed, and so become a means of self-realisation and not a form of self-negation. In other words, anarchists want to abolish work because “[l]ife, the art of living, has become a dull formula, flat and inert.” [Berkman, Op. Cit., p. 166] Anarchists want to bring the spontaneity and joy of life back into productive activity and save humanity from the dead hand of capital. Anarchists consider economic activity as an expression of the human spirit, an expression of the innate human need to express ourselves and to create. Capitalism distorts these needs and makes economic activity a deadening experience by the division of labour and hierarchy. We think that “industry is not an end in itself, but should only be a means to ensure to man his material subsistence and to make accessible to him the blessings of a higher intellectual culture. Where industry is everything and man is nothing begins the realm of a ruthless economic despotism whose workings are no less disastrous than those of any political despotism. The two mutually augment one another, and they are fed from the same source.” [Rudolph Rocker, Anarchosyndicalism, p. 2]

One last point on the abolition of work. May 1st — International Workers’ Day — was, as we discussed in section A.5.2, created to commemorate the Chicago Anarchist Martyrs. Anarchists then, as now, think that it should be celebrated by strike action and mass demonstrations. In other words, for anarchists, International Workers’ Day should be a non-work day! That sums up the anarchist position to work nicely — that the celebration of workers’ day should be based on the rejection of work.
The collection of articles in *Why Work? Arguments for the Leisure Society* (edited by Vernon Richards) is a useful starting place for libertarian socialist perspectives on work.

### I.4.3 How do anarchists intend to abolish work?

Basically by workers’ self-management of production and common ownership of the means of production. It is hardly in the interests of those who do the actual “work” to have bad working conditions, boring, repetitive labour, and so on. Therefore, a key aspect of the liberation from work is to create a self-managed society, “a society in which everyone has equal means to develop and that all are or can be at the same time intellectual and manual workers, and the only differences remaining between men [and women] are those which stem from the natural diversity of aptitudes, and that all jobs, all functions, give an equal right to the enjoyment of social possibilities.” [Errico Malatesta, *Anarchy*, p. 42]

Essential to this task is decentralisation and the use of appropriate technology. Decentralisation is important to ensure that those who do work can determine how to liberate it. A decentralised system will ensure that ordinary people can identify areas for technological innovation and so understand the need to get rid of certain kinds of work. Unless ordinary people understand and control the introduction of technology, then they will never be fully aware of the benefits of technology and resist advances which may be in their best interests to introduce. This is the full meaning of appropriate technology, namely the use of technology which those most affected feel to be best in a given situation. Such technology may or may not be technologically “advanced” but it will be of the kind which ordinary people can understand and, most importantly, control.

Therefore, in collectivism, investment funds would exist for syndicates, communes and their in community (“People’s”) banks. These would be used to store depreciation funds and as well as other funds agreed to by the syndicates for investment projects (for example, confederations of syndicates may agree to allocate a certain percentage of their labour notes to a common account in order to have the necessary funds available for major investment projects). Similarly, individual syndicates and communes would also create a store of funds for their own investment projects. Moreover, the confederations of syndicates to which these “People’s Banks” would be linked would also have a defined role in investment decisions to ensure that production meets demand by being the forum which decides which investment plans should be given funding (this, we stress, is hardly “central planning” as capitalist firms also plan future investments to meet expected demand). In this, collectivist anarchism is like mutualism and so we would also expect interest-free credit being arranged to facilitate investment.

In a communist-anarchist society, things would be slightly different as this would not have the labour notes used in mutualism and collectivism. This means that the productive syndicates would agree that a certain part of their total output and activity will be directed to investment projects. In effect, each syndicate is able to draw upon the resources approved of by the co-operative commonwealth in the form of an agreed claim on the labour power of society (investment “is essentially an allocation of material and labour, and fundamentally, an allocation of human productive power.” [Cole, *Op. Cit.*, pp. 144–5]). In this way, mutual aid ensures a suitable pool of resources for the future from which all benefit.

It should be remembered that savings are not required before credit can be issued. Under capitalism, for example, banks regularly issue credit in excess of their actual reserves of cash (if they did not then, one, they would not be very good capitalists and, two,
would be allocated to projects which the mutual banks considered likely to succeed and repay the original loan. In this way, the increase in the money supply implied by these acts of credit providing does not generate inflation for money is not created wantonly but rather is aimed at projects which are considered likely to increase the supply of goods and services in the economy (see section G.3.6). Another key source of investment would be internal funds (i.e., retained savings) as is the case with co-operatives today: “Worker-managers finance their new investments partly out of internal funds and partly from external loans ... Entrepreneurial activity of worker-managers ... generates profits and losses, i.e., higher or lower income per worker.” [Branko Horvat, “The Theory of the Worker-Managed Firm Revisited”, pp. 9–25, Journal of Comparative Economics, vol. 10, no. 1, p. 21] As discussed in section I.1.1, eliminating the stock market will not harm investment (almost all investment funds are from other sources) and will remove an important negative influence in economic activity.

Collectivist and communist anarchists recognise that credit is based on human activity, which is represented as money. As Cole pointed out, the “understanding of this point [on investment] depends on a clear appreciation of the fact that all real additions to capital take the form of directing a part of the productive power of labour and using certain materials not for the manufacture of products and the rendering of services incidental to such manufacture for purposes of further production.” [Op. Cit., p. 143] So collectivist and communist anarchists agree with their Mutualist cousins when they state that “[a]ll credit presupposes labour, and, if labour were to cease, credit would be impossible” and that the “legitimate source of credit” was “the labouring classes” who “ought to control it” and for “whose benefit [it should] be used”. [Dana, Op. Cit., p. 35]

The potential for rational use of technology can be seen from capitalism. Under capitalism, technology is used to increase profits, to expand the economy, not to liberate all individuals from useless toil (it does, of course, liberate a few from such “activity”). As economist Juliet B. Schor points out, productivity “measures the goods and services that result from each hour worked. When productivity rises, a worker can either produce the current output in less time, or remain at work the same number of hours and produce more.” With rising productivity, we are presented with the possibility of more free time. For example, since 1948 the level of productivity of the American worker “has more than doubled. In other words, we could now produce our 1948 standard of living ... in less than half the time it took that year. We could actually have chosen the four-hour day. Or a working year of six months.” [The Overworked American, p. 2]

And, remember, these figures include production in many areas of the economy that would not exist in a free society — state and capitalist bureaucracy, weapons production for the military, property defence, the finance sector, and so on. As Alexander Berkman argued, millions are “engaged in trade, ... advertisers, and various other middlemen of the present system” along with the armed forces and “the great numbers employed in unnecessary and harmful occupations, such as building warships, the manufacture of ammunition and other military equipment” would be “released for useful work by a revolution.” [What is Anarchism, pp. 224–5] So the working week will be reduced simply because more people will be available for doing essential work. Moreover, goods will be built to last and so much production will become sensible and not governed by an insane desire to maximise profits at the expense of everything else. In addition, this is not taking into account the impact of a more just distribution of consumption in terms of living standards and production, meaning that a standard of living produced by working half the time would be far higher than that implied by Schor’s 1948 baseline (not to mention the advances in technology.
since then either!). In short, do not take the 1948 date as implying a literal return to that period!

Moreover, a lower working week would see productivity rising. “Thus,” as one economist summarises, “when the hours of labour were reduced, the better-rested workers were often able to produce as much or more in the shorter hours than they had previously in longer hours.” Yet “competition between employers would make it unlikely that a working day of optimal length would be established” under capitalism. In addition, “more disposable time might better contribute to people’s well-being — that is, to things such as trust, health, learning, family life, self-reliance and citizenship”. While this may reduce such conventional economic measures as GDP, the fact is that such measures are flawed. After all, “an increase in GDP could represent a diminution of free time accompanied by an increased output of goods and services whose sole utility was either facilitating labour-market participation or repairing some of the social damage that resulted from the stress of overwork or neglect of non-market activity.” [Tom Walker, “Why Economists dislike a Lump of Labor”, pp. 279–91, Review of Social Economy, vol. 65, No. 3, p. 286, pp. 287–8 and p. 288]

All this suggests the level of production for useful goods with a four-hour working day would be much higher than the 1948 level or, of course, the working day could be made even shorter. As such, we can easily combine a decent standard of living with a significant reduction of the necessary working time required to produce it. Once we realise that much work under capitalism exists to manage aspects of the profit system or are produced as a result of that system and the damage it does, we can see how a self-managed society can give us more time for ourselves in addition to producing useful goods (rather than working long and hard to produce surplus value for the few).

However, anarchists do not see it as simply a case of reducing the hours of work will keeping the remaining work as it. That would be silly. We aim to transform what useful productive activity is left.

Thus, to ensure producer accountability of production to consumption, no bureaucratic body is required in libertarian communism (or any other form of anarchism). Rather, communication and direct action by those affected by unresponsive producers would be an effective and efficient means of ensuring the accountability of production to consumption.

I.4.8 What about investment decisions?

Obviously, a given society needs to take into account changes in consumption and so invest in new means of production. An anarchist society is no different. As Guild Socialist G.D.H Cole points out, “it is essential at all times, and in accordance with considerations which vary from time to time, for a community to preserve a balance between production for ultimate use and production for use in further production. And this balance is a matter which ought to be determined by and on behalf of the whole community.” [Guild Socialism Restated, p. 144]

How this balance is determined varies according to the school of anarchist thought considered. All agree, however, that such an important task should be under effective community control.

The mutualists see the solution to the problems of investment as creating a system of mutual banks, which reduce interest rates to zero. This would be achieved “[b]y the organisation of credit, on the principle of reciprocity or mutualism … In such an organisation credit is raised to the dignity of a social function, managed by the community; and, as society never speculates upon its members, it will lend its credit … at the actual cost of transaction.” [Charles A. Dana, Proudhon and his “Bank of the People”***, p. 36] Loan
Rather, a bare minimum of goods required for survival would still be available.

In the unlikely event this general boycott did not result in a change of heart, then two options are left available. These are either the break-up of the syndicate and the finding of its members new work places or the giving/selling of the syndicate to its current users (i.e. to exclude them from the society they obviously do not want to be part of). The decision of which option to go for would depend on the importance of the workplace in question and the desires of the syndicates’ members. If the syndicate refused to disband, then option two would be the most logical choice (unless the syndicate controlled a scare resource). The second option would, perhaps, be best as this would drive home the benefits of association as the expelled syndicate would have to survive on its own, subject to survival by selling the product of its labour and would soon return to the fold.

Kropotkin argued in these terms over 100 years ago:

“When a railway company, federated with other companies, fails to fulfil its engagements, when its trains are late and goods lie neglected at the stations, the other companies threaten to cancel the contract, and that threat usually suffices.

“It is generally believed ... that commerce only keeps to its engagements from fear of lawsuits. Nothing of the sort; nine times in ten the trader who has not kept his word will not appear before a judge ... the sole fact of having driven a creditor to bring a lawsuit suffices for the vast majority of merchants to refuse for good to have any dealings with a man who has compelled one of them to go to law.

“This being so, why should means that are used today among ... traders in the trade, and railway companies

When self-management becomes universal we will see the end of division of labour as mental and physical work becomes unified and those who do the work also manage it. This will allow “the free exercise of all the faculties of man” both inside and outside “work.” [Peter Kropotkin, The Conquest of Bread, p. 148] The aim of such a development would be to turn productive activity, as far as possible, into an enjoyable experience. In the words of Murray Bookchin it is the quality and nature of the work process that counts:

“If workers’ councils and workers’ management of production do not transform the work into a joyful activity, free time into a marvellous experience, and the workplace into a community, then they remain merely formal structures, in fact, class structures. They perpetuate the limitations of the proletariat as a product of bourgeois social conditions. Indeed, no movement that raises the demand for workers’ councils can be regarded as revolutionary unless it tries to promote sweeping transformations in the environment of the work place.” [Post-Scarcity Anarchism, p. 88]

Work will become, primarily, the expression of a person’s pleasure in what they are doing and become like an art — an expression of their creativity and individuality. Work as an art will become expressed in the workplace as well as the work process, with workplaces transformed and integrated into the local community and environment (see section I.4.15). This will obviously apply to work conducted in the home as well, otherwise the “revolution, intoxicated with the beautiful words, Liberty, Equality, Solidarity, would not be a revolution if it maintained slavery at home. Half [of] humanity subjected to the slavery of the hearth would still have to rebel against the other half.” [Kropotkin, Op. Cit., p. 128]

In other words, anarchists desire “to combine the best part (in fact, the only good part) of work — the production of use-values — with
the best of play ... its freedom and its fun, its voluntariness and its 
intrinsic gratification”. In short, the transformation of production 
creating “what seems needful”) into “productive play”***. [Bob 
49]

Workers’ self-management of production (see section I.3.2) 
would be the means of achieving this. Only those subject to a 
specific mode of working can be in a position to transform it 
and their workplace into something fit for free individuals to 
create in. Only those who know a workplace which would only 
exist in a hierarchical system like capitalism can be in a position 
to decommission it safely and quickly. The very basis of free 
association will ensure the abolition of work, as individuals will 
apply for “work” they enjoy doing and so would be interested in 
reducing “work” they did not want to do to a minimum. Therefore, 
an anarchist society would abolish work by ensuring that those 
who do it actually control it. “Personal initiative will be encouraged 
and every tendency to uniformity and centralisation combated.” 
[Kropotkin, quoted by Martin Buber, Paths in Utopia, p. 42]

All this does not imply that anarchists think that individuals will 
not seek to “specialise” in one form of productive activity rather 
than another. Far from it, people in a free society will pick activities which interest them as the main focal point of their means of self-expression (after all, not everyone enjoys the same games and pastimes so why expect the same of productive play?). “It is evident,” noted Kropotkin, “that all men and women cannot equally enjoy the pursuit of scientific work. The variety of inclinations is such that some will find more pleasure in science, some others in art, and others again in some of the numberless branches of the production of wealth.” This “division of work” is commonplace in humanity this natural desire to do what interests you and what you are good at will be encouraged in an anarchist society. As Kropotkin argued, anarchists “fully recognise the necessity of specialisation of knowledge, but we maintain that specialisation must follow general 
goods or not pulling its weight, then those in contact with them 
would soon realise this. First, those unhappy with a syndicate’s 
work would appeal to them directly to get their act together. If 
this did not work, then they would notify their disapproval by re-
fusing to associate with them in the future (i.e. they would use 
their power of “exit” as well as refusing to provide the syndicate 
with any goods it requires). They would also let society as a whole 
know (via the media) as well as contacting consumer groups and 
co-operatives and the relevant producer and communal confed-
erations which they and the other syndicate are members of, who 
would, in turn, inform their members of the problems (the relevant 
confederations could include local and regional communal confed-
erations, the general cross-industry confederation, its own indus-
trial/communal confederation and the confederation of the syndi-
cate not pulling its weight). In today’s society, a similar process of 
“word of mouth” warnings and recommendations goes on, along 
with consumer groups and media. Our suggestions here are an ex-
tension of this common practice (that this process exists suggests 
that the price mechanism does not, in fact, provide consumers with 
all the relevant information they need to make decisions, but this 
is an aside).

If the syndicate in question, after a certain number of complaints 
had been lodged against it, still did not change its ways, then it 
would suffer non-violent direct action. This would involve the 
boycotting of the syndicate and (perhaps) its local commune (such 
as denying it products and investment), so resulting in the syndi-
cate being excluded from the benefits of association. The syndicate 
would face the fact that no one else wanted to associate with it and 
suffer a drop in the goods coming its way, including consumption 
products for its members. In effect, a similar process would occur 
to that of a firm under capitalism that looses its customers and so its 
income. However, we doubt that a free society would subject any 
person to the evils of destitution or starvation (as capitalism does).
met. This is because of the decentralised and federal nature of such a society.

So what is the mechanism which makes producers accountable to consumers in a libertarian communist society? Firstly, communes would practice their power of “exit” in the distributive network. If a syndicate was producing sub-standard goods or refusing to change their output in the face of changing consumer needs, then the communal stores would turn to those syndicates which were producing the goods desired. The original syndicates would then be producing for their own stocks, a pointless task and one few, if any, would do. After all, people generally desire their work to have meaning, to be useful. To just work, producing something no-one wanted would be such a demoralising task that few, if any, sane people would do it (under capitalism people put up with spirit destroying work as some income is better than none, such an “incentive” would not exist in a free society).

As can be seen, “exit” would still exist in libertarian communism. However, it could be argued that unresponsive or inefficient syndicates would still exist, exploiting the rest of society by producing rubbish (or goods which are of less than average quality) and consuming the products of other people’s labour, confident that without the fear of poverty and unemployment they can continue to do this indefinitely. Without the market, it is argued, some form of bureaucracy would be required (or develop) which would have the power to punish such syndicates. Thus the state would continue in “libertarian” communism, with the “higher” bodies using coercion against the lower ones to ensure they meet consumer needs or produced enough.

While, at first glance, this appears to be a possible problem on closer inspection it is flawed. This is because anarchism is based not only on “exit” but also “voice”. Unlike capitalism, libertarian communism is based on association and communication. Each syndicate and commune is in free agreement and confederation with all the others. Thus, a specific syndicate was producing bad education, and that general education must be given in science and handicraft alike. To the division of society into brain workers and manual workers we oppose the combination of both kinds of activities … we advocate the education integrale [integral education], or complete education, which means the disappearance of that pernicious division.” Anarchists are, needless to say, aware that training and study are required to qualify you to so some tasks and a free society would ensure that individuals would achieve the necessary recognised levels before undertaking them (by means of, say, professional bodies who organise a certification process). Kropotkin was aware, however, that both individuals and society would benefit from a diversity of activities and a strong general knowledge: “But whatever the occupations preferred by everyone, everyone will be the more useful in his [or her] branch if he [or she] is in possession of a serious scientific knowledge. And, whosoever he might be … he would be the gainer if he spent a part of his life in the workshop or the farm (the workshop and the farm), if he were in contact with humanity in its daily work, and had the satisfaction of knowing that he himself discharges his duties as an unprivileged producer of wealth.” [Fields, Factories and Workshops Tomorrow, p. 186, p. 172 and p. 186]

However, while specialisation would continue, the permanent division of individuals into manual or brain workers would be eliminated. Individuals will manage all aspects of the “work” required (for example, engineers will also take part in self-managing their workplaces), a variety of activities would be encouraged and the strict division of labour of capitalism will be abolished. In other words, anarchists want to replace the division of labour by the division of work. We must stress that we are not playing with words here. John Crump presents a good summary of the ideas of the Japanese anarchist Hatta Shuzo on this difference:

“[We must] recognise the distinction which Hatta made between the ‘division of labour’ … and the ‘division of
work’ ... while Hatta believed that the division of labour ... was the cause of class divisions and exploitation, he did not see anything sinister in the division of work ... On the contrary, Hatta believed that the division of work was a benign and unavoidable feature of any productive process: ‘it goes without saying that within society, whatever the kind of production, there has to be a division of work.’ ... [For] the dangers [of division of labour] to which Hatta [like other anarchists like Proudhon and Kropotkin] drew attention did not arise from a situation where, at any one time, different people were engaged in different productive activities ... What did spell danger, however, was when, either individually or collectively, people permanently divided along occupational lines ... and gave rise to the disastrous consequences ... [of] the degrading of labour to a mechanical function; the lack of responsibility for, understanding of, or interest in other branches of production; and the need for a superior administrative organ to co-ordinate the various branches of production.” [Hatta Shuzo and Pure Anarchism in Interwar Japan, pp. 146–7]

As Kropotkin argued:

“while a temporary division of functions remains the surest guarantee of success in each separate undertaking, the permanent division is doomed to disappear, and to be substituted by a variety of pursuits — intellectual, industrial, and agricultural — corresponding to the different capacities of the individual, as well as to the variety of capacities within every human aggregate.” [Op. Cit., p. 26]
nist goal eventually. Of course, for people used to capitalism this may sound totally utopian. Possibly it is. However, as Oscar Wilde said, a map of the world without Utopia on it is not worth having. One thing is sure, if the developments we have outlined above fail to appear and attempts at communism fail due to waste and demand exceeding supply then a free society would make the necessary decisions and introduce some means of limiting supply (such as, for example, labour notes, equal wages, and so on). Rest assured, though, “the difficulty will be solved and obstacles in the shape of making necessary changes in the detailed working of the system of production and its relation to consumption, will vanish before the ingenuity of the myriad minds vitally concerned in overcoming them.” [Charlotte M. Wilson, Anarchist Essays, p. 21]

I.4.7 What will stop producers ignoring consumers?

It is often claimed that without a market producers would ignore the needs of consumers. Without the threat (and fear) of unemployment and destitution and the promise of higher profits, producers would turn out shoddy goods. The holders of this argument point to the example of the Soviet Union which was notorious for terrible goods and a lack of consumer commodities.

Capitalism, in comparison to the old Soviet block, does, to some degree, make the producers accountable to the consumers. If the producer ignores the desires of the consumer then they will loose business to those who do not and be forced, perhaps, out of business (large companies, of course, due to their resources can hold out far longer than smaller ones). Thus we have the carrot (profits) and the stick (fear of poverty) – although, of course, the carrot can be used as a stick against the consumer (no profit, no sale, no matter how much the consumer may need it). Ignoring the obvious objection to this analogy (namely we are human beings, not don-

As an aside, supporters of capitalism argue that integrated labour must be more inefficient than divided labour as capitalist firms have not introduced it. This is false for numerous reasons.

Firstly, we have to put out the inhuman logic of the assertion. After all, few would argue in favour of slavery if it were, in fact, more productive than wage labour but such is the logical conclusion of this argument. If someone did argue that the only reason slavery was not the dominant mode of labour simply because it was inefficient we would consider them as less than human. Simply put, it is a sick ideology which happily sacrifices individuals for the sake of slightly more products. Sadly, that is what many defenders of capitalism do, ultimately, argue for.

Secondly, capitalist firms are not neutral structures but rather a system of hierarchies, with entrenched interests and needs. Managers will only introduce a work technique that maintains their power (and so their profits). As we argue in section J.5.12, while experiments in workers’ participation see a rise in efficiency and productivity, managers stop them simply because they recognise that workers’ control undercuts their power by empowering workers who then can fight for a greater slice of the value they produce (not to mention come to the conclusion that while the boss needs them to work, they don’t need to boss to manage them!). So the lack of integrated labour under capitalism simply means that it does not empower management nor secure their profits and power, not that it is less efficient.

Thirdly, the attempts by managers and bosses to introduce “flexibility” by eliminating unions suggests that integration is more efficient. After all, one of the major complaints directed towards union contracts are that they explicitly documented what workers could and could not do (for example, union members would refuse to do work which was outside their agreed job descriptions). This is usually classed as an example of the evil of regulations. However, if we look at it from the viewpoint of contract and division of labour, it exposes the inefficiency and inflexibility of both as a means of co-
operation. After all, what is this refusal actually mean? It means that the worker refuses to do work that is not specified in his or her contract! Their job description indicates what they have been contracted to do and anything else has not been agreed upon in advance. The contract specifies a clear, specified and agreed division of labour in a workplace between worker and boss.

While being a wonderful example of a well-designed contract, managers discovered that they could not operate their workplaces because of them. Rather, they needed a general “do what you are told” contract (which of course is hardly an example of contract reducing authority) and such a contract integrates numerous work tasks into one. The managers diatribe against union contracts suggests that production needs some form of integrated labour to actually work (as well as showing the hypocrisy of the labour contract under capitalism as labour “flexibility” simply means labour “commodification” — a machine does not question what its used for, the ideal under capitalism is a similar unquestioning nature for labour). The union job description indicates that production needs the integration of labour while demanding a division of work. As Cornelius Castoriadis argued:

“Modern production has destroyed many traditional professional qualifications. It has created automatic or semi-automatic machines. It has thereby itself demolished its own traditional framework for the industrial division of labour. It has given birth to a universal worker who is capable, after a relatively short apprenticeship, of using most machines. Once one gets beyond its class aspects, the ‘posting’ of workers to particular jobs in a big modern factory corresponds less and less to a genuine division of labour and more and more to a simple division of tasks. Workers are not allocated to given areas of the productive process and then riveted to them because their ‘occupational skills’ invariably correspond to the ‘skills required’
by non-hierarchical social relationships and organisations, individuals would have a strong sense of self and so be less inclined to mindlessly consume. As Fromm put it: "If I am what I am and not what I have, nobody can deprive me of or threaten my security and my sense of identity. My centre is within myself." [Op. Cit., p. 112] Such self-centred individuals do not have to consume endlessly to build a sense of security or happiness within themselves.

In other words, the well-developed individuality that an anarchist society would develop would have less need to consume than the average person in a capitalist one. This is not to suggest that life will be bare and without luxuries in an anarchist society, far from it. A society based on the free expression of individuality could be nothing but rich in wealth and diverse in goods and experiences. What we are arguing here is that an anarchist-communist society would not have to fear rampant consumerism making demand outstrip supply constantly and always precisely because freedom will result in a non-alienated society of well developed individuals.

It should not be forgotten that communism has two conditions, distribution according to need and production according to ability. If the latter condition is not met, if someone does not contribute to the goods available in the libertarian communist society, then the former condition is not likely to be tolerated and they would be asked to leave so reducing demand for goods. The freedom to associate means being free not to associate. Thus a free communist society would see goods being supplied as well as demanded. As Malatesta argued:

"Basic to the anarchist system, before communism or any other forms of social conviviality is the principle of the free compact; the rule of integral communism — 'from each according to his [or her] ability, to each according to his [or her] need' — applies only to those who accept it, including naturally the conditions which make it practicable." [quoted by Camillo Berneri, "The

By replacing the division of labour with the division of work, a free society will ensure that productive activity can be transformed into an enjoyable task (or series of tasks). By integrating labour, all the capacities of the producer can be expressed so eliminating a major source of alienation and unhappiness in society. "The main subject of social economy," argued Kropotkin, is "the economy of energy required for the satisfaction of human needs." These needs obviously expressed both the needs of the producers for empowering and interesting work and their need for a healthy and balanced environment. Thus Kropotkin discussed the "advantages" which could be "derive[d] from a combination of industrial pursuits with intensive agriculture, and of brain work with manual work." The "greatest sum total of well-being can be obtained when a variety of agricultural, industrial and intellectual pursuits are combined in each community; and that man [and woman] shows his best when he is in a position to apply his usually-varied capacities to several pursuits in the farm, the workshop, the factory, the study or the studio, instead of being riveted for life to one of these pursuits only." [Op. Cit., pp. 17–8] This means that "under socialism, factories would have no reason to accept the artificially rigid division of labour now prevailing. There will be every reason to encourage a rotation of workers between shops and departments and between production and office areas." The "residues of capitalism's division of labour gradually will have to be eliminated" as "socialist society cannot survive unless it demolishes this division." [Castoriadis, Op. Cit., p. 117]

Anarchists think that a decentralised social system will allow "work" to be abolished and economic activity humanised and made a means to an end (namely producing useful things and liberated individuals). This would be achieved by, as Rudolf Rocker puts it, the "alliance of free groups of men and women based on co-operative
labour and a planned administration of things in the interest of the community.” However, as things are produced by people, it could be suggested that this implies a “planned administration of people” (although few who suggest this danger apply it to capitalist firms which are like mini-centrally planned states). This objection is false simply because anarchism aims “to reconstruct the economic life of the peoples from the ground up and build it up anew in the spirit of Socialism” and, moreover, “only the producers themselves are fitted for this task, since they are the only value-creating element in society out of which a new future can arise.” Such a reconstructed economic life would be based on anarchist principles, that is “based on the principles of federalism, a free combination from below upwards, putting the right of self-determination of every member above everything else and recognising only the organic agreement of all on the basis of like interests and common convictions.” [Anarcho-Syndicalism, p. 72, p. 62 and p. 60]

In other words, those who produce also administer and so govern themselves in free association (and it should be pointed out that any group of individuals in association will make “plans” and “plan”, the important question is who does the planning and who does the work. Only in anarchy are both functions united into the same people). The “planned administration of things” would be done by the producers themselves, in their independent groupings. This would likely take the form (as we indicated in section I.3 of confederations of syndicates who communicate information between themselves and respond to changes in the production and distribution of products by increasing or decreasing the required means of production in a co-operative (i.e. “planned”) fashion. No “central planning” or “central planners” governing the economy, just workers co-operating together as equals (as Kropotkin argued, free socialism “must result from thousands of separate local actions, all directed towards the same aim. It cannot be dictated by a central body: it must result from the numberless local needs and wants.” [Act for Yourselves, p. 54]).

Therefore, most anarchists think that consumerism is a product of a hierarchical society within which people are alienated from themselves and the means by which they can make themselves really happy (i.e. meaningful relationships, liberty, self-managed productive activity, and so on). Consumerism is a means of filling the spiritual hole capitalism creates within us by denying our freedom and violating equality. This means that capitalism produces individuals who define themselves by what they have, not who they are. This leads to consumption for the sake of consumption, as people try to make themselves happy by consuming more commodities. But, as Erich Fromm pointed out, this cannot work for long and only leads to even more insecurity (and so even more consumption):

“If I am what I have and if what I have is lost, who then am I? Nobody but a defeated, deflated, pathetic testimony to a wrong way of living. Because I can lose what I have, I am necessarily constantly worried that I shall lose what I have.” [To Have Or To Be, p. 111]

Such insecurity easily makes consumerism seem a “natural” way of life and so make communism seem impossible. However, rampant consumerism is far more a product of lack of meaningful freedom within an alienated society than a “natural law” of human existence. In a society that encouraged and protected individuality
false personalities for products and provide solutions for problems that the advertisers themselves create if this were the case. Crude it may be, but advertising is based on the creation of insecurities, preying on fears and obscuring rational thought. In an alienated soci- ety in which people are subject to hierarchical controls, feelings of insecurity and lack of control and influence would be natural. It is these fears that advertising multiples — if you cannot have real freedom, then at least you can buy something new. Advertising is the key means of making people unhappy with what they have and who they are. It is naive to claim that advertising has no effect on the psyche of the receiver or that the market merely responds to the populace and makes no attempt to shape their thoughts. If advertising did not work, firms would not spend so much money on it! Advertising creates insecurities about such matter-of-course things and so generates irrational urges to buy which would not exist in a libertarian communist society.

However, there is a deeper point to be made here about consumerism. Capitalism is based on hierarchy, not liberty. This leads to a weakening of individuality as well as a lose of self-identity and sense of community. Both these senses are a deep human need and consumerism is often a means by which people overcome their alienation from their selves and others (religion, ideology and drugs are other means of escape). Therefore the consumption within capitalism reflects its values, not some abstract “human nature.” As such, because a firm or industry is making a profit satisfying “needs” within capitalism, it does not follow that people in a free society would have similar wants (i.e., “demand” often does not exist independently of the surrounding society). As Bob Black argues:

“what we want, what we are capable of wanting is relative to the forms of social organisation. People ‘want’ fast food because they have to hurry back to work, because processed supermarket food doesn’t taste much bet-

Now, any form of association requires agreement. Therefore, even a society based on the communist-anarchist maxim “from each according to their ability, to each according to their need” will need to make agreements in order to ensure co-operative ventures succeed. In other words, members of a co-operative commonwealth would have to make and keep to their agreements between themselves. This means that the members of a syndicate would agree joint starting and finishing times, require notice if individuals want to change “jobs” and so on within and between syndicates. Any joint effort requires some degree of co-operation and agreement. Moreover, between syndicates, an agreement would be reached (in all likelihood) that determined the minimum working hours required by all members of society able to work. As Kropotkin argued, an communist anarchist society would be based upon the such a minimum-hour “contract” between its members:

“We undertake to give you the use of our houses, stores, streets, means of transport, schools, museums, etc., on condition that, from twenty to forty-five or fifty years of age, you consecrate four or five hours a day to some work recognised as necessary to existence. Choose yourself the producing group which you wish to join, or organise a new group, provided that it will undertake to produce necessaries. And as for the remainder of your time, combine together with whomsoever you like, for recreation, art, or science, according to the bent of your taste ... Twelve or fifteen hundred hours of work a year ... is all we ask of you. For that amount of work we guarantee to you the free use of all that these groups produce, or will produce.” [The Conquest of Bread, pp. 153–4]

With such work “necessary to existence” being recognised by individuals and expressed by demand for labour from productive syndicates. It is, of course, up to the individual to decide which work
he or she desires to perform from the positions available in the various associations in existence. A union card could be the means by which work hours would be recorded and access to the common wealth of society ensured. And, of course, individuals and groups are free to work alone and exchange the produce of their labour with others, including the confederated syndicates, if they so desired. An anarchist society will be as flexible as possible.

Therefore, we can imagine a social anarchist society being based on two basic arrangements — firstly, an agreed minimum working week of, say, 16 hours, in a syndicate of your choice, plus any amount of hours doing “work” which you feel like doing — for example, art, scientific experimentation, DIY, playing music, composing, gardening and so on. How that minimum working week was actually organised would vary between workplace and commune, with work times, flexi-time, job rotation and so on determined by each syndicate (for example, one syndicate may work 8 hours a day for 2 days, another 4 hours a day for 4 days, one may use flexi-time, another more rigid starting and stopping times). Needless to say, in response to consumption patterns, syndicates will have to expand or reduce production and will have to attract volunteers to do the necessary work as would syndicates whose work was considered dangerous or unwanted. In such circumstances, volunteers could arrange doing a few hours of such activity for more free time or it could be agreed that one hour of such unwanted positions equals more hours in a more desired one (see section I.4.13 for more on this). Needless to say, the aim of technological progress would be to eliminate unpleasant and unwanted tasks and to reduce the basic working week more and more until the very concept of necessary “work” and free time enjoyments is abolished. Anarchists are convinced that the decentralisation of power within a free society would unleash a wealth of innovation and ensure that unpleasant tasks are minimised and fairly shared while required productive activity is made as pleasant and enjoyable as possible.

for a fixed charge. Similarly with pavements, people do not walk everywhere because to do so is free. In such cases individuals use the resource as and when they need to. Equally, vegetarians do not start eating meat when they visit their friend’s parties just because the buffet is free.

We can expect similar results as other resources become freely available. In effect, this argument makes as much sense as arguing that individuals will travel to stops beyond their destination if public transport is based on a fixed charge! Obviously only an idiot would travel further than required in order to get “value for money.” However, for many the world seems to be made up of such fools. Perhaps it would be advisable for such critics to hand out political leaflets in the street. Even though the leaflets are free, crowds rarely form around the person handing them out demanding as many copies of the leaflet as possible. Rather, those interested in what the leaflets have to say take them, the rest ignore them. If free access automatically resulted in people taking more than they need then critics of free communism would be puzzled by the lack of demand for what they were handing out!

Part of the problem is that capitalist economics has invented a fictional type of person, Homo Economicus, whose wants are limitless: an individual who always wants more and so whose needs could only satisfied if resources were limitless too. Needless to say, such an individual has never existed. In reality, wants are not limitless — people have diverse tastes and rarely want everything available nor want more of a good than that which satisfies their need.

Communist Anarchists also argue that we cannot judge people’s buying habits under capitalism with their actions in a free society. After all, advertising does not exist to meet people’s needs but rather to create needs by making people insecure about themselves. Simply put, advertising does not amplify existing needs or sell the goods and services that people already want. Advertising would not need to stoop to the level of manipulative adverts that create
communes and their confederations would suggest that this would be waste of resources. Ultimately, a free society would seek to avoid the irrationalities of capitalism where the drive for profits results in production for the sake of production and consumption for the sake of consumption and the many work longer and harder to meet the demands of a (wealthy) few. A free people would evaluate the pros and cons of any activity before doing it. As Malatesta put it:

"[A] communist society … is not, obviously, about an absolute right to satisfy all of one’s needs, because needs are infinite … so their satisfaction is always limited by productive capacity; nor would it be useful or just that the community in order to satisfy excessive needs, otherwise called caprices, of a few individuals, should undertake work, out of proportion to the utility being produced … What we would like is for everybody to live in the best possible way: so that everybody with a minimum amount of effort will obtain maximum satisfaction." [At the Café, pp. 60–1]

Communist-anarchists recognise that production, like consumption, must be based on freedom. However, it has been argued that free access would lead to waste as people take more than they would if they had to pay for it. This objection is not as serious as it first appears. There are plenty of examples within current society to indicate that free access will not lead to abuses. Let us take a few examples. In public libraries people are free to sit and read books all day but few, if any, actually do so. Neither do people always take the maximum number of books out at a time. No, they use the library as they need to and feel no need to maximise their use of the institution. Some people never use the library, although it is free. In the case of water supplies, it is clear that people do not leave taps on all day because water is often supplied freely or

It could be said that this sort of agreement is a restriction of liberty because it is “man-made” (as opposed to the “natural law” of “supply and demand”). This is a common defence of the non-capitalist market by individualist anarchists against anarcho-communism, for example. However, while in theory individualist-anarchists can claim that in their vision of society, they don’t care when, where, or how a person earns a living, as long as they are not invasive about it the fact is that any economy is based on interactions between individuals. The law of “supply and demand” easily, and often, makes a mockery of the ideas that individuals can work as long as they like — usually they end up working as long as required by market forces (i.e. the actions of other individuals, but turned into a force outwith their control, see section I.1.3). This means that individuals do not work as long as they like, but as long as they have to in order to survive. Knowing that “market forces” is the cause of long hours of work hardly makes them any nicer.

And it seems strange to the communist-anarchist that certain free agreements made between equals can be considered authoritarian while others are not. The individualist-anarchist argument that social co-operation to reduce labour is “authoritarian” while agreements between individuals on the market are not seems illogical to social anarchists. They cannot see how it is better for individuals to be pressured into working longer than they desire by “invisible hands” than to come to an arrangement with others to manage their own affairs to maximise their free time.

Therefore, free agreement between free and equal individuals is considered the key to abolishing work, based upon decentralisation of power and the use of appropriate technology.
I.4.4 What economic decision making criteria could be used in anarchy?

Firstly, it should be noted that anarchists do not have any set idea about the answer to this question. Most anarchists are communists, desiring to see the end of money, but that does not mean they want to impose communism onto people. Far from it, communism can only be truly libertarian if it is organised from the bottom up. So, anarchists would agree with Kropotkin that it is a case of not “determining in advance what form of distribution the producers should accept in their different groups — whether the communist solution, or labour checks, or equal salaries, or any other method” while considering a given solution best in their opinion. [Anarchism, p. 166]

Free experimentation is a key aspect of anarchism.

While certain anarchists have certain preferences on the social system they want to live in and so argue for that, they are aware that objective circumstances and social desires will determine what is introduced during a revolution (for example, while Kropotkin was a communist-anarchist and considered it essential that a revolution proceed towards communism as quickly as possible, he was aware that it was unlikely it would be introduced fully immediately — see section I.2.2 for details). However, we will outline some possible means of economic decision making criteria as this question is an important one and so we will indicate what possible solutions exist in different forms of anarchism.

In a mutualist or collectivist system, the answer is easy. Prices will exist and be used as a means of making decisions (although, as Malatesta suggested, such non-communist anarchies would “seek a way to ensure that money truly represents the useful work performed by its possessors” rather than, as today, “the means for living on the labour of others” [Errico Malatesta: His Life and Ideas, p. 101 and p. 100]). Mutualism will be more market orientated than collectivism, with collectivism being based on confederations of collec-

Kropotkin, for example, stated that “free communism ... places the product reaped or manufactured at the disposal of all, leaving to each the liberty to consume them as he pleases in his own home.” [The Place of Anarchism in the Evolution of Socialist Thought, p. 7] But, some argue, what if an individual says they “need” a luxury house or a personal yacht? Simply put, workers may not “need” to produce it. As Tom Brown put it, “such things are the product of social labour ... Under syndicalism ... it is improbable that any greedy, selfish person would be able to kid a shipyard full of workers to build him a ship all for his own hoggish self. There would be steam luxury yachts, but they would be enjoyed in common.” [Syndicalism, p. 51]

Therefore, communist-anarchists are not blind to the fact that free access to products is based upon the actual work of real individuals — “society” provides nothing, individuals working together do. This is reflected in the classic statement of communism: “From each according to their ability, to each according to their needs.” This must be considered as a whole as those producing have needs and those receiving have abilities. The needs of both consumer and producer have to be taken into account, and this suggests that those producing have to feel the need to do so. This means that if no syndicate or individual desires to produce a specific order then this order can be classed as an “unreasonable” demand — “unreasonable” in this context meaning that no one freely agrees to produce it. Of course, individuals may agree to barter services in order to get what they want produced if they really want something but such acts in no way undermines a communist society.

This also applies to the demand for goods which are scare and, as a result, require substantial labour and resources to produce. In such circumstances, the producers (either as a specific syndicate or in their confederations) would refuse to supply such a “need” or
people would be able to influence the decisions of the syndicates as producers (in some cases) and through syndicate/commune dialogue.

Finally, it would be churlish, but essential, to note that capitalism only equates supply and demand in the fantasy world of neoclassical economics. Any real capitalist economy, as we discussed in section I.1.5 is marked by uncertainty and a tendency to over-produce in the response to the higher profits caused by previously under-producing goods, with resulting periods of crisis in which falling effective demand sees a corresponding fall in supply. Not to mention the awkward fact that real needs (demand) are not met simply because people are too poor to pay for the goods (i.e., no effective demand). As such, to suggest that only non-market systems have a problem ensuring demand and supply meet is mistaken.

To conclude, anarchists do not ignore “supply and demand.” Instead, they recognise the limitations of the capitalist version of this truism and point out that capitalism is based on effective demand which has no necessary basis with efficient use of resources. Instead of the market, social anarchists advocate a system based on horizontal links between producers which effectively communicates information across society about the relative changes in supply and demand which reflect actual needs of society and not bank balances. The investment response to changes in supply and demand will be discussed in section I.4.8 while section I.4.13 will discuss the allocation of work tasks.

I.4.6 Surely anarchist-communism would just lead to demand exceeding supply?

While non-communist forms of anarchism relate consumption to work done, so automatically relating demand to production, this is not the case in communist-anarchism. In that system, distribu-
ers would be related to hours worked, for example, and when used as a guide for investment decisions could be supplemented with cost-benefit analysis of the kind possibly used in a communist-anarchist society (see below). Although this scheme bears a strong resemblance to Proudhonian “People’s Banks,” it should be noted that the Banks of Exchange, along with a “Communal Statistical Commission,” are intended to have a planning function as well to ensure that supply meets demand. This does not imply a Stalinist-like command economy, but simple bookkeeping for “each Bank of Exchange makes sure in advance that these products are in demand [in order to risk] nothing by immediately issuing payment vouchers to the producers.” [“On Building the New Social Order”, pp. 356–79, Bakunin on Anarchism, p. 366 and p. 367] The workers syndicates would still determine what orders to produce and each commune would be free to choose its suppliers.

As will be discussed in more depth later (see section I.4.8) information about consumption patterns will be recorded and used by workers to inform their production and investment decisions. In addition, we can imagine that production syndicates would encourage communes as well as consumer groups and co-operatives to participate in making these decisions. This would ensure that produced goods reflect consumer needs. Moreover, as conditions permit, the exchange functions of the communal “banks” would (in all likelihood) be gradually replaced by the distribution of goods in accordance with the needs of the consumers. In other words, most supporters of collectivist anarchism see it as a temporary measure before anarcho-communism could develop.

Communist anarchism would be similar to collectivism, i.e. a system of confederations of collectives, communes and distribution centres (Communal stores). However, in an anarcho-communist system, prices are not used. How will economic decision making be done? One possible solution is as follows:

Communes would agree to produce eco-friendly products, reduce waste and generally make decisions enriched by social interaction. Individuals would still decide which sort goods they desire, based on what the collectives produce but these goods would be based on a socially agreed agenda. In this way waste, pollution and other “externalities” of atomised consumption could be reduced. For example, while it is rational for individuals to drive a car to work, collectively this results in massive irrationality (for example, traffic jams, pollution, illness, unpleasant social infrastructures). A sane society would discuss the problems associated with car use and would agree to produce a fully integrated public transport network which would reduce pollution, stress, illness, and so on.

Therefore, while anarchists recognise individual tastes and desires, they are also aware of the social impact of them and so try to create a social environment where individuals can enrich their personal decisions with the input of other people’s ideas.

On a related subject, it is obvious that different syndicates would produce slightly different goods, so ensuring that people have a choice. It is doubtful that the current waste implied in multiple products from different companies (sometimes the same multinational corporation!) all doing the same job would be continued in an anarchist society. However, production will be “variations on a theme” in order to ensure consumer choice and to allow the producers to know what features consumers prefer. It would be impossible to sit down beforehand and make a list of what features a good should have — that assumes perfect knowledge and that technology is fairly constant. Both these assumptions are of limited use in real life. Therefore, co-operatives would produce goods with different features and production would change to meet the demand these differences suggest (for example, factory A produces a new CD player, and consumption patterns indicate that this is popular and so the rest of the factories convert). This is in addition to R&D experiments and test populations. In this way consumer choice would be maintained, and enhanced as...
equal the predicted long term changes, then the federation need not act. However, if they do then investment in new copper mines or large scale new investment across the industry may be required. The federation would propose such plans.

Needless to say, the future can be guessed, it cannot be accurately predicted. Thus there may be over-investment in certain industries as expected changes do not materialise. However, unlike capitalism, this would not result in an economic crisis (with over-investment within capitalism, workplaces close due to lack of profits, regardless of social need). All that would happen is that some of the goods produced would not be used, some labour and resources would be wasted and the syndicates would rationalise production, close down relatively inefficient plant and concentrate production in the more efficient ones. The sweeping economic crises of capitalism would be a thing of the past.

In summary, each syndicate receives its own orders and supplies and sends its own produce out to specific consumers. Similarly, communal distribution centres would order required goods from syndicates it determines. In this way consumers can change to syndicates which respond to their needs and so production units are aware of what it is socially useful for them to produce as well as the social cost of the resources they need to produce it. In this way a network of horizontal relations spread across society, with co-ordination achieved by equality of association and not the hierarchy of the corporate structure.

While anarchists are aware of the “isolation paradox” (see section B.6) this does not mean that they think the commune should make decisions for people on what they were to consume. That would be a prison. No, all anarchists agree that is up to the individual to determine their own needs and for the collectives they join to determine social requirements like parks, infrastructure improvements and so on. However, social anarchists think that it would be beneficial to discuss the framework around which these decisions would be made. This would mean, for example, that com-

“As to decisions involving choices of a general nature, such as what forms of energy to use, which of two or more materials to employ to produce a particular good, whether to build a new factory, there is a . . . technique . . . that could be [used] . . . ‘cost-benefit analysis’. . . . [I]n socialism a points scheme for attributing relative importance to the various relevant considerations could be used . . . The points attributed to these considerations would be subjective, in the sense that this would depend on a deliberate social decision rather than some objective standard, but this is the case even under capitalism when a monetary value has to be attributed to some such ‘cost’ or ‘benefit’ . . . In the sense that one of the aims of socialism is precisely to rescue humankind from the capitalist fixation with production time/money, cost-benefit analyses, as a means of taking into account other factors, could therefore be said to be more appropriate for use in socialism than under capitalism. Using points systems to attribute relative importance in this way . . . [is] simply to employ a technique to facilitate decision-making in particular concrete cases.” [Adam Buick and John Crump, State Capitalism: The Wages System Under New Management, pp. 138–139]

This points system would be the means by which producers and consumers would be able to determine whether the use of a particular good is efficient or not. Unlike prices, this cost-benefit analysis system would ensure that production and consumption reflects social and ecological costs, awareness and priorities. Moreover, this analysis would be a guide to decision making and not a replacement of human decision making and evaluation. As Lewis Mumford argued:

“it is plain that in the decision as to whether to build a bridge or a tunnel there is a human question that should
outweigh the question of cheapness or mechanical feasibility: namely the number of lives that will be lost in the actual building or the advisability of condemning a certain number of men [and women] to spend their entire working days underground supervising tunnel traffic ... Similarly the social choice between silk and rayon is not one that can be made simply on the different costs of production, or the difference in quality between the fibres themselves: there also remains, to be integrated in the decision, the question as to difference in working-pleasure between tending silkworms and assisting in rayon production. What the product contributes to the labourer is just as important as what the worker contributes to the product. A well-managed society might alter the process of motor car assemblage, at some loss of speed and cheapness, in order to produce a more interesting routine for the worker: similarly, it would either go to the expense of equipping dry-process cement making plants with dust removers — or replace the product itself with a less noxious substitute. When none of these alternatives was available, it would drastically reduce the demand itself to the lowest possible level.” [The Future of Technics and Civilisation, pp. 160–1]

Obviously, today, we would include ecological issues as well as human ones. Any decision making process which disregards the quality of work or the effect on the human and natural environment is a deranged one. However, this is how capitalism operates, with the market rewarding capitalists and managers who introduce de-humanising and ecologically harmful practices. Indeed, so biased against labour and the environment is capitalism that many economists and pro-capitalists argue that reducing “efficiency” by such social concerns (as expressed by the passing laws related to labour rights and environmental protection) is actually harmful to...
decisions where being made (as discussed in section I.1.5 such dis-equilibrium prices convey misinformation which causes very substantial economic distortions).

This, combined with cost-benefit analysis described in section I.4.4, would allow information about changes within a moneyless economy to rapidly spread throughout the whole system and influence all decision makers without the great majority knowing anything about the original causes of these changes. This would allow a syndicate to ascertain which good used up least resources and therefore left the most over for other uses (i.e., relative costs or scarcity) as well as giving them information on what resources were used to create it (i.e., the absolute costs involved) The relevant information is communicated to all involved, without having to be ordered by an “all-knowing” central body as in a Leninist centrally planned economy. As argued in section I.1.2, anarchists have long realised that no centralised body could possibly be able to possess all the information dispersed throughout the economy to organise production and if such a body attempted to do so, the resulting bureaucracy would effectively reduce and impoverish the amount of information available to decision makers and so cause shortages and inefficiencies.

To get an idea how this system could work, let us take the example of a change in the copper industry. Let us assume that a source of copper unexpectedly fails or that the demand for copper increases. What would happen?

First, the initial difference would be a diminishing of stocks of copper which each syndicate maintains to take into account unexpected changes in requests. This would help buffer out short lived, changes in supply or requests. Second, naturally, there is an increase in demand for copper for those syndicates which are producing it. This immediately increases the **scarcity index** of those firms and their product. For example, the index may rise from 95% (indicating a slight over-production in respect to current demand) to 115% (indicating that the demand for copper has risen an economy, which is a total reversal of common sense and human feelings (after all, surely the economy should satisfy human needs and not sacrifice those needs to the economy?). The argument is that consumption would suffer as resources (human and material) would be diverted from more “efficient” productive activities and so reduce, over all, our economic well-being. What this argument ignores is that consumption does not exist in isolation from the rest of the economy. What we want to consume is conditioned, in part, by the sort of person we are and that is influenced by the kind of work we do, the kinds of social relationships we have, whether we are happy with our work and life, and so on. If our work is alienating and of low quality, then so will our consumption decisions. If our work is subject to hierarchical control and servile in nature then we cannot expect our consumption decisions to be totally rational — indeed they may become an attempt to find happiness via shopping, a self-defeating activity as consumption cannot solve a problem created in production. Thus rampant consumerism may be the result of capitalist “efficiency” and so the objection against socially aware production is question begging.

Of course, as well as absolute scarcity, prices under capitalism also reflect relative scarcity (while in the long term, market prices tend towards their production price plus a mark-up based on the degree of monopoly in a market, in the short term prices can change as a result of changes in supply and demand). How a communist society could take into account such short term changes and communicate them throughout the economy is discussed in section I.4.5. Moreover, it is likely that they will factor in the desirability of the work performed to indicate the potential waste in human time involved in production (see section I.4.13 for a discussion of how this could be done). The logic behind this is simple, a resource which people **like** to produce will be a better use of the scarce resource of an individual’s time than one people hate producing. Another key factor in making sensible decisions would be the relative scarcity of a good. After all, it would make little sense when making a deci-
sion to use a good which is in short supply over one which is much more abundant. Thus, while the cost-benefit points system would show absolute costs (number of hours work required, energy use, pollution, etc.) this would be complemented by information about how scare a specific good is and the desirability of the work required to produce it.

Therefore, a communist-anarchist society would be based around a network of syndicates who communicate information between each other. Instead of the price being communicated between workplaces as in capitalism, actual physical data will be sent (the cost). This data is a summary of these (negative) use values of the good (for example resources, labour time and energy used to produce it, pollution details) as well as relative scarcity. With this information a cost-benefit analysis will be conducted to determine which good will be best to use in a given situation based upon mutually agreed common values. These will be used to inform the decision on which goods to use, with how well goods meet the requirements of production (the positive use-value) being compared to their impact in terms of labour, resource use, pollution and so forth (the negative use-values) along with their relative availability.

The data for a given workplace could be compared to the industry as a whole (as confederations of syndicates would gather and produce such information — see section 1.3.5) in order to determine whether a specific workplace will efficiently produce the required goods (this system has the additional advantage of indicating which workplaces require investment to bring them in line, or improve upon, the industrial average in terms of working conditions, hours worked and so on). In addition, common rules of thumb would possibly be agreed, such as agreements not to use scarce materials unless there is no alternative (either ones that use a lot of labour, energy and time to produce or those whose demand is currently exceeding supply capacity).

anarchism. It is assumed that syndicates and their confederations will wish to adjust capacity if they are aware of the need to do so. Hence, price changes in response to changes in demand would not be necessary to provide the information that such adjustments are required. This is because a “change in demand first becomes apparent as a change in the quantity being sold at existing prices [or being consumed in a moneyless system] and is therefore reflected in changes in stocks or orders. Such changes are perfectly good indicators or signals that an imbalance between demand and current output has developed. If a change in demand for its products proved to be permanent, a production unit would find its stocks being run down and its order book lengthening, or its stocks increasing and orders falling ... Price changes in response to changes in demand are therefore not necessary for the purpose of providing information about the need to adjust capacity.” [Pat Devine, Democracy and Economic Planning, p. 242]

So syndicates, communes and their confederations will create buffer stocks of goods to handle unforeseen changes in demand and supply. This sort of inventory has also been used by capitalist countries like the USA to prevent changes in market conditions for agricultural products and other strategic raw materials producing wild spot-price movements and inflation. Post-Keynesian economist Paul Davidson argued that the stability of commodity prices this produced “was an essential aspect of the unprecedented prosperous economic growth of the world’s economy” between 1945 and 1972. US President Nixon dismantled these buffer zone programmes, resulting in “violent commodity price fluctuations” which had serious negative economic effects. [Controversies in Post-Keynesian Economics, p. 114 and p. 115] Again, an anarchist society is likely to utilise this sort of buffer system to iron out short-term changes in supply and demand. By reducing short-term fluctuations of the supply of commodities, bad investment decisions would be reduced as syndicates would not be mislead, as is the case under capitalism, by market prices being too high or too low at the time when the
in stocks, production and consumption has also to be factored in when making decisions.

To indicate the relative changes in scarcity of a given good it will be necessary to calculate what could be termed its “scarcity index.” This would inform potential users of this good whether its demand is outstripping its supply so that they may effectively adjust their decisions in light of the decisions of others. This index could be, for example, a percentage figure which indicates the relation of orders placed for a good to the amount actually produced. For example, a good which has a demand higher than its supply would have an index value of 101% or higher. This value would inform potential users to start looking for substitutes for it or to economise on its use. Such a scarcity figure would exist for each syndicate as well as (possibly) a generalised figure for the industry as a whole on a regional, “national”, etc. level.

In this way, a specific good could be seen to be in high demand and so only those producers who really required it would place orders for it (so ensuring effective use of resources). Needless to say, stock levels and other basic book-keeping techniques would be utilised in order to ensure a suitable buffer level of a specific good existed. This may result in some excess supply of goods being produced and used as stock to handle unexpected changes in the aggregate demand for a good. Such a buffer system would work on an individual workplace level and at a communal level. Syndicates would obviously have their inventories, stores of raw materials and finished goods “on the shelf” which can be used to meet unexpected increases in demand. Communal stores, hospitals and so on would have their stores of supplies in case of unexpected disruptions in supply.

This is a common practice even in capitalism, with differences between actual demand and expected demand being absorbed by unintended stock changes. Firms today also have spare capacity in order to meet such upsurges in demand. Such policies of maintaining stocks and spare capacity will continue to the case under

Similarly, when ordering goods, the syndicate, commune or individual involved will have to inform the syndicate why it is required in order to allow the syndicate to determine if they desire to produce the good and to enable them to prioritise the orders they receive. In this way, resource use can be guided by social considerations and “unreasonable” requests ignored (for example, if an individual states they “need” a ship-builders syndicate to build a ship for their personal use, the ship-builders may not “need” to build it and instead build ships for communal use, freely available for all to use in turn — see section I.4.6). However, in almost all cases of individual consumption, no such information will be needed as communal stores would order consumer goods in bulk as they do now. Hence the economy would be a vast network of co-operating individuals and workplaces and the dispersed knowledge which exists within any society can be put to good effect (better effect than under capitalism because it does not hide social and ecological costs in the way market prices do and co-operation will eliminate the business cycle and its resulting social problems).

Therefore, production units in a social anarchist society, by virtue of their autonomy within association, are aware of what is socially useful for them to produce and, by virtue of their links with communes, also aware of the social (human and ecological) cost of the resources they need to produce it. They can combine this knowledge, reflecting overall social priorities, with their local knowledge of the detailed circumstances of their workplaces and communities to decide how they can best use their productive capacity. In this way the division of knowledge within society can be used by the syndicates effectively as well as overcoming the restrictions within knowledge communication imposed by the price mechanism (see section I.1.2) and workplaces hierarchies within capitalism (see section I.1.1).

Moreover, production units, by their association within confederations ensure that there is effective communication between them. This results in a process of negotiated co-ordination between
equals (i.e. horizontal links and agreements) for major investment decisions, thus bringing together supply and demand and allowing the plans of the various units to be co-ordinated. By this process of co-operation, production units can reduce duplicating effort and so reduce the waste associated with over-investment (and so the irrationalities of booms and slumps associated with the price mechanism, which does not provide sufficient information to allow workplaces to efficiently co-ordinate their plans).

When evaluating production methods we need to take into account as many social and ecological costs as possible and these have to be evaluated. Which costs will be taken into account, of course, be decided by those involved, as will how important they are relative to each other (i.e. how they are weighted). What factors to take into account and how to weigh them in the decision making process will be evaluated and reviewed regularly so to ensure that it reflects real costs and social concerns. As communist-anarchists consider it important to encourage all to participate in the decisions that affect their lives, it would be the role of communal confederations to determine the relative points value of given inputs and outputs. In this way, all individuals in a community determine how their society develops, so ensuring that economic activity is responsible to social needs and takes into account the desires of everyone affected by production. In this way consumption and production can be harmonised with the needs of individuals as members of society and the environment they live in. The industrial confederations would seek to ensure that this information is recorded and communicated and (perhaps) formulating industry-wide averages to aid decision-making by allowing syndicates and communes to compare specific goods points to the typical value.

So which factors are to be used to inform decision-making would be agreed and the information communicated between workplaces and communes so that consumers of goods can evaluate their costs in terms of ecological impact, use of resources and human labour. Any agreed values for the Cost-Benefit analysis for inputs can be bakers would know what carts and delivery vans were needed to send the bread out to the people, and if they let the carters and vanmen know of this, would these not do their utmost to supply the vehicles ... If ... [the bakers needed] more benches [to make bread] ... the carpenters would supply them [and so on] ... So the endless continuity goes on — a well-balanced interdependence of parts guaranteed, because need is the motive force behind it all ... In the same way that each free individual has associated with his brothers [and sisters] to produce bread, machinery, and all that is necessary for life, driven by no other force than his desire for the full enjoyment of life, so each institution is free and self-contained, and co-operates and enters into agreements with other because by so doing it extends its own possibilities. There is no centralised State exploiting or dictating, but the complete structure is supported because each part is dependent on the whole ... It will be a society responsive to the wants of the people; it will supply their everyday needs as quickly as it will respond to their highest aspirations. Its changing forms will be the passing expressions of humanity."

[The Anarchist Revolution, pp. 17–19]

To make productive decisions we need to know what others need and information in order to evaluate the alternative options available to us to satisfy that need. Therefore, it is a question of distributing information between producers and consumers, information which the market often hides (or actively blocks) or distorts due to inequalities in resources (i.e. need does not count in the market, “effective demand” does and this skews the market in favour of the wealthy). This information network has partly been discussed in the last section where a method of comparison between different materials, techniques and resources based upon use value was discussed. In addition, the need to indicate the current fluctuations
such as friendship, love, solidarity, mutual aid and so on. Thus you can help or associate with others without having to be ordered to do so or by being paid cash to do so — we do so all the time. You can work together because by so doing you benefit yourself and the other person. This is the real communist way, that of mutual aid and free agreement.

So Schweickart is ignoring the vast majority of relations in any society. For example, love/attraction is a horizontal link between two autonomous individuals and profit considerations do not enter into the relationship. Thus anarchists argue that Schweickart’s argument is flawed as it fails to recognise that resource usage and production techniques can be organised in terms of human need and free agreement between economic actors, without profits or central command. This system does not mean that we all have to love each other (an impossible wish). Rather, it means that we recognise that by voluntarily co-operating as equals we ensure that we remain free individuals and that we can gain the advantages of sharing resources and work (for example, a reduced working day and week, self-managed work in safe and hygienic working conditions and a free selection of the product of a whole society). In other words, a self-interest which exceeds the narrow and impoverished egotism of capitalist society.

Thus free agreement and horizontal links are not limited to market transactions — they develop for numerous reasons and anarchists recognise this. As George Barrett argued:

“Let us imagine now that the great revolt of the workers has taken place, that their direct action has made them masters of the situation. It is not easy to see that some man in a street that grew hungry would soon draw a list of the loaves that were needed, and take it to the bakery where the strikers were in possession? Is there any difficulty in supposing that the necessary amount would then be baked according to this list? By this time the

incorporated in the information associated with the outputs. As such, a communist society would seek to base decisions on more than one criteria, whether it is profits or (say) labour. The reasons for this should be obvious, as one criteria rarely allows sensible decisions. Of course, to some degree people already do this under capitalism but market forces and inequality limit this ability (people will tend to buy cheaper products if they need to make ends meet) while both the price mechanism and the self-interest of companies ensure information about costs are hidden (for example, few companies publically acknowledge their externalities and most spend vast sums on advertising to greenwash their products).

In order to process the information on costs communicated in a libertarian communist economy accounting tools can be created (such as a spreadsheet or computer programme). These could take the decided factors as inputs and returns a cost benefit analysis of the choices available. So while these algorithmic procedures and guidelines can, and indeed should be, able to be calculated by hand, it is likely that computers will be extensively used to take input data and process it into a suitable format. Indeed, many capitalist companies have software which records raw material inputs and finished product into databases and spreadsheets. Such software could be the basis of a libertarian communist decision making algorithm. Of course, currently such data is submerged beneath money and does not take into account externalities and the nature of the work involved (as would be the case in an anarchist society). However, this does not limit their potential or deny that communist use of such software can be used to inform decisions.

Therefore, the claim that communism cannot evaluate different production methods due to lack of prices is inaccurate. Indeed, a look at the actual capitalist market — marked as it is by differences in bargaining and market power, externalities and wage labour — soon shows that the claims that prices accurately reflect costs is simply not accurate. However, it may be such that objective circumstances preclude the immediate introduction of libertarian
communism (as discussed in section I.2.2, many communist anarchists consider this likely). As such, there could be a transitional period in which elements of mutualism, collectivism and communism co-exist within a specific economy. It can easily be seen how a mutualist economy (the usual initial product of a social revolution) could evolve into a collectivist and then communist one. The market generated prices could initially be complemented by the non-market information decided upon (for objective costs and the scarcity index) and, overtime, replaced by this data as the main decision making criteria by syndicates and communes.

One final point on this subject. What methods are used, which criteria picked, which information is communicated and how it is processed, will be the decision of a free people. This section was merely a suggestion of one possibility of how a libertarian communist economy could make informed decisions about production. It is not meant as a blue-print nor is it set-in-stone.

I.4.5 What about “supply and demand”?

Anarchists do not ignore the facts of life, namely that at a given moment there is so much a certain good produced and so much of it is desired to be consumed or used. Neither do we deny that different individuals have different interests and tastes. However, this is not what is usually meant by “supply and demand.” Often in general economic debate, this formula is given a certain mythical quality which ignores its underlying realities as well as some unwholesome implications of the theory (for example, as discussed in section C.1.5 the market can very efficiently create famines by exporting food to areas where there is demand for it). At the very least, the “law of supply and demand” is not the “most efficient” means of distribution in an unequal society as decisions are skewed in favour of the rich.

As far as “supply and demand” in terms of allocating scarce resources is concerned, anarchists are well aware of the need to create and distribute necessary goods to those who require them. The question is, in an anarchist society, how do you know that valuable labour and materials are not being wasted? How do people judge which tools are most appropriate? How do they decide among different materials if they all meet the technical specifications? How important are some goods than others? How important is cellophane compared to vacuum-cleaner bags and so which one should be produced?

It is answers like this that the supporters of the market claim that their system answers. For individualist and mutualist anarchists, their non-capitalist market would indicate such information by differences between market price and cost price and individuals and co-operatives would react accordingly. For communist and collectivist anarchists, who reject even non-capitalist markets, the answer is less simple. As discussed in section I.1.3, these anarchists argue that although the market does answer such questions it does so in irrational and dehumanising ways (while this is particularly the case under capitalism, it cannot be assumed this will disappear in a post-capitalist market). The question is: can collectivist and communist anarchism answer such questions? Yes, they reply.

So collectivist and communist anarchists reject the market. This rejection often implies, to some, central planning. As the market socialist David Schweickart puts it, “[i]f profit considerations do not dictate resource usage and production techniques, then central direction must do so. If profit is not the goal of a productive organisation, then physical output (use values) must be.” [Against Capitalism, p. 86] However, Schweickart is wrong. Horizontal links need not be market based and co-operation between individuals and groups need not be hierarchical. What is implied in this comment is that there is just two ways to relate to others — either by prostitution (purely by cash) or by hierarchy (the way of the state, the army or capitalist workplace). But people relate to each other in other ways,
tion, from the turning of delegates into representatives and bureaucrats. As Bakunin stressed, there are two ways of organising society, “as it is today, from high to low and from the centre to circumference by means of enforced unity and concentration” and the way of the future, by federalism “starting with the free individual, the free association and the autonomous commune, from low to high and from circumference to centre, by means of free federation.” [Michael Bakunin: Selected Writings, p. 88] In other words, “the organisation of society from the bottom up.” [The Basic Bakunin, p. 131] This suggests that a free society will have little to fear in way of its delegates turning into politicians or bureaucrats as it includes the necessary safeguards (election, mandates, recall, decentralisation, federalism, etc.) which will reduce such developments to a small, and so manageable, level (if not eliminate it totally).

I.5.4 How will anything ever be decided by all these meetings?

Anarchists have little doubt that the confederal structure will be an efficient means of decision making and will not be bogged down in endless meetings. We have various reasons for thinking this. After all, as Murray Bookchin once noted, “[h]istory does provide us with a number of working examples of forms that are largely libertarian. It also provides us with examples of confederations and leagues that made the co-ordination of self-governing communities feasible without impinging on their autonomy and freedom.” [The Ecology of Freedom, p. 436]

Firstly, we doubt that a free society will spend all its time in assemblies or organising confederal conferences. Certain questions are more important than others and few anarchists desire to spend all their time in meetings. The aim of a free society is to allow individuals to express their desires and wants freely — they cannot do that if they are continually at meetings (or preparing for them). So

The shops were often dirty and ill-maintained. The 5,000 hairdressing assistants were among the most poorly paid workers… Both owners and assistants therefore voluntarily decided to socialise all their shops.

“How was this done? All the shops simply joined the union. At a general meeting they decided to shut down all the unprofitable shops. The 1,100 shops were reduced to 235 establishments, a saving of 135,000 pesetas per month in rent, lighting, and taxes. The remaining 235 shops were modernised and elegantly outfitted. From the money saved, wages were increased by 40%. Everyone having the right to work and everyone received the same wages. The former owners were not adversely affected by socialisation. They were employed at a steady income. All worked together under equal conditions and equal pay. The distinction between employers and employees was obliterated and they were transformed into a working community of equals — socialism from the bottom up.” [The Anarchist Collectives, Sam Dolgoff (ed.), pp. 93–94]

The collectives, as well as improving working conditions, also ensured access to other goods and services which market forces had previously denied working class people. Across Republican Spain collectives in towns and villages organised health care. For example, in the village of Magdalena de Pulpis housing “was free and completely socialised, as was medical care… Medicines, supplies, transfer to hospitals in Barcelona or Castellon, surgery, services of specialists — all was paid for by the collective.” This was also done for education, with collectives forming and running schools, colleges and universities. For example, Regional Peasant Federation of Levant saw each collective organise “one or two free schools for the children” and “almost wiped out illiteracy” (over 70% of rural Spain was literate before the Civil War). It also organised a “Uni-
University of Moncada” which “gave courses in animal husbandry, poultry raising, animal breeding, agriculture, tree science, etc.” [Gaston Leval, Op. Cit., p. 156 and p. 125]

These examples, social anarchists argue, show that co-operation ensures that resources are efficiently allocated and waste is minimised by cutting down needless competition. It also ensures that necessary goods and services which meet vital areas for human well-being and development are available for all rather than the few. Rather than reduce choice, such co-operation increased it by making such things available to all (and as consumers have choices in which syndicate to consume from as well as having direct communication between consumer co-operatives and productive units, there is little danger that rationalisation in production will hurt the interests of the consumer).

Another way in which wide distribution of surplus can be advantageous is in Research and Development (R&D). By creating a fund for research and development which is independent of the fortunes of individual syndicates, society as a whole can be improved by access to useful new technologies and processes. Therefore, in a libertarian socialist society, people (both within the workplace and in communities) are likely to decide to allocate significant amounts of resources for basic research from the available social output. This is because the results of this research would be freely available to all and so would aid everyone in the long term. In addition, because workers directly control their workplace and the local community effectively “owns” it, all affected would have an interest in exploring research which would reduce labour, pollution, waste and so on or increase output with little or no social impact.

It should also be mentioned here that research would be pursued more and more as people take an increased interest in both their own work and education. As people become liberated from the grind of everyday life, they will explore possibilities as their interests take them and so research will take place on many levels of what is possible. Only decentralisation and confederation can promote the freedom and resulting social experimentation which will ensure social progress and make society a good place to live.

Moreover, confederation is required to maximise self-management and reduce the possibility that delegates will become isolated from the people who mandated them. As Rocker explained:

“In a smaller community, it is far easier for individuals to observe the political scene and become acquainted with the issues which have to be resolved. This is quite impossible for a representative in a centralised government. Neither the single citizen nor his [or her] representative is completely or even approximately to supervise the huge clockwork of the central state machine. The deputy is forced daily to make decisions about things of which he [or she] has no personal knowledge and for the appraisal of which he must therefore depend on others [i.e. bureaucrats and lobbyists]. That such a system necessarily leads to serious errors and mistakes is self-evident. And since the citizen for the same reason is not able to inspect and criticise the conduct of his representative, the class of professional politicians is given added opportunity to fish in troubled waters.” [Op. Cit., p. 17–18]

These principles, it must be stressed, have worked well on a mass scale. For example, this is how anarcho-syndicalist unions operate and, as was the case with the CNT in Spain in the 1930s, worked well with over one million members. There were also successfully applied during the Spanish Revolution and the federations of collectives produced by it.

So the way communes and confederations are organised protect society and the individual against the dangers of centralisa-
Practical experimentation is the parent of ever development in society. So long as each distinct is capable of effecting the changes within its own sphere which its citizens deem necessary, the example of each becomes a fructifying influence on the other parts of the community since they will have the chance to weigh the advantages accruing from them without being forced to adopt them if they are not convinced of their usefulness. The result is that progressive communities serve the others as models, a result justified by the natural evolution of things.” [Rudolf Rocker, Pioneers of American Freedom, pp. 16–7] The contrast with centralisation of the state could not be more clear. Rocker continued:

“In a strongly centralised state, the situation is entirely reversed and the best system of representation can do nothing to change that. The representatives of a certain district may have the overwhelming majority of a certain district on his [or her] side, but in the legislative assembly of the central state, he [or she] will remain in the minority, for it lies in the nature of things that in such a body not the intellectually most active but the most backward districts represent the majority. Since the individual district has indeed the right to give expression of its opinion, but can effect no changes without the consent of the central government, the most progressive districts will be condemned to stagnate while the most backward districts will set the norm.” [Op. Cit., p. 17]

Little wonder anarchists have always stressed what Kropotkin termed “local action” and considered the libertarian social revolution as “proceed[ing] by proclaiming independent Communes which Communes will endeavour to accomplish the economic transformation within ... their respective surroundings.” [Peter Kropotkin, Act For Yourselves, p. 43] Thus the advanced communities will inspire the rest to follow them by showing them a practical example within society — in the workplace, in the community, in education and so on.

This means that research and innovation would be in the direct interests of everyone involved and that all would have the means to do it. Under capitalism, this is not the case. Most research is conducted in order to get an edge in the market by increasing productivity or expanding production into new (previously unwanted) areas. Any increased productivity often leads to unemployment, deskilling and other negative effects for those involved. Libertarian socialism will not face this problem. Moreover, it should be stressed that basic research is not something which free-market capitalism does well. As Doug Henwood notes, basic science research “is heavily funded by the public sector and non-profit institutions like universities.” The internet and computer, for example, were both projects for the Pentagon and “the government picked up the basic R&D tab for decades, when neither Wall Street nor private industry showed any interest. In fact, capital only became interested when the start-up costs had all been borne by the public sector and there were finally profits to be made ... good American individualists don’t like to talk about the public sector, since their hero is the plucky entrepreneur.” [After the New Economy, p. 196 and p. 6] The rise of such systems across the world indicates that basic research often needs public support in order to be done. Even such a leading neo-classical economist as Kenneth Arrow had to admit in the 1960s that market forces are insufficient:

“basic research, the output of which is only used as an informational input into other inventive activities, is especially unlikely to be rewarded. In fact, it is likely to be of commercial value to the firm undertaking it only if other firms are prevented from using the information. But such restriction reduces the efficiency of inventive activity in general, and will therefore reduce its quantity
Nothing has changed since. Would modern society have produced so many innovations if it had not been for the Pentagon system, the space race and so on? Take the Internet, for example — it is unlikely that this would have got off the ground if it had not been for public funding. Needless to say, of course, much of this technology has been developed for evil reasons and purposes and would be in need of drastic change (or, in many some, abolition) before it could be used in a libertarian society. However, the fact remains that it is unlikely that a pure market based system could have generated most of the technology we take for granted. As Noam Chomsky argues:

"[Alan] Greenspan [then head of the US Federal Reserve] gave a talk to newspaper editors in the US. He spoke passionately about the miracles of the market, the wonders brought by consumer choice, and so on. He also gave examples: the Internet, computers, information processing, lasers, satellites, transistors. It’s an interesting list: these are textbook examples of creativity and production in the public sector. In the case of the Internet, for 30 years it was designed, developed and funded primarily in the public sector, mostly the Pentagon, then the National Science Foundation — that’s most of the hardware, the software, new ideas, technology, and so on. In just the last couple of years it has been handed over to people like Bill Gates … In the case of the Internet, consumer choice was close to zero, and during the crucial development stages that same was true of computers, information processing, and all the rest …

“In fact, of all the examples that Greenspan gives, the only one that maybe rises above the level of a joke is
nal body must be a working organisation. This will reduce bureaucratic tendencies as implementing tasks will be done by elected delegates rather than faceless (and usually unelected) bureaucrats. This means, as Bakunin put it in 1868, that “the Communal Council” (made up of delegates “with binding mandates and accountable and revocable at all times”) would create “separate executive committees from among its membership for each branch of the Commune’s revolutionary administration.” [Bakunin, No Gods, No Masters, vol. 1, p. 155] Thus would no longer be a body of people, a government, separate from the delegates of the people. This, it should be noted, echoed Proudhon’s comments from 1848:

“It is up to the National Assembly, through organisation of its committees, to exercise executive power, just the way it exercises legislative power ... Besides universal suffrage and as a consequence of universal suffrage, we want implementation of the binding mandate. Politicians balk at it! Which means that in their eyes, the people, in electing representatives, do not appoint mandates but rather abjure their sovereignty! That is assuredly not socialism: it is not even democracy.” [Op. Cit., p. 63]

Due to mandating and recall, any delegate who starts to abuse their position or even vote in ways opposed to by the communal assembly would quickly be recalled and replaced. As such a person may be an elected delegate of the community but that does not mean that they have power or authority (i.e., they are not a representative but rather a delegate). Essentially they are an agent of the local community who is controlled by, and accountable to, that community. Clearly, such people are unlike politicians. They do not, and cannot, make policy decisions on behalf of (i.e., govern) those who elected them — they are not given power to make decisions for people. In addition, people in specific organisations transistors, and they are an interesting case. Transistors, in fact, were developed in a private laboratory — Bell Telephone Laboratories of AT&T — which also made major contributions to solar cells, radio astronomy, information theory, and lots of other important things. But what is the role of markets and consumer choice in that? Well, again, it turns out, zero. AT&T was a government supported monopoly, so there was no consumer choice, and as a monopoly they could charge high prices: in effect a tax on the public which they could use for institutions like Bell Laboratories ... So again, it’s publicly subsidised. As if to demonstrate the point, as soon as the industry was deregulated, Bell Labs went out of existence, because the public wasn’t paying for it any more ... But that’s only the beginning of the story. True, Bell invented transistors, but they used wartime technology, which, again, was publicly subsidised and state-initiated. Furthermore, there was nobody to buy transistors at that time, because they were very expensive to produce. So, for ten years the government was the major procurer ... Government procurement provided entrepreneurial initiatives and guided the development of the technology, which could then be disseminated to industry.” [Rogue States, pp. 192–3]

The free market can also have a negative impact on innovation. This is because, in order to please shareholders with higher share prices, companies may reduce funds available for real investment as well as R&D which would also depress growth and employment in the long term. What shareholders might condemn as “uneconomic” (investment projects and R&D) can, and does, make society as a whole better off. However, these gains are over the long term and, within capitalism, it is short-term gains which count. Higher
share prices in the here and now are essential in order to survive and so see the long-run.

A socialised economy with a wide-scale sharing of surpluses and resources could easily allocate resources for R&D, long term investment, innovation and so on. Via the use of mutual banks or confederations of syndicates and communes, resources could be allocated which take into account the importance of long-term priorities, as well as social costs, which are not taken into account (indeed, are beneficial to ignore) under capitalism. Rather than penalise long term investment and research and development, a socialised economy would ensure that adequate resources are available, something which would benefit everyone in society in some way.

If we look at vocational training and education, a wide basis of surplus distribution would aid this no end. Under free market capitalism, vocational training suffers for profit seeking firms will not incur costs that will be enjoyed by others. This means that firms will be reluctant to spend money on training if they fear that the trained workers will soon be poached by other firms which can offer more money because they had not incurred the cost of providing training. As a result few firms will provide the required training as they could not be sure that the trained workers will not leave for their competitors (and, of course, a trained work force also, due to their skill, have more workplace power and are less replaceable). So as well as technological developments, a wide basis of surplus distribution would help improve the skills and knowledge of the members of a community. As Keynesian economist Michael Stewart points out, "[t]here are both theoretical and empirical reasons to suppose that market forces under-provide research and development expenditures, as well as both education and training." [Keynes in the 1990s, p. 77]

By socialising training via confederations of workplaces, syndicates could increase productivity via increasing the skill levels of their members. Higher skill levels will also tend to increase in-

I.5.3 Would confederations produce bureaucrats and politicians?

Of course, any organisation holds the danger that the few who have been given tasks to perform could misuse their position for personal benefit or, over time, evolve into a bureaucracy with power over the rest of society. As such, some critics of social anarchism suggest that a system of communes and confederations would simply be a breeding ground for politicians and bureaucrats. This is obviously the case with the state and many generalise from this experience for all forms of social organisation, including the anarchist commune.

While recognising that this is a danger, anarchists are sure that such developments are unlikely in an anarchy. This is because, based on our analysis and critique of the state, we have long argued for various institutional arrangements which reduce the danger of such things developing. These include electing delegates rather than representatives, giving these delegates a binding mandate and subjecting them to instant recall by their electors. They would not, in general, be paid and so, in other words, delegates are expected, as far as possible, to remain in their current communities and conduct their communal tasks after their usual work. For the few exceptions to this that may occur, delegates would receive the average pay of their commune, in mutualism and collectivism or, in communism, no special access to communal resources. Moreover, it seems likely that regular rotation of delegates would be utilised and, perhaps, random selection as happens in jury duty today in many countries. Lastly, communes could leave any confederation if its structure was becoming obviously misshapen and bureaucratic.

By these methods, delegates to communal bodies would remain under the control of their electors and not, as in the state, become their masters. Moreover, anarchists have stressed that any commu-
Therefore the scale and levels of confederation will be decided by those actually creating an anarchist world although it is almost certain that levels of confederation would be dependent on the number of delegates required. After a certain number, the confederation assembly may become difficult to manage, so implying that another level of confederation is required. This would, undoubtedly, be the base for determining the scale and level of confederation, ensuring that any confederal assembly can actually manage its activities and remain under the control of lower levels.

Finally, confederations are required to ensure solidarity can be expressed in the unlikely situation of local oppression. After all, history is full of local communities which have been oppressive to minorities within them (most obviously, the American South) and so confederation is required so that members of any such minority can appeal for help and mutual aid to end its domination. Equally, though, confederation is needed to ensure that local communes can experiment and try out new ideas without having to wait until the majority agree to it as would be required in a centralised system.

Thus confederations of communes are required to co-ordinate joint activity and discuss common issues and interests. It is also required to protect individual, community and social freedom as well as allowing social experimentation and protecting the distinctiveness, dignity, freedom and self-management of communities and so society as a whole. Thus “socialism is federalist” and “true federalism, the political organisation of socialism, will be attained only when these popular grass-roots institutions [namely, “communes, industrial and agricultural associations”] are organised in progressive stages from the bottom up.” [Bakunin, Bakunin on Anarchism, p. 402]

innovation and enjoyment at “work” when combined with workers’ self-management. This is because an educated workforce in control of their own time will be unlikely to tolerate mundane, boring, machine-like work and seek ways to eliminate it, improve the working environment and increase productivity to give them more free time.

In addition to work conducted by syndicates, education establishments, communes and so on, it would be essential to provide resources for individuals and small groups to pursue “pet projects.” Of course, syndicates and confederations will have their own research institutions but the innovatory role of the interested “amateur” cannot be over-rated. As Kropotkin argued:

“What is needed to promote the spirit of innovation is ... the awakening of thought, the boldness of conception, which our entire education causes to languish; it is the spreading of a scientific education, which would increase the numbers of inquirers a hundred-fold; it is faith that humanity is going to take a step forward, because it is enthusiasm, the hope of doing good, that has inspired all the great inventors. The Social Revolution alone can give this impulse to thought, this boldness, this knowledge, this conviction of working for all.

“Then we shall have vast institutes ... immense industrial laboratories open to all inquirers, where men will be able to work out their dreams, after having acquitted themselves of their duty towards society; ... where they will make their experiments; where they will find other comrades, experts in other branches of industry, likewise coming to study some difficult problem, and therefore able to help and enlighten each other — the encounter of their ideas and experiences causing the longed-for solution to be found.” [The Conquest of Bread, p. 117]
The example of free software (operating systems, programming languages, specific packages and code) today show the potential this. Thus socialisation would aid innovation and scientific development by providing the necessary resources (including free time) for such work. Moreover, it would also provide the community spirit required to push the boundaries of science forward. As John O’Neil argues:

“There is, in a competitive market economy, a disincentive to communicate information. The market encourages secrecy, which is inimical to openness in science. It presupposes a view of property in which the owner has rights to exclude others. In the sphere of science, such rights of exclusion place limits on the communication of information and theories which are incompatible with the growth of knowledge ... science tends to grow when communication is open... [In addition a] necessary condition for the acceptability of a theory or experimental result is that it pass the public, critical scrutiny of competent scientific judges. A private theory or result is one that is shielded from the criteria of scientific acceptability.” [The Market, p. 153]

Today inventors often “carefully hide their inventions from each other, as they are hampered by patents and Capitalism — that bane of present society, that stumbling-block in the path of intellectual and moral progress.” In a free society, socialisation would ensure that inventors will be able to build upon the knowledge of everyone, including past generations. Rather than hide knowledge from others, in case they get a competitive advantage, knowledge would be shared, enriching all involved as well as the rest of society. Thus the “spreading of a scientific education, which would increase the number of inquirers”, “faith that humanity is going to take a step forward” and the “enthusiasm, the hope of doing good, that has inspired
formation from which the assembled people chose what they think is best. Or, to use another example, someone may be elected to overlook the installation of a selected power supply but the decision on what power supply to use and which specific project to implement has been decided upon by the whole community. Similarly with any delegate elected to a confederal council.

The scales and levels of confederation can only be worked out in practice. In general, it would be safe to say that confederations would be needed on a wide scale, starting with towns and cities and then moving onto regional and other levels. No village, town or city could be self-sufficient nor would desire to be — communication and links with other places are part and parcel of life and anarchists have no desire to retreat back into an isolated form of localism:

“No community can hope to achieve economic autarchy, nor should it try to do so. Economically, the wide range of resources that are needed to make many of our widely used goods preclude self-enclosed insularity and parochialism. Far from being a liability, this interdependence among communities and regions can well be regarded as an asset — culturally as well as politically... Divested of the cultural cross-fertilisation that is often a product of economic intercourse, the municipality tends to shrink into itself and disappear into its own civic privatism. Shared needs and resources imply the existence of sharing and, with sharing, communication, rejuvenation by new ideas, and a wider social horizon that yields a wider sensibility to new experiences.”

Combined with this consideration, we must also raise the issue of economies of scale. A given level of confederation may be required to make certain social and economic services efficient (we all the great inventors” will be maximised and innovation increased.

Social anarchists would also suggest that socialisation would produce more benefits by looking at existing societies. The evidence from the UK, USA, Australia, New Zealand and China shows that privatisations of nationalised industries associated with neoliberalism failed in its stated aims of cheaper and better services while more than succeeding in their unstated aim of redistributing wealth upwards (for details see In Government we Trust: Market Failure and the delusions of privatisation by Warrick Funnell, Robert Jupe and Jane Andrew). The examples of railway and utility privatisation, the energy crisis in California (with companies like Enron reaping huge speculative profits while consumers faced blackouts) and the Sydney water treatment scandal in Australia are sadly all too typical. Ironically, in the UK after 30 years of Thatcherite policies (first under the Tories and then New Labour) the readers of the right-wing press who supported it are subjected to article after article complaining about “Rip off Britain” and yet more increases in the prices charged for privatised utilities, services and goods. This, it must be stressed, if not to suggest that anarchists aim for nationalisation (we do not, we aim for socialisation and workers’ self-management) but rather to indicate that privatising resources does not benefit the majority of people in a given society.

It should also be noted that more unequal societies are bad for almost everyone within them. Richard Wilkinson and Kate Pickett in their book The Spirit Level: Why More Equal Societies Almost Always Do Better show that almost every modern social and environmental problem (including ill-health, lack of community life, violence, drugs, obesity, mental illness, long working hours, big prison populations) is more likely to occur in an unequal society than a more equal one. Based on thirty years of research, it shows that inequality, as anarchists have long argued, is bad for us. As such, socialisation of wealth would benefit us all.
Lastly, there is the issue of those who cannot work and the general provision of public goods. With a wide distribution to surplus, communal hospitals, schools, universities and so on can be created. The simple fact is that any society has members who cannot (indeed, should not) work unless they want to, such as the young, the old and the sick. In an Individualist Anarchist society, there is no real provision for these individuals unless someone (a family member, friend or charity) provides them with the money required for hospital fees and so on. For most anarchists, such a situation seems far too much like the system we are currently fighting against to be appealing. As such, social anarchists argue that everyone deserves an education, health care and so on as a right and so be able live a fully human life as a right, rather than a privilege to be paid for. A communal basis for distribution would ensure that every member of the commune can receive such things automatically, as and when required. The removal of the worry that, for example, privatised health care produces can be seen as a benefit of socialisation which cannot be reflected in, say, GDP or similar economic measures (not to mention the ethical statement it makes).

Significantly, though, non-privatised system of health care are more efficient. Competition as well as denying people treatment also leads to inefficiencies as prices are inflated to pay for advertising, competition related administration costs, paying dividends to share-holders and so on. This drives up the cost for those lucky enough to be covered, not to mention the stress produced by the constant fear of losing insurance or being denying payment due to the insurance company deciding against the patient and their doctor. For example, in 1993, Canada’s health plans devoted 0.9% of spending to overhead, compared to U.S. figures of 3.2% for Medicare and 12% for private insurers. In addition, when Canada adopted its publicly financed system in 1971, it and the U.S. both spent just over 7% of GDP on health care. By 1990, the U.S. was up to 12.3%, verses Canada’s 9%. Since then costs have continued to rise and rise, making health-care reform of key interest to the

and co-ordination are the responsibility of confederal councils, which become the means for interlinking villages, towns, neighbourhoods, and cities into confederal networks. Power flows from the bottom up instead of from the top down, and in confederations, the flow of power from the bottom up diminishes with the scope of the federal council ranging territorially from localities to regions and from regions to ever-broader territorial areas.” [From Urbanisation to Cities, p. 253]

Thus the people will have the final word on policy, which is the essence of self-government, and each citizen will have his or her turn to participate in the co-ordination of public affairs. In other words, self-government will be the people themselves organised in their community assemblies and their confederal co-ordinating councils, with any delegates limited to implementing policy formulated by the people. Such policies will still be subject to approval by the neighbourhood and community assemblies through their right to recall their delegates and revoke their decisions. Needless to say, the higher the confederation the less often it would meet and the less it would have to consider in terms of issues to decide. On such a level, only the most general issues and decisions could be reached (in effect, only guidelines which the member confederations would apply as they saw fit).

In such a system there will, undoubtedly, be the need for certain individuals to be allocated certain tasks to do. We stress the word “tasks” because their work is essentially administrative in nature, without power. For example, an individual or a group of individuals may be elected to look into alternative power supplies for a community and report back on what they discover. They cannot impose their decision onto the community as they do not have the power to do so. They simply present their findings to the body which had mandated them. These findings are not a law which the electors are required to follow, but a series of suggestions and infor-
This need for co-operation does not imply a centralised body. To exercise your autonomy by joining self-managing organisations and, therefore, agreeing to abide by the decisions you help make is not a denial of that autonomy (unlike joining a hierarchical structure, where you forsake autonomy within the organisation). In a centralised system, we must stress, power rests at the top and the role of those below is simply to obey (it matters not if those with the power are elected or not, the principle is the same). In a federal system, power is not delegated into the hands of a few (obviously a “federal” government or state is a centralised system). Decisions in a federal system are made at the base of the organisation and flow upwards so ensuring that power remains decentralised in the hands of all. Working together to solve common problems and organise common efforts to reach common goals is not centralisation and those who confuse the two make a serious error — they fail to understand the different relations of authority each generates and confuse obedience with co-operation.

As in the economic federation of syndicates, the lower levels will control the higher, thus eliminating the current pre-emptive powers of centralised government hierarchies. Delegates to higher-level co-ordinating councils or conferences will be instructed, at every level of confederation, by the assemblies they come from on how to deal with any issues. These instructions will be binding, committing delegates to a framework of policies within which they must act and providing for their recall and the nullification of their decisions if they fail to carry out their mandates. Delegates may be selected by election and/or sortition (i.e. random selection by lot, as for jury duty currently). As Murray Bookchin argued:

“A confederalist view involves a clear distinction between policy making and the co-ordination and execution of adopted policies. Policy making is exclusively the right of popular community assemblies based on the practices of participatory democracy. Administration public who are suffering under it (assuming they are lucky enough to have private insurance, of course).

The madness of private health-care shows the benefits of a society-wide distribution of surpluses. Competition harms health-care provision and, as a result, people. According to Alfie Kohn:

“More hospitals and clinics are being run by for-profit corporations; many institutions, forced to battle for ‘customers,’ seem to value a skilled director of marketing more highly than a skilled caregiver. As in any other economic sector, the race for profits translates into pressure to reduce costs, and the easiest way to do it here is to cut back on services to unprofitable patients, that is, those who are more sick than rich … The result: hospital costs are actually higher in areas where there is more competition for patients.” [No Contest, p. 240]

American Liberal Robert Kuttner concurs:

“The American health-care system is a tangle of inequity and inefficiency — and getting worse as private-market forces seek to rationalise it. A shift to a universal system of health coverage would cut this Gordian knot at a stroke. It would not only deliver the explicitly medical aspects of health more efficiently and fairly, but, by socialising costs of poor health, it would also create a powerful financial incentive for society as a whole to stress primary prevention. … every nation with a universal system spends less of its GDP on health care than the United States … And nearly every other nation with a universal system has longer life spans from birth (though roughly equivalent life spans from adulthood) … most nations with universal systems also have greater patient satisfaction.
“The reasons … should be obvious. By their nature, universal systems spend less money on wasteful overhead, and more on primary prevention. Health-insurance overhead in the United States alone consumes about 1 percent of the GDP, compared to 0.1 percent in Canada. Though medical inflation is a problem everywhere, the universal systems have had far lower rates of cost inflation … In the years between 1980 and 1987, total health costs in the United States increased by 2.4 times the rate of GDP growth. In nations with universal systems, they increased far more slowly. The figures for Sweden, France, West Germany, and Britain were 1.2, 1.6, 1.8, and 1.7 percent, respectively …

“Remarkably enough, the United States spends most money on health care, but has the fewest beds per thousand in population, the lowest admission rate, and the lowest occupancy rate — coupled with the highest daily cost, highest technology-intensiveness, and greatest number of employees per bed.” [Everything for Sale, pp. 155–6]

In 1993, the US paid 13.4% of its GDP towards health care, compared to 10% for Canada, 8.6% for Sweden and Germany, 6.6% for Britain and 6.8% for Japan. Only 40% of the US population was covered by public health care and over 35 million people, 14% of the population, went without health insurance for all of 1991, and about twice that many were uninsured for some period during the year. In terms of health indicators, the US people are not getting value for money. Life expectancy is higher in Canada, Sweden, Germany, Japan and Britain. The USA has the highest levels of infant mortality and is last in basic health indicators as well as having fewer doctors per 1,000 people than the OECD average. All in all, the US system is miles behind the universal systems of other countries.

In other words, the commune “cannot any longer acknowledge any superior: that, above it, there cannot be anything, save the interests of the Federation, freely embraced by itself in concert with other Communes.” [Kropotkin, No Gods, No Masters, vol. 1, p. 259]

Federalism is applicable at all levels of society. As Kropotkin pointed out, anarchists “understand that if no central government was needed to rule the independent communes, if national government is thrown overboard and national unity is obtained by free federation, then a central municipal government becomes equally useless and noxious. The same federative principle would do within the commune.” [Anarchism, pp. 163–164] Thus the whole of society would be a free federation, from the local community right up to the global level. And this free federation would be based squarely on the autonomy and self-government of local groups. With federalism, co-operation replaces coercion.
Thus the communal assembly discusses that which affects the community and those within it. As these local community associations will be members of larger communal bodies, the communal assembly will also discuss issues which affect wider areas, as indicated, and mandate their delegates to discuss them at confederation assemblies. This system, we must note, was applied with great success during numerous revolutions (see section I.5.4) and so cannot be dismissed as wishful thinking.

However, of course, the actual framework of a free society will be worked out in practice. As Bakunin correctly argued, society “can, and must, organise itself in a different fashion [than what came before], but not from top to bottom and according to an ideal plan” [Michael Bakunin: Selected Writings, p. 205] What does seem likely is that confederations of communes will be required. We turn to this in the next section.

I.5.2 Why are confederations of participatory communities needed?

Since not all issues are local, the community assemblies will also elect mandated and recallable delegates to the larger-scale units of self-government in order to address issues affecting urban districts, the city or town as a whole, the county, the bio-region, and ultimately the entire planet. Thus the assemblies will confederate at several levels in order to develop and co-ordinate common policies to deal with common problems. In the words of the CNT’s resolution on libertarian communism:

“The inhabitants of a commune are to debate among themselves their internal problems ... Federations are to deliberate over major problems affecting a country or province and all communes are to be represented at their reunions and assemblies, thereby enabling their

Of course, it will be argued that the USA is not a pure “free market” and so comparisons are pointless. However, it seems strange that the more competitive system, the more privatised system, is less efficient and less fair than the universal systems. It also seems strange that defenders of competition happily use examples from “actually existing” capitalism to illustrate their politics but reject negative examples as being a product of an “impure” system. They want to have their cake and eat it to.

Significantly, we should note that the use of surplus for communal services (such as hospitals and education) can be seen from the Spanish Revolution. Many collectives funded new hospitals and colleges for their members, providing hundreds of thousands with services they could never have afforded by their own labour. This is a classic example of co-operation helping the co-operators achieve far more than they could by their own isolated activities. This libertarian health system was run and how other public services would be organised in a free society are discussed in section I.5.12.

So we can generalise from our experiences of different kinds of capitalism. If you want to live in a society of well-educated people, working today as equals in pleasant surroundings with more than ample leisure time to pursue their own projects and activities, then a wide sharing of the social surplus is required. Otherwise, you could live in a society where people work long and hard to survive on the market, without the time or opportunity for education and leisure, and be bossed about for most of their waking hours to enrich the wealthy few so that they can live a life of leisure (which, in turn, will inspire you to be work harder in spite of the fact that such high inequality produces low social mobility). The first society, according to some, would be one of self-sacrificing altruism and “collectivism” while the latter is, apparently, one based on “individualism” and self-interest...
I.4.11 If socialism eliminates the profit motive, won’t performance suffer?

Firstly, just to be totally clear, by the profit motive we mean money profit. As anarchists consider co-operation to be in our self-interest — i.e. we will “profit” from it in the widest sense possible — we are not dismissing the fact people usually act to improve their own situation. However, money profit is a very narrow form of “self-interest,” indeed so narrow as to be positively harmful to the individual in many ways (in terms of personal development, interpersonal relationships, economic and social well-being, and so on). In other words, do not take our discussion here on the “profit motive” to imply a denial of self-interest, quite the reverse. Anarchists simply reject the “narrow concept of life which consist[s] in thinking that profits are the only leading motive of human society.” [Peter Kropotkin, Fields, Factories and Workshops Tomorrow, p. 25]

Secondly, we cannot hope to deal fully with the harmful effects of competition and the profit motive. For more information, we recommend Alfie Kohn’s No Contest: The Case Against Competition and Punished by Rewards: The Trouble with Gold Stars, Incentive Plans, A’s, Praise and Other Bribes. He documents the extensive evidence accumulated that disproves the “common sense” of capitalism that competition and profits are the best way to organise a society.

According to Kohn, a growing body of psychological research suggests that rewards can lower performance levels, especially when the performance involves creativity. His books summarise the related series of studies shows which show that intrinsic interest in a task — the sense that something is worth doing for its own sake — typically declines when someone is rewarded for doing it. Much of the research on creativity and motivation has been performed by Theresa Amabile, associate professor of psychology at Brandeis University and she has found consistently

norms may be agreed by majority vote after free debate … the commune is to be autonomous and confederated with the other communes … the commune will have the duty to concern itself with whatever may be of interest to the individual.

“It will have to oversee organising, running and beautification of the settlement. It will see that its inhabitants are housed and that items and products be made available to them by the producers’ unions or associations.

“Similarly, it is to concern itself with hygiene, the keeping of communal statistics and with collective requirements such as education, health services and with the maintenance and improvement of local means of communication.

“It will orchestrate relations with other communes and will take care to stimulate all artistic and cultural pursuits.

“So that this mission may be properly fulfilled, a communal council is to be appointed … None of these posts will carry any executive or bureaucratic powers … [its members] will perform their role as producers coming together in session at the close of the day’s work to discuss the detailed items which may not require the endorsement of communal assemblies.

“Assemblies are to be summoned as often as required by communal interests, upon the request of the communal council or according to the wishes of the inhabitants of each commune … The inhabitants of a commune are to debate among themselves their internal problems.” [quoted by Jose Peirats, The CNT in the Spanish Revolution, vol. 1, pp. 106–7]
added to the interests of travellers ... each expressed it-
self in castle, home or cathedral.

"How different is the dull, drab, or flashy ostentatious
monotony of modern England. Each town is the same.
The same Woolworth’s, Odeon Cinemas, and multiple
shops, the same ‘council houses’ or ‘semi-detached vil-
las’ ... North, South, East or West, what’s the difference,
where is the change?

“With the Commune the ugliness and monotony of
present town and country life will be swept away, and
each locality and region, each person will be able to
express the joy of living, by living together.” [Tom
Brown, Syndicalism, p. 59]

The size of the neighbourhood assemblies will vary, but it will
probably fluctuate around some ideal size, discoverable in practice,
that will provide a viable scale of face-to-face interaction and allow
for both a variety of personal contacts. This suggests that any town
or city would itself be a confederation of assemblies — as was, of
course, practised very effectively in Paris during the Great French
Revolution.

Such assemblies would meet regularly, at the very least monthly
(probably more often, particularly during periods which require
fast and frequent decision making, like a revolution) and deal with
a variety of issues. In the words of the CNT’s resolution on liber-
tarian communism:

“the foundation of this administration will be the com-
mune. These communes are to be autonomous and will
be federated at regional and national levels to achieve
their general goals. The right to autonomy does not pre-
clude the duty to implement agreements regarding col-
lective benefits ... [A] commune without any voluntary
restrictions will undertake to adhere to whatever general

that those were promised rewards did the least creative work.
Thus “rewards killed creativity, and this was true regardless of the
type of task, the type of reward, the timing of the reward or the
age of the people involved.” [Punished by Rewards, p. 45] Such
research casts doubt on the claim that financial reward is the only
effective way — or even the best way — to motivate people. They
challenge the behaviourist assumption that any activity is more
likely to occur or be better in terms of outcome if it is rewarded.

These findings re-enforce the findings of other scientific fields.
Biology, social psychology, ethnology and anthropology all present
evidence that support co-operation as the natural basis
for human interaction. For example, ethnological studies indicate
that virtually all indigenous cultures operate on the basis of highly
cooporative relationships and anthropologists have presented
evidence to show that the predominant force driving early human
evolution was co-operative social interaction, leading to the
capacity of hominids to develop culture. This is even sinking into
capitalism, with industrial psychology now promoting “worker
participation” and team functioning because it is decisively more
productive than hierarchical management. More importantly, the
evidence shows that co-operative workplaces are more productive
than those organised on other principles. All other things equal,
producers’ co-operatives will be more efficient than capitalist or
state enterprises, on average. Co-operatives can often achieve
higher productivity even when their equipment and conditions
are worse. Furthermore, the better the organisation approximates
the co-operative ideal, the better the productivity.

All this is unsurprising to social anarchists (and it should make
individualist anarchists reconsider their position). Peter Kropotkin
argued that, "[i]f we ... ask Nature: ‘Who are the fittest: those who are
continually at war with each other, or those who support one another?’
we at once see that those animals which acquire habits of mutual
aid are undoubtedly the fittest. They have more chances to survive,
and they attain, in their respective classes, the highest development of intelligence and bodily organisation.” [Mutual Aid, p. 24]

It should be noted that, as one biologist points out, “Kropotkin’s ideas, though unorthodox, were scientifically respectable, and indeed the contention that mutual aid can be a means of increasing fitness had become a standard part of modern sociobiology.” [Douglas H. Boucher, “The Idea of Mutualism, Past and Future”, pp. 1–28, The Biology of Mutualism: Biology and Evolution, Douglas H. Boucher (ed.), p. 17] Frans de Waal (a leading primatologist) and Jessica C. Flack argue that Kropotkin is part of a wider tradition “in which the view has been that animals assist each other precisely because by doing so they achieve long term, collective benefits of greater value than the short term benefits derived from straightforward competition.” They summarise that the “basic tenet of [Kropotkin’s] ideas was on the mark. Almost seventy years later, in an article entitled ‘The Evolution of Reciprocal Altruism’, [Robert] Trivers refined the concepts Kropotkin advanced and explained how co-operation and, more importantly, a system of reciprocity (called ‘reciprocal altruism’ by Trivers) could have evolved.” [“‘Any Animal Whatever’: Darwinian Building Blocks of Morality in Monkeys and Apes”, pp. 1–29, Journal of Consciousness Studies, Vol. 7, No. 1–2, p. 4]

So modern research has reinforced Kropotkin’s argument. This applies to both human and non-human animals. For the former, the evidence is strong that we have intrinsic abilities and needs to co-operate as well as an intrinsic senses of fairness and ethics. This suggests that co-operation is part of “human nature” and so studies which show that such behaviour is more productive than competition should come as no surprise — and the evidence is impressive. As noted, Alfie Kohn is also the author of No Contest: The Case Against Competition and he spent seven years reviewing more than 400 research studies dealing with competition and co-operation. According to Kohn, there are three principle consequences of competition:

As well as integrating the social life of a community and encouraging the political and social development of its members, these free communes will also be integrated into the local ecology. Humanity would live in harmony with nature as well as with itself — as discussed in section E.2, these would be eco-communities part of their local eco-systems with a balanced mix of agriculture and industry (as described by Kropotkin in his classic work Fields, Factories and Workshops). Thus a free commune would aim to integrate the individual into social and communal life, rural and urban life into a balanced whole and human life into the wider ecology. In this way the free commune would make human habitation fully ecological, ending the sharp and needless (and dehumanising and de-individualising) division of human life from the rest of the planet. The commune will be a key means of the expressing diversity within humanity and the planet as well as improving the quality of life in society:

“The Commune ... will be entirely devoted to improving the communal life of the locality. Making their requests to the appropriate Syndicates, Builders”, Public Health, Transport or Power, the inhabitants of each Commune will be able to gain all reasonable living amenities, town planning, parks, play-grounds, trees in the street, clinics, museums and art galleries. Giving, like the medieval city assembly, an opportunity for any interested person to take part in, and influence, his town’s affairs and appearance, the Commune will be a very different body from the borough council ... “In ancient and medieval times cities and villages expressed the different characters of different localities and their inhabitants. In redstone, Portland or granite, in plaster or brick, in pitch of roof, arrangements of related buildings or patterns of slate and thatch each locality
over the current state or creating a new one as doomed to failure. Instead, he recognised that socialism would only be built using new organisations that reflect the spirit of socialism (such as freedom, self-government and so on). He, like Proudhon and Bakunin before him, therefore argued that "[t]his was the form that the social revolution must take — the independent commune... [whose] inhabitants have decided that they will communalise the consumption of commodities, their exchange and their production." [Kropotkin, Anarchism, p. 184 and p. 163]

In a nutshell, a participatory community is a free association, based upon the mass assembly of people who live in a common area, the means by which they make the decisions that affect them, their communities, bio-regions and the planet. Their essential task is to provide a forum for raising public issues and deciding upon them. Moreover, these assemblies will be a key way of generating a community (and community spirit) and building and enriching social relationships between individuals and, equally important, of developing and enriching individuals by the very process of participation in communal affairs. By discussing, thinking and listening to others, individuals develop their own abilities and powers while at the same time managing their own affairs, so ensuring that no one else does (i.e. they govern themselves and are no longer governed from above by others). As Kropotkin argued, self-management has an educational effect on those who practice it:

“[The 'permanence' of the general assemblies of the sections — that is, the possibility of calling the general assembly whenever it was wanted by the members of the section and of discussing everything in the general assembly... will educate every citizen politically... The section in permanence — the forum always open — is the only way... to assure an honest and intelligent administration.” [The Great French Revolution, vol. 1, pp. 210–1]
All in all, the results of competition (as documented by a host of scientific disciplines) show its poverty as well as indicating that co-operation is the means by which the fittest survive.

Moreover, the notion that material rewards result in better work is simply not true. Basing itself on simple behaviourist psychology, such arguments fail to meet the test of long-term success (and, in fact, can be counter-productive). Indeed, it means treating human beings as little better that pets or other animals (Kohn argues that it is "not an accident that the theory behind 'Do this and you'll get that' derives from work with other species, or that behaviour management is frequently described in words better suited to animals.") In other words, it "is by its very nature dehumanising." Rather than simply being motivated by outside stimuli like mindless robots, people are not passive. We are "beings who possess natural curiosity about ourselves and our environment, who search for and overcome challenges, who try and master skills and attain competence, and who seek new levels of complexity in what we learn and do ... in general we act on the environment as much as we are acted on by it, and we do not do so simply in order to receive a reward." [Punished by Rewards, p. 24 and p. 25]

Kohn presents extensive evidence to back upon his case that rewards harm activity and individuals. We cannot do justice to it here so we will present a few examples. One study with college students showed that those paid to work on a puzzle “spent less time on it than those who hadn’t been paid” when they were given a choice of whether to work on it or not. “It appeared that working for a reward made people less interested in the task.” Another study with children showed that “extrinsic rewards reduce intrinsic motivation.” [Op. Cit., p. 70 and p. 71] Scores of other studies confirmed this. This is because a reward is effectively saying that a given activity is not worth doing for its own sake — and why would anyone wish to do something they have to be bribed to do?

In the workplace, a similar process goes on. Kohn presents extensive evidence to show that extrinsic motivation also fails even it or who turns it to your own advantage.” The rules governing the association are determined by the associated and can be changed by them (and so a vast improvement over "love it or leave") as are the policies the association follows. Thus, the association "does not impose itself as a spiritual power superior to my spirit. I have no wish to become a slave to my maxims, but would rather subject them to my ongoing criticism." [Max Stirner, No Gods, No Masters, vol. 1, p. 17]

Thus participatory communities are freely joined and self-managed by their members with no division between order givers and order takers as exists within the state. Rather the associated govern themselves and while the assembled people collectively decide the rules governing their association, and are bound by them as individuals, they are also superior to them in the sense that these rules can always be modified or repealed (see section A.2.11 for more details). As can be seen, a participatory commune is new form of social life, radically different from the state as it is decentralised, self-governing and based upon individual autonomy and free agreement. Thus Kropotkin:

"The representative system was organised by the bourgeoisie to ensure their domination, and it will disappear with them. For the new economic phase that is about to begin we must seek a new form of political organisation, based on a principle quite different from that of representation. The logic of events imposes it.” [Words of a Rebel, p. 125]

This “new form of political organisation has to be worked out the moment that socialistic principles shall enter our life. And it is self-evident that this new form will have to be more popular, more decentralised, and nearer to the folk-mote self-government than representative government can ever be.” Kropotkin, like all anarchists, considered the idea that socialism could be created by taking
These positions are not hard and fast divisions, far from it. Puente, for example, thought that in the countryside the dominant commune would be “all the residents of a village or hamlet meeting in an assembly (council) with full powers to administer local affairs.” [Op. Cit., p. 25] Kropotkin supported the soviets of the Russian Revolution, arguing that the “idea of soviets ... of councils of workers and peasants ... controlling the economic and political life of the country is a great idea. All the more so, since it necessarily follows that these councils should be composed of all who take part in the production of natural wealth by their own efforts.” [Anarchism, p. 254]

Which method, workers’ councils or community assemblies, will be used in a given community will depend on local conditions, needs and aspirations and it is useless to draw hard and fast rules. It is likely that some sort of combination of the two approaches will be used, with workers’ councils being complemented by community assemblies until such time as a reduced working week and decentralisation of urban centres make purely community assemblies the more realistic option. It is likely that in a fully libertarian society, community assemblies will be the dominant communal organisation but in the period immediately after a revolution this may not be immediately possible. Objective conditions, rather than predictions, will be the deciding factor. Under capitalism, anarchists pursue both forms of organisation, arguing for community and industrial unionism in the class struggle (see sections J.5.1 and J.5.2).

Regardless of the exact make up of the commune, it has certain key features. It would be free a association, based upon the self-assumed obligation of those who join them. In free association, participation is essential simply because it is the only means by which individuals can collectively govern themselves (and unless they govern themselves, someone else will). “As a unique individual,” Stirner argued, “you can assert yourself alone in association, because the association does not own you, because you are one who owns there. Indeed, he argues that “economists have it wrong if they think of work as a ‘disutility’ — something unpleasant we must do in order to be able to buy what we need, merely a means to an end.” Kohn stresses that “to assume that money is what drives people is to adopt an impoverished understanding of human motivation.” Moreover, “the risk of any incentive or pay-for-performance system is that it will make people less interested in their work and therefore less likely to approach it with enthusiasm and a commitment to excellence. Furthermore, the more closely we tie compensation (or other rewards) to performance, the most damage we do.” [Op. Cit., p. 131, p. 134 and p. 140]

Kohn argues that the idea that humans will only work for profit or rewards “can be fairly described as dehumanising” if “the capacity for responsible action, the natural love of learning, and the desire to do good work are already part of who we are.” Also, it is “a way of trying to control people” and so to “anyone who is troubled by a model of human relationships founded principally on the idea of one person controlling another must ponder whether rewards are as innocuous as they are sometimes made out to be”. So “there is no getting around the fact that ‘the basic purpose of merit pay is manipulative.’ One observer more bluntly characterises incentives as ‘demeaning’ since the message they really convey is, ‘Please big daddy boss and you will receive the rewards that the boss deems appropriate.’” [Op. Cit., p. 26]

Given that much work is controlled by others and can be a hateful experience under capitalism does not mean that it has to be that way. Clearly, even under wage slavery most workers can and do find work interesting and seek to do it well — not because of possible rewards or punishment but because we seek meaning in our activities and try and do them well. Given that research shows that reward orientated work structures harm productivity and excellence, social anarchists have more than just hope to base their ideas. Such research confirms Kropotkin’s comments:
“Wage-work is serf-work; it cannot, it must not, produce all it could produce. And it is high time to disbelieve the legend which presents wagedom as the best incentive to productive work. If industry nowadays brings in a hundred times more than it did in the days of our grandfathers, it is due to the sudden awakening of physical and chemical sciences towards the end of the [18th] century; not to the capitalist organisation of wagedom, but in spite of that organisation.” [The Conquest of Bread, p. 150]

For these reasons, social anarchists are confident that the elimination of the profit motive within the context of self-management will not harm productivity and creativity, but rather enhance them (within an authoritarian system in which workers enhance the power and income of bureaucrats, we can expect different results). With the control of their own work and workplaces ensured, all working people can express their abilities to the full. This will see an explosion of creativity and initiative, not a reduction.

I.4.12 Won’t there be a tendency for capitalist enterprise to reappear?

This is a common right-wing “libertarian” objection. Robert Nozick, for example, imagined the following scenario:

“small factories would spring up in a socialist society, unless forbidden. I melt some of my personal possessions and build a machine out of the material. I offer you and others a philosophy lecture once a week in exchange for yet other things, and so on ... some persons might even want to leave their jobs in socialist industry and

Revolution.” [Peter Kropotkin, The Great French Revolution, vol. 1, p. 210 and p. 204] Anarchists also point to the clubs created during the 1848 Revolution in France and in the Paris Commune of 1871 not to mention the community assemblies created in Argentina during the revolt against neo-liberalism at the start of the 21st century.

Critics of workers’ councils point out that not all people work in traditional workplaces (many are parents who look after children, for example). By basing the commune around the workplace, such people are automatically excluded. Moreover, in most modern cities many people do not live near where they work. It would mean that local affairs could not be effectively discussed in a system of workers’ councils as many who take part in the debate are unaffected by the decisions reached. In addition, some anarchists argue that workplace based systems automatically generate “special interests” and so exclude community issues. Only community assemblies can “transcend the traditional special interests of work, workplace, status, and property relations, and create a general interest based on shared community problems.” [Murray Bookchin, From Urbanisation to Cities, p. 254]

However, such communities assemblies can only be valid if they can be organised rapidly in order to make decisions and to mandate and recall delegates. In the capitalist city, many people work far from where they live and so such meetings have to be called for after work or at weekends (thus the key need is to reduce the working day/week and to communalise industry). For this reason, many anarchists continue to support the workers’ council vision of the commune, complemented by community assemblies for those who live in an area but do not work in a traditional workplace (e.g. parents bringing up small children, the old, the sick and so on). It should be noted that this is something which the supporters of workers’ councils have noticed and some argue for councils which are delegates from both the inhabitants and the enterprises of an area.
lected Writings, p. 170 and p. 206] This vision was stressed by later anarchist thinkers. For example, Spanish anarchist Issac Puente thought that in towns and cities “the part of the free municipality is played by local federation… Ultimate sovereignty in the local federation of industrial unions lies with the general assembly of all local producers.” [Libertarian Communism, p. 27] The Russian anarchist G. P. Maximoff saw the “communal confederation” as being “constituted by thousands of freely acting labour organisations.” [The Program of Anarcho-Syndicalism, p. 43]

This vision of the commune was created during many later revolutions (such as in Russia in 1905 and 1917 as well as Hungary in 1956). Being based on workplaces, this form of commune has the advantage of being based on groups of people who are naturally associated during most of the day (Bakunin considered workplace bodies as “the natural organisation of the masses” as they were “based on the various types of work” which “define their actual day-to-day life” [The Basic Bakunin, p. 139]). This would facilitate the organisation of assemblies, discussion on social, economic and political issues and the mandating and recalling of delegates. Moreover, it combines political and economic power in one organisation, so ensuring that the working class actually manages society.

Other anarchists counterpoise neighbourhood assemblies to workers’ councils. These assemblies will be general meetings open to all citizens in every neighbourhood, town, and village, and will be the source of public policy for all levels of confederal co-ordination. Such “town meetings” will bring people directly into the political process and give them an equal voice in the decisions that affect their lives. Such anarchists point to the experience of the French Revolution of 1789 and the “sections” of the Paris Commune as the key example of “a people governing itself directly — when possible — without intermediaries, without masters.” It is argued, based on this experience, that “the principles of anarchism … dated from 1789, and that they had their origin, not in theoretical speculations, but in the deeds of the Great French

work full time in this private sector … [This is] how private property even in means of production would occur in a socialist society … [and so] the socialist society will have to forbid capitalist acts between consenting adults.” [Anarchy, State and Utopia, pp. 162–3]

There are numerous flawed assumptions in this argument and we will discuss them here. The key flaws are the confusion of exchange with capitalism and the typically impoverished propertarian vision that freedom is, essentially, the freedom to sell your liberty, to become a wage slave and so unfree. Looking at history, we can say that both these assumptions are wrong. Firstly, while markets and exchange have existed for thousands of years capitalism has not. Wage-labour is a relatively recent development and has been the dominant mode of production for, at best, a couple of hundred years. Secondly, few people (when given the choice) have freely become wage-slaves. Just as the children of slaves often viewed slavery as the “natural” order, so do current workers. Yet, as with chattel slavery, substantial state coercion was required to achieve such a “natural” system.

As discussed in section F.8, actually existing capitalism was not created by Nozick’s process — it required substantial state intervention to separate workers from the means of production they used and to ensure, eventually, that the situation in which they sold their liberty to the property owner was considered “natural.” Without that coercion, people do not seek to sell their liberty to others. Murray Bookchin summarised the historical record by noting that in “every precapitalist society, countervailing forces … existed to restrict the market economy. No less significantly, many precapitalist societies raised what they thought were insuperable obstacles to the penetration of the State into social life.” He pointed to “the power of village communities to resist the invasion of trade and despotic political forms into society’s abiding communal substrate.” [The Ecology of Freedom, pp. 207–8] Anarchist anthropologist David Graeber
notes that in the ancient Mediterranean world "while one does periodically run into evidence of arrangements which to the modern eye look like wage-labour contracts, on closer examination they almost always actually turn out to be contracts to rent slaves … Free men and women thus avoided anything remotely like wage-labour, seeing it as a matter, effectively, of slavery, renting themselves out." This means that wage labour "(as opposed to, say, receiving fees for professional services) involves a degree of subordination: a labourer has to be to some degree at the command of his or her employer. This is exactly why, through most of history, free men and women tended to avoid wage-labour, and why, for most of history, capitalism … never emerged." [Possibilities, p. 92]

Thus while the idea that people will happily become wage slaves may be somewhat common place today (particularly with supporters of capitalism) the evidence of history is that people, given a choice, will prefer self-employment and resist wage labour (often to the death). As E. P. Thompson noted, for workers at the end of the 18th and beginning of the 19th centuries, the "gap in status between a 'servant,' a hired wage-labourer subject to the orders and discipline of the master, and an artisan, who might 'come and go' as he pleased, was wide enough for men to shed blood rather than allow themselves to be pushed from one side to the other. And, in the value system of the community, those who resisted degradation were in the right." [The Making of the English Working Class, p. 599]

Over one hundred years later, the rural working class of Aragon showed the same dislike of wage slavery. After Communist troops destroyed their self-managed collectives, the "dispossessed peasants, intransigent collectivists, refused to work in a system of private property, and were even less willing to rent out their labour." [Jose Peirats, Anarchists in the Spanish Revolution, p. 258] The rural economy collapsed as the former collectivists refused to be the servants of the few.

People who have tasted freedom are unlikely to go back to oppression. Therefore, any perception that people will become wage-

1871); a town of 10,000; or just a 10-person hamlet. It appeared in the 12th century from Medieval Latin communia, which means a gathering of people sharing a common life (from Latin communis, things held in common). Proudhon used the term to describe the social units of a non-statist society and subsequent anarchists like Bakunin and Kropotkin followed his lead. As the term "commune", since the 1960s, often refers to "intentional communities" where people drop out of society and form their own counter-cultural groups and living spaces we have, in order to avoid confusion, decided to use "participatory community" as well (anarchists have also used other terms, including "free municipality").

These community organisations are seen as the way people participate in the decisions that affect them and their neighbourhoods, regions and, ultimately, planet. These are the means for transforming our social environment from one disfigured by economic and political power and its needs to one fit for human beings to live and flourish in. The creation of a network of participatory communities ("communes") based on self-government through direct, face-to-face democracy in grassroots neighbourhood assemblies is the means to that end. As we argued in section I.2.3 such assemblies will be born in social struggle and so reflect the needs of the struggle and those within it so our comments here must be considered as generalisations of the salient features of such communities and not blue-prints.

Within anarchist thought, there are two main conceptions of the free commune. One vision is based on workplace delegates, the other on neighbourhood assemblies. We will sketch each in turn.

The first type of participatory community (in which "the federative Alliance of all working men's associations … will constitute the commune") is most associated with Bakunin. He argued that the future social organisation must be made solely from the bottom upwards, by the free association or federation of workers, firstly in their unions, then in communes, regions, nations and finally in a great federation, international and universal." [Michael Bakunin: Se-
ing social and ecological disruption. Libertarian socialists therefore call for a radically new form of political system to replace the centralised nation-state, a form that would be based around confederations of self-governing communities: \"Society is a society of societies; a league of leagues of leagues; a commonwealth of commonwealths of commonwealths; a republic of republics of republics. Only there is freedom and order, only there is spirit, a spirit which is self-sufficiency and community, unity and independence.\" [Gustav Landauer, For Socialism, pp. 125–126]

To create such a system would require dismantling the nation-state and reconstituting relations between communities on the basis of self-determination and free and equal confederation from below. In the following subsections we will examine in more detail why this new system is needed and what it might look like. As we have stressed repeatedly, these are just suggestions of possible anarchist solutions to social organisation. Most anarchists recognise that anarchist communities will co-exist with non-anarchist ones after the destruction of the existing state. As we are anarchists we are discussing anarchist visions. We will leave it up to non-anarchists to paint their own pictures of a possible future.

I.5.1 What are participatory communities?

A key concept in anarchist thought is that of the participatory community. Traditionally, these participatory communities are called communes in anarchist theory (“The basic social and economic cell of the anarchist society is the free, independent commune” [A. Grachev, quoted by Paul Avrich, The Anarchists in the Russian Revolution, p. 64]).

The reason for the use of the term commune is due to anarchism’s roots in France where it refers to the lowest level of administrative division in the Republic. In France, a commune can be a city of 2 million inhabitants (hence the Paris Commune of slaves through choice in a free society is based on the assumption what people accept through necessity under capitalism will pass over, without change, into a free one. This assumption is unfounded and anarchists expect that once people struggle for freedom and taste the pleasures of freedom they will not freely accept a degradation back to having a master — and as history shows, we have some evidence to support our argument. It seems a strangely debased perspective on freedom to ponder whether people will be “free” to alienate their freedom — it is a bit like proclaiming it a restriction of freedom to forbid owning slaves (and, as noted in section F.2.2, Nozick did support voluntary slave contracts).

So anarchists think Nozick’s vision of unfreedom developing from freedom is unlikely. As anarcho-syndicalist Jeff Stein points out “the only reason workers want to be employed by capitalists is because they have no other means for making a living, no access to the means of production other than by selling themselves. For a capitalist sector to exist there must be some form of private ownership of productive resources, and a scarcity of alternatives. The workers must be in a condition of economic desperation for them to be willing to give up an equal voice in the management of their daily affairs and accept a boss.” [“Market Anarchism? Caveat Emptor!”, Libertarian Labour Review, no. 13]

In an anarchist society, there is no need for anyone to forbid capitalist acts. All people have to do is refrain from helping would-be capitalists set up monopolies of productive assets. This is because, as we have noted in section B.3.2, capitalism cannot exist without some form of state to protect such monopolies. In a libertarian-socialist society, of course, there would be no state to begin with, and so there would be no question of it “refraining” people from doing anything, including protecting would-be capitalists’ monopolies of the means of production. In other words, would-be capitalists would face stiff competition for workers in an anarchist society. This is because self-managed workplaces would be able to offer workers more benefits (such as self-government,
better working conditions, etc.) than the would-be capitalist ones. The would-be capitalists would have to offer not only excellent wages and conditions but also, in all likelihood, workers’ control and hire-purchase on capital used. The chances of making a profit once the various monopolies associated with capitalism are abolished are slim.

Thus the would-be capitalist would “not [be] able to obtain assistance or people to exploit” and “would find none because nobody, having a right to the means of production and being free to work on his own or as an equal with others in the large organisations of production would want to be exploited by a small employer”. [Malatesta, Errico Malatesta: His Life and Ideas, pp. 102–103] So where would the capitalist wannabe find people to work for him? As Kropotkin argued:

“You have the freedom here to do whatever you want to do with your money, and to me, that is worth all the political freedom in the world.” [quoted by Chomsky, Op. Cit., p. 99]

Deterring libertarian alternatives to statism is a common feature of our current system. By marginalising and disempowering people, the ability of individuals to manage their own social activities is undermined and weakened. They develop a “fear of freedom” and embrace authoritarian institutions and “strong leaders”, which in turn reinforces their marginalisation.

This consequence is hardly surprising. Anarchists maintain that the desire to participate and the ability to participate are in a symbiotic relationship: participation builds on itself. By creating the social structures that allow participation, participation will increase. As people increasingly take control of their lives, so their ability to do so also increases. The challenge of having to take responsibility for decisions that make a difference is at the same time an opportunity for personal development. To begin to feel power, having previously felt powerless, to win access to the resources required for effective participation and learn how to use them, is a liberating experience. Once people become active subjects, making things happen in one aspect of their lives, they are less likely to remain passive objects, allowing things to happen to them, in other aspects.

All in all, “politics” is far too important an subject to leave to politicians, the wealthy and bureaucrats. After all, it is (or, at least, it should be) what affects, your friends, community, and, ultimately, the planet you live on. Such issues cannot be left to anyone but you. Hence a meaningful communal life based on self-empowered individuals is a distinct possibility (indeed, it has repeatedly appeared throughout history). It is the hierarchical structures in statism and capitalism, marginalising and disempowering the majority, which is at the root of the current wide scale apathy in the face of increas-
every and all questions also helps make “politics” seem boring and irrelevant.

As noted above, this result is not an accident and the marginalisation of “ordinary” people is actually celebrated in bourgeois “democratic” theory. As Noam Chomsky notes:

“Twentieth century democratic theorists advise that ‘The public must be put in its place,’ so that the ‘responsible men’ may ‘live free of the trampling and roar of a bewildered herd,’ ‘ignorant and meddlesome outsiders’ whose ‘function’ is to be ‘interested spectators of action,’ not participants, lending their weight periodically to one or another of the leadership class (elections), then returning to their private concerns. (Walter Lippman). The great mass of the population, ‘ignorant and mentally deficient,’ must be kept in their place for the common good, fed with ‘necessary illusion’ and ‘emotionally potent oversimplifications’ (Wilson’s Secretary of State Robert Lansing, Reinhold Niebuhr). Their ‘conservative’ counterparts are only more extreme in their adulation of the Wise Men who are the rightful rulers – in the service of the rich and powerful, a minor footnote regularly forgotten.” [Year 501, p. 18]

This marginalisation of the public from political life ensures that the wealthy can be “left alone” to use their power as they see fit. In other words, such marginalisation is a necessary part of a fully functioning capitalist society and so libertarian social structures have to be discouraged. Or as Chomsky put it, the “rabble must be instructed in the values of subordination and a narrow quest for personal gain within the parameters set by the institutions of the masters; meaningful democracy, with popular association and action, is a threat to be overcome.” [Op. Cit., p. 18] This philosophy can be seen in the statement of a US Banker in Venezuela under the murderous Jimenez dictatorship:

his invention and instead tried to claim a patent monopoly on it in order to gather a group of wage slaves to exploit, no one would agree to work for him unless they got the full control over both the product of their labour and the labour process itself. And, assuming that he did find someone willing to work for him (and so be governed by him), the would-be capitalist would have to provide such excellent conditions and pay such good wages as to reduce his profits to near zero. Moreover, he would have to face workers whose neighbours would be encouraging them to form a union and strike for even better conditions and pay, including workers’ control and so on. Such a militant workforce would be the last thing a capitalist would desire. In addition, we would imagine they would also refuse to work for someone unless they also got the capital they used at the end of their contract (i.e. a system of “hire-purchase” on the means of production used). In other words, by removing the statist supports of capitalism, would-be capitalists would find it hard to “compete” with the co-operative sector and would not be in a position to exploit others’ labour.

With a system of communal production (in social anarchism) and mutual banks (in individualist anarchism), usury — i.e. charging a use-fee for a monopolised item, of which patents are an instance — would no longer be possible and the inventor would be like any other worker, exchanging the product of his or her labour. As Benjamin Tucker argued, “the patent monopoly ... consists in protecting inventors and authors against competition for a period of time long enough for them to extort from the people a reward enormously in excess of the labour measure of their services — in other words, in giving certain people a right of property for a term of years in laws and facts of nature, and the power to extract tribute from others for the use of this natural wealth, which should be open to all. The abolition of this monopoly would fill its beneficiaries with a wholesome fear of competition which should cause them to be satisfied with pay for their services equal to that which other labourers get for theirs, and secure it by placing their products and works on the market at
the outset at prices so low that their lines of business would be no more tempting to competitors than any other lines." [The Anarchist Reader, pp. 150–1]

So, if someone has labour to sell then they deserve a free society to do it in — as Tucker once pointed out. Such an environment would make the numbers seeking employment so low as to ensure that the rate of exploitation would be zero. Little wonder that, when faced with a self-employed, artisan workforce, capitalists have continually turned to the state to create the "correct" market forces. So without statism to back up various class-based monopolies of capitalist privilege, capitalism would not have become dominant.

It should also be noted that Nozick makes a serious error in his case. He assumes that the "use rights" associated with an anarchist (i.e. socialist) society are identical to the "property rights" of a capitalist one. This is not the case, and so his argument is weakened and loses its force. Simply put, there is no such thing as an absolute or "natural" law of property. As John Stuart Mill pointed out, "powers of exclusive use and control are very various, and differ greatly in different countries and in different states of society." Therefore, Nozick slips an ideological ringer into his example by erroneously interpreting socialism (or any other society for that matter) as specifying a distribution of capitalist property rights along with the wealth. As Mill argued: "One of the mistakes oftenest committed, and which are the sources of the greatest practical errors in human affairs, is that of supposing that the same name always stands for the same aggregation of ideas. No word has been subject of more of this kind of misunderstanding that the word property." ["Chapters on Socialism," Principles of Political Economy, p. 432]

In other words, Nozick assumes that in all societies capitalist property rights are distributed along with consumption and production goods. As Cheyney C. Ryan comments "[d]ifferent conceptions of justice differ not only in how they would apportion society's holdings but in what rights individuals have over their holdings once bourgeoisie sought to reinforce the central government even more..." [Kropotkin, Words of a Rebel, p. 143]). Simply put, the state is centralised to facilitate minority rule by excluding the mass of people from taking part in the decision making processes within society. This is to be expected as social structures do not evolve by chance — rather they develop to meet specific needs and requirements. The specific need of the ruling class is to rule and that means marginalising the bulk of the population. Its requirement is for minority power and this is reflected in the structure of the state (see section H.3.7).

Even if we ignore the historical evidence on this issue, anarchists do not draw this conclusion from the current apathy that surrounds us. In fact, we argue that this apathy is not the cause of government but its result. Government is an inherently hierarchical system in which ordinary people are deliberately marginalised. The powerlessness people feel due to the workings of the system ensure that they are apathetic about it, thus guaranteeing that wealthy and powerful elites govern society without hindrance from the oppressed and exploited majority.

Moreover, government usually sticks its nose into areas that most people have no real interest in. Some things, as in the regulation of industry or workers' safety and rights, a free society could leave to those affected to make their own decisions (we doubt that workers would subject themselves to unsafe working conditions, for example). In others, such as the question of personal morality and acts, a free people would have no interest in (unless it harmed others, of course). This, again, would reduce the number of issues that would be discussed in a free commune. Also, via decentralisation, a free people would be mainly discussing local issues, so reducing the complexity of many questions and solutions. Wider issues would, of course, be discussed but these would be on specific issues and so more focused in their nature than those raised in the legislative bodies of the state. So, a combination of centralisation and an irrational desire to discuss...
that are now rampant and (as always happens when people are free) unleash a flood of innovation in dealing with the social breakdown now afflicting our world. The gigantic metropolis with its hierarchical and impersonal administration, its atomised and isolated “residents,” will be transformed into a network of humanly scaled participatory communities, each with its own unique character and forms of self-government, which will be co-operatively linked through federation with other communities, from the municipal through the bio-regional to the global level.

This means that the social perspective of libertarian socialism is as distinctive as its economic vision. While mainstream socialism is marked by support for centralised states, anarchists stay true to socialism as equality and argue that means decentralisation. Thus socialism “wears two distinct faces. When it is said that a man is a Socialist, it is implies that he regards the monopoly of private property in the means of production as the cause of the existing unequal distribution of wealth and its attendant ills... Socialists are divided into the centralising and decentralising parties, the party of the State and the party of the federatic commune.” [Charlotte M. Wilson, Anarchist Essays, p. 37] Only such a federal, bottom-up, system can ensure people can manage their own fates and ensure genuine freedom and equality through mass participation and self-management.

Of course, it can (and has) been argued that people are just not interested in “politics.” Further, some claim that this disinterest is why governments exist — people delegate their responsibilities and power to others because they have better things to do.

Such an argument, however, is flawed on empirical grounds. As we indicated in section B.2.6, centralisation of power in both the French and American revolutions occurred because the wealthy few thought that working class people were taking too much interest in politics and social issues, not the reverse (“To attack the central power, to strip it of its prerogatives, to decentralise, to dissolve authority, would have been to abandon to the people the control of its affairs, to run the risk of a truly popular revolution. That is why the
plans. This can apply equally to rented accommodation as well, for example when landlords ban working from home or selling off the furniture that is provided. Thus, ironically, “capitalist society will have to forbid capitalist acts between consenting adults” — and does so all the time.

Moreover, it must be stressed that as well as banning capitalist acts between consenting adults, capitalism involves the continual banning of socialist acts between consenting adults. For example, if workers agree to form a union, then the boss can fire them. If they decide to control their own work, the boss can fire them for not obeying orders. Thus capitalism forbids such elemental freedoms as association and speech — at least for the majority, for the wage slaves. Why would people seek such “freedom” in a free society?

Of course, Nozick’s reply to this point would be that the individual’s involved have “consented” to these rules when they signed their contract. Yet the same can be said of an anarchist society — it is freely joined and freely left. To join a communist-anarchist society it would simply be a case of agreeing to “exchange” the product of ones labour freely with the other members of that society and not to create oppressive or exploitation social relationships within it. If this is “authoritarian” then so is capitalism — and we must stress that at least anarchist associations are based on self-management and so the individuals involved have an equal say in the obligations they live under.

Notice also that Nozick confused exchange with capitalism (“I offer you a lecture once a week in exchange for other things”). This is a telling mistake by someone who claims to be an expert on capitalism, because the defining feature of capitalism is not exchange (which obviously took place long before capitalism existed) but labour contracts involving wage labour. Nozick’s example is merely a direct labour contract between the producer and the consumer. It does not involve wage labour, what makes capitalism capitalism. It is only this latter type of transaction that libertarian socialism prevents — and not by “forbidding” it but simply by

interests and not to governmental centralisation; it belongs to freedom and not to authority.” [Words of a Rebel, pp. 143–4]

Thus the social structure of an anarchist society will be the opposite of the current system. Instead of being centralised and top-down as in the state, it will be decentralised and organised from the bottom up. As Kropotkin argued, “socialism must become more popular, more communalistic, and less dependent upon indirect government through elected representatives. It must become more self-governing.” [Anarchism, p. 185] In this, Kropotkin (like Bakunin) followed Proudhon who argued that “[u]nless democracy is a fraud, and the sovereignty of the People a joke, it must be admitted that each citizen in the sphere of his [or her] industry, each municipal, district or provincial council within its own territory, is the only natural and legitimate representative of the Sovereign, and that therefore each locality should act directly and by itself in administering the interests which it includes, and should exercise full sovereignty in relation to them.” [General Idea of the Revolution, p. 276] While anarchists have various different conceptions of how this communal system would be constituted (as we will see), they is total agreement on these basic visions and principles.

The aim is “to found an order of things wherein the principle of the sovereignty of the people, of man and of the citizen, would be implemented to the letter” and “where every member of a society retaining his independence and continuing to act as sovereign, would be self-governing” and any social organisation “would concern itself solely with collective matters; where as a consequence, there would be certain common matters but no centralisation.” This means that the “federative, mutualist republican sentiment” (as summarised these days by the expression self-management) will “bring about the victory of Worker Democracy right around the world.” [Proudhon, Anarchism, vol. 1, Robert Graham (ed.), p. 74 and p. 77]

This empowerment of ordinary citizens through decentralisation and direct democracy will eliminate the alienation and apathy
I.5 What could the social structure of anarchy look like?

The social and political structure of anarchy is similar to that of its economic structure, i.e., it is based on a voluntary federation of decentralised, directly democratic community assemblies (communes). In these grassroots political units and their confederations, the concept of “self-management” becomes that of “self-government”, a form of municipal organisation in which people take back control of their living places from the bureaucratic state and the capitalist class whose interests it serves. Bakunin’s comments are very applicable here:

“[A] truly popular organisation begins from below, from the association, from the commune. Thus starting out with the organisation of the lowest nucleus and proceeding upward, federalism becomes a political institution of socialism, the free and spontaneous organisation of popular life.” [The Political Philosophy of Bakunin, pp. 273–4]

“A new economic phase demands a new political phase,” argued Kropotkin, “A revolution as profound as that dreamed of by the socialists cannot accept the mould of an out-dated political life. A new society based on equality of condition, on the collective possession of the instruments of work, cannot tolerate for a week ... the representative system ... if we want the social revolution, we must seek a form of political organisation that will correspond to the new method of economic organisation ... The future belongs to the free groupings of refusing to maintain the conditions necessary for it to occur, i.e. protection of capitalist property.

In addition, we must note that Nozick also confused “private property in the means of production” with capitalism. Liberation socialism can be easily compatible with “private property in the means of production” when that “private property” is limited to what a self-employed worker uses rather than capitalistic property (see section G.2.1). Nozick, in other words, confused pre-capitalist forms of production with capitalist ones (see section G.1.2). Thus possession of the means of production by people outside of the free commune is perfectly acceptable to social anarchists (see section I.6.2).

Thus an anarchist society would have a flexible approach to Nozick’s (flawed) argument. Individuals, in their free time, could “exchange” their time and possessions as they saw fit. These are not “capitalist acts” regardless of Nozick’s claims. However, the moment an individual employs wage labour then, by this act, they have broken their agreements with their fellows and, therefore, no longer part of “socialist society.” This would involve them no longer having access to the benefits of communal life and to communal possessions. They have, in effect, placed themselves outside of their community and must fair for themselves. After all, if they desire to create “private property” (in the capitalist sense) then they have no right of access to communal possessions without paying for that right. For those who become wage slaves, a socialist society would, probably, be less strict. As Bakunin argued:

“Since the freedom of every individual is inalienable, society shall never allow any individual whatsoever legally to alienate his [or her] freedom or engage upon any contract with another on any footing but the utmost equality and reciprocity. It shall not, however, have the power to disbar a man or woman so devoid of any sense of personal dignity as to contract a relationship of voluntary servitude with another individual, but it will con-
sider them as living off private charity and therefore un-
fit to enjoy political rights throughout the duration
of that servitude.” [Michael Bakunin: Selected
Writings, pp. 68–9]

Lastly, we must also note that Nozick also ignored the fact that acquisition must come before transfer, meaning that before “consenting” capitalist acts occur, individual ones must precede it. As argued in section B.3.4, Nozick provided no convincing arguments why natural resources held in common can be appropriated by individuals. This means that his defence of transferring absolute capitalist property rights in goods is without foundations. Moreover, his argument in favour of such appropriations ignore that liberties are very definitely restricted by private property (and it should be keep in mind that the destruction of commonly held resources, such as village commons, was imposed by the state — see section F.8.3). As pointed out in section F.2, right-wing “libertarians” would better be termed “Propertarians” (why is liberty according a primary importance when arguing against socialism but not when private property restricts liberty?). As Cheyney C. Ryan points out, Nozick “invoke[s] personal liberty as the decisive ground for rejecting patterned principles of justice [such as socialism] and restrictions on the ownership of capital ... [b]ut where the rights of private property admittedly restrict the liberties of the average person, he seems perfectly happy to trade off such liberties against material gain for society as a whole.” [Op. Cit., p. 339] This can be seen by his lack of comment on how capitalism forbids socialist acts between consenting adults, not to mention quite a few numerous capitalist acts for good measure.

Thus Nozick’s acquisition of resources is based on the would-be capitalist stealing communally owned resources and barring others from using them. This obviously would restrict the liberty of those who currently used them and so be hotly opposed by members of a community. As Murray Bookchin noted, a free society is based on

With self-management, we can soon see time and resources being used efficiently and productively simply because those doing the work would have a direct and real interest in it. Rather than alienate their liberty, as under capitalism, they would apply their creativity and minds to transforming their productive activity in such a way as to make it enjoyable and not a waste of their time.

Little wonder Kropotkin argued that modern knowledge could be applied to a society in which people, “with the work of their own hands and intelligence, and by the aid of the machinery already invented and to be invented, should themselves create all imaginable riches. Technics and science will not be lagging behind if production takes such a direction. Guided by observation, analysis and experiment, they will answer all possible demands. They will reduce the time required for producing wealth to any desired amount, so as to leave to everyone as much leisure as he or she may ask for ... they guarantee ... the happiness that can be found in the full and varied exercise of the different capacities of the human being, in work that need not be overwork.” [Fields, Factories and Workshops Tomorrow, pp. 198–9]
Rewarding efficiency with free time would also be an important means to ensure efficient use of resources as well as a means of reducing time spent in productive activity which was considered as boring or otherwise undesirable. The incentive of getting unpleasant tasks over with as quickly as possible would ensure that the tasks were done efficiently and that innovation was directed towards them. Moreover, when it came to major investment decisions, a syndicate would be more likely to get others to agree to its plans if the syndicate had a reputation of excellence. This, again, would encourage efficiency as people would know that they could gain resources for their communities and workplaces (i.e. themselves) more easily if their work is efficient and reliable. This would be a key means of encouraging efficient and effective use of resources.

Similarly, an inefficient or wasteful syndicate would have negative reactions from their fellow workers. As we argued in section I.4.7, a libertarian communist economy would be based on free association. If a syndicate or community got a reputation for being inefficient with resources then others would not associate with them (i.e. they would not supply them with materials, or place them at the end of the queue when deciding which production requests to supply, and so on). As with a syndicate which produced shoddy goods, the inefficient syndicate would also face the judgement of its peers. This will produce an environment which will encourage efficient use of resources and time.

All these factors, the possibility of increased free time, the respect and resources gained for an efficient and excellent work and the possibility of a lack of co-operation with others for inefficient use of resources, would ensure that an anarchist-communist or anarchist-collectivist society would have no need to fear inefficiency. Indeed, by placing the benefits of increased efficiency into the hands of those who do the work, efficiency will no doubt increase.

I.4.13 Who will do the dirty or unpleasant work?

This problem affects every society, including capitalism of course. Under capitalism, this problem is “solved” by ensuring that such jobs are done by those at the bottom of the social pile. In other words, it does not really solve the problem at all — it just ensures that some people are subject to this work the bulk of their working lives. Most anarchists reject this flawed solution in favour of something better, one that shares the good with the bad and so ensure
everyone’s life is better. How this would be done depends on the kind of libertarian community you are a member of.

Obviously, few would argue against the idea that individuals will voluntarily work at things they enjoyed doing. However there are some jobs that few, if any, would enjoy (for example, collecting rubbish, processing sewage, dangerous work, etc.). So how would an anarchist society deal with it?

It is obvious that not all “jobs” are equal in interest or enjoyment. It is sometimes argued that people would start to join or form syndicates which are involved in more fun activities. By this process excess workers would be found in the more enjoyable “jobs” while the boring and dangerous ones would suffer from a scarcity of willing workers. Hence, so the argument goes, a socialist society would have to force people to do certain jobs and that requires a state. Obviously, this argument ignores the fact that under capitalism usually it is the boring, dangerous work which is the least well paid with the worse working conditions. In addition, this argument ignores the fact that under workers self-management boring, dangerous work would be minimised and transformed as much as possible. Only under capitalist hierarchy are people in no position to improve the quality of their work and working environment. As George Barrett argued:

“Now things are so strangely organised at present that it is just the dirty and disagreeable work that men will do cheaply, and consequently there is no great rush to invent machines to take their place. In a free society, on the other hand, it is clear that the disagreeable work will be one of the first things that machinery will be called upon to eliminate. It is quite fair to argue, therefore, that the disagreeable work will, to a large extent, disappear in a state of anarchism.” [Objections to Anarchism, p. 361]

the wasteful use of individual time, energy and potential as well as environmental and social costs. Such a narrow criteria for decision making or evaluating efficient production will not exist in an anarchist society (see our discussion of the irrational nature of the price mechanism in section I.1.2, for example). When we use the term efficiency we mean the dictionary definition of efficiency (i.e. reducing waste, maximising use of resources) rather than what the capitalist market distorts this into (i.e. what creates most profits for the boss).

While capitalism has turned improvements in productivity as a means of increasing work, enriching the few and generally proletarianising the working class, a free society would take a different approach to the problem. As argued in section I.4.3, a communist-anarchist society would be based upon the principle of “for some much per day (in money today, in labour tomorrow) you are entitled to satisfy — luxury excepted — this or the other of your wants.” [Peter Kropotkin, Small Communal Experiments and why the fail, p. 8] Building upon this, we can imagine a situation where the average output for a given industry in a given amount of time is used to encourage efficiency and productivity. If a given syndicate can produce this average output with at least average quality in less time than the agreed average/minimum (and without causing ecological or social externalities, of course) then the members of that syndicate can and should have that time off.

This would be a powerful incentive to innovate, improve productivity, introduce new machinery and processes as well as work efficiently without reintroducing the profit motive and material inequality. With the possibility of having more time available for themselves and their own projects, people involved in productive activities would have a strong interest in being efficient. Of course, if the work in question is something they enjoy then any increases in efficiency would enhance what makes their work enjoyable and not eliminate it.
Pleasant working conditions based upon the self-management of work can produce a workplace within which economic "efficiency" can be achieved without disrupting and destroying individuality and the environment (also see section I.4.9 for a fuller discussion of anarchism and technology).

I.4.16 Won’t a libertarian communist society be inefficient?

It is often argued that anarchism and other forms of non-market libertarian-socialism would promote inefficiency and unproductive work. The basis of this argument is that without market forces to discipline workers and the profit motive to reward them, workers would have no incentive to work in a way which minimises time or resources. The net effect of this would be inefficient use of resources, particularly an individual's time.

This is a valid point in some ways; for example, a society can (potentially) benefit from increasing productivity as the less time and resources it takes to produce a certain good, the more of both it gains for other activities (although, of course, in a class society the benefits of increased productivity generally accrue to, first and foremost, those at the top and, for the rest, the "other activities" mean more work). Indeed, for an individual, a decent society depends on people having time available for them to do what they want, to develop themselves in whatever way they want, to enjoy themselves. In addition, doing more with less can have a positive environment impact as well. It is for these reasons that an anarchist society would be interested in promoting efficiency and productiveness during production.

A free society will undoubtedly create new criteria for what counts as an efficient use of resources and time. What passes for “efficient” use capitalism often means what is efficient in increasing the power and profits of the few, without regard to

Moreover, most anarchists would think that the argument that there would be a flood of workers taking up “easy” work placements is abstract and ignores the dynamics of a real society. While many individuals would try to create new productive syndicates in order to express themselves in innovative work outwith the existing research and development going on within existing syndicates, the idea that the majority of individuals would leave their current work at a drop of a hat is crazy. A workplace is a community and part of a community and people would value the links they have with their fellow workers. As such they would be aware of the impacts of their decisions on both themselves and society as a whole. So, while we would expect a turnover of workers between syndicates, the mass transfers claimed in this argument are unlikely. Most workers who did want to try their hand at new work would apply for work places at syndicates that required new people, not create their own ones. Because of this, work transfers would be moderate and easily handled.

However, the possibility of mass desertions does exist and so must be addressed. So how would a libertarian socialist society deal with a majority of its workers deciding to all do interesting work, leaving the boring and/or dangerous work undone? It, of course, depends on the type of anarchism in question and each offers alternative ways to ensure that individual preferences for certain types of work matches the requirements of social demand for labour.

Under individualist anarchism and mutualism, those who desired a certain form of work done would reach an agreement with workers or a co-operative and pay them to do the work in question. Within a co-operative, as Proudhon argued, a person’s “education, instruction, and apprenticeship should ... be so directed that, while permitting him to do his share of unpleasant and disagreeable tasks, they may also give variety of work and knowledge, and may assure him ... an encyclopaedic attitude and a sufficient income.” [General Idea of the Revolution, p. 222] In terms of unpleasant tasks
for other people (for example, collecting and processing a community’s rubbish) then individuals would form co-operatives which would have to find their place on the market and this would ensure that such work was done as they would contract with others to provide the appropriate services. However, this could lead to some people doing unpleasant work all the time and so is hardly a solution. As in capitalism, we may see some people doing terrible work because it is better than no work at all. This is a solution few anarchists would support.

In a collectivist or communist anarchist society, such an outcome would be avoided as far as possible. Noam Chomsky points to two possible alternatives, one “in which the undesired work, after the best efforts to make it meaningful, is shared” and another one “where the undesired work receives high extra pay, so that individuals voluntarily choose to do it.” Such schemes are “consistent with… anarchist principles” unlike the current situation where “the undesired work is given to wage-slaves.” [Radical Priorities, p. 220] Another way, somewhat complementary to these two, would be to take a leaf from “peasant attitudes toward labour” and their “most striking feature”, the extent “to which any kind of communal toil, however onerous, can be transformed by the workers themselves into festive occasions that serve to reinforce community ties.” [The Ecology of Freedom, p. 342]

It would be easy to imagine a free community sharing such tasks as fairly as possible between a community’s members by, for example, allocating a few days a month to all fit members of a community to do work which no one volunteers to do. This would soon ensure that it would be done, particularly if it were part of a festival or before a party. In this way, every one shares in the unpleasant as well as pleasant tasks (and, of course, minimises the time any one individual has to spend on it). Or, for tasks which are very popular, individuals would also have to do unpleasant tasks as well. In this way, popular and unpopular tasks could balance each other out. Or such tasks could be rotated randomly by lottery. The possibilities

of a certain variety of natural resources — it may be a nation, or rather a region — produces and itself consumes most of its own agricultural and manufactured produce.” [Op. Cit., p. 26]

The future workplace would be an expression of the desires of those who worked there. It would be based around a pleasant working environment, within gardens and with extensive library, resources for education classes and other leisure activities. All this, and more, will be possible in a society based upon self-realisation and self-expression and one in which individuality is not crushed by authority and capitalism. To quote Kropotkin, the future workplace would be “airy and hygienic, and consequently economical, factories in which human life is of more account than machinery and the making of extra profits.” [Op. Cit., p. 197] For, obviously, “if most of the workshops we know are foul and unhealthy, it is because the workers are of no account in the organisation of factories”. [The Conquest of Bread, p. 121]

“So in brief,” argued William Morris, “our buildings will be beautiful with their own beauty of simplicity as workshops” and “besides the mere workshops, our factory will have other buildings which may carry ornament further than that, for it will need dining-hall, library, school, places for study of different kinds, and other such structures.” [A Factory as It Might Be, p. 9] This is possible and is only held back by capitalism which denounces such visions of freedom as “uneconomic.” Yet such claims ignore the distribution of income in class society:

“Impossible I hear an anti-Socialist say. My friend, please to remember that most factories sustain today large and handsome gardens, and not seldom parks … only the said gardens, etc. are twenty miles away from the factory, out of the smoke, and are kept up for one member of the factory only, the sleeping partner to wit.” [Morris, Op. Cit., pp. 7–8]
nant tasks will disappear, because it is evident that these unhealthy conditions are harmful to society as a whole. Slaves can submit to them, but free men [and women] will create new conditions, and their work will be pleasant and infinitely more productive.” [Kropotkin, *The Conquest of Bread*, p. 123] Workplaces would be designed to maximise space and allow individual expression within them. We can imagine such places surrounded by gardens and allotments which were tended by workers themselves, giving a pleasant surrounding to the workplace. There would, in effect, be a break down of the city/rural divide — workplaces would be placed next to fields and integrated into the surroundings:

“Have the factory and the workshop at the gates of your fields and gardens, and work in them. Not those large establishments, of course, in which huge masses of metals have to be dealt with and which are better placed at certain spots indicated by Nature, but the countless variety of workshops and factories which are required to satisfy the infinite diversity of tastes among civilised men [and women] ... factories and workshops which men, women and children will not be driven by hunger, but will be attracted by the desire of finding an activity suited to their tastes, and where, aided by the motor and the machine, they will choose the branch of activity which best suits their inclinations.” [Kropotkin, *Fields, Factories and Workshops Tomorrow*, p. 197]

This vision of rural and urban integration is just part of the future anarchists see for the workplace. As Kropotkin argued, "[w]e proclaim integration... a society of integrated, combined labour. A society where each individual is a producer of both manual and intellectual work; where each able-bodied human being is a worker, and where each worker works both in the field and the industrial workshop; where every aggregation of individuals, large enough to dispose are many and, undoubtedly, a free people will try many different ones in different areas.

Another possible solution could be to follow the ideas of Josiah Warren and take into account the undesirability of the work when considering the level of labour notes received or communal hours worked. In other words, in a collectivist society the individuals who do unpleasant work may be “rewarded” (along with social esteem) with a slightly higher pay – the number of labour notes, for example, for such work would be a multiple of the standard amount, the actual figure being related to how much supply exceeds demand (in a communist society, a similar solution could be possible, with the number of necessary hours required by an individual being reduced by an amount that corresponds to the undesirability of the work involved). The actual levels of “reward” would be determined by agreements between the syndicates. For example, if a given type of work has 50% more people wanting to do it than actually required, then the labour value for one hours work in this industry would correspondingly be less than one hour. If fewer people applied than required, then the labour value would increase, as would holiday time, etc. For “work” placements in which supply exceeded demand, it would be easy to arrange a work share scheme to ensure that most people get a chance to do that kind of work (along with such methods as increasing the value of an hour’s labour, reducing holiday allocations and such like).

In this way, “supply and demand” for workers would soon approximate each other. In addition, a collectivist society would be better placed than the current system to ensure work-sharing and other methods to spread unpleasant and pleasant tasks equally around society due to its organs of self-management and the rising social awareness via participation and debate within those organs.

A communist-anarchist society’s solution would be similar to the collectivist one. There would still be basic agreements between its members for work done and so for work placements with excess supply of workers the amount of hours necessary to meet the
agreed minimum would correspondingly increase. For example, an industry with 100% excess supply of volunteers would see its minimum requirement increase from (say) 20 hours a week to 30 hours. An industry with less applicants than required would see the number of required hours decrease, plus increases in holiday time and so on. As G.D.H. Cole argued in respect of this point:

“If we first by the fullest application of machinery and scientific methods eliminate or reduce ... ‘dirty work’ that admit to such treatment. This has never been tried ... under capitalism ... It is cheaper to exploit and ruin human beings ... Secondly, let us see what forms of ‘dirty work’ we can do without ... [and] if any form of work is not only unpleasant but degrading, we will do without it, whatever the cost. No human being ought to be allowed or compelled to do work that degrades. Thirdly, for what dull or unpleasant work remains, let us offer whatever special conditions are required to attract the necessary workers, not in higher pay, but in shorter hours, holidays extending over six months in the year, conditions attractive enough to men who have other uses for their time or attention to being the requisite number to undertake it voluntarily.” [Guild Socialism Restated, p. 76]

By these methods a balance between industrial sectors would be achieved as individuals would balance their desire for interesting work with their desires for free time. Over time, by using the power of appropriate technology, even such time keeping would be minimised or even got eliminated as society developed freely. Until such time as it can be automated away, a free society will have to encourage people to volunteer for “work” placements they do not particularly want to do by these and other methods.

It will be clear what is considered unpleasant work in any society — few people (if any) will volunteer to do it. As in any advanced so-

social necessities (a practice, we must note, that had started before the revolution when anarchist unions had funded schools, social centres, libraries and so on).

The future workplace would be expanded to include education and classes in individual development. This follows Proudhon’s suggestion made during the 1848 revolution that we should “[o]rganise association, and by the same token, every workshop becoming a school, every worker becomes a master, every student an apprentice.” [No Gods, No Masters, vol. 1, pp. 62–3] This means that in a free society “Workers’ associations have a very important role to play ... Linked to the system of public education, they will become both centres of production and centres and for education ... The working masses will be in daily contact with the youthful army of agricultural and industrial workers. Labour and study, which have for so long and so foolishly been kept apart, will finally emerge side by side in their natural state of union. Instead of being confined to narrow, specialised fields, vocational education will include a variety of different types of work which, taken as a whole, will insure that each student becomes an all-round worker.” [Proudhon, Selected Writings of Pierre-Joseph Proudhon, p. 87]

This would allow work to become part of a wider community, drawing in people from different areas to share their knowledge and learn new insights and ideas. In addition, children would have part of their school studies with workplaces, getting them aware of the practicalities of many different forms of work and so allowing them to make informed decisions in what sort of activity they would be interested in pursuing when they were older.

Obviously, a workplace managed by its workers would also take care to make the working environment as pleasant as possible. No more “sick building syndrome” or unhealthy and stressful work areas for “can we doubt that work will become a pleasure and a relaxation in a society of equals, in which ‘hands’ will not be compelled to sell themselves to toil, and to accept work under any conditions repug-
wished to supply his own material needs by working alone would be the slave of his labours.” [The Anarchist Revolution, p. 15]

So, enlightened self-interest would secure the voluntary labour and egalitarian distribution anarchists favour in the vast majority of the population. The parasitism associated with capitalism would be a thing of the past. Thus the problem of the “lazy” person fails to understand the nature of humanity nor the revolutionising effects of freedom on the nature and content of work.

I.4.15 What will the workplace of tomorrow look like?

Given the anarchist desire to liberate the artist in all of us, we can easily imagine that a free society would totally transform the working environment. No longer would workers be indifferent to their workplaces, but they would express themselves in transforming them into pleasant places, integrated into both the life of the local community and into the local environment. After all, “no movement that raises the demand for workers’ councils can be regarded as revolutionary unless it tries to promote sweeping transformations in the environment of the work place.” [Murray Bookchin, Post-Scarcity Anarchism, p. 88]

A glimpse of the future workplace can been seen from the actual class struggle. In the 40 day sit-down strike at Fisher Body plant #1 in Flint, Michigan in 1936, “there was a community of two thousand strikers … Committees organised recreation, information, classes, a postal service, sanitation … There were classes in parliamentary procedure, public speaking, history of the labour movement. Graduate students at the University of Michigan gave courses in journalism and creative writing.” [Howard Zinn, A People’s History of the United States, p. 391] In the same year, during the Spanish Revolution, collectivised workplaces also created libraries and education facilities as well as funding schools, health care and other
quested. If it is within the syndicate’s agreed budget then it is likely that they will produce the required materials. In this way, a communist-anarchist society will ensure the maximum amount of economic freedom to start new syndicates and join existing ones plus ensure that social production does not suffer in the process.

Of course, no system is perfect — we are sure that not everyone will be able to do the work they enjoy the most (this is also the case under capitalism, we may add). In an anarchist society every method of ensuring that individuals pursue the work they are interested in would be investigated. If a possible solution can be found, we are sure that it will. What a free society would make sure of was that neither the capitalist market redeveloped (which ensures that the majority are marginalised into wage slavery) or a state socialist “labour army” type allocation process developed (which would ensure that free socialism did not remain free or socialist for long).

In this manner, anarchism will be able to ensure the principle of voluntary labour and free association as well as making sure that unpleasant and unwanted “work” is done. Moreover, most anarchists are sure that in a free society such requirements to encourage people to volunteer for unpleasant work will disappear over time as feelings of mutual aid and solidarity become more and more common place. Indeed, it is likely that people will gain respect for doing jobs that others might find unpleasant and so it might become “glamorous” to do such activity. Showing off to friends can be a powerful stimulus in doing any activity. So anarchists would agree with Albert and Hahnel when they say that:

“In a society that makes every effort to depreciate the esteem that derives from anything other than conspicuous consumption, it is not surprising that great income differentials are seen as necessary to induce effort. But to assume that only conspicuous consumption can motivate people because under capitalism we have strained to make it so is unwarranted. There is plenty of evidence

So, in most, if not all, anarchist communities, individuals have two options, either they can join a commune and work together as equals, or they can work as an individual or independent co-operative and exchange the product of their labour with others. If an individual joins a commune and does not carry their weight, even after their fellow workers ask them to, then that person will possibly be expelled and given enough land, tools or means of production to work alone. Of course, if a person is depressed, run down or otherwise finding it hard to join in communal responsibilities then their friends and fellow workers would do everything in their power to help and be flexible in their approach to the problem. What method a community would use would depend on what people in that community thought was best.

However, most social anarchists think that the problem of people trying not to work would be a very minor one in a free society. This is because productive activity is part of human life and an essential way to express oneself. With work being voluntary and self-managed, it will become like current day hobbies and many people work harder at their hobbies than they do at “real” work (this FAQ can be considered as an example of this!). How long this takes to organise fully is, of course, unknown but one of the most important tasks of a free society will be to ensure work is transformed and the burden of what remains is shared in order to reduce toil to a minimum.

It is then nature of employment under capitalism, the hierarchical nature of its workplace, that makes it “work” instead of pleasure. Work need not be a part of the day that we wish would end. It is not work that people hate. Rather it is over-work, in unpleasant circumstances and under the control of others that people hate. Reduce the hours of labour, improve the working conditions and place the work under self-management and work will stop being a hated thing. All these will help ensure that only an idiot would desire to work alone for, as Malatesta argued, the “individual who
We have to stress here that an anarchist society will not deny anyone the means of life. This would violate the voluntary labour which is at the heart of all schools of anarchism. Unlike capitalism, the means of life will not be monopolised by any group — including the commune. This means that someone who does not wish to join a commune or who does not pull their weight within a commune and are expelled or choose to leave will have access to the means of making a living.

We stated that we stress this fact as many supporters of capitalism seem to be unable to understand this point (or prefer to ignore it and so misrepresent the anarchist position). In an anarchist society, no one will be forced to join a commune simply because they do not have access to the means of production and/or land required to work alone. Unlike capitalism, where access to these essentials of life is dependent on buying access to them from the capitalist class (and so, effectively, denied to the vast majority), an anarchist society will ensure that all have access and have a real choice between living in a commune and working independently. This access is based on the fundamental difference between possession and property — the commune possesses as much land as it needs, as do non-members. The resources used by them are subject to the usual possession rationale — they possess it only as long as they use it and cannot bar others using it if they do not (i.e., it is not property).

Thus an anarchist commune remains a voluntary association and ensures the end of all forms of domination. The member of the commune has the choice of working as part of a community, giving according to their abilities and taking according to their needs (or some other means of organising production and consumption such as equal income or receiving labour notes, and so on), or working independently and so free of communal benefits as well as any commitments (bar those associated with using communal resources such as roads and so on).

We should note here that the education syndicates would obviously take into account the trends in “work” placement requirements when deciding upon the structure of their classes. In this way, education would respond to the needs of society as well as the needs of the individual (as would any productive syndicate).

I.4.14 What about the person who will not work?

Anarchism is based on voluntary labour. If people do not desire to work then they cannot (must not) be forced to by means of physical coercion. This makes some wonder what happens if someone refuses to work in a libertarian society.

In terms of a mutualist or collectivist anarchy, this question is easy to answer for goods are distributed according to work done and so if people do not work then they are left dependent on the charity of those who do (exceptions for the young, old and ill would apply, of course).

So this question is directed towards communist-anarchists, with many people arguing that communism is impossible because people simply would not work unless they get paid. This ignores the many people who do volunteer work (often in addition to their “real jobs”). It also ignores those who spend their time contributing to projects they are interested in (such as fan journals) which would be considered work in other contexts. A classic example of this is that people can be moved to great sacrifices for reasons other than a desire for personal wealth... there is good reason to believe that for nonpathological people wealth is generally coveted only as a means of attaining other ends such as economic security, comfort, social esteem, respect, status, or power.” [The Political Economy of Participatory Economics, p. 52]
the internet, particularly webpages like Wikipedia and software projects like php. Then there is the activity of the pro-capitalists themselves, often fanatical anti-communists (which they almost always equate to Stalinism), who spend their free time working on wikipedia, newsgroups, webpages and journals explaining how communism could not work because people would never voluntarily contribute to society! It is one of the great ironies of life that those who hate communism the most often, by their actions, prove its viability.

So, communist-anarchists argue, in a society based on self-managed work in pleasant surroundings and a reduction of the working week to a minimum, there would be few people who refuse to do any kind of productive activity. The question arises of what to do with those (a small minority, to be sure) who refuse to work.

On this question there is some disagreement. Some anarchists argue that the lazy should not be deprived of the means of life. Social pressure, they argue, would ensure those who take from, but do not contribute, to the community to listen to their conscience and start producing for the community that supports them. If this did not happen, then the person who refused to contribute would be asked to leave (freedom of association means the freedom not to associate). As Kropotkin argued;

“First of all, is it not evident that if a society, founded on the principle of free work, were really menaced by loafers, it could protect itself without the authoritarian organisation we have nowadays, and without having recourse to wagedom [i.e., payment by deeds]?

“Let us take a group of volunteers, combining for some particular enterprise. Having its success at heart, they all work with a will, save one of the associates, who is frequently absent from his post ... some day the comrade who imperils their enterprise will be told: 'Friend, we should like to work with you; but as you are often absent from your post, and you do your work negligently, we must part. Go and find other comrades who will put up with your indifference!'

“This is so natural that it is practised everywhere, even nowadays, in all industries ... [If] a worker does his work badly, if he hinders his comrades by his laziness or other defects, if he is quarrelsome, there is an end of it; he is compelled to leave the workshop.

“Authoritarians pretend that it is the almighty employer and his overseers who maintain regularity and quality of work in factories. In reality ... it is the factory itself, the workmen [and women] who see to the good quality of the work.” [The Conquest of Bread, pp. 152–3]

Most anarchists agree with Camillo Berneri when he argued that anarchism should be based upon “no compulsion to work, but no duty towards those who do not want to work.” [“The Problem of Work”, pp. 59–82, Why Work?, Vernon Richards (ed.), p. 74] This means that an anarchist society will not continue to feed, clothe, house someone who can produce but refuses to. Anarchists have had enough of the wealthy under capitalism consuming but not producing and do not see why they should support a new group of parasites after the revolution.

Obviously, there is a difference between not wanting to work and being unable to work. The sick, children, the old, pregnant women and so on will be looked after in libertarian communism. As child rearing would be considered “work” along with other more obviously economic tasks, mothers and fathers will not have to leave their children unattended and work to make ends meet. Instead, consideration will be given to the needs of both parents and children as well as the creation of community nurseries and child care centres.
In reality, the "tragedy of the commons" comes about only after wealth and private property, backed by the state, starts to eat into and destroy communal life. This is well indicated by the fact that commons existed for thousands of years and only disappeared after the rise of capitalism — and the powerful central state it requires — had eroded communal values and traditions. Without the influence of wealth concentrations and the state, people get together and come to agreements over how to use communal resources and have been doing so for millennia. That was how the commons were successfully managed before the wealthy sought to increase their holdings and deny the poor access to land in order to make them fully dependent on the power and whims of the owning class.

Thus, as Kropotkin stressed, the state "systematically weeded out all institutions in which the mutual-aid tendency had formerly found its expression. The village communities were bereft of their folkmotes, their courts and independent administration; their lands were confiscated." [Mutual Aid, p. 182] The possibilities of free discussion and agreement were destroyed in the name of "absolute" property rights and the power and authority which goes with them. Both political influence and market forces were, and are, dominated by wealth: "There were two occasions that dictated absolute precision: a trial at law and a process of enclosure. And both occasions favoured those with power and purses against the little users." Popular assertion meant little when the state enforces property rights in the interests of the wealthy. Ultimately, "Parliament and law imposed capitalist definitions to exclusive property in land." [Thompson, Op. Cit., p. 134 and p. 163] As Cox suggested, many tenants were "denied [their] remedy at law for the illegal abuses of the more powerful landowners" and "[s]ponsored by wealthy landowners, the land reform was frequently no more than a sophisticated land-grab." [Op. Cit., p. 58 and p. 59] Gerrard Winstanley, the Digger (and proto-anarchist), was only expressing a widespread popular sentiment when he complained that "in Parishes where Commons lie the rich Norman Freeholders, or the new (more covetous) Gentry overstock
pered rank-and-file workers’ gatherings (convened, for instance, to decide on a strike) there have never been ‘too many’ speeches. The two or three fundamental opinions having been voiced, and various arguments exchanged, a decision is soon reached.

“The length of speeches, moreover, often varies inversely with the weight of their content. Russian leaders sometimes talk on for four hours at Party Congresses without saying anything ... For an account of the laconicism of revolutionary assemblies, see Trotsky’s account of the Petrograd soviet of 1905 — or accounts of the meetings of factory representatives in Budapest in 1956.” [Political and Social Writings, vol. 2, pp. 144–5]

As we shall see below, this was definitely the case during the Spanish Revolution as well.

Thirdly, as these assemblies and congresses are concerned purely with joint activity and co-ordination. Different associations and syndicates have a functional need for co-operation and so would meet more regularly and take action on practical activity which affects a specific section of a community or group of communities. Not every issue that a member of a community is interested in is necessarily best discussed at a meeting of all members of a community or at a confederal conference. As Herbert Read suggested, anarchism “proposes to liquidate the bureaucracy first by federal devolution” and so “hands over to the syndicates all ... administrative functions” related to such things as “transport, and distribution, health and education.” [Anarchy and Order, p. 101] Such issues will be mainly discussed in the syndicates involved and so community discussion would be focused on important issues and themes of general policy rather than the specific and detailed laws discussed and implemented by politicians who know nothing about the issues or industries at hand.

Much the same can be said against those who argue that the experience of the Stalinism in the Eastern Block and elsewhere shows that public property leads to pollution and destruction of natural resources. Such arguments also show a lack of awareness of what common property actually is (it is no co-incidence that the propertarian-right use such an argument). This is because the resources in question, as we discussed in section B.3.5, were not owned or managed in common — the fact that these countries were dictatorships excluded popular control of resources. Thus Stalinism does not, in fact, show the dangers of having commons or public ownership. Rather it shows the danger of not subjecting those who manage a resource to public control (and it is no co-incidence that the USA is far more polluted than Western Europe — in the USA, like in the USSR, the controllers of resources are not subject to popular control and so pass pollution on to the public). Stalinism shows the danger of state owned resource use (nationalisation) rather than commonly owned resource use (socialisation), particularly when the state in question is not under even the limited control of its subjects implied in representative democracy.

This confusion of public and state owned resources has, of course, been used to justify the stealing of communal property by the rich and the state. The continued acceptance of this “confusion” in political debate, like the continued use of Hardin’s original and flawed “Tragedy of the Commons”, is due to the utility of the theory for the rich and powerful, who have a vested interest in undermining pre-capitalist social forms and stealing communal resources. Most examples used to justify the “tragedy of the commons” are false examples, based on situations in which the underlying social context is assumed to be radically different from that involved in using true commons.
Surely, the very obvious fact that humans have lived in societies with commons for centuries and did not overuse them disproves Hardin’s most fundamental assumptions. “If we misunderstand the true nature of the commons,” argues scientist Susan Jane Buck Cox “we also misunderstand the implications of the demise of the traditional, commons system. Perhaps what existed in fact was not a ‘tragedy of the commons’ but rather a triumph: that for hundreds of years — and perhaps thousands, although written records do not exist to prove the longer era — land was managed successfully by communities.” This suggests that it is a case of “the myth of the tragedy of the commons”, rooted in an argument which is “historically false” as the “commons were carefully and painstakingly regulated.” She points to a wider issue, namely whether “our perceptions of the nature of humankind are avaricious” for “it seems quite likely if ‘economic man’ had been managing the commons that tragedy really would have occurred,” so “perhaps someone else was running the common.” (“No Tragedy on the Commons”, pp. 49–61, Environmental Ethics, vol. 7, p. 60, p. 53, p. 56 and p. 61)

One economist has noted that the “tragedy of the commons” only makes sense once the assumption of neo-classical economics are taken for granted. If we assume atomised individuals accessing unmanaged lands then Hardin’s conclusions automatically flow. However, “if the property were really common, this would imply the necessary existence of institutional agreements … between the co-owners to establish the rules for decisions governing the management of the resource. To put it more clearly, for common property to be truly common property implies its existence as an institution.” It is precisely these kinds of human institutions which neo-classical economics ignores and so “the so-called ‘tragedy of the commons’ is more accurately considered ‘the tragedy of a methodological individualism’”. As many critics note, there are numerous “conceptual errors” contained in the article and these “have been repeated systematically by economists.” In summary, “the so-called tragedy of the commons has nothing to do with common property, but with un-

By reducing conferences to functional bodies based on concrete issues, the problems of endless discussions can be reduced, if not totally eliminated. In addition, as functional groups would exist outside of these communal confederations (for example, industrial collectives would organise conferences about their industry with invited participants from consumer groups), there would be a limited agenda in most communal get-togethers.

In other words, communal assemblies and conferences will have specific, well defined agendas, and so there is little danger of “politics” (for want of a better word!) taking up everyone’s time. Hence, far from discussing abstract laws and pointless motions on everything under the sun and on which no one actually knows much about, the issues discussed in these conferences will be on specific issues which are important to those involved. In addition, the standard procedure may be to elect a sub-group to investigate an issue and report back at a later stage with recommendations. The conference can change, accept, or reject any proposals. As Kropotkin argued, anarchy would be based on “free agreement, by exchange of letters and proposals, and by congresses at which delegates met to discuss well specified points, and to come to an agreement about them, but not to make laws. After the congress was over, the delegates would return … not with a law, but with the draft of a contract to be accepted or rejected.” [Conquest of Bread, p. 131]

Is this system fantasy? Given that such a system has existed and worked at various times, we can safely argue that it is not. Obviously we cannot cover every example, so we point to just two — revolutionary Paris and Spain.

As Murray Bookchin points out, Paris “in the late eighteenth century was, by the standards of that time, one of the largest and economically most complex cities in Europe: its population approximated a million people … Yet in 1793, at the height of the French Revolution, the city was managed institutionally almost entirely by [48] citizen assemblies… and its affairs were co-ordinated by the Commune … and often, in fact, by the assemblies themselves, or sections as they
were called, which established their own interconnections without recourse to the Commune.” [“Transition to the Ecological Society”, pp. 92–105, *Society and Nature*, no. 3, p. 96]

Here is his account of how communal self-government worked in practice:

“What, then, were these little-know forty-eight sections of Paris ... How were they organised? And how did they function?

“Ideologically, the sectionnaires (as their members were called) believed primarily in sovereignty of the people. This concept of popular sovereignty, as Albert Soboul observes, was for them ‘not an abstraction, but the concrete reality of the people united in sectional assemblies and exercising all their rights.’ It was in their eyes an inalienable right, or, as the section de la Cite declared in November 1792, ‘every man who assumes to have sovereignty will be regarded as a tyrant, usurper of public liberty and worthy of death.’

“Sovereignty, in effect, was to be enjoyed by all citizens, not pre-empted by ‘representatives’ ... The radical democrats of 1793 thus assumed that every adult was, to one degree or another, competent to participate in management public affairs. Thus, each section ... was structured around a face-to-face democracy: basically a general assembly of the people that formed the most important deliberative body of a section, and served as the incarnation of popular power in a given part of the city ... each elected six deputies to the Commune, presumably for the purpose merely of co-ordinating all the sections in the city of Paris.

“Each section also had its own various administrative committees, whose members were also recruited from the

Colin Ward points to a more recent example, that of Spain after the victory of Franco:

“The water history of Spain demonstrates that the tragedy of the commons is not the one identified by Garrett Hardin. Communal control developed an elaborate and sophisticated system of fair shares for all. The private property recommended by Hardin resulted in the selfish individualism that he thought was inevitable with common access, or in the lofty indifference of the big landowners.” [Op. Cit., p. 27]

So, for a while, Hardin’s essay “was taken to provide an argument for the privatisation of the commons. It is now a well-developed point that Hardin’s argument is not a tragedy of common ownership at all ... Hardin’s argument is a problem not of common ownership, but of open access in a context of private ownership of particular assets.” [John O’Neill, *Markets, Deliberation and Environment*, p. 54]

Significantly, Hardin later admitted his mistake and noted that “it is clear to me that the title of my original contribution should have been *The Tragedy of the Unmanaged Commons* ... I can understand how I might have misled others.” [quoted by O’Neill, Op. Cit., p. 199]

But, of course, by then the damage had been done.

There is something quite arrogant about Hardin’s assertions, as he basically assumed that peasant farmers are unable to recognise certain disaster and change their behaviour accordingly. This, apparently, is where enlightened elites (governmental and economic) step in. However, in the real world, small farmers (and others) have created their own institutions and rules for preserving resources and ensuring that their community has the resources it needed to survive. Hardin, in other words, ignored what actually happens in a real commons, namely communal control and self-regulation by the communities involved who develop the appropriate communal institutions to do so.
Nobody is responsible for free-for-all property until someone claims it as his own. He then has a right to do as he pleases with it, a right that is uniquely capitalist. Unlike common or personal property, capitalist property is not valued for itself or for its utility. It is valued for the revenue it produces for its owner. If the capitalist owner can maximise his revenue by liquidating it, he has the right to do that.” [Apostles of Greed, pp. 58–59]

Therefore, as Colin Ward argues, “Local, popular, control is the surest way of avoiding the tragedy of the commons.” [Reflected in Water, p. 20] Given that a social anarchist society is a communal, decentralised one, it will have little to fear from irrational overuse or abuse of communally owned and used resources.

So, the real problem is that a lot of economists and sociologists conflate Hardin’s scenario, in which unmanaged resources are free for all, with the situation that prevailed in the use of commons which were communally managed resources in village and tribal communities. Historian E.P. Thompson, for example, noted that Hardin was “historically uninformed” when he assumed that commons were pastures open to all. The commons, in reality, were managed by common agreements between those who used them. In an extensive investigation on this subject, Thompson showed that the “argument is that since resources held in common are not owned and protected by anyone, there is an inexorable economic logic that dooms them to over-exploitation … Despite its common sense air, what it overlooks is that commoners themselves were not without common sense. Over time and over space the users of commons have developed a rich variety of institutions and community sanctions which have effected restraints and stints upon use … As the old … institutions lapsed, so they fed into a vacuum in which political influence, market forces, and popular assertion contested with each other without common rules.” [Customs in Common, p. 108fn and p. 107]

Little wonder Kropotkin argued that these “sections” showed “the principles of anarchism … had their origin, not in theoretical speculations, but in the deeds of the Great French Revolution” [The Great French Revolution, vol. 1, p. 204]

Communal self-government was also practised, and on a far wider scale, in revolutionary Spain where workers and peasants formed communes and federations of communes (see section I.8 for fuller details). Gaston Leval summarised the experience:

“There was, in the organisation set in motion by the Spanish Revolution and by the libertarian movement, which was its mainspring, a structuring from the bottom to the top, which corresponds to a real federation and true democracy … the controlling and co-ordinating Comites, clearly indispensable, do not go outside the organisation that has chosen them, they remain in their midst, always controllable by and accessible to the members. If any individuals contradict by their actions their mandates, it is possible to call them to order, to reprimand them, to replace them. It is only by and in such a system that the ‘majority lays down the law.’

“The syndical assemblies were the expression and the practice of libertarian democracy, a democracy having nothing in common with the democracy of Athens where the citizens discussed and disputed for days on end on the Agora; where factions, clan rivalries, ambitions, personalities conflicted, where, in view of the social inequalities precious time was lost in interminable wrangles …

“Normally those periodic meetings would not last more than a few hours. They dealt with concrete, precise sub-
jects concretely and precisely. And all who had something to say could express themselves. The Comite presented the new problems that had arisen since the previous assembly, the results obtained by the application of such and such a resolution... relations with other syndicates, production returns from the various workshops or factories. All this was the subject of reports and discussion. Then the assembly would nominate the commissions, the members of these commissions discussed between themselves what solutions to adopt, if there was disagreement, a majority report and a minority report would be prepared.

“This took place in all the syndicates throughout Spain, in all trades and all industries, in assemblies which, in Barcelona, from the very beginnings of our movement brought together hundreds or thousands of workers depending on the strength of the organisations. So much so that the awareness of the duties, responsibilities of each spread all the time to a determining and decisive degree...

“The practice of this democracy also extended to the agricultural regions... the decision to nominate a local management Comite for the villages was taken by general meetings of the inhabitants of villages, how the delegates in the different essential tasks which demanded an indispensable co-ordination of activities were proposed and elected by the whole assembled population. But it is worth adding and underlining that in all the collectivised villages and all the partially collectivised villages, in the 400 Collectives in Aragon, in the 900 in the Levante region, in the 300 in the Castilian region, to mention only the large groupings... the population was called together

periment in logic was as uniform as it was simple: only privatisation of common resources could ensure their efficient use and stop them being overused and destroyed. Coming as it before the rise of neo-liberalism in the 1970s, Hardin’s essay was much referenced by those seeking to privatise nationalised industries and eliminate communal institutions in tribal societies in the Third World. That these resulted in wealth being concentrated in a few hands should come as no surprise.

Needless to say, there are numerous problems with Hardin’s analysis. Most fundamentally, it was a pure thought experiment and, as such, was not informed by historical or current practice. In other words, it did not reflect the reality of the commons as a social institution. The so-called “Tragedy of the Commons” was no such thing. It is actually an imposition of the “tragedy of the free-for-all” to communally owned resources (in this case, land). In reality, commons were never “free for all” resources and while the latter may be see overuse and destruction the former managed to survive thousands of years. So, unfortunately for the supporters of private property who so regularly invoke the “Tragedy of the Commons”, they simply show their ignorance of what true commons are. As socialist Allan Engler points out:

“Supporters of capitalism cite what they call the tragedy of the commons to explain the wanton plundering of forests, fish and waterways, but common property is not the problem. When property was held in common by tribes, clans and villages, people took no more than their share and respected the rights of others. They cared for common property and when necessary acted together to protect it against those who would damage it. Under capitalism, there is no common property. (Public property is a form of private property, property owned by the government as a corporate person.) Capitalism recognises only private property and free-for-all prop-
I.6 What about the “Tragedy of the Commons”?

The term “Tragedy of the Commons” is a phrase which is used to describe why, according to some, commonly owned resources will be destructively overused. The term was first coined by Garret Hardin in December 1968. [“The Tragedy of the Commons”, Science, Vol. 162, No. 3859, pp. 1243–1248] It quickly became popular with those arguing against any form of collective ownership or socialism and would be the basis for many arguments for privatisation.

Unsurprisingly, given its popularity with defenders of capitalism and neo-classical economists, Hardin’s argument was a pure thought experiment with absolutely no empirical evidence to support it. He suggested a scenario in which commonly owned pasture was open to all local herdsmen to feed their cattle on. Completing this assumption with the standard ones of neo-classical economics, with Hardin arguing that each herdsman would try to keep as many cattle as possible on the commons to maximise their income. This would result in overgrazing and environmental destruction as the cost of each feeding addition animals is shouldered by all who use the commons while the benefits accrue to the individual herdsman. However, what is individually rational becomes collectively irrational when each herdsman, acting in isolation, does the same thing. The net result of the individual’s actions is the ending of the livelihood of every herdsman as the land becomes overused.

His article was used to justify both nationalisation and privatisation of communal resources (the former often a precursor for the latter). As state ownership fell out of favour, the lesson of this experience was used to justify both nationalisation and privatisation of communal resources (the former often a precursor for the latter).

Weekly, fortnightly or monthly and kept fully informed of everything concerning the commonweal.

“This writer was present at a number of these assemblies in Aragon, where the reports on the various questions making up the agenda allowed the inhabitants to know, to so understand, and to feel so mentally integrated in society, to so participate in the management of public affairs, in the responsibilities, that the recriminations, the tensions which always occur when the power of decision is entrusted to a few individuals, be they democratically elected without the possibility of objecting, did not happen there. The assemblies were public, the objections, the proposals publicly discussed, everybody being free, as in the syndical assemblies, to participate in the discussions, to criticise, propose, etc. Democracy extended to the whole of social life.” [Collectives in the Spanish Revolution, pp. 205–7]

These collectives organised federations embracing thousands of communes and workplaces, whole branches of industry, hundreds of thousands of people and whole regions of Spain. As such, it was a striking confirmation of Proudhon’s argument that under federalism “the sovereignty of the contracting parties ... serves as a positive guarantee of the liberty of ... communes and individuals. So, no longer do we have the abstraction of people’s sovereignty ... but an effective sovereignty of the labouring masses.” The “labouring masses are actually, positively and effectively sovereign: how could they not be when the economic organism — labour, capital, property and assets — belongs to them entirely ... ?” [Anarchism, vol. 1, Robert Graham (ed.), p. 75]

In other words, it is possible. It has worked. With the massive improvements in communication technology it is even more viable than before. Whether or not we reach such a self-managed society depends on whether we desire to be free or not.
I.5.5 Aren’t participatory communities and confederations just new states?

No. As we have seen in section B.2, a state can be defined both by its structure and its function. As far as structure is concerned, a state involves the politico-military and economic domination of a certain geographical territory by a ruling elite, based on the delegation of power into the hands of the few, resulting in hierarchy (centralised authority). As such, it would be a massive theoretical error to confuse any form of social organisation with the specific form which is the state.

As we have discussed in section H.3.7, the state has evolved its specific characteristics as a result of its function as an instrument of class rule. If a social organisation does not have these characteristics then it is not a state. Thus, for anarchists, “the essence of the state” is “centralised power or to put it another way the coercive authority of which the state enjoys the monopoly, in that organisation of violence know as ‘government’; in the hierarchical despotism, juridical, police and military despotism that imposes laws on everyone.” [Luigi Fabbri, “Anarchy and ‘Scientific’ Communism”, in The Poverty of Statism, pp. 13–49, Albert Meltzer (ed.), pp. 24–5]

This is why Malatesta stressed that the state “means the delegation of power, that is the abdication of initiative and sovereignty of all into the hands of a few.” [Anarchy, p. 41] If a social organisation is not centralised and top-down then it is not a state.

In a system of federated participatory communities there is no ruling elite, and thus no hierarchy, because power is retained by the lowest-level units of confederation through their use of direct democracy and mandated, rotating, and recallable delegates to confederal bodies. This eliminates the problem in “representative” democratic systems of the delegation of power leading to the elected officials becoming isolated from and beyond the control of the mass of people who elected them. An anarchist society would
and by members of the communes and so individuals who were not part of one would have to pay to gain access to communal resources. However, it is unlikely that an anarchist society would be as barbaric as a capitalist one and refuse entry to people who were ill and could not pay, nor turn away emergencies because they did not have enough money. And just as other workers need not join a syndicate or commune, so doctors, teachers and so on could practice their trade outside the communal system as either individual artisans or as part of a co-operative. However, given the availability of free medical services it is doubtful they would grow rich doing so. Medicine, teaching and so on would revert back to what usually motivates people to initially take these up professions—the desire to help others and make a positive impact in society.

Thus, as would be expected, public services would be organised by the public, organised in their syndicates and communes. They would be based on workers’ self-management of their daily work and of the system as a whole. Non-workers who took part in the system (patients, students, etc.) would not be ignored and would also play a role in providing essential feedback to assure quality control of services and to ensure that it is responsive to users needs. The resources required to maintain and expand the system would be provided by the communes, syndicates and their federations. For the first time, public services would truly be public and not a statist system imposed upon the public from above nor a system by which the few fleece the many by exploiting natural monopolies for their own interests.

So Public Services in a free society will be organised by those who do the work and under the effective control of those who use them. This vision of public services being run by workers’ associations would be raised as a valid libertarian reform under capitalism (not to mention raising the demand to turn firms into co-operatives when they are bailed out during an economic crisis). Equally, rather than nationalisation or privatisation, public utilities could be organised as a consumer co-operative (i.e., owned by make decisions by “means of congresses, composed of delegates, who discuss among themselves, and submit proposals, not laws, to their constituents” [Kropotkin, The Conquest of Bread, p. 135] So it is based on self-government, not representative government (and its inevitable bureaucracy). As Proudhon put it, “the federal system is the contrary of hierarchy or administrative and governmental centralisation” and so “a confederation is not exactly a state... What is called federal authority ... is no longer a government; it is an agency created ... for the joint execution of certain functions”. [The Principle of Federation, pp. 40–1]

Perhaps it will be objected that communal decision making is just a form of “statism” based on direct, as opposed to representative, democracy — “statist” because the individual is still be subject to the rules of the majority and so is not free. This objection, however, confuses statism with free agreement (i.e. co-operation). Since participatory communities, like productive syndicates, are voluntary associations, the decisions they make are based on self-assumed obligations (see section A.2.11), and dissenters can leave the association if they so desire. Thus communes are no more “statist” than the act of promising and keeping your word.

In addition, in a free society, dissent and direct action can be used by minorities to press their case (or defend their freedom) as well as debate. As Carole Pateman argues, “[p]olitical disobedience is merely one possible expression of the active citizenship on which a self-managing democracy is based.” [The Problem of Political Obligation, p. 162] In this way, individual liberty can be protected in a communal system and society enriched by opposition, confrontation and dissent. Without self-management and minority dissent, society would become an ideological cemetery which would stifle ideas and individuals as these thrive on discussion (“those who will be able to create in their mutual relations a movement and a life based on the principles of free understanding ... will understand that variety, conflict even, is life and that uniformity is death” [Kropotkin, Anarchism, p. 143]). So a society...
based on voluntary agreements and self-management would, out of interpersonal empathy and self-interest, create a society that encouraged individuality and respect for minorities.

Therefore, a commune’s participatory nature is the opposite of statism. April Carter agrees, stating that “commitment to direct democracy or anarchy in the socio-political sphere is incompatible with political authority” and that the “only authority that can exist in a direct democracy is the collective ‘authority’ vested in the body politic ... it is doubtful if authority can be created by a group of equals who reach decisions be a process of mutual persuasion.” [Authority and Democracy, p. 69 and p. 380] Which echoes, we must note, Proudhon’s comment that “the true meaning of the word ‘democracy’ was the dismissal of government.” [No Gods, No Masters, vol. 1, p. 42] Bakunin argued that when the “whole people govern” then “there will be no one to be governed. It means that there will be no government, no State.” [The Political Philosophy of Bakunin, p. 287] Malatesta, decades later, made the same point: “government by everybody is no longer government in the authoritarian, historical and practical sense of the word.” [No Gods, No Masters, vol. 2, p. 38] And, of course, Kropotkin argued that by means of the directly democratic sections of the French Revolution the masses “practic[ed] what was to be described later as Direct Self-Government” and expressed “the principles of anarchism.” [The Great French Revolution, vol. 1, p. 200 and p. 204]

Anarchists argue that individuals and the institutions they create cannot be considered in isolation. Authoritarian institutions will create individuals who have a servile nature, who cannot govern themselves. We, therefore, consider it common sense that individuals, in order to be free, must have take part in determining the general agreements they make with their neighbours which give form to their communities. Otherwise, a free society could not exist and individuals would be subject to rules others make for them (following orders is hardly libertarian). Somewhat ironically, those who stress “individualism” and denounce communes as new form attached to each university. The Aragon collectives formed a similar specialised school in Binefar. The CNT was heavily involved in transforming education in Catalonia. In addition, the local federation of the CNT in Barcelona established a school to train women workers to replace male ones being taken into the army. The school was run by the anarcha-feminist group the Mujeres Libres. [Robert Alexander, Op. Cit., p. 406, p. 670 and pp. 665–8 and p. 670]

Ultimately, the public services that exist in a social anarchist society will be dependent on what members of that society desire. If, for example, a commune or federation of communes desires a system of communal health-care or schools then they will allocate resources to implement it. They will allocate the task of creating such a system to, say, a special commission based on volunteers from the interested parties such as the relevant syndicates, professional associations, consumer groups and so on. For example, for communal education a commission or working group would include delegates from the teachers union, from parent associations, from student unions and so on. The running of such a system would be, like any other industry, by those who work in it. Functional self-management would be the rule, with doctors managing their work, nurses theirs and so on, while the general running of, say, a hospital would be based on a general assembly of all workers there who would elect and mandate the administration staff and decide the policy the hospital would follow. Other interested parties would have a say, including patients in the health system and students in the education system. As Malatesta argued “the carrying out and the normal functioning of public services vital to our daily lives would be more reliable if carried out ... by the workers themselves who, by direct election or through agreements made with others, have chosen to do that kind of work and carry it out under the direct control of all the interested parties.” [Anarchy, p. 41]

Needless to say, any system of public services would not be imposed on those who did not desire it. They would be organised for
improve the quality of service to the public in a system of generalised self-management and socialisation. The communes and their federations, the syndicates and federations of syndicates will provide resources and effectively own the health system, ensuring access for all.

Similar systems would operate in other public services. For example, in education we expect the members of communes to organise a system of free schools. This can be seen from the Spanish revolution. Indeed, the Spanish anarchists organised Modern Schools before the outbreak of the revolution, with 50 to 100 schools in various parts funded by local anarchist groups and CNT unions. During the revolution everywhere across Spain, syndicates, collectives and federations of collectives formed and founded schools. Indeed, education “advanced at an unprecedented pace. Most of the partly or wholly socialised collectives and municipalities built at least one school. By 1938, for example, every collective in the Levant Federation had its own school.” [Gaston Leval, quoted by Sam Dolgoff, Op. Cit., p. 168] These schools aimed, to quote the CNT’s resolution on Libertarian Communism, to “help mould men with minds of their own — and let it be clear that when we use the word ‘men’ we use it in the generic sense — to which end it will be necessary for the teacher to cultivate every one of the child’s faculties so that the child may develop every one of its capacities to the full.” [quoted by Jose Periats, *The CNT in the Spanish Revolution*, p. 70] The principles of libertarian education, of encouraging freedom instead of authority in the school, was applied on vast scale (see section J.5.13 for more details on Modern Schools and libertarian education).

This educational revolution was not confined to collectives or children. For example, the *Federacion Regional de Campesinos de Levante* formed institutes in each of its five provinces. The first was set up in October 1937 in an old convent with 100 students. The Federation also set up two universities in Valencia and Madrid which taught a wide variety of agricultural subjects and combined learning with practical experience in an experimental

“states” advocate a social system which produces extremely hierarchical social relationships based on the authority of the property owner. In other words, abstract individualism produces authoritarian (i.e., state-like) social relationships (see section F.1). Therefore, anarchists recognise the social nature of humanity and the fact any society based on an abstract individualism (like capitalism) will be marked by authority, injustice and inequality, not freedom. As Bookchin pointed out: “To speak of ‘The Individual’ apart from its social roots is as meaningless as to speak of a society that contains no people or institutions.” [*Anarchism, Marxism, and the Future of the Left*, p. 154]

Society cannot be avoided and “[u]nless everyone is to be psychologically homogeneous and society’s interests so uniform in character that dissent is simply meaningless, there must be room for conflicting proposals, discussion, rational explication and majority decisions — in short, democracy.” [Bookchin, Op. Cit., p. 155] Those who reject democracy in the name of liberty (such as many supporters of capitalism claim to do) usually also see the need for laws and hierarchical authority (particularly in the workplace). This is unsurprising, as such authority is the only means left by which collective activity can be co-ordinated if self-management is rejected (which is ironic as the resulting institutions, such as a capitalist company, are far more statist than self-managed ones).

So, far from being new states by which one section of a community (historically, almost always a wealthy elite) imposes its ethical standards on another, the anarchist commune is just a public forum. In this forum, issues of community interest (for example, management of the commons, control of communalised economic activity, and so forth) are discussed and policy agreed upon. In addition, interests beyond a local area are also discussed and delegates for confederal conferences are mandated with the wishes of the community. Hence, administration of things replaces government of people, with the community of communities existing to ensure that the interests of all are managed by all and that liberty,
justice and equality for all are more than just ideals. Moreover, a free society would be one without professional bodies of armed people (i.e., there would be no armed forces or police). It would not have the means of enforcing the decisions of conferences and communes which reflected the interests of a few (would-be politicians or bureaucrats) rather than popular opinion.

Of course, it could be argued that popular opinion can be as oppressive as any state, a possibility anarchists are aware of and take steps to combat. Remember, the communities and confederations of a free society would be made up of free people. They would not be too concerned with the personal behaviour of others unless it impacted on their own lives. As such, they would not be seeking to restrict the liberty of those who live with them. A community, therefore, is unlikely to make decisions like, for example, outlawing homosexuality or censoring the press. This is not to say that there is no danger of majorities abusing minorities. As we discuss in the next section, anarchists suggest means of reducing it, even eliminating it. Suffice to say, a free society would seek to encourage diversity and so leave minorities free to live their own lives (assuming they are not oppressing or exploiting others, of course).

For these reasons, a libertarian-socialist society would not have a state. Structurally, it would be based on egalitarian and decentralised institutions, the direct opposite of the hierarchical and centralised state. Functionally, it would be based on mass participation of all to ensure they manage their own affairs rather than, as in a state, exclusion of the many to ensure the rule of an elite. The communes and confederations of a libertarian system are not just states with new names but rather the forums by which free people manage their own affairs rather than being ruled by a state and its politicians and bureaucrats.

This is why Proudhon argued that “under the democratic constitution ... the political and the economic are ... one and the same system ... based upon a single principle, mutuality ... and form this vast humanitarian organism of which nothing previously could give every isolated peasant in the mountains, every woman, every child, anywhere, received adequate, up-to-date medical care. In each of the nine zones there was a central syndicate and a Control Committee located in Barcelona. Every department was autonomous within its own sphere. But this autonomy was not synonymous with isolation. The Central Committee in Barcelona, chosen by all the sections, met once a week with one delegate from each section to deal with common problems and to implement the general plan ... “The people immediately benefited from the projects of the health syndicate. The syndicate managed all hospitals and clinics. Six hospitals were opened in Barcelona ... Eight new sanatoriums were installed in converted luxurious homes ideally situated amidst mountains and pine forests. It was no easy task to convert these homes into efficient hospitals with all new facilities.” [The Anarchist Collectives, Sam Dolgoff (ed.), pp. 99–100]

People were no longer required to pay for medical services. Each collective, if it could afford it, would pay a contribution to its health centre. Building and facilities were improved and modern equipment introduced. Like other self-managed industries, the health service was run at all levels by general assemblies of workers who elected delegates and hospital administration.

We can expect a similar process to occur in the future anarchist society. It would be based on self-management, of course, with close links to the local commune and federations of communes. Each hospital or health centre would be autonomous but linked in a federation with the others, allowing resources to be shared as and when required while allowing the health service to adjust to local needs and requirements as quickly as possible. Workers in the health industry will organise their workplaces, federate together to share resources and information, to formulate plans and
In the Levante, the CNT built upon its existing Sociedad de Socorros Mutuos de Levante (a health service institution founded by the union as a kind of mutual benefit society which had numerous doctors and specialists). During the revolution, the Mutua had 50 doctors and was available to all affiliated workers and their families. The socialisation of the health care took on a slightly different form in Catalonia but on the same libertarian principles. Gaston Leval provided us with an excellent summary:

"The socialisation of health services was one of the greatest achievements of the revolution. To appreciate the efforts of our comrades it must be borne in mind that they rehabilitated the health service in all of Catalonia in so short a time after July 19th. The revolution could count on the co-operation of a number of dedicated doctors whose ambition was not to accumulate wealth but to serve the afflicted and the underprivileged.

"The Health Workers’ Union was founded in September, 1936. In line with the tendency to unite all the different classifications, trades, and services serving a given industry, all health workers, from porters to doctors and administrators, were organised into one big union of health workers ...

“Our comrades laid the foundations of a new health service ... The new medical service embraced all of Catalonia. It constituted a great apparatus whose parts were distributed according to different needs, all in accord with an overall plan. Catalonia was divided into nine zones ... In turn, all the surrounding villages and towns were served from these centres.

"Distributed throughout Catalonia were twenty-seven towns with a total of thirty-six health centres conducting services so thoroughly that every village, every hamlet, every idea ... [I]s this not the system of the old society turned upside down”? [Anarchism, vol. 1, Robert Graham (ed.), pp. 74–5]

I.5.6 Won’t there be a danger of a “tyranny of the majority” under libertarian socialism?

While the “tyranny of the majority” objection does contain an important point, it is often raised for self-serving reasons. This is because those who have historically raised the issue (for example, and as discussed in section B.2.5, creators of the 1789 American constitution like Hamilton and Madison) saw the minority to be protected as the rich. In other words, the objection is not opposed to majority tyranny as such (they have no objections when the majority support their right to their riches and powers) but rather attempts of the majority to change their society to a fairer and freer one. Such concerns can easily be dismissed as an ingenious argument in favour of rule by the few — particularly as its proponents (such as the propertarian right and other defenders of capitalism) have no problem with the autocratic rule of property owners over their wage-slaves!

However, as noted, the objection to majority rule does contain a valid point and one which anarchists have addressed — namely, what about minority freedom within a self-managed society? So this is a danger, one raised by people who are most definitely not seeking minority rule. For example, someone who was sympathetic to anarchism, George Orwell, suggested:

"the totalitarian tendency ... is explicit in the anarchist ... vision of Society. In a Society in which there is no law, and in theory no compulsion, the only arbiter of behaviour is public opinion. But public opinion, because of the tremendous urge to conformity in gregarious animals, is less tolerant than any system of law. When
human beings are governed by ‘thou shalt not’, the individual can practise a certain amount of eccentricity: when they are supposedly governed by ‘love’ or ‘reason’, he is under continuous pressure to make him behave and think in exactly the same way as everyone else.” [Inside the Whale and Other Essays, p. 132]

There is, of course, this danger in any society, be its decision making structure direct (anarchy) or indirect (by some form of government). However, this does not really address the issue to point out this obvious fact. Anarchists are at the forefront in expressing concern about it, recognising that the majority is often a threat to freedom by its fear of change (see, for example, Emma Goldman’s classic essay “Minorities versus Majorities”). We are well aware that the mass, as long as the individuals within it do not free themselves, can be a dead-weight on others, resisting change and enforcing conformity. As Goldman argued, “even more than constituted authority, it is social uniformity and sameness that harass the individual the most.” [Red Emma Speaks, p. 116] Hence Malatesta’s comment that anarchists “have the special mission of being vigilant custodians of freedom, against all aspirants to power and against the possible tyranny of the majority.” [Errico Malatesta: His Life and Ideas, p. 161]

However, rather than draw elitist conclusions from this fact of life under capitalism and urge forms of government and organisation which restrict popular participation (and promote rule, and tyranny, by the few) — as classical liberals do — libertarians argue that only a process of self-liberation through struggle and participation can break up the mass into free, self-managing individuals (as discussed in section H.2.11 attempts by Leninists to portray anarchists as elitists are both hypocritical and false). Moreover, we also argue that participation and self-management is the only way that majorities can come to see the point of minority ideas and for seeing the importance of protecting minority freedoms. This means of the collectives. Syndicates organised water, gas and electricity utilities in Catalonia, while the trams and railways were run more efficiently and cheaper than under capitalist management. All across Spain, the workers in the health service re-organised their industry on libertarian lines and in association with the collectives, communes and the unions of the CNT. As Leval summarised:

“For the socialisation of medicine was not just an initiative of militant libertarian doctors. Wherever we were able to make a study of villages and small towns transformed by the Revolution, medicine and existing hospitals had been municipalised, expanded, placed under the aegis of the Collective. When there were none, they were improvised. The socialisation of medicine was becoming everyone’s concern, for the benefit of all. It constituted one of the most remarkable achievements of the Spanish Revolution.” [Collectives in the Spanish Revolution, p. 278]

So the Spanish Revolution indicates how an anarchist health service would operate. In rural areas local doctors would usually join the village collective and provided their services like any other worker. Where local doctors were not available, “arrangements were made by the collectives for treatment of their members by hospitals in nearby localities. In a few cases, collectives themselves build hospitals; in many they acquired equipment and other things needed by their local physicians.” For example, the Monzon comercial (district) federation of collectives in Aragon established maintained a hospital in Binefar, the Casa de Salud Durruti. By April 1937 it had 40 beds, in sections which included general medicine, prophylaxis and gynaecology. It saw about 25 outpatients a day and was open to anyone in the 32 villages of the comarca. [Robert Alexander, The Anarchists in the Spanish Civil War, vol. 1, p. 331 and pp. 366–7]
ter than the privatised system). Such a system of socialised healthcare will be built from the bottom-up and based around the local commune. In a social anarchist society, “medical services .. will be free of charge to all inhabitants of the commune. The doctors will not be like capitalists, trying to extract the greatest profit from their unfortunate patients. They will be employed by the commune and expected to treat all who need their services.” Moreover, prevention will play an important part, as “medical treatment is only the curative side of the science of health care; it is not enough to treat the sick, it is also necessary to prevent disease. That is the true function of hygiene.” [James Guillaume, “On Building the New Social Order”, pp. 356–79, Bakunin on Anarchism, p. 371] The same would go for other public services and works.

While rejecting privatisation, anarchists also reject nationalisation in favour of socialisation and worker’s self-management. In this we follow Proudhon, who argued that there was a series of industries and services which were “public works” which he thought best handled by communes and their federations. Thus “the control undertaking such works will belong to the municipalities, and to districts within their jurisdiction” while “the control of carrying them out will rest with the workmen’s associations.” This was due to both their nature and libertarian values as the “direct, sovereign initiative of localities, in arranging for public works that belong to them, is a consequence of the democratic principle and the free contract: their subordination to the State is ... a return to feudalism.” Workers’ self-management of such public workers is, again, a matter of libertarian principles for “it becomes necessary for the workers to form themselves into democratic societies, with equal conditions for all members, on pain of a relapse into feudalism.” Railways should be given “to responsible companies, not of capitalists, but of WORKMEN.” [General Idea of the Revolution, p. 276, p. 277 and p. 151]

This was applied during the Spanish Revolution. Gaston Leval discussed “Achievements in the Public Sector” in his classic account that any attempt to restrict participation in the name of minority rights actually enforces the herd mentality, undermining minority and individual freedom rather than protecting it. As Carole Pateman argues:

“the evidence supports the arguments ... that we do learn to participate by participating and that feelings of political efficacy are more likely to be developed in a participatory environment. Furthermore, the evidence indicates that experience of a participatory authority structure might also be effective in diminishing tendencies towards non-democratic attitudes in the individual.”

[Participation and Democratic Theory, p. 105]

So while there is cause for concern (and anarchists are at the forefront in expressing it), the “tyranny of the majority” objection fails to take note of the vast difference between direct and representative forms of democracy.

In the current system, as we pointed out in section B.5, voters are mere passive spectators of occasional, staged, and highly rehearsed debates among candidates pre-selected by the corporate elite, who pay for campaign expenses. The public is expected to choose simply on the basis of political ads and news sound bites. Once the choice is made, cumbersome and ineffective recall procedures insure that elected representatives can act more or less as they (or rather, their wealthy sponsors) please. The function, then, of the electorate in bourgeois “representative government” is ratification of “choices” that have been already made for them! This is also the case in referendum, where the people “are not to propose the questions: the government is to do that. Only to questions proposed by the government, the people may answer Yes or No, like a child in the catechism. The people will not even have a chance to make amendments.” [Proudhon, General Idea of the Revolution, p. 148]
By contrast, in a libertarian society decisions are made following public discussion in community assemblies open to all. After decisions have been reached, outvoted minorities — even minorities of one — still have ample opportunity to present reasoned and persuasive counter-arguments to try to change the decision. This process of debate, disagreement, challenge, and counter-challenge, which goes on even after the defeated minority has temporarily acquiesced in the decision of the majority, is virtually absent in the representative system, where “tyranny of the majority” is truly a problem. In addition, minorities can secede from an association if the decision reached by it are truly offensive to them.

And let us not forget that in all likelihood, issues of personal conduct or activity will not be discussed in the neighbourhood assemblies. Why? Because we are talking about a society in which most people consider themselves to be unique, free individuals, who would thus recognise and act to protect the uniqueness and freedom of others. Unless people are indoctrinated by religion or some other form of ideology, they can be tolerant of others and their individuality. If this is not the case now, then it has more to do with the existence of authoritarian social relationships — relationships that will be dismantled under libertarian socialism — and the type of person they create rather than some innate human flaw.

Thus there will be vast areas of life in a libertarian socialist community which are none of other people’s business. Anarchists have always stressed the importance of personal space and “private” areas. Indeed, for Kropotkin, the failure of many “utopian” communities directly flowed from a lack of these and “the desire to manage the community after the model of a family, to make it ‘the great family.’ They lived all in the same house and were thus forced to continuously meet the same ‘brethren and sisters.’ It is already difficult often for two real brothers to live together in the same house, and family life is not always harmonious; so it was a fundamental error to impose on all the ‘great family’ instead of trying, on the contrary, to guarantee as much freedom and home life to each individual.” In

uals or co-operatives/associations would subscribe to various insurance providers or enter into direct contracts with health care providers. Thus the system would be similar to privatised health care but without the profit margins as competition, it is hoped, would drive prices down to cost.

Other anarchists reject such a system. They are favour of socialising health care and other public services. They argue that a privatised system would only be able to meet the requirements of those who can afford to pay for it and so would be unjust and unfair. In addition, such systems would have higher overheads (the need to pay share-holders and the high wages of upper management, most obviously, and not to mention paying for propaganda against “socialised” medicine) as well as charge more (privatised public utilities under capitalism have tended to charge consumers more, unsurprisingly as by their very nature they are natural monopolies).

Looking at health care, for example, the need for medical attention is not dependent on income and so a civilised society would recognise this fact. Under capitalism, profit-maximising medical insurance sets premiums according to the risks of the insured getting ill or injured, with the riskiest and most ill not being able to find insurance at any price. Private insurers shun entire industries as too dangerous for their profits due to the likelihood of accidents or illness. They review contracts regularly and drop sick people for the slightest reason (understandably, given that they make profits by minimising pay-outs for treatment). Hardly a vision to inspire a free society or one compatible with equality and mutual respect.

Therefore, most anarchists are in favour of a socialised and universal health-care system for both ethical and efficiency reasons (see section I.4.10). Needless to say, an anarchist system of socialised health care would differ in many ways to the current systems of universal health-care provided by the state (which, while called socialised medicine by its enemies is better described as nationalised medicine — although it should be stressed that this is bet-
of free individuals. It is unlikely that they would tolerate bad behaviour and would use their own direct action as well as social and economic organisations to combat it. Moreover, the nature of free co-operation would reward ethical behaviour as those who practice it would have it reciprocated by their fellows. and, if worse came to worse, they would defend their liberty!

One last point. Some people seem to think that anarchism is about the powerful being appealed to not to oppress and dominate others. Far from it. Anarchism is about the oppressed and exploited refusing to let others dominate them. It is not an appeal to the “better side” of the boss or would-be boss; it is about the solidarity and direct action of those subject to a boss getting rid of the boss — whether the boss agrees to it or not! Once this is clearly understood the idea that an anarchist society is vulnerable to the power-hungry is clearly nonsense — anarchy is based on resisting power and so is, by its very nature, more resistant to would-be rulers than a hierarchical one.

So, to summarise, anarchists are well aware that an anarchist society will have to defend itself from both inside and outside attempts to re-impose capitalism and the state. Indeed, every revolutionary anarchist has argued that a revolution will have to defend itself (as proven in section H.2.1, Marxist assertions otherwise have always been myths). This applies to both internal and external attempts to re-introduce authority.

I.5.12 Would an anarchist society provide health care and other public services?

It depends on the type of anarchist society you are talking about. Different anarchists propose different solutions.

In an individualist-mutualist society, for example, health care and other public services would be provided by individuals or cooperatives on a pay-for-use basis. It would be likely that individ-
resources, their use and management. It is highly unlikely that a free society would debate issues of personal behaviour or morality and instead would leave them to those directly affected by them — as it should be, as we all need personal space and experimentation to find the way of life that best suits us.

Today an authoritarian worldview, characterised by an inability to think beyond the categories of domination and submission, is imparted by conditioning in the family, schools, religious institutions, clubs, fraternities, the army, etc., and produces a type of personality that is intolerant of any individual or group perceived as threatening to the perpetuation of that worldview and its corresponding institutions and values. Thus, as Bakunin argued, “public opinion” is potentially intolerant “simply because hitherto this power has not been humanised itself; it has not been humanised because the social life of which it is ever the faithful expression is based ... in the worship of divinity, not on respect for humanity; in authority, not on liberty; on privilege, not on equality; in the exploitation, not on the brotherhood, of men; on iniquity and falsehood, not on justice and truth. Consequently its real action, always in contradiction of the humanitarian theories which it professes, has constantly exercised a disastrous and depraving influence.” [God and the State, p. 43f] In other words, “if society is ever to become free, it will be so through liberated individuals, whose free efforts make society.” [Emma Goldman, Anarchism and Other Essays, p. 44] In an anarchist society a conscious effort will be made to dissolve the institutional and traditional sources of the authoritarian/submissive type of personality, and thus to free “public opinion” of its current potential for intolerance.

This is not to suggest that such a society of free individuals will not become stuck in routine and, over time, become oppressive to minorities who question certain aspects of public opinion or how it works. Public opinion and social organisations can evolve over generations in ways which no one expects. The best know, albeit fictional, example is in Ursula Le Guin’s classic science-fiction book need, placing friendship above money, count for nothing when the bills come in. People who act ethically in a capitalist society are usually punished and penalised for their ethical and principled behaviour. Indeed, the capitalist market rewards unethical behaviour as it generally reduces costs and so gives those who do it a competitive edge.

It is different in a free society. Anarchism is based on equal access to power and wealth. Everybody in an anarchist society irrespective of what they do, or who they are or what type of work they perform is entitled to share in society’s wealth. Whether a community survives or prospers depends on the combined efforts of the people in that community. Ethical behaviour would become the norm in an anarchist community; those people who act ethically would be rewarded by the standing they achieve in the community and by others being more than happy to work with and aid them. People who cut corners, try to exercise power over others, refuse to co-operate as equals or otherwise act in an unethical manner would lose their standing. Their neighbours and work mates would refuse to co-operate with them (or reduce co-operation to a minimum) and take other forms of non-violent direct action to point out that certain forms of activity was inappropriate. They would discuss the issue with the unethical person and try to convince them of the errors of their way. In a society where the necessities are guaranteed, people would tend to act ethically because ethical behaviour raises an individuals profile and standing within such a community. Capitalism and ethical behaviour are mutually exclusive concepts; anarchism encourages and rewards ethical behaviour. Needless to say, as we discussed in section I.5.8, anarchists are aware that a free society would need to defend itself against whatever anti-social behaviour remains in a free and equal society and seeking to impose your will on others defines unethical and anti-social!

Therefore, as can be seen, anarchists argue that a free society would not have to fear would-be thugs, “charismatic” leaders or the unethical. An anarchist society would be based on the co-operation...
would quickly organise itself in self-managed militias for self-
defence (just as they would during a social revolution to defend it — section J.7.6).

As for self-management resulting in “charismatic” leaders, well the logic is astounding. As if hierarchical structures are not based on leadership structures and do not require a charismatic leader! Such an argument is inherently self-contradictory — as well as ignoring the nature of modern society and its leadership structures. Rather than mass assemblies being dominated by leaders, it is the case that hierarchical structures are the natural breeding ground for dictators. All the great dictators the world have seen have come to the forefront in hierarchical organisations, not libertarian structured ones. Hitler, for example, did not come to power via self-management. Rather he used a highly centralised and hierarchically organised party to take control of a centralised, hierarchical state. The very disempowerment of the population in capitalist society results in them looking to leaders to act for them and so “charismatic” leaders are a natural result. An anarchist society, by empowering all, would make it more difficult, not less, for a would-be leader to gain power — few people, if any, would be willing to sacrifice and negate themselves for the benefit of another.

Our discussion on the power hungry obviously relates to the more general the question of whether ethical behaviour be re-
warded in an anarchist society. In other words, could an anarchist society be stable or would the unethical take over?

It is one of the most disturbing aspects of living in a world where the rush to acquire wealth is the single most important aspect of living is what happens to people who follow an ethical path in life. Under capitalism, the ethical generally do not succeed as well as those who stab their fellows in the back, those who cut corners, indulge in sharp business practises, drive competitors into the ground and live their lives with an eye on the bottom line but they do survive. Loyalty to a firm or a group, bending over backwards to provide a service, giving a helping hand to somebody in

The Dispossessed where the anarchist society of Anarres has developed something of a weak informal bureaucracy due to the routine of everyday life and the unconscious pressures of public opinion. When the protagonist, Shevek, and his friends try to point this out and do something about (including Shevek leaving Anarres for the capitalist world of Urras), most on the planet are extremely hostile to this activity (precisely because it is going against the normal routine). Significantly, though, a large minority end up supporting their activities, activities which can occur precisely because the society is still fundamentally communist-anarchist and so the dissenters have a rich libertarian tradition and sensibility to base their direct action on as well having use-rights over the resources they need to propagate their ideas and practice their protest.

In the real world, the best example would be the Mujeres Libres in the Spanish anarchist movement during the 1930s (see Martha A. Ackelsberg’s classic Free Women Of Spain: Anarchism And The Struggle For The Emancipation Of Women for more on this important movement). This organisation arose in response to the fact that many male anarchists, while expressing a theoretical commitment to sexual equality, were as sexist as the system they were fighting against and so they subconsciously reflected the oppressive public opinion of what a woman’s position should be. Unsurprisingly, many anarchist women were (rightly) angry at this and their marginalised status within a libertarian movement that ostensibly sought to abolish all forms of domination and hierarchy. In response, and often in the face of the hostility or indifference of their male comrades, they organised themselves to change this situation, to combat and transform public opinion both within and outwith the anarchist movement. Their activities meet with some success before, like the rest of the libertarian revolution, it was crushed by Franco’s victory in the civil war.

We can, therefore, suggest that a free society is unlikely to see public opinion becoming authoritarian. This is because, as the example of the Mujeres Libres shows, members of that society
would organise to combat such developments and use various means to raise the problem to public awareness and to combat it. Once a free society has been gained, the task of anarchists would be to ensure it remained free and that would mean keeping a constant watch on possible sources of authority, including those associated with organisations developing informal bureaucracies and public opinion. While a free society would place numerous safeguards against such developments, no system would be perfect and so the actions of dissident minorities would be essential to point out and protest if such dangers appeared to be developing.

As such, it should be noted that anarchists recognise that the practice of self-assumed political obligation implied in free association also implies the right to practice dissent and disobedience as well. As Carole Pateman notes:

“Even if it is impossible to be unjust to myself, I do not vote for myself alone, but along with everyone else. Questions about injustice are always appropriate in political life, for there is no guarantee that participatory voting will actually result in decisions in accord with the principles of political morality.” [The Problem of Political Obligation, p. 160]

If an individual or group of individuals feel that a specific decision threatens their freedom (which is the basic principle of political morality in an anarchist society) they can (and must) act to defend that freedom:

“The political practice of participatory voting rests in a collective self-consciousness about the meaning and implication of citizenship. The members of the political association understand that to vote is simultaneously to commit oneself, to commit one’s fellow citizens, and also to commit oneself to them in a mutual undertaking … a

Thus a free society would use direct action to resist the would-be ruler just as it had used direct action to free itself from existing rulers. It would be organised in a way which would facilitate this direct action as it would be based on networks of solidarity and mutual aid. An injury to one is an injury to all and a would-be ruler would face a whole liberated society acting against him or her. Faced with the direct action of the population (which would express itself in non-co-operation, strikes, demonstrations, occupations, insurrections and so on) a would-be power seeker would find it difficult to impose themselves. Unlike those accustomed to rule-ship in existing society, an anarchist people would be a society of rebels and so difficult to dominate and conquer: “In the future society, Anarchy will be defence, the prevention of the re-establishment of any authority, any power, any State.” [Carlo Cafiero, “Anarchy and Communism”, pp. 179–86, The Raven, No. 6, p. 180]

Anarchists point to the example of the rise of Fascism in Italy, Spain and Germany. In areas with strong anarchist movements the fascists were resisted most strongly. While in Germany Hitler was met with little or no opposition, in Italy and Spain the fascists had to fight long and hard to gain power. The anarchist and anarcho-syndicalist organisations fought the fascists tooth and nail, with some success before betrayal by the Republicans and Marxists. From this historical experience anarchists argue that an anarchist society would quickly and easily defeat would-be thugs as people would be used to practising direct action and self-management and would have no desire to stop. A free people
that we live in a society where the power-hungry already rule. As an argument against anarchism it fails and is, in fact, an argument against hierarchical societies.

Moreover, it also ignores fact that people in an anarchist society would have gained their freedom by overthrowing every existing and would-be thug who had, or desired, power over others. They would have defended that freedom against those who desired to re-impose it. They would have organised themselves to manage their own affairs and, therefore, to abolish all hierarchical power. And we are to believe that these people, after struggling to become free, would quietly let a new set of thugs impose themselves? As Kropotkin argued:

“The only way in which a state of Anarchy can be obtained is for each man [or woman] who is oppressed to act as if he [or she] were at liberty, in defiance of all authority to the contrary ... In practical fact, territorial extension is necessary to ensure permanency to any given individual revolution. In speaking of the Revolution, we signify the aggregate of so many successful individual and group revolts as will enable every person within the revolutionised territory to act in perfect freedom ... without having to constantly dread the prevention or the vengeance of an opposing power upholding the former system ... Under these circumstance it is obvious that any visible reprisal could and would be met by a resumption of the same revolutionary action on the part of the individuals or groups affected, and that the maintenance of a state of Anarchy in this manner would be far easier than the gaining of a state of Anarchy by the same methods and in the face of hitherto unshaken opposition ... They have it in their power to apply a prompt check by boycotting such a person and refusing to help him with their labour or to willing supply him with any refusal to vote on a particular occasion indicates that the refusers believe ... [that] the proposal ... infringes the principle of political morality on which the political association is based ... A refusal to vote [or the use of direct action] could be seen as an appeal to the 'sense of justice' of their fellow citizens.” [Pateman, Op. Cit., p. 161]

As they no longer consent to the decisions made by their community they can appeal to the “sense of justice” of their fellow citizens by direct action and indicate that a given decision may have impacts which the majority were not aware. Hence direct action and dissent is a key aspect of an anarchist society and help ensure against the tyranny of the majority. Anarchism rejects the “love it or leave it” attitude that marks an authoritarian organisation.

This vision of self-assumed obligation, with its basis in individual liberty, indicates the basic flaw of Joseph Schumpeter’s argument against democracy as anything bar a political method of arriving at decisions (in his case who will be the leaders of a society). Schumpeter proposed “A Mental Experiment” of imagining a country which, using a democratic process, “reached the decision to persecute religious dissent” (such as Jews and witches). He argued that we should not approve of these practices just because they have been decided upon by a majority or using a democratic method and, therefore, democracy cannot be an end in itself. [Capitalism, Socialism and Democracy, pp. 240–3]

However, such systematic persecution would conflict with the rules of procedure required if a country’s or community’s political method is to be called “democratic.” This is because, in order to be democratic, the minority must be in a position for its ideas to become the majority’s via argument and that requires freedom of speech, discussion and association. A country or community in which the majority persecutes or represses a minority automatically ensures that the minority can never be in a position to become the majority (as the minority is barred by force from becoming so)
or convince the majority of the errors of its way (even if it cannot become the majority physically, it can become so morally by convincing the majority to change its position). Schumpeter’s example utterly violates democratic principles and so cannot be squared with the it (Rousseau’s somewhat opaque distinction between “the General Will” and majority rule sought to express this). Thus majority tyranny is an outrage against both democratic theory and individual liberty (unsurprisingly, as the former has its roots in the latter).

This argument applies with even more force to a self-managed community too and so any system in which the majority tyrannies over a minority is, by definition, not self-managed as one part of the community is excluded from convincing the other (“the enslavement of part of a nation denies the federal principal itself.” [Proudhon, The Principle of Federation, p. 42f]). Thus individual freedom and minority rights are essential to self-management. As Proudhon argued, “a new spirit has dawned on the world. Freedom has opposed itself to the State, and since the idea of freedom has become universal people have realised that it is not a concern of the individual merely, but rather that it must exist in the group also.” [quoted by Martin Buber, Paths in Utopia, p. 28] Unsurprisingly, then, the “freedom of the collectivity to crush the individual is not, however, true Liberty in the eyes of Anarchists. It is one of those shams, which the Revolution is to destroy.” [Charlotte M. Wilson, Anarchist Essays, p. 25]

It should be stressed, however, that most anarchists do not think that the way to guard against possible tyranny by the majority is to resort to decision-making by consensus (where no action can be taken until every person in the group agrees) or a property system (based in contracts). Both consensus (see section A.2.12) and contracts (see section A.2.14) soon result in authoritarian social relationships developing in the name of “liberty.” Rather, we seek new forms of free agreement to replace contract and new forms of

becomes open to charismatic leaders so anarchy would just lead to tyranny.

For anarchists, such arguments are strange. Society already run by thugs and/or the off-spring of thugs. Kings were originally just successful thugs who imposed their domination over a specific territorial area. The modern state has evolved from the structure created to impose this domination. Similarly with property, with most legal titles to land being traced back to its violent seizure by thugs who then passed it on to their children who then sold it or gave it to their offspring. The origins of the current system in violence can be seen by the continued use of violence by the state and capitalists to enforce and protect their domination over society. When push comes to shove, the dominant class will happily re-discover their thug past and employ extreme violence to maintain their privileges. The descent of large parts of Europe into Fascism in the 1920s and 1930s, or Pinochet’s coup in Chile in 1973 indicates how far they will go. As Peter Arshinov argued (in a slightly different context):

“Statists fear free people. They claim that without authority people will lose the anchor of sociability, will dissipate themselves, and will return to savagery. This is obviously rubbish. It is taken seriously by idlers, lovers of authority and of the labour of others, or by blind thinkers of bourgeois society. The liberation of the people in reality leads to the degeneration and return to savagery, not of the people, but of those who, thanks to power and privilege, live from the labour of the people’s arms and from the blood of the people’s veins … The liberation of the people leads to the savagery of those who live from its enslavement.” [The History of the Makhnovist Movement, p. 85]

So anarchists are not impressed with the argument that anarchy would be unable to stop thugs seizing power. It ignores the fact
existed. All across society, people would be associating together to express themselves and convince others of their ideas on all kinds of issues.

This applies to professional groupings who would seek to ensure that those work tasks that require qualifications to do (medicine and such like) have recognised standards and certificates. In this way, others in society would know whether a fellow worker is a recognised expert in their field and has the appropriate qualifications to do the work required or give advice. While a free society would break down the line between intellectual and manual work, ensure the end of the division of labour, the fact remains that people will wish to be happy that the doctor or nurse they are visiting knows what they are doing. This is where professional groupings would come into play, organising training and certification based on mutually agreed standards and qualifications. This would not stop others seeking to practice such tasks, of course, but it will mean that few, if any, would frequent someone without the recognised professional standards.

Hence in an anarchist society, free association would take on a stronger and more positive role than under capitalism. In this way, social life would take on many dimensions, and the individual would have the choice of thousands of societies to join to meet his or her interests or create new ones with other like-minded people. Anarchists would be the last to deny that there is more to life than work!

I.5.11 How will an anarchist society defend itself against the power hungry?

A common objection to anarchism is that a libertarian society will be vulnerable to be taken over by thugs or those who seek power. A similar argument is that a group without a leadership structure decision making which do not replace the possible tyranny of the majority with the real tyranny of a minority.

Then there is freedom of association. As Malatesta argued, “for if it is unjust that the majority should oppress the minority, the contrary would be quite as unjust; and if the minority has a right to rebel, the majority has a right to defend itself ... it is true that this solution is not completely satisfactory. The individuals put out of the association would be deprived of many social advantages, which an isolated person or group must do without, because they can only be procured by the co-operation of a great number of human beings. But what would you have? These malcontents cannot fairly demand that the wishes of many others should be sacrificed for their sakes.” [A Talk about Anarchist-Communism, p. 29] In other words, freedom of association means the freedom not to associate and so communities can expel individuals or groups of individuals who constantly hinder community decisions — assuming they do not leave voluntarily and seek a community more in tune with their needs. This a very important freedom for both the majority and the minority, and must be defended.

So while minorities have significant rights in a free society, so does the majority. We can imagine that there will be ethical reasons why participants will not act in ways to oppose joint activity — as they took part in the decision making process they would be considered childish if they reject the final decision because it did not go in their favour. Moreover, they would also have to face the reaction of those who also took part in the decision making process. It would be likely that those who ignored such decisions (or actively hindered them) would soon face non-violent direct action in the form of non-co-operation, shunning, boycotting and so on. Anarchists think that such occurrences would be rare.

As an isolated life is impossible, the need for communal associations is essential. It is only by living together in a supportive community can individuality be encouraged and developed along with individual freedom. However, anarchists are aware that not
everyone is a social animal and that there are times that people like to withdraw into their own personal space. Thus our support for free association and federalism along with solidarity, community and self-management. Most anarchists have recognised that majority decision making, though not perfect, is the best way to reach decisions in a political system based on maximising individual and so social freedom. Self-management in grassroots confederal assemblies and workers’ councils ensures that decision making is “horizontal” in nature (i.e. between equals) and not hierarchical (i.e. governmental, between order giver and order taker). In other words, anarchists support self-management because it ensures liberty — not because we subscribe to the flawed assumption that the majority is always right.

I.5.7 What if I don’t want to join a commune?

As would be expected, no one would be forced to join a commune nor take part in its assemblies. To suggest otherwise would be contrary to anarchist principles. Thus a commune would be a free society, in which individual liberty would be respected and encouraged.

However, what about individuals who live within the boundaries of a commune but decide not to join? For example, a local neighbourhood may include households that desire to associate and a few that do not (this is actually happened during the Spanish Revolution). What happens to the minority of dissenters?

Obviously individuals can leave to find communities more in line with their own concepts of right and wrong if they cannot convince their neighbours of the validity of their ideas. And, equally obviously, not everyone will want to leave an area they like. So we must discuss what happens to those who decide to not to find a more suitable neighbourhood. Are the communal decisions binding on non-members? Obviously not. If an individual or family desire not animal rights associations, groups based around gender, sexuality, creed and colour and so forth. Associations will be created for all human interests and activities. As Kropotkin argued:

“He who wishes for a grand piano will enter the association of musical instrument makers. And by giving the association part of his half-days’ leisure, he will soon possess the piano of his dreams. If he is fond of astronomical studies he will join the association of astronomers … and he will have the telescope he desires by taking his share of the associated work … In short, the five or seven hours a day which each will have at his disposal, after having consecrated several hours to the production of necessities, would amply suffice to satisfy all longings for luxury, however varied. Thousands of associations would undertake to supply them.” [The Conquest of Bread, p. 120]

We can imagine, therefore, an anarchist society being based around associations and interest groups on every subject which fires the imagination of individuals and for which individuals want to meet in order to express and further their interests. Housing associations, for example, would exist to allow inhabitants to manage their local areas, design and maintain their homes and local parks and gardens. Vegetarian groups would produce information on issues they consider important, trying to convince others of the errors of eating meat. Consumer groups would be in dialogue with syndicates about improving products and services, ensuring that syndicates produce what is required by consumers. Environment groups would exist to watch production and make sure that it is not creating damaging side effects and informing both syndicates and communes of their findings. Feminist, homosexual, bisexual and anti-racist groups would exist to put their ideas across, highlighting areas in which social hierarchies and prejudice still
elected delegates who happened to be members of a political party). This was how, for example, "high party leaders became voting delegates" in the soviets, by being "selected by the leadership of each political organisation, and not by the soviet assembly itself." [Samuel Farber, Before Stalinism, p. 31] Thus the Makhnovists were rejecting the means by which many soviet members were not directly elected by actual workers.
